Wexford Farmers Organize Community Meet

(Continued from Page 4)

Agricultural School attended the Community Meet quite often and he and others gave talks on balanced rations for dairy cows, making a good ration by using the crops you raised and adding the lacking ones, thereby keeping expense down; adaptability of soils, fertilizers, etc. The pastor of the Manton Methodist Episcopal church made an address emphasizing the importance of get together meetings in the creating and fostering of cooperation among farmers.

The second summer started like the first with monthly meetings but people seemed unusually busy even for farmers, and farmers are the busiest people there are. In the months since the opening meeting a number of the most useful helpers had left the community. The teacher who helped start the meetings was gone and another teacher whose home was in the neighborhood had moved to the district where she taught and opened similar meetings there. Several of the young men had gone to the cities, in the general exodus from the farms a number of families had gone away. Some of the evenings were too hot for comfort. The chairman tried to interest the farmers in a milk testing association and borrowed an outfit with which he tested the samples brought, but in August it was decided to discontinue the meetings for the summer.

In the fall the Community Meet was reorganized. A new chairman, Mr. G. W. Brown, was elected as well as a new sec'y-treas. It was again voted to hold weekly meetings.

Some of the new things we have had this year are: a penny march to take care of the expense of christmas next winter, an auction sale of articles no longer wanted by their owner but of value to others which resulted in putting a tidy little sum into the treasury, and a resolution on the part of the men to make a quilt.

At one of the earliest meetings it was decided that the Community Meet needed a good lamp and some song books. These were paid for by collections. But when it was decided to buy an organ collections would have been too slow so a Community Ladies' Aid was organized. Meetings were held on alternate Wednesdays with a pot luck dinner for which five cents was charged. Any man who took a sleigh load of women to the aid got a free (?) dinner. There was some argument among the men as to whether the dinner was worth the trip but there was usually one man at least who though it was or was willing to sacrifice himself for the good of the cause.

Quilts were made and sold and carpet rags sewed. If the hostess desired the ladies' worked for her as well as for the community. The organ was bought also a huge coffee pot. Now that the men are planning a quilt perhaps they'll start an aid. Who can tell? They have already promised a dinner of their own cooking to the woman who will take a load of men to their quilting.

SERRADELLA

(Continued on Page 6)

al other Agricultural Experiment Stations have also tried it out, but so far it has found no place in America. Sweet clover, hairy vetch, and soybeans may be successfully used for building up the soil. Sweet clover is quite sensitive to soil acidity, but has the ability to produce better than most other crops on soils that are low in organic matter and available fertility. Soybeans are not so sensative to soil acidity as sweet clover and are adapted to sandy soils.—C. R. Megree, Associate Prof. of Farm Crops, M. A. C.

DAIRY and LIVESTOCK

BREEDS OF BEEF CATTLE

IN OUR January 5th issue we concluded a series of articles on the leading breeds of dairy cattle in the United States and starting with this issue we will publish a series of articles on the leading breeds of beef cattle.

The breeds of beef cattle in the United States are the Shorthorn (both horned and polled), Hereford (both horned and polled), Aberdeen Angus, and Galloway. Each of these breeds has been carefully selected and bred for a long period of years, with the result that individuals transmit their breed characters very readily; hence their value and importance for use in improving or grading up native or scrub cattle.

With frequent exceptions, especially the Shorthorn, the cows of the beef breeds are not heavy milkers, and in this point lies their success as desirable and economical producers of beef. The heavy milking tendency, as with the dairy breeds, is associated with a conformation of body which prevents the animal from yielding the greatest quantity and the best quality of beef.

1.—Shorthorn

Of the breeds of beef cattle in the United States, the Shorthorn is the most extensively grown. The first importations where made in 1783 by Miller and Gough, of Virginia and Maryland, respectively. These cattle were brought from the Tees River Valley, in northeastern England, where they were sometimes spoken of as Teeswater, or Durham, cattle. These names are practically obsolete, and now only the name Shorthorn is used. Such men as Colonel Lewis Sanders, of Kentucky, who imported Shorthorns in 1817, Samuel Thorne, of New York, who in 1853 imported Duchesses and the famous Cherry, Abram Renick, who produced the famous bull Airdrie, and R. A. Alexander, of Kentucky, may be considered the founders of the Shorthorn breed in America. Later, the Ohio Importing Company was organized by some of these men and others to promote the industry.

The Shorthorn is the largest of the beef breeds. As a rule, when raised under favorable conditions the mature bulls weigh between 1,800 and 2,400 pounds, and the cows usually weigh between 1,300 and 1,600 pounds. These cattle have great adaptability and do well almost everywhere. They may vary in color from all red or all white to any combination of red and white, and a blending of the red and white hairs (roan) is a popular color. The Shorthorn crosses well with scrub and grade cows, the calves of such a matings developing into desirable beef cattle. The bulls are very prepotent and have been used freely in grading up the scrub cattle of the plains, in both this country and South America.

Some of the other breeds excel the Shorthorn in grazing ability where feed and pasture conditions are favorable. The Shorthorn thrives best where grasses are abundant and feed plentiful. Under these conditions it is not equaled by any other breed. The Shorthorn is early maturing, "growthy," and fattens readily.

Of all the beef breeds the Shorthorn excels in milk production, the large milk flow insuring a good calf. For this reason the Shorthorn cow is favored on many small farms to supply milk for the family in addition to raising a calf for beef. The steers sell readily as feeders and produce a very high-class beef with a thick loin and full hind quarter which furnish profitable cuts.

In conformation the Shorthorn is wide, deep, lengthy, and thickly fleshed—a good beef type. The great width of back and the straight lines of the Shorthorn, together with its depth, give a more rectangular form than that of any of the other breeds, although the wide distribution of the breed has caused a slightly greater difference in this respect to be recognized than in other beef breeds.

In the cow the following points should be noted: The horn is usually small and curved forward, with the tips pointing inward, upward, or sometimes downward, and should be of a waxy, yellowish color. The head should be shapely, with

KOW-KARE
DAIRY ASSOCIATION CO
THE HOME COW DOCTOR

Kow-Kare Helps World's Champion Ayrshire Cow

The use of Kow-Kare in the treatment of diseases, and in increasing the milk yield, is general in dairies of all classes. On the smallest hillside farm, or in the homes of the fancy herds Kow-Kare is equally valued.

M. G. Welch & Son, Burke, N. Y., owners of a world's champion cow, write us: "Enclosed find picture of our four-year Ayrshire cow, Agnes Wallace of Maple Grove (No. 25171), champion four-year-old Ayrshire cow of the world, with a record of 17,657 pounds milk and 966 pounds butter in one year. We have used Kow-Kare in our herd for years and would not think of getting along without it. We consider it the best cow tonic known."

The medicinal properties of Kow-Kare act directly on the digestive and genital organs of the cow—the milk-making function. By toning them up to active vigor the milk flow is increased and disease is guarded against.

Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite and similar cow troubles always result from lowered vitality of these important organs. In treating such diseases Kow-Kare strikes at the heart of the trouble and assists nature in the rebuilding process.

Few successful dairymen now try to go through the winter months without the occasional use of Kow-Kare. Fed one week out of each month or for a month at calving time, Kow Kare pays big returns in better milk yield and freedom from disease.

Feed dealers, general stores and druggists sell Kow-Kare. Large size $1.25; medium size 65c. Send for free cow book, "The Home Cow Doctor."

RED POLLED

FOR SALE—REGISTERED RED POLLED Cattle. Both Sex.
PIERCE BROS., R. 1, Eaton Rapids, Michigan.

great width between the eyes, short from the eyes to the muzzle, which should be large and flesh-colored, with large, open nostrils. A black muzzle is objectionable to most breeders. The neck should be short and full, blending well into head and shoulder. The shoulders should be smooth and well covered with flesh. The crops should be full, the heart girth large, and the foreflank low. The chest should be wide and deep, with the brisket thick and well to the front. The ribs are usually well sprung and the barrel well developed. In good individuals the back is broad and the loin is wide, deep, and thickly fleshed. The hips are wide and should be well covered with flesh; the rump is long, wide, and level, carrying an abundance of flesh. The hind quarter is well developed in the Shorthorn, and it is characteristic in that it is almost straight from the root of the tail to the hocks; it is wide and thick, carrying flesh well down, thus giving a maximum quantity of flesh. The flank is low; the udder is usually well developed, extending well forward, with prominent milk veins. Teats of medium size are perferred.

The bull should possess the same desirable features as the female, without her feninine qualities. He should show masculinity by developing a heavier horn, a larger and thicker neck, a heavier bone throughout, and greater depth, thickness, and scale. His horns are heavier and less curved than the cow's, but they should not show undue coarseness.

VETERINARY DEPARTMENT

PARALYSIS

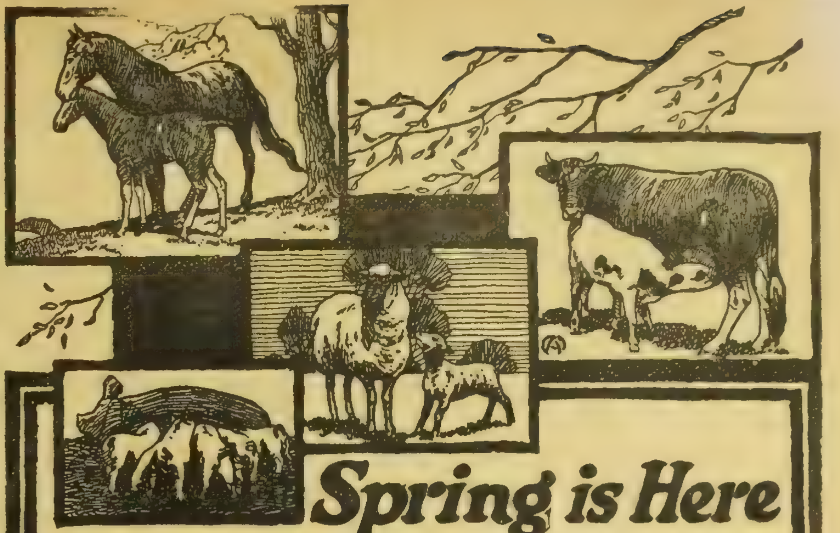
I have a pig weighing around 75 pounds which is unable to walk on its feet. It rolls or bounds around in the straw to get to the feding trough to drink milk. It has good appetite and is O. K. except it can not stand on its feet and walk. The hog house floor is partly cement and part hard wood floor, is kept clean and as dry as possible with good dry straw. I have feed this pig sulphur and condition powders but it seems to stay in the same condition. What can be done?—G. H., Sand Lake, Mich.

—Paralysis of the hind quarters of swine is quite common and is attracting considerable attention. In the majority of cases the cause is obscure and the treatment is very unsatisfactory. Various theories of the origin of the disease are given. A lack of mineral matter in the food of growing pigs may affect the joints and bones and cause paralysis. Paralysis sometimes follows parturation in sows that are in a run down condition and are being nursed heavily. In all probility some cases are due to lesions in the spinal cord, such as tuberculosis, tumors, abscess and diseased vertebrae. Confining pigs in small inclosures without exercise for a long time may cause paralysis. If there is constipation the pig should be given a dose of Epsom salts about two ounces as a drench in water. Give a light diet such as slop made of bran and milk. Make the animal as comfortable as possible, keep them in a clean place with clean bedding and plenty of fresh water. The daily administration of about four drams of cod liver oil in the feed sometimes gives good results.—John P. Hutton, Michigan Agricultural College.

Testing of seed corn can be done by any farmer. Why take a chance with untested seed when a little time will tell the story before the crop is planted?

CHANGE IN DATE OF CLARK'S SALE

IN our February 2nd issue we published an advertisement regarding the sale of pure bred Poland China hogs and Aberdeen Angus cattle to be held on February 20th. Thru an error the place where the sale was to be held was not mentioned. Mr. Clark postponed the sale until Friday, March 7th, 1924, and it will be held at his farm at St. Louis, Mich. Let's all attend.



DR HESS STOCK TONIC

Spring is Here

All out-of-doors is filled with the bleat of the lamb, the bawl of the calf, the grunt of the pig, and the whinny of the colt.

Youth asserting itself everywhere!

Keep their bodies healthy, and stomachs full.

You can then count on good growth—quick development—and begin to cash in on them before the summer-end.

Let
DR. HESS STOCK TONIC
be your insurance policy

against disease, insurance of good appetite, good digestion. It keeps the worms away.

Then, there are the mothers:

Your COWS need it for its system-toning, bowel-cleansing, appetizing effects. Puts them in fine condition for calving.

Your BROOD SOWS will be relieved of constipation and put in fine fettle for farrowing.

Excellent for MARES in foal—and EWES at lambing time.

It makes for good appetite, and more milk to nourish the offspring.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.

DAIRYING—THE HOPE OF THE UPPER PENINSULA

NOTHING heretofore in an industrial way—unless it be the almost rocket-like ascent of the tourist industry—has caused the wave of enthusiasm and concerted effort which is attending the pure-bred dairy sire campaign now in progress throughout the Upper Peninsula of Michigan. It is a movement which, born almost over-night, and wholly as the result of a happy inspiration, has swept the peninsula from stem to stern, and left it rocking with the impact and reeking with the spirit of pure-bred bulls, pure-bred cows, better farms, and more creameries and bigger profits.

Probably the most important phase of the better-dairying campaign throughout upper Michigan is the pure-bred dairy sire campaign which officially opened January 1, 1924, and will formally close on the same date, 1925. It is the plan launched under the joint direction of the extension department of the Michigan Agricultural College; the railroads operating throughout the peninsula and the Upper Peninsula Development Bureau. It is a plan whereby the sum of $1,000 donated by the development bureau will be paid out in cash prizes, January 1, 1925, to the organizations in the various districts which have been most successful in the work of substituting pure-bred bulls for scrubs.

The plan involves, briefly, the organization of separate committees in each county, averaging about fifteen members for each district. These committees direct the work in their respective districts and are, in turn, responsible to a central committee composed of representatives of the three directing agencies. Among the co-operating organizations and institutions are the State Farm Bureau, the State Grange, banks, lumber companies, mining companies, individuals, corporations and the press, in each of the twelve counties which are entered to date.

Thus, some 180 or more live-wire citizens of Cloverland are today united in the one big effort to chase out the "scrub" and to establish, in his place, the pure-bred animal which is to build and improve every dairy herd throughout the region. That is, these 180 men represent only those who have pledged their time and effort as committeemen, toward the campaign in their respective districts. If we were to count every individual in upper Michigan who will have had a hand in it before the year is out, the total would be considerably in excess of that figure.

That, briefly, is what we mean when we say" the $1,000 bull campaign". But that isn't all.

In addition, to this carefully planned drive, there is apparent, all throughout the upper peninsula, a determined effort to improve and develop the diary industry with all possible speed, and yet, with every thought and consideration for the consistency and practicality of the plan.

Live-stock associations, cow-testing organizations, better dairying committees and other similar bodies are seeking, conscientiously, to make dairying an established and flourishing branch of agriculture throughout the peninsula. Already some communities have formulated definite plans, aside from the $1,000 bull campaign, for the immediate improvement of their dairy industry. This is true of Escanaba, at Ontonagan, and in the Gogebic range districts, particularly, where associations have been formed for the immediate purchase of pure-bred stock for distribution among the farmers. Such action has been made possible largely through the action co-operation of the banks in each district, which, after all, is the most gratifying feature of the whole situation. When the banker is "sold" the plan—wherever it may be—savors of practical merit. And that is surely true of this new movement in Cloverland.

But—when all is said and done; when every phase of the 'variphased' campaign is considered, there looms out of it all the one big issue—Better Dairying. And upper Michigan, with its climate, soils, transportation facilities and favorable geographical location, is adequately equipped as the background for the movement.—L. D. Tucker.

START CAMPAIGN AGAINST BOVINE TUBERCULOSIS IN UPPER MICHIGAN

HAND in hand with the better-dairying campaign in Cloverland, comes the announcement by Dr. F. K. Hansen, assistant state veterinarian, that already six counties in upper Michigan are signed up for the bovine tuberculosis eradication work, and that this work has already been practically completed in two of the counties.

The counties on the list are: Gogebic, Ontonagon, Schoolcraft, Marquette, Chippewa and Delta. The first test of all herds in Gogebic and Ontonagon counties has been completed.

Work in the other counties will begin early in the spring, with the opening up of the highways, and, according to present plans, the first test will be completed in all six counties before next winter. A group of state and federal department workers will be retained in the upper peninsula during the winter to make re-tests of suspected cases and to wind up the season's activity.

It is the plan of the federal bureau of animal industry to accommodate, during 1925, all other counties which make application for this work. Thus—if the nine remaining counties of upper Michigan enroll for the T-B campaign during this year and next, Cloverland will represent the largest single area thruout the United States in which the work will be in progress, according to Dr. Hansen.—L. D. Tucker.

ALLEGAN COW TESTER ISSUES ANNUAL REPORT

KARL S. KING, cow tester for the East Allegan Association, reports in his annual summary that 302 cows were tested for the year, averaging 5623 pounds of milk and 242.1 pounds butter fat. Mr. Wm. Knobloch, one of the members of this association, of Otsego, Mich., had the high herd in butter fat production on 17 cows averaging 8997 pounds of milk and 479.9 pounds fat. His herd is made up of pure bred and grade jerseys. The high cow in butter fat production was an eight-year old grade jersey in Mr. Knobloch's herd. This cow made 13718 pounds milk and 715.3 pounds fat for the year. It is believed this is the highest cow testing association record made to date in Allegan county.

It is further interesting to study the records of production in the offspring from this cow. A three-year old grade jersey and a two-year old grade Jersey, both daughters out of this eight year-old cow, made 479.3 pounds fat and 476.4 pounds fat, respectively. The fat test on these three individuals for the entire year was 5.21, 5.23 and 5.27 per cent. This is a remarkably uniform test and uniform production for these high grade Jersey cows, all of them sired by purebred bulls.

The high herd in milk production belonged to Oliver Brothers, Plainwell, Michigan. In this herd of 10 purebred and grade Holstein cows averaged 9963.4 pounds milk and 350.9 pounds fat. Among the ten high herds in this association two Jersey herds averaged higher than 400 pounds fat annually. Mr. Knobloch's and Mr. David Anderson's. Mr. Martin Reed and Mr. John Smith also with purebred and grade Jersey herds, made an average above 350 pounds of fat. There were four Holstein herds that made better than 340 pounds fat average for the association year. Among the high cows listed 9 cows made over 500 pounds of fat and 24 cows made between 400 and 500 pounds of fat.

This is the second year that the East Allegan Association has operated. The interest aroused and the good work accomplished by the three associations that have been operating in this county during the past year have attracted considerable attention to the quality of dairy cows to be found in Allegan county. Both breeds—Holsteins and Jerseys—are well represented in the associations that are operating.—A. C. Baltzer, Dairy Extension Specialist, East Lansing, Michigan.

The Only Way

"Johnny," said the teacher sternly, "I want you to tell me where you learned to swear!"

Aw, I just picked it up, teacher," said Johnny. "But if you wanta learn I can't teach you none. You gotta go out where it's bein' done an' listen until you get it!"—Richmond Times-Dispatch.

F.S.R

Royster's "*cured*" fertilizer is *certified* fertilizer

YOU can't look at the ordinary bag of fertilizer and tell how good it is. You have to risk the time and money of a season's work before you KNOW. It isn't *known* to be good until you get your money!

Certified Fertilizer

But Royster's "cured" fertilizer is like a certified check.

It is certified by the forty years we have spent in learning the needs of the soil you work.

It is certified by the experience of successful farmers all about you, who say "Royster's fertilizer increased my earnings."

"Cured" Fertilizer is better plant food

It is certified by the "curing"—a feature of Royster's fertilizer which increases its value because of a more complete chemical action, making the plant food readily available to the plant. (Royster's goods age in great bins for four to six months. They are then re-milled and bagged).

Ask for "Royster's"

Stop guessing about fertilizer. Look for the name "Royster" on your bags of fertilizer and you have found the assurance that your crops will have proper feeding from seed time to harvest.

Money Coming in When you use a *New* De Laval

because you have cream or butter, which brings good prices, to sell for cash, giving a good, steady income. You also have skim-milk, a wonderful feed for calves, pigs and chickens, all bringing in more money, and you keep the fertility of your soil on the farm.

More Money with a New De Laval. A new De Laval Cream Separator brings in more money because it gets all the cream, because it doesn't waste it in the skim-milk, because it will give more years of service, because it is more convenient to clean and operate, and because it separates a richer, smoother and higher testing cream. That's why there are over 2,500,000 De Lavals in use, and why they have won more than 1000 grand prizes.

Self-Centering Bowl. The new improved De Laval, which has been in use more than a year, is the best cream separator ever made. It has many improvements and refinements, among which is a self-centering bowl. This new De Laval Bowl eliminates vibration, which causes it to run smoother, thus adding to its efficiency and life—it skims cleaner, runs easier and lasts longer.

De Laval Milker. Also ask about the De Laval Milker, which is giving wonderful satisfaction on thousands of farms. Pays for itself with 10 or more cows.

Each Serves Its Community

In Fraser, Colorado, a log cabin of three rooms shelters a telephone exchange that connects with the mountain homes of cowmen, miners, homesteaders and tie-cutters. In the heart of New York City a new building of twenty-nine stories is to become the home of several metropolitan central offices serving some 120,000 telephones. This building will contain, as well, offices for executives and for engineering, commercial, plant and accounting forces, providing space for over 7000 telephone workers.

Each of these buildings helps to render adequate and economical telephone service in its own community. They stand at the extremes in size, equipment and personnel. Yet they both indicate the nation-wide need for adequate housing of the activities of the Bell System; and they illustrate the varied ways in which that need is being met. One of the largest single items of plant investment of the Bell System is real estate, comprising nearly 1700 buildings acquired, with their sites, at a cost of $180,000,000.

It is continuously the aim of the Bell System to construct and so to situate each new building—whether executive office, central office, storehouse or garage—so that it shall serve its community with the utmost efficiency and economy, and remain a sound investment throughout its period of life.

If you don't want our editor's advice or an expert's advice, but just plain, everyday business farmers' advice, send in your question here. We will publish one each week. If you can answer the other fellow's question, please do so, he may answer one of yours some day! Address Experience Pool, care The Business Farmer, Mt. Clemens, Mich.

HAVE YOU EVER RAISED KUDZU GRASS?

DEAR Editor—Will you please ask your readers to tell me through your paper, if they have had any experience in raising Kudzu grass, in Michigan? If so, what kind of luck did they have? We have two seed catalogues in which it is advertised very highly. They say if you set out the roots 5 ft. by 10 ft. apart, that the second year, the vines will cover the ground. And you can cut two crops of hay from it each year in the north. The land will grow richer every year. And that it is as good or better than clover for stock and chickens. I bought some Dasheens, and they did not turn out good at all. In fact, they were a complete failure for me. Have any of your readers tried them? What do you think of the chestnut bean, that is being advertised. Do you think they are nothing but a colored bean, with a bean flavor or are they something extra nice?

I think it would be nice if the readers would write to your paper and tell of the different experiences that they have, in buying some new varieties of seed, and their luck in growing them. The seed catalogues are full of so many different things, that it is hard for a farmer to know which to buy and which not to buy. And I believe we could help each other a lot in that way, if we only would. We think your paper is fine, and do not want to miss a number. Wishing you the best of success, I remain—L. H., Cedar Springs, Mich.

CURING RING BONE

IF Mrs. Reader, North Branch, Mich., will get a one pound bar of Soder Led and bend it around his horse's leg just so it will rest on the ring bone cut off to right size and let his horse wear it in the stable only, take off when out it will kill it in 4 months. It killed one for me and he was so lame that he could hardly step on his foot and did not have any bunch. A veterinary in Hart, Mich., told me to do this and it would kill it.—A Reader, Muskegon Hgts., Mich.

Poultry Department

HOW I RAISE TURKEYS

PERHAPS almost everybody knows by this time how to raise turkeys successfully, but for fear there might be a few who are still having trouble, I want to tell them how easy I have found it to be.

When I first began to raise turkeys so many people told me to feed them curd or cooked clabber, but I tried that faithfully with very poor success.

I tried many ways and still kept losing little turkeys, so I finally tried feeding them just nice firm clabber, like I would eat myself, and lettuce and a few onion tops chopped fine.

When the little turkeys are two and a half days old I put them out with the mother turkey in a pen, (wagon frames are good) and give them sand to pick around in. Then I put fresh clabber out in baking powder can lids, or drinking fountains, on clean boards. They must not get themselves wet or the clabber dirty. I give them lettuce and onion tops chopped fine three times a day, but I keep the clabber before them all the time.

The clabber prevents all bowel trouble. Buttermilk is just as good for them, but they can pick the clabber up better. They are crazy about the clabber and will eat it till they look like they had the big crop, but it will not hurt them and will soon be gone and they will be calling for more and in no time they will be as fat as little butter balls.

Confined During First Week

I keep the little turkeys up till they are a week old, or can jump over a foot plank; then try to keep

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MENTION THE MICHIGAN BUSINESS FARMER WHEN WRITING ADVERTISERS

them out of the dew in the early morning.

I feed them corn bread with black pepper at about a week old and when they are about two or three weeks old I gradually change to wheat and feed them wheat till they are grown. Of course, almost any kind of grain will do, but I think they grow off better when fed wheat. Wheat makes bone and muscle, and corn makes fat.

I feed my laying hens a laying mash in the morning and boiled oats at night and plenty of oyster shell and charcoal. Also try to have plenty of green stuff. Turkeys any size need shell or grit and plenty of charcoal, and clabber or sour milk is good for them at all times.

Lice cause a great many deaths among little turkeys. Sometimes they are so small that they cannot be seen with the naked eye. I powder the turks and the mother with a good powder when I take them off and once a week for six weeks afterward, and when they are a little older I put sodium fluoride on them, using the pinch method. I mention these powders, as I have had such good success with them. There may be others just as good.

I have the very finest, big-boned, healthy breeding stock that I can get. It is just as easy to raise a thoroughbred turkey as a scrub turkey and there is so much more pleasure and profit in raising the thoroughbred. At three months old my pullets are as tall as their mother and the toms are much taller.

How to Combat Roup

So many people have roup among their turkeys. It is a disease to be dreaded if not taken in time. The first sign of roup is a little foam in the eye and a wet nose. Just get the turpentine and a feather and put a drop up each nostril; wet the feather good and put it through that slit in the roof of the turkey's mouth and then down his throat; rub a little between his eye and nostril.

If he is puffed under the eye, slit that with a knife or small scissors, gently press the phlegm out and put a few drops of turpentine in the wound. A few applications will cure the worst cases. Some salts or copperas in the drinking water will be good, and if they have had roup long, some good tonic in their food for a few days is needed. Don't keep them up; doctor them and let them go.

If any turkey has the big-crop, don't operate, but use a funnel and tube and wash the crop out with creolin, a teaspoonful to a cupful of water. Wash it out twice with this solution and then twice with clear water. Of course it must be emptied first and this should be done early in the morning when there is least solid food in the crop. Keep the turkey up a few days, feeding it soft food and not much water.

For sorehead or chickenpox I scrape off the top of the bumps and paint them with iodine, then skip one day and paint again and then grease with axle grease or any good ointment and put salts in drinking water.

For cholera or black-head in turkeys, some have found that a child's dose of liver regulator and some copperas given every other day is very good. Give them water mixed with prepared chalk and scorched flour.

I have my turkeys all vaccinated against diseases, which is the easiest and best way of all, but you can't do that till they are about eight weeks old.

Turkeys are a great help on any farm in keeping down insects of all kinds, especially in the cotton. They can almost find their entire living in the fields and pastures without bothering the grain crops. We have raised turkeys for many years and they have never bothered anything but the melons. They have never hurt our fruit and we have most all kinds.—Mrs. J.

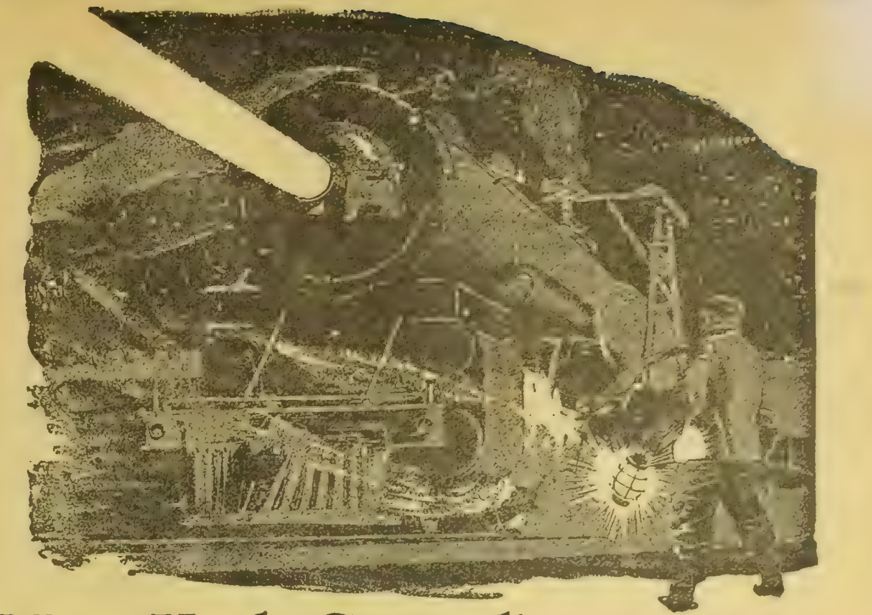
A schoolboy at lunch time entered a grocery store and said to the clerk: "Take this order: 10 pounds of sugar at 6 cents; 11 pounds of coffee at 25 cents; 8 pounds of tea at 30 cents. Add that up. How much is it?"

The clerk replied, "$5.75."

"Are you sure?" asked the boy.

"Of course I am sure."

The boy thanked him and said: "That's my arithmetic lesson for tomorrow."—Judge.



New York Central's 11,000,000 *horse-power*

THE locomotives in service on the New York Central Lines have an aggregate capacity of 11,000,000 horse-power. This equals a third of all power used in the manufacturing industries of the country.

Operating and maintaining this great power plant cost last year $169,000,000, or 33% of operating expenses. The men on the engines earned $34,000,000. In the fireboxes was burned $54,000,000 worth of coal. Repairs, another large item, took $54,000,000.

Adequate power is the first necessity of efficient transportation service. The capacity of New York Central Lines to meet the test of heavy traffic — as was so strikingly shown in the war emergency—is in no small measure due to the New York Central policy of maintaining a power reserve to meet abnormal traffic demands.

New York Central locomotives—whether designed to haul 100-car coal trains or the *Twentieth Century Limited*—are all built to special New York Central specifications, and year after year represent the highest achievement in American locomotive construction.

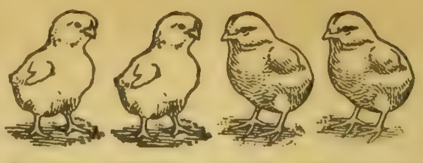
BABY CHICKS FROM BRED TO LAY S. C. Buff Leghorns. First hatch March 3rd.
J. W. WEBSTER, Bath, Michigan.



BABY CHICKS NEED VITAMINS

WHEN a few years ago it was learned that the baby chick could live for the first three days of its life without food, the commercial hatchery had its beginning, and one has only to look through the pages of the farm press of today to get an idea of the magnitude to which this industry has already grown. In nearly all parts of the United States the hatcheries flourish and plants of immense size are not uncommon—some of them boasting a capacity of upwards of million eggs. Shipments of baby chicks over a radius of 1,000 miles are frequently found.

Two distinct movements are apparent in the American poultry industry: A very marked trend toward the use of centralized hatcheries, and a quite general tendency toward more winter egg production.

With the development of the baby chick business a number of widespread adjustments are coming. It makes possible a higher degree of specialization and an increase in efficiency. It is no longer necessary for the rank and file of poultrymen to suffer losses that have always been incident to unsatisfactory hatching—the baby chick men are assuming that risk and overcoming it largely by more expert methods, thus leaving the average poultryman free to turn his efforts to greater production.

But the success of the commercial hatchery, as well as that of the small poultryman is dependent largely upon the quality of eggs available for incubation. Where only eggs from vigorous, well-bred birds are used a rapid improvement in the type and production of the flocks is possible. In some states plans are already in operation whereby a system of accredited forms is established to supply high-class eggs to the hatcheries.

The vitality of the eggs incubated spells success or failure to the commercial hatchery. The percentage of hatchability of the eggs used determine whether the hatchery can succeed on a large scale, and to obtain highly hatchable eggs has been one of the biggest problems in the business.

Recent experiments have shown that the ration of the hen often determines whether or not an egg will hatch. It has been well established that animals ordinarily store up a supply of vitamins in their bodies. The good laying hen like the high producing dairy cow draws upon the body supply of vitamins with the result that unless it is constantly replendished it may become depleted.

Work at the Wisconsin Experiment Station with White Leghorn pullets shows that when a ration low in the fat soluble vitamin, and consisting largely of white corn, was fed to hens the eggs produced were very low in hatchability—15.3 per cent. When yellow corn was substituted for the white, the hatching quality at once rose to 23.6 per cent. When vitamin-rich feeds, such as pork liver, cod liver oil, or broken eggs were added to the ration, eggs hatching from 53 to 62 per cent were laid by the same birds that on rations low in fat soluble vitamin had produced largely non-hatchable eggs. The difference in the hatchability of the eggs produced from various rations is more pronounced toward the end of the laying season, because at that time the body reserves of vitamins are less of a factor.

Many successful poultrymen have held the belief that their hens should rest in the winter if they were to produce eggs high in vitality. Figures based on careful records and extending over several years have shown that with the proper ration hens can produce high priced market eggs all winter and then lay good hatching eggs in the spring.

November and December eggs bring the highest prices. Less storage eggs are now sold as fresh than formerly. People want quality and are willing to pay for it. The result is that fresh eggs have a good price in the season of low produc-

BOWERS Colony Brooder

Burns any fuel—costs less

This brooder raises more and better chicks at lowest cost. Stove is sturdy, safe, air-tight, self-regulating—best in world to hold fire. Burns soft coal—cheapest brooder fuel—perfectly. tion and progressive poultrymen try to hatch their chicks early enough so as to have them well grown and ready to start laying in these months of premium prices.

As the dairy industry has gradually become one in which a very large part of the production occurs in the winter months so the poultry business is turning more and more to the production of winter eggs. Many of us can recall the days back on the farms of our boyhood when there was scarcely a cow in the entire neighborhood that gave milk in the winter time, and, of course, chickens did not ordinarily lay eggs in winter—we really did not expect them to. Yet large numbers of just such communities are now producing as much milk in January as in July and the egg production is often corresponding.

As in the dairy industry, poultry methods have changed greatly. The buff or speckled hens that used to hatch their summer broods under the woodpile or behind the democrat wagon in the implement shed required little attention. They roamed about in the open and nature supplied them with enough variety of food to provide for their maintenance.

But the question of raising large number of chicks in late winter or early spring so as to have them well grown and ready for winter laying is a complex one. Growing the birds in confinement without green or scratch feed has always been difficult on a large scale, because leg weakness, a term which may cover a variety of troubles, often developed and there seemed to be no way of overcoming it.

Recently, however, investigators at the Wisconsin station found that chicks can readily be grown under confinement without scratch feeds or green feeds. Again the problem seems to be one of supplying the proper vitamins in generaus quantities. When the vitamin element of cod liver oil is abundant in the ration, no leg weakness develops, and the indoor birds grow to be healthy, normal speciment, often above the average of those grown under the best of outdoor conditions.

In fertile eggs from the incubator which have often been discarded as worthless can be used as an inexpensive solution of the baby chick vitamin problem. It has been shown that a small quantity of egg when added to an ordinary ration of 60 parts cornmeal and 40 middlings will give excellent results. When skimmilk is available the eggs can be beaten in it until thoroughly mixed, and the whole used to moisten the mash of the chickens.

Eggs alone with the ration can be used if no skimmilk is available. About one egg to each 30 chicks is recommended for the first two weeks, and after that a gradual increase in the amount of egg used seems desirable in order to accommodate the needs of mire rapid growth. Whole milk can, of course, be substituted for eggs, as the butter fat supplies the necessary vitamins.

That the poultrymen who concentrate their efforts upon production will in the future be in a position to harvest increased profits seems probable. The industry tends more and more to become specialized and the specialization in winter egg production promises the most handsome returns.—Wisconsin Farmer.

After Thought

A lady who kept a little curly poodle dog lost her pet and called on the police to find it. The next day one of the force came with the dog very wet and dirty.

The lady was overjoyed and asked a lot of questions, one being:

"Where did you find my darling?"

"Why, ma'am," said the officer "a fellow had him on a pole and was washing windows with him."—Selected.

FARM PAPER SAVES WOMAN'S LIFE

THE Value of farm papers from many angles has been featured. But it may be news to know that a farm paper actually saved the life of Mrs. Frank Rosebough, Brockport, New York. Mrs. Rosebough was reading her paper when a disgruntled hired man fired a shotgun through the window at her husband. The charge missed the latter and would have killed Mrs. Rosebough except that the farm paper which was spread before her face broke the force of the shot.

MARKET FLASHES

MARKET SUMMARY

Slack demand for wheat turns prices slightly lower. Corn, oats and rye unchanged. Beans steady after small decline, trading inactive. Butter in demand. Eggs easy. Poultry scarce and firm. Good demand for dressed Calves. Cattle trade active. Sheep and hogs higher.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Plans of Farmers

FARMERS are looking into the future and laying their plans for next spring, trying to learn from the past how best to avoid such mistakes as they have made. Michigan farmers are as a rule less inclined to devote too many acres to one crop than farmers of several other states, and agricultural and live stock are carried on in a conservative way generally, but it is a fact that in growing wheat many farmers have overdone it and have suffered financially in common with farmers in other important wheat states. It is almost a foregone conclusion that they will diversify their farming from now on, and some of them are preparing to utilize tracts not well adapted for raising crops to setting out forest trees, while others are making arrangements for setting out young fruit trees, as well as grape vines and berries. Just now there is quite a spread in the cultivation of orchards of apples and peaches, and the cherry tree is becoming highly popular in parts of the state. Cherries are much utilized in making pies and beverages, and every year the demand for them increases. Farmers are apt to be a little impatient about waiting too long for the trees to bear fruit, and nurserymen are called upon to produce a quick maturing, low growing cherry tree that will bear fruit within two or three years. Dairy interests are coming to the front in Michigan, as well as in other states of the middle west, and Holstein dairy cows are in increasing demand, with sales in the Chicago stock yards at $50 to $90 per head, and some cheaper cows around $35. It is always interesting to learn of big achievements in dairying, and the 150 high producing herd of purebred Holsteins owned by the Iowa State Hospital for the Insane boasts of a cow that made 150 pounds of butter in thirty days. High-bred dairy cows sell high, but if a farmer can pay the price, the returns justify what seems perhaps rank extravagence. Michigan is a famous state for the sheep industry, and lots of money is gathered these times on flocks of sheep and lambs, the wool item being a highly lucrative one. And yet the sheep industry of this country is falling seriously below the actual requirements, while the relatively small number of sheepmen are making all kinds of money, with recent advances of as much as $1 per 100 pounds in a week in the Chicago market. The Chicago Board of Trade is to assist the bankers in getting the ten million dollars needed for the farm credit corporation recently organized. The money market is steady, Chicago banks loaning at 5 to 5½ per cent.

What Will Wheat Do?

There are differences of opinion, of course, on this extremely important question, but there is a pretty general belief that startling changes in prices are not likely to occur in the immediate future and the ultimate valuation will be largely governed by the course of action adopted by the federal government in legislating on the tariff and other matters affecting wheat. Of late any fair advances in wheat prices have been followed by moderate reactions, and from one week to another quotable alterations are usually comparatively unimportant. Naturally, increasing the duty on imported wheat would put a check on our exports, and for weeks past the exports of wheat and flour have been quite moderate in volume. The way it looks now is that we are approaching the time when we must consume at home such wheat as our farmers raise. The high cost of wheat production may be expected to result in considerably curtailing the wheat acreage, and it is hoped that ultimately there will be readjustment in prices between farm products and commodities purchased by farmers. Statistically, there is no marked change, and the visible wheat supply in this country, while showing weekly reductions, is still much larger than a year ago. It is practically certain that marketing of wheat for the near future will show gains, as farmers will want to avoid paying taxes on their holdings. State taxes in North Dakota are so high that farmers are allowed two periods for payment. Many bills have been introduced in Congress for helping farmers in marketing their wheat, the most important one being the McNary-Haugen bill for appropriating $75,000,000 to aid in diversifying farming. May delivery wheat sells around $1.10.

A Minneapolis grain man figures that there is enough spring wheat to supply northwestern mills with 280,000 bushels a day until the new crop is harvested. He says mills are actually grinding 400,000 bushels per day, adding that "an increased tariff would insure the northwest taking wheat from the west and southwest, and perhaps our supposed surplus will look like a deficiency later in the season."

Corn, Oats and Rye

Corn and oats have continued to sell in the Chicago market at considerably higher prices than a year ago, while rye has sold much below prices paid at that time. As for corn, many farmers are quite bullish in sentiment, realizing that very little old corn was carried over from the 1922 crop. At the same time many farmers will sell part of their surplus corn early to avoid paying taxes on their grain. The visible corn supply is now increasing considerably, and prices in the future will be governed very largely by the volume of farm marketing. At the same time farmers are now asleep, and they have held a meeting in Des Moines, Iowa, where more than one hundred farmers of several states perfected an organization to be known as The Corn Growers' Association. The farmers were largely from Iowa, but also came from Illinois, Kansas and South Dakota, and those present were determined to obtain at least production cost for their corn, figuring this at over $1 a bushel. Although the corn in sight is growing in volume, it is still not much over half as large as a year ago, and very little is being exported to foreign countries, whereas a year ago it was exported with fair freedom. A great deal of corn has gone from the northwest to Duluth. The visible oats supply in this country is down to 17,526,000 bushels, comparing with 30,296,000 bushels a year ago, and exports are not large. The rye visible supply is up to 20,538,000 bushels, comparing with 12,946,000 bushels a year ago, while prices are unusually low, and yet exports are meager, comparing with fair exports a year ago. May delivery corn sells around 81 cents, May oats at 49 cents and May rye at 72 cents.

Bullish Factor in Corn

"The most brilliant factor in the corn situation is the failure of country elevators to accumulate a stock of winter shelled grain," says Burton Hungerford, the Logan & Bryan crop observer. "Central Illinois elevators probably have an average of 4,000 bushel on hand or about 20 per cent of normal at this season. Movement is likely to fall off sharply, as farmers have already delivered 75 to 80 per cent of the grain that had been sold to country dealers."

Successful Farmers' Creamery

C. B. Moody, secretary of the Iona Farmers' Creamery association, of Iowa has just issued his annual report for 1923. The report was satisfactory to the patrons who realized a large sum of money for their dairy products.

The creamery received 259,392.9 pounds of butter fat and paid $115,304.82 for it; hauling cost, $8,347.99; labor and salaries, $3,411.86; coal, salt and other items, $6,073.37, making the amount paid out $133,138.04.

The creamery made 320,473 pounds of butter and shipped to eastern markets 293,195 pounds, for which it received $120,519.66. Butter sold to patrons amounted to $6,580.59 and that sold at retail brought $4,139.04. The average overrun for the year was 23 per cent; average price received for all butter, 42 cents.

Choice Cattle Sell Higher

There has been a marked improvement in the consumption of beef in the United States recently, and despite the largely increased cattle receipts in the Chicago market, the choicer beeves, long-fed heavy steers especially, have sold higher. Only a few weeks back the local packers and eastern shippers greatly favored the better class of yearlings and readily paid a handsome premium over prices for the choicest heavy steers; but of late this rule was reversed, and yearlings sold much lower than weighty cattle of the best class. The bulk of the beef steers sold recently at $8 to $11, with the best weighty steers purchased at $10.70 to $11.70 and the best yearlings at $10.50 to $11.50. Steers of good grade sold at $9.50 and upward, with sales down to $6.25 to $7.50 for the cheaper class of light steers, and inferior little steers selling at $4.50 to $6.20. A few light weight cattle have sold especially well, and the other day a sale was made of 29 steers and heifers averaging 724 pounds at $10-50, while a little later the best steers and heifers mixed averaging 873 lbs. sold at $11. Fair to prime cows and heifers found buyers at $3.50 to $8 mostly and canner and cutter cows at $2 to $3.40, with bulls selling at $3.50 to $6 and calves at $5 to $13.50. A small winter trade is witnessed in stockers and feeders, sales being mainly at $5 to $7.50 and a few sales of fleshy feeders for a short finish at $7.75 to $8.25. Farmers wanting cattle for feeding are able to pick up good bargains. A year ago common to prime beef steers sold in Chicago at $6.25 to $10.25 and two years ago at $6.25 to $9.20. Well finished beef cattle are bringing good profits. Last week's large receipts resulted in a moderate decline except in the best.

Hogs Plentiful and Wanted

The huge production of hogs has stood in the way of placing the market on a higher price basis, although the trade requirements beat all past records. The really surprising thing is that the shrinkage in prices has not been even greater. The large decline which has taken place in hogs is reflected in corresponding declines in prices for hog products, especially fresh meats, and reduced values account for the enormous exports of provisions. In addition to heavy purchases of hogs by Chicago packers, there has been about the largest demand in that market for hogs to ship east ever known, and this makes lively competition at times. At the present time the high price of corn is causing increased marketing of young hogs, and receipts averaging 229 pounds, being five pounds less than a year ago. The bulk of the hogs sell within a range of 20 cents, with the best heavy butchers selling 15 cents above prime light bacon weights. Late sales were made in the Chicago market at $6 to $7.15, the top being 25 cents lower than a week earlier. Combined receipts in twenty markets for the year to late date aggregate 7,942,000 hogs, comparing with 7,003,000 a year ago.

Great Boom in Lambs

Months ago predictions were made that much higher prices were in store for prime lambs because of the short supply, and toda ythe prophets are surprised by the great boom which has taken place, the best flocks having sold in the Chicago market within a short time as high as $15.75 per 100 pounds, with sales down to $15 for the next best class, and feeder lambs bringing $13.50 to $14.25. Looking backward, it is recalled that at this time in 1915 lambs sold at $9.25 to $9.75. The best yearlings sell for $13.75, the best ewes at $10 and the best wethers at $11.75. Many farmers regret that they did not engage in the sheep industry months ago when urged to do so, but there is yet time and wise ones will try their luck. Wethers sell at $9.25 to $11 and yearlings at $12 to $13.75.

WHEAT

Trading was quiet in the wheat market at Detroit last week and the general tone was easy until the closing day when a slight firmness developed. Prices declined and then advanced leaving them at the same level as quoted in last issue. Demand and receipts remain about as they were two weeks ago, with southern millers the best buyers and farmers not ready sellers. Some export demand is reported but not enough to effect prices.

CORN

Contrary to expectations receipts of corn from farms increased during the fortnight closing Saturday of last week and the market showed some signs of weakening. Many dealers continue to believe in higher prices and if receipts again decline there is no doubt in the minds of many but that there will be an advance. Buyers complain about the quality of receipts declaring that very little good corn is being sent to market.

OATS

The oat market at Detroit continued unchanged in tone while prices declined a cent under two weeks ago. Demand is not active.

RYE

Rye followed the trend of oats during the two weeks ending February 23rd and is quoted a cent under two weeks ago. A dull tone prevails.

BEANS

Beans are inactive and steady with prices slightly lower at most of the larger markets. Detroit quotations show a decline of from 20 to 25 cents per hundred pounds. Demand is slow and mostly of a local nature at present. Anyone interested in Michigan beans should read the letter, "The Future of the Bean Market" by Mr. Benjamin Gerks on page 6 of this issue.

POTATOES

The potato market is steady at most points with trading from steady to dull. Detroit market has a fair demand and trading moderate. At Chicago the market is slow with demand light and eastern markets are in about the same condition as the Chicago market.

HAY

Eastern markets are lower due principally to the large amount of poor hay arriving. Some markets are overstocked with this description and it drags at irregular and uncertain figures. The demand for the best grades continues steady but offerings of this sort are small. The approach of spring is weakening the alfalfa and prairie markets in the southwest.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 1 red, $1.15½; No. 2, $1.14½; No. 2 white, $1.15½; No. 2 mixed, $1.14½.

Chicago—Cash No. 3 red, $1.10; No. 2 hard, $1.10@1.14.

Prices one year ago—Detroit, Cash No. 2 red, $1.35; No. 2 white, $1.35; No. 2 mixed, $1.33.

Corn

Detroit—Cash No. 3 yellow, 82c; No. 4, 80c.

Chicago—Cash No. 2 yellow, 82½c; No. 2 mixed, 80c.

Prices one year ago—Detroit, Cash No. 2 yellow, 79c; No. 3, 77c; No. 4, 75c.

Oats

Detroit—Cash No. 2 white, 53c; No. 3, 51½c.

Chicago—Cash No. 2 white, 49@50c; No. 3, 47¾@49c.

Prices one year ago—Detroit, Cash No. 2 white, 49½c; No. 3, 48c.

Rye

Detroit—Cash No. 2, 73c.

Chicago—Cash No. 2, 71c.

Prices one year ago—Detroit, Cash No. 2, 87c.

Beans

Detroit—C. H. P., $4.75 per cwt.

Prices one year ago—Detroit, C. H. P., $7.80 per cwt.

Potatoes

Detroit—$1.60@1.66 per cwt.

Chicago—$1.20@1.40 per cwt.

Prices one year ago—Detroit, $1.07@1.13 per cwt.

Hay

Detroit—No. 1 timothy, $23.50@24; No. 2, $21@22; No. 1 clover, $20.50@21; standard and light mixed, $22.50@23 per ton.

Chicago—No. 1 timothy, $26@27; No. 2, $25@26; No. 1 clover, $22@23; light timothy & clover mixed, $24@25 per ton.

Prices one year ago—Detroit, No. 1 timothy, $16@16.50; No. 2, $14@15; No. 1 clover, $13@14; standard and light mixed, $15.50@16 per ton.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of March 2

FOLLOWING the generally fair weather which we are expecting at beginning of this week the weather will become unsettled and mild; maximum temperatures ranging between 50 and 55 degrees.

During Tuesday, Wednesday and probably Thursday there will be storms of rain or snow and gales in Michigan. We are not expecting precipitation to be as heavy as last week but the high winds may do more or as much damage as the snow or rain itself in many parts of the state.

About Friday and not later than Saturday temperatures will drop rapidly to a minimum between 18 and 23 degrees. The weather at end of this week will average clear although there may be some local snow flurries.

Week of March 9

This week opens in Michigan with a very severe storm of rain or snow and wind. Because of the high temperatures expected during early part of week, most of precipitation will be in form of rain during first part of storm period.

Following this storm period temperatures will fall and continue on the downward trend until Friday. There may be a reaction to warmer and some storminess within a day or so of the storm period of early part of week but this will not last long. Eventually temperatures will drop to readings close to the 20 degree mark and the skies about Thursday and Friday will be clear.

Balance of March Wet, Windy

The last half of March is expected to show precipitation above the normal in Michigan and the wind movement will also be above the average for this time of year. Nevertheless, we are expecting that the month will go out like a lamb in most parts of the state.

M. A. C. COW SETS WORLD'S PRODUCTION RECORD

"BRAVURA IV," a two-year-old brown Swiss cow bred and raised by the Michigan Agricultural College, is the proud possessor of a new world's record for milk and butter fat production for her breed and age.

The newest addition to the M. A. C. family of record breakers is a daughter of Bravura III, which previously held the world's record for a two-year-old brown Swiss. Further right to the title of queen is adduced from the fact that Bravura III is a double great granddaughter of College Bravura II, a cow that for many years held the brown Swiss production record for all ages. The present record holder, Bravura IV, is a descendent from maternal ancestors, which for five generations have been bred and raised by the college.

The new record was made by persistency of production. Her largest milk flow for a month was 1,694.7 pounds, with a milk production for the last full calendar month of 1,238.2 pounds and for the last day on test of 41 pounds of milk. The average butter fat test for the year was 4.19 per cent fat.

WRITING "MOVIES"

(Continued from Page 15)

where I might obtain reliable information on the subject, if it is not to be had from this company, and whether you would advise me to put $160 into their course. I will be very thankful for any information you can give me. I like your paper very much and am enclosing $1 for a two year renewal subscription.

WE understand the Palmer school is the best of its kind, but to us that statement does not mean a thing. If, as we have said before they will send out their course and let the student pay for it out of his earnings, we are for them. We have seen letters from these schools which would make the recipient believe that he or she had all the earmarks of a star and yet the letter was printed and probably went out to every one who replied, old or young, white, black or yellow.

Now, dear madam, you can secure from the Detroit Public Library good books on scenario writing without charge. After you have read these you can put your thoughts on paper and submit them to any of the legitimate producers of motion pictures, who are only too anxious to get the right kind of material, but I understand that they read five thousand scenarios to secure one which they keep, so unless you have unusual talent I certainly could not advise you to go into this work.

The best scheme is to write these people asking them if they have a satisfied student in Michigan and then go and talk with that party before you invest so large an amount of money. I have given you a frank answer because I believe you desire it.

Good Correspondence Schools

There are several correspondence schools of real merit in the United States and we do not wish any reader to get the idea from this page that we do not believe that a mail-course can be valuable. Several universities and colleges maintain correspondence schools in most subjects taught by them, but schools of this type do not make extravagant claims of earning power or promise Tom, Dick and Harry that they can, by a few evenings work at home master a profession which men and women only learn after a life-times work.

Milk is the best source of protein for little children and should be the chief item in their diet.

For You and for Your Family

This book has been carefully prepared for you and for your family. It presents our merchandise to you honestly. It brings to you and to your family all of the advantage, all of the saving made possible by our 52 years experience in securing bargains for you.

At Montgomery Ward & Co. we believe that we owe a duty to our customers—a duty to you. We believe it is our duty to offer only reliable goods of standard quality, and always at the lowest possible prices.

That is our duty to you—and that is the policy of Montgomery Ward & Co. today. And that policy has been conscientiously carried out in this catalogue—for you and for your family.

This Book Offers a Saving on Everything for the Home, the Farm and the Family

Are you *using* this book? Do you look through it every week to find the right price, *the lowest price* for everything you want to buy?

This Catalogue is now at work saving millions of dollars for the people of America. Are you getting your share of this saving?

This page is printed to remind you of your opportunity

You have a copy of this big complete Catalogue, or you can easily get one by writing to us. If in immediate need borrow your neighbor's Catalogue until yours comes. The opportunity for Saving is now *yours.*

Fifty million dollars' worth of new merchandise is ready for your selection. Fifty million dollars' worth of goods Manufactured and bought especially for this Catalogue, bought *when* prices were lowest, bought *where* prices were lowest—and paid for in ready cash to make our prices lower—to make *your savings larger.*

Over one hundred expert buyers have been working for you, at home and abroad, carefully choosing the best, skillfully buying at the lowest prices—and the fruit of all this work, the benefit of all this experience, the advantage of all this vast buying power and ready cash—*is now yours.*

Low Prices and Ward Quality Make Your Savings Double

A low price means nothing without *quality.* It takes quality—serviceability—*and low price* to make a bargain.

Ward quality stands for satisfaction in actual use. It stands for serviceability. It means the kind of goods that stand inspection and use.

We do not sell "cheap goods." We sell good goods. Our prices are low—but they are not price baits. We never sacrifice quality—serviceability—to make a low price.

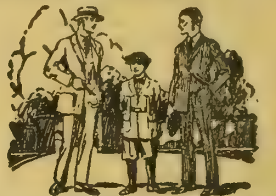
Look Through this Catalogue Again

You buy something every week. This book, therefore, offers you a *saving every week.* Before you buy, look through your Catalogue—compare prices. Remember our Guarantee of Quality. Remember our Guarantee of Satisfaction—"Your money back if anything does not please you."

Use your Catalogue. Study every department of this book. There is a saving for you in everything you wear and use. There is a saving for you on everything for the Home, the Farm and the Family.

FOR WOMEN AND MISSES: New York is the home of Fashion. Therefore, Ward's Fashion Experts live in New York to select all of the best styles for you. And when you buy your clothes at Ward's you get the newest, most beautiful styles without paying the usual "Fashion Profits."

HOME FURNISHING: It is a delightful task to select from Ward's Catalogue. Experts on beautifying the home, artists in the selection of furnishings choose everything for this big Catalogue. And the saving you make enables you to buy many more things than you expect.



FOR MEN AND BOYS: This Catalogue will interest you for hours if you will study the hundreds of articles for men, young men and boys. Everything you wear, or like, or use, from suits to sporting goods, from a knife to all kinds of tools are offered, always at a saving.

FOR THE HOUSE: Roofing, fencing, poultry supplies, plumbing, electric lighting, furnaces, stoves, and the most wonderful bargains in furniture, yes, even to doors and mill work and the house itself. All can be bought at Ward's with certain satisfaction and at a big saving.

FOR THE AUTOMOBILE: Riverside Oversize Cord Tires, guaranteed for 10,000 miles and lasting longer than that, will save you one-third. Why pay more? The same saving is offered on tubes, batteries, radiators—everything for the automobile of standard make and quality, and with a big saving for you.

FOR THE FARM: For Fifty -one years we have studied the farmer's needs. For fifty-one years we have been friends with the American farmer. We have experts in every branch of farm work to study what lasts longest, what gives the best satisfaction in actual use. Quality first for the Farmer is our policy, but always we offer a saving.

24-Hour Service

We have perfected our service for you. After much study and testing new systems and employing experts we have perfected a system that makes certain your orders will be shipped promptly.

Our records prove that during the past year most of our orders were shipped in 24 hours—nearly all of our orders within 48 hours.

Servant of the Millions

FOUNDED on the principle that a business earns the right to exist only as it serves, the Ford organization has grown to be more than a business.

It is an institution that serves the millions.

Ford service through 33,912 stations in America reaches out to every one of the Ford Cars, Ford Trucks and Fordson Tractors on every street, highway and farm the length and breadth of the land.

The nearest service to every farm is Ford service—a very good reason for standardizing on Ford equipment.

What About the Proposed State Income Tax?

Farm Organizations Endorse Proposed Income Tax for Michigan Believing It will Help Remove Burden From Shoulders of Overtaxed Farmer

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

IN this and the previous article of this series by Mr. Powell some definite facts and figures have been presented which challenge the attention of every thinking citizen of Michigan.

The rapid increase in the tax burden and the fact that this increase in taxation has greatly exceeded the increase in the valuation of property owned for taxes in Michigan have been pointed out. A rapidly advancing rate of taxation has been the inevitable result.

It has been shown that the burden on the general property of the state has become too great to be borne and that consequently there is a constantly increasing proportion of the total tax being returned each year.

It is also regarded as very significant that despite this rapid and unbearable increase in general property tax, the bonded indebtedness of the State and its local units has been continually mounting, increasing 830 per cent in the ten years from 1911 to 1921.

A personal income tax to largely or entirely replace the general property tax for state purposes has been advanced as a logical step in the solution of these perplexing problems. It has been shown that the revenue to be raised by the proposed amendment outlined in this article, if properly administered, should be entirely adequate, supplemented by existing and contemplated specific taxes, to take care of the financial needs of the state.

It has also been pointed out how the enactment of the proposed measure might logically be expected to result in economy in local appropriations and expenditures without encouraging extravagence in state expenditures and appropriations. But best of all it would be a big step toward equalizing the tax burden in Michigan. Watch for the article on the gas tax. It will be the next or third article of the series.

ADAM Smith, the great economist, in his classic work, "The Wealth of Nations" lays down the following as one of the fundamental principles of equitable and sound taxation:

"The subjects of every state ought to contribute toward the support of the government as nearly as possible in proportion to their respective abilities."

Mr. Smith evidently realizes that even though we practice the utmost governmental economy, we shall still be confronted with the necessity of raising large amounts to provide funds for all the various activities which people are today demanding of government. But the significant feature of this principle which he lays down is that the issue of first importance is to secure a fair distribution of the tax burden.

As pointed out in the first article in this series, our present system of taxation in Michigan is not securing any such desirable condition. The general property tax as applied today in our state is so hopelessly outgrown that real estate, which constitutes but 35 per cent of the total wealth of Michigan, is paying 80 per cent of the total taxes, while the other 65 per cent of our wealth escapes with but 20 per cent of the tax load. This situation is obviously unfair.

Taxes and Citizenship

Citizens of a republic should expect to pay directly toward the support of their government. It is a duty which is an important part of their obligation as citizens. As Professor Seligman of Columbia University has so well said, "Taxation should be regarded as a contribution cheerfully rendered by those who are alive to the sense of collective responsibility implicit in the very conception of democracy." And this leads us to remark in passing that this is certainly a noble sentiment, but unless taxation is fairly and equitably levied in such a way as to secure a just distribution of the tax burden how can we regard our present oppressive general property tax as a contribution cheerfully rendered by us as loyal citizens?

It seems quite evident that the purpose of taxation should not be either to punish or benefit any particular class or individual, but to provide revenue for the conduct of our various governmental units and activities. When a situation develops such that any one class of our citizenship is paying a disproportionate share of the load it is high time that a reform should be substituted to bring our method of taxation up to date and make it meet present conditions with a reasonable degree of justice.

Antiquated Tax System

Year by year the cost of government increases but we have failed to put into effect new systems of raising the necessary revenue. The result is, as we all know, that today Michigan real estate is laboring under an excessive burden of general property tax. This condition is not confined to Michigan alone for statistics reveal that the taxes which the farmers in United States paid in 1922 amounted to a larger sum of money than the total net income of the farms of the United States for that year. Both theory and history reveal that this is indeed a very undesirable and unfortunate condition.

The power to tax carries with it the power to destroy. When taxes become confiscatory and the citizen loses his property through inability to pay his taxes he can hardly be blamed for becoming radical. The experience in Russia illustrates that. Our farmers are the most conservative class of our citizens, but there is a limit to even their patience and there are those who fear that Michigan farmers may develop Red tendencies unless some immediate and substantial relief is secured.

One of the most aggravating features of the situation is that it is as unnecessary as it is undesirable. Under a fair distribution of the burden in Michigan, there would be no necessity for so much misery and distress as results under the present system. Because of its recent industrial development, Michigan is today one of the richest and most prosperous states in the union. Figures just released by the federal Department of Commerce show that Michigan's wealth more than doubled in the ten year period from Dec. 31, 1912 to Dec. 31, 1922, increasing from $5,233,760,000 to $11,340,150,000. This was a growth of 116.7 per cent. During this period the per capita wealth increased from $1,806 in 1912 to $2,883 in 1922, or 59.6 per cent. The big trouble today is that much of this new wealth is not on the tax rolls or helping in any way to bear its fair proportionate share of the burden.

What Is the Remedy?

Various remedies have been advocated to meet the undesirable tax situation which has developed in Michigan during the past decade. The remedy which appears to be the most logical and to meet with the greatest amount of popular favor is the suggestion for a state income tax, which should be so devised that it will raise enough revenue so that taken with the present specific taxes it will be ample for all of the needs of the state and thus entirely replace the general property tax for state purposes.

Michigan farm organizations have been outspoken in their endorsement of this idea. Just now they are all cooperating to secure the necessary signature to an initatory petition so that a constitutional amendment providing for a state income tax will be placed upon the ballot at the regular fall election in 1924.

Under the terms of the proposed tax, the first $4,000 from every income will be exempt from this form of taxation. This is not because of any desire to secure class legislation, but is prompted by the feeling that the little fellows are already paying far more than their share.

To Give Real Relief

The petition definitely provides that all funds raised by the proposed tax would be deducted from the amount which would otherwise be raised by the general property tax for state purposes. The balance, if any, would constitute the state tax. This gives definite assurance that this will not be merely a new means of providing added revenue for state officials to spend, but that it will afford real, genuine taxation relief to overburdened real estate.

If sufficient signatures are secured, the proposed amendment will be placed on the ballot at the regular fall election in 1924. In brief, its provision will be as follows:

1. $4,000 of all incomes shall be exempt.
2. Incomes from $4,000 to $20,000 shall be taxed 5 per cent.
3. Incomes from $20,000 to $40,000 shall be taxed 6 per cent.
4. Incomes from $40,000 to $60,000 shall be taxed 7 per cent.
5. Incomes from $60,000 to $80,000 shall be taxed 8 per cent.
6. Incomes from $80,000 to $100,000 shall be taxed 9 per cent.
7. Incomes above $100,000 shall be taxed 10 per cent.

All funds derived from this proposed tax shall be turned into the general fund of the state and shall be used in defraying general expense and bonded indebtedness and interest.

Who Would Benefit?

It might be interesting to note how the relief from general property taxation proposed by this constitutional amendment would be divided among Michigan tax payers. In 1921 the general property tax for state purposes was borne by the various classes of our citizenship as follows:

Corporations of State paid	$5,625,000
Other City Property paid	7,275,000
Villages of State paid	1,550,000
Townships Outside Villages paid	6,000,000
TOTAL	$20,450,000

These amounts, therefore, represent the division of the relief which would be afforded by a state income tax law to replace a general property tax for state purposes.

Thus it is plain to see that the proposed constitutional amendment would shift the big burden of state support from the property owners who are already overtaxed to thousands of individuals who, while probably owning little or no taxable property, still have healthy incomes and might well help support the state whose protection they enjoy. This is not a measure to benefit any one class of people, but to shift the burden of supporting the state government from the field of tangible property to another basis, that of net personal incomes.

There are thousands of professional men, physicians, dentists, lawyers, teachers, and salesmen whose personal income, and bondholders, mortgage holders, etc., whose net intangible property income (and their ability to pay taxes) has no relation whatever to the amount of land, real estate or assessed personal property which they possess. Inasmuch as there are many millions and probably billions of dollars of property in Michigan which yields a very good income paying no tax today, or at least none of any consequence, shouldn't such property bear a reasonable portion of this burden?

The proposed tax seems well adapted to distributing the state tax burden automatically in proportion to the individual's ability to pay.

Collection Easy and Cheap

The idea of a state income tax is neither new nor radical and visionary. Fourteen other states already have similar laws in successful operation. Experience in these states shows that the percentage of collection is high and the cost of collection is low. New York not only has a personal income tax and a corporation income tax, but has a corporation license fee as well. Through these three taxes they raised $86,711,000 in 1922 and collected it at a cost of but 1.2 percent. Massachusetts has a state income tax which applies only to interest earnings, yet under this system they collected $17,000,000 at a cost of 2½ per cent. These illustrations might be multiplied by quoting from the experience of the dozen other states which have state income tax laws.

Perhaps the ease of collecting an income tax is due to fact that it never hits a person who is not able to pay. It is automatic. If misfortune of any nature afflicts an individual, his tax is under the income tax system immediately drops off. If sudden prosperity comes along, the income tax automatically takes advantage of this increased tax-paying ability. This quality of flexibility is wholly lacking in the present general property tax. It is relentless in its action and annually takes its toll from the defenseless holder of real estate, regardless of whether or not that property has produced a profit or a loss during the year.

Can It Be Passed On?

No matter how cunningly devised any system of taxation may be, it is always human nature to attempt to pass it on and make the ultimate consumer pay. This is quite possible with most forms of taxation, but extremely difficult under the personal income tax, such as is being proposed for Michigan. It is paid out of net incomes after the year's business has been finished and the books closed. There is no way to get around it. Nor do we fear that the proposed moderate

Barley for Michigan

Experiments Prove Beardless Variety Does Not Yield Well in this State

By FRANK A. SPRAGG

Assistant Professor of Farm Crops, M. A. C.

This is a view of the spring barley varietal series at the Michigan Experiment Station. It will illustrate how a farmer can plant varieties side by side in order to compare his old variety with others in his soil and under the same conditions.

WE have in these pages quite recently considered the improvement of the oat crop and the influence of the farm and the farmer in this great problem. The problem in the case of barley is just the same as in the case of oats. Success or failure depends upon the farm, the location, and the farmer as much as it does upon the variety. All that an improved variety can do is to produce more grain or better quality than other varieties under the same conditions and at the same expense. There are two ways of reducing cost of production, and one of them certainly is to produce more at the same expense. This can be done by means of an improved variety.

You farmers are interested in feed. That is usually the reason why you grow either oats or barley. The choice between these two crops depends, partly if not largely, upon the needs of the live stock on the farm. The farmer's experience must be relied upon to decide this point. Some prefer oats for their class of stock.

But, a great many farmers would grow the crop that yields them the most feed per acre. This is not necessarily the greatest number of bushels of grain per acre. A bushel of oats is 32 pounds, while a bushel of barley is 48 pounds of feed. The chances are that a pound of one has as much feed value as a pound of the other. If there is any difference, we may agree that a pound of barley is more nutritious than a pound of oats, at least to feed hogs. For horses, no doubt we would prefer oats. Suppose we say that a pound of oats is equal in food value to a pound of barley, that we may have a basis for comparison. Then a bushel of barley is worth one and a half times as much as a bushel of oats, or fifty bushels of barley is as good as seventy-five bushels of oats. Some of you are not able to raise as much barley as that, but could raise more oats. In that case, unless you must have the barley, you had better raise the oats, but be sure that it is a good producing variety. Others find by experience that their farm will produce more pounds of feed from barley. Well then, grow barley but a good variety of barley.

Some people object to barley because it has beards, and the hired man will not handle it. Some object to the barley because it is hard on the sheep's mouths and sticks in the wool. In these cases, it is not the beards but the barbs that make trouble. Those of you who have had barley beards down your neck, know what I am talking about. The beard that gets started, big end first, keeps on going. This is because the sides of the beard have little teeth, known as barbs.

Be careful to make this distinction between barbs and beards. There is no use trying to grow a beardless variety of barley under Michigan conditions. It will produce only about half as many bushels of barley to the acre. This has been tried out again and again at M. A. C. There is no use for you to try an experiment of this kind. Barley must have beards. All barleys will be barbless as soon as the breeding work can produce white high yielding barbless varieties, and they can be distributed long enough to become known. This process is on the way, but remains for the future.

The Michigan Crop Improvement Association has a variety of barley known as the Michigan Black Barbless. This came from an individual plant of this kind that I selected in 1913. The progeny of the plant after being increased was tested out in comparison with several progenies of the same kind and it was selected as the best one for distribution in 1918. This is not quite as good a yielder as certain old fashioned barbed sorts, but many farmers have preferred it because it is smooth. These beards are no more disagreeable to handle than the straw. They are perfectly smooth, so that you can rub one of them back and forth on your cheek without harm or discomfort.

This picture was taken in the spring of 1912. These two winter barleys grew in a wheat varietal series. Just note how the wheats were killed out on either side. The winter of 1911-12 was exceptionally hard. The plat to the left showing a full stand is the variety that has since been known as the Michigan Winter. It came from a single seed planted in the fall of 1909.

Mr. Maystead, a farmer in Hillsdale County who got some of this barley, the first year that it was distributed, tells his experience at harvest time. The barley had been cut and rained upon before it was shocked. His hired man had left him and a neighbor who was passing, caught him carrying two bundles of barley under each arm as he gathered it to be shocked. So the neighbor said: "Say, Maystead, I always thought you were crazy. Now I know you are." Maystead stopped work and told his neighbor to hop over the fence and see that no harm could come from so handling that barley. The neighbor did so and was convinced. And at threshing time the whole neighborhood knew that a new barley had come to town.

The Wisconsin Experiment Station has produced a good barley that is known in Michigan as the Wisconsin Pedigree. The Michigan Crop Improvement Association also has a supply of this barley that has been kept pure, and is available to people who wish to take advantage of the greater production that can be obtained from improved varieties.

Now, some one will be interested in a joke. We take it as such. It illustrates personal preferences among farmers. In 1918 when the Michigan Black Barbless was distributed, a white two-rowed barley known as the Michigan-2-Row was also distributed. This Michigan-2-Row had averaged from 20% to 25% more bushels per acre than the Wisconsin Pedigree on the plats at M. A. C. They are both barbed barleys and therefor alike on that point.

Take Care of That Female Calf Today and She Will Repay You Tomorrow

By O. E. REED

Professor of Dairy Husbandry, Michigan Agricultural College

THE future milking herd on any farm will be just as good or just as poor as the female offspring happens to be Every farmer or dairyman hopes that the future generation of his herd or flock will be an improvement over his present holdings If one is to realize on his expectations he must first of all see to it that all chances for failure are eliminated as far as is possible. This means that the present herd must be inventoried and all poor producers "weeded out by keeping records on each individual. The next step is to see to it that the sire of the future calves is a pure bred sire and comes from a high producing family. Without taking these precautions there is chance of failure.

Next to good breeding comes good feeding. Many well bred animals fall short of their owners' expectations simply because they are not properly fed and fail to make the maximum growth and development. The time to begin feeding for development of good calves is before they are born. We are told that 95 per cent of the power of growth is expended at the time the calf is born. It is apparent that everything should be done to insure the normal development of the calf during this period. To begin with, the mother should be well fed at all times and the ration should be a complete one, furnishing every element needed for growth. The cow should be given a rest before she calves in order to build up her own body and properly nourish the calf in embryo. Many cows either "go dry" or are turned dry before freshening but are not fed sufficiently during this period. The average man figures that she doesn't require much and consequently turns her on a poor pasture and in many cases turns her to a stalk field in the winter to shift for herself. This method of treatment is the cause of many calves being born prematurely, or if carried full time they are in an extremely weakened condition when born. The ration at this time for the cow should consist first of all of an abundance of good pasture in summer, pasture with plenty of legumes, and alfalfa, clover or other legume hay in the winter. In the growth and development of the foetus a considerable amount of mineral matter is required to build the frame work. The legume hays contain an abundance of this material, but some of the common feeds, such as timothy hay, straw, etc., are very deficient. While these latter feeds are deficient in minerals it does not mean that the foetus will not develop to maturity, because the mother will draw the nutrients from her own body to make up the required amount absolutely necessary. However, if her own system is run down a weak offspring will be the result.

When the calf is born it should by all means receive the first milk of its mother. Some follow the practice of allowing the calf to remain with the mother for several days. There are some advantages in this system, the principal one being that the calf is sure to get the first milk and if the cow's udder is much swollen the massaging it gets from the nursing calf will be quite beneficial. However, there are some dangers. The calf may get too much milk and on the other hand, if the calf is a strong lusty calf and the milk secretion has not fully begun the calf will milk the udder dry and it is a common opinion that milk fever is likely to result if all the milk is taken from the udder at any time during the first two or three days.

A better system is to take the calf away from the mother immediately after it is born, at least before it has had time to nurse its mother. It will be much easier to teach the calf to drink from a pail when this system is followed. The conventional system of teaching the calf to drink is to get its head between your legs and then dip the fore finger into the pail of milk and let the calf suck the finger and gradually lower your hand into the pail of milk. Under ordinary circumstances, provided the calf is fully developed in a mental capacity, he will begin to drink at once or at least after a few such lessons. However, there is danger of the attendant being upset and both calf and pail of milk heaped upon him.

The milk of the mother is often too rich in butterfat and this may cause the calf to scour. If this condition prevails, the milk should be diluted with skimmilk or after the first few days the milk from a low testing cow can be fed with good results.

The quantity of milk to feed the calf at this time is very important. Under natural conditions the calf gets its milk often and in small quantities, and the more closely Nature is imitated in this case, as well as practically all others, the greater the success in calf raising. The average sized calf should receive about eight pounds of milk at first, large calves, such as Holstein calves, should have ten pounds or more. If calves are fed three times or more per day these amounts can be increased with good results.

The best guide as to the amount of milk to feed is the calf's appetite. It should be fed sufficiently, but never overfed, and it is a good practice to always keep the calf a little hungry. The last milk from the pail should be taken with as much relish as the first taste.

Changing to Skim Milk

It has been demonstrated many times that calves can be raised just as successfully on skim milk after they are well started as they can on whole milk. The time to change the calf from whole milk to skim milk will depend largely upon the development of the calf. If the calf is strong, and well developed, it may be changed to skim milk at

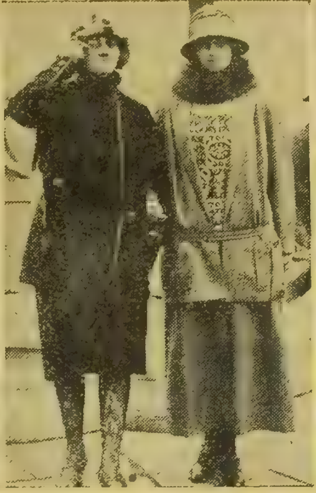
PICTURES FROM FAR AND NEAR

MARY PICKFORD AND DOUGLASS FAIRBANKS.—This famous couple of "movieland" recently arrived in New York City from California and as usual the newspaper men and the camera men were there to greet them. Both Mary and "Doug" were willing to pose for the camera men.



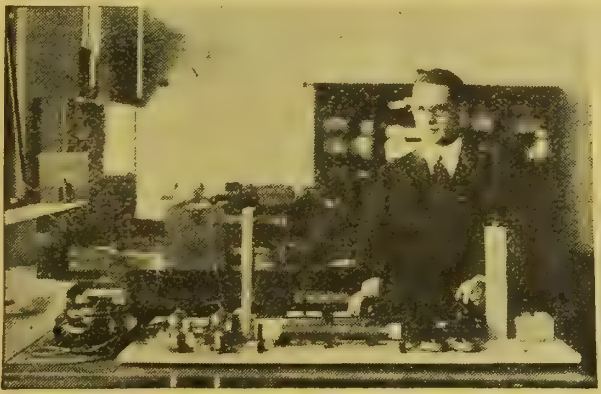
WELCOME, MISS 1924.—The latest style from London is the short skirt. Miss 1923 is on the right and Miss 1924 on the left.

U. S. MINISTER FOR POLAND LEAVES FOR POST.—Mr. and Mrs. Hugh S. Gibson, who left New York City on the SS President Roosevelt, for the Continent. Mr. Gibson is the newly appointed American Ambassador to Poland, and is going over to take up his new duties.

NOVELIST AT SIXTEEN.—Miss Mollie Panter-Downes, of Brighton, England, although only 16 years old, wrote "The Shoreless Sea" a novel that has won the approval of all English critics. The book is very popular.

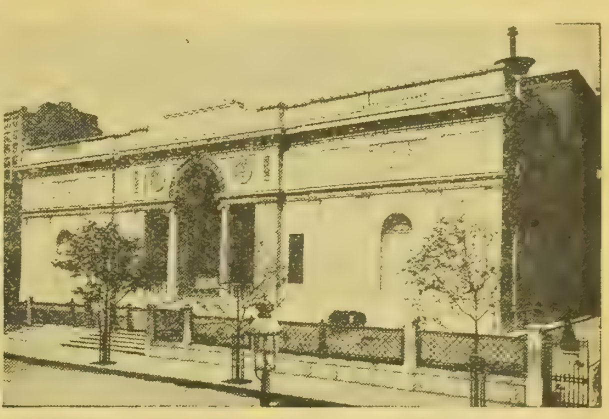
NEW CALENDAR TO RUN TILL YEAR 17600.—Prof. Chas. F. Marvin, chief of the U. S. Weather Bureau, Washington, D. C. has made up a calendar of his own. It has 13 months to the year and four weeks to each month, the first day each month coming on Sunday. An extra day each year would be a national holiday. Prof. Marvin says the calendar would run till 17,600.

TEN-YEAR-OLD POETESS.—Little Miss Nathalie Crane of Brooklyn, N. Y. has astounded the hardened verse writers with her technique and rythmic form of writing poems, Her poems are featured daily by large publications and she is winning a large audience.



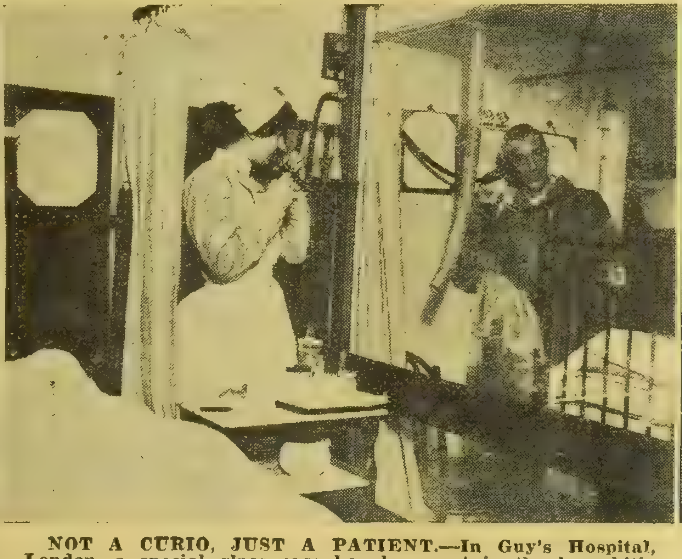
VISION BY USE OF RADIO.—Prof. Arthur C. Hardy, of the Massachusetts Institute of Technology, Boston, Mass. predicts that movies will soon be sent by radio. He is seen with a small working example of what the future machine will be based on. What next, we ask.

SUNKIST GIRL TO ENTER MUSICAL COMEDY.—Violet Oliver, California "Sunkist" girl, who made a tour of the world as a beauty contest winner, is going into musical comedy.

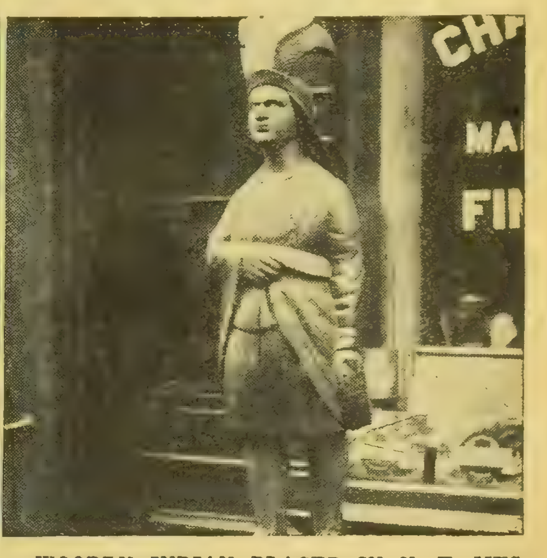


MORGAN GIVES LIBRARY TO PUBLIC.—J. P. Morgan, internationally known American financier, has given a library to the public as a memorial to his father, the late John Pierpont Morgan. The library is valued at $8,500,000 and contains over 25,000 books.

THE NEW JAPANESE CABINET.—This photo of the new Japanese cabinet was taken at the Premier's office on the day the appointments were made. The Premier, Viscount Kiiyoura, is standing in the front row, second from the left.



NOT A CURIO, JUST A PATIENT.—In Guy's Hospital, London, a special glass case has been put in the bronchitis ward for the treatment of that type patient. The glass case is air tight, and the patient lives inside, where he breathes double the amount of oxygen found in the normal atmosphere. The oxygen is forced into the case.



WOODEN INDIAN PLACED IN N. Y. MUSEUM.—This wooden Indian stood in front of a New York cigar store for 25 years, but recently the Museum of New York City asked for it saying it was an example of real primitive American art, so it now reposes in the Museum.

(Copyright, Keystone View Co.)

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

COUNTY UP TO ROAD COMMISSIONERS

I am writing you to find out what right the county road commissioners have to accept a Covert Act road petition for a strip of unimproved road. Sent engineering department out upon it for two or three days, then said that they would not go any farther with the work. Now this is practically a level piece of road. It has not a creek or hill in the seven and ¾ miles. Last summer the road commissioners let or took bids for a Covert Act road in the county with a later number than this one. Every owner who lived upon or in the vicinity of the land adjoining the road signed the petition. Also better than one-half of the road is a R. F. D. route.—M. E. B., Flushing, Mich.

—I beg to refer you to Section 7 of said Act which provides that,

"Upon the filing of the petition the Board of County Road Commissioners shall proceed to examine the highway proposed to be improved and if they deem the proposed improvement necessary shall cause a survey thereof, and specifications to be made."

Section 3 of said Act provides that, "After the survey, plans and specifications and estimates of cost have been filed, the Board of County Road Commissioners shall, if they are of the opinion that the proposed improvement is not necessary for the benefit of the public welfare and convenience, make an order of determination." If the Board of County Road Commissioners do not deem the proposed highway necessary they need not cause any survey thereof to be made and if, after the survey has been made they determine that the proposed improvement is not necessary they need not continue the improvement.—H. Victor Spike, Asst. Attorney General.

MUST SUPPORT CHILDREN

Could you advise me as to what support a man would have to give his six small children, the oldest twelve, if he and his wife separated? Thanking you in advance, I am—A Subscriber, Old Mission, Mich.

—The amount the husband would be required to contribute toward the suport of his children would depend upon the condition and situation of the parties; the conduct and ability of the husband and the amount of property owned by the wife. In the event of divorce, these conditions would be taken into consideration by the judge. A reasonably accurate estimate would be the amount which would likely be required, under the circumstances, to provide a sufficient and proper support of the children.—Asst. Legal Editor.

NO LAW FORBIDDING SALE OF REMEDY

I am writing to ask if their is a law forbidding a person from selling mite and lice destroyer of all kinds vermin for hens and chickens in their drinking water or feed. I make this remedy myself. Have given it to my large flock with extra results, and would like to know if there is a law forbidding a person selling it. Just what I should have to do to be able to put this remedy out on the market?—Mrs. E. S. L., Clio, Mich.

—There is no state law forbidding the sale of such a remedy. If it contains anything poisonous, that must be indicated on the container.—Asst. Legal Editor.

COMPULSORY EDUCATION

What age does a child have to be or what grade does he need to have completed before he can be kept out of school?—Reader, Saginaw, Mich.

—The law provides that every child between seven and sixteen years of age shall attend school continuously and consecutively. A pupil who has completed the eighth grade and who is under sixteen years of age may be excused by the superintendent of schools in city districts, and by the county commissioner of schools in all other districts of the county if services of such child are essential to his support or the support of his parents. The superintendent or the commissioner as the case may be, is the judge as to whether this support is essential.

In a school district where there are not more than eight grades taught, a child may stay out of school after completing the eighth grade because there is no law to provide for the education of the child outside of his own district by compelling him to attend high school.—W. L. Coffey, Deputy Superintendent of Public Instruction.

MUST PAY FOR CAR

I bought a Ford car for $250.00 on contract. I paid $75.00 down, and I owe for the balance. Now as I cannot pay the balance I told them to come and get the car, which they refuse to do. Now have they got to take the car back? Or is there any way they can come on to me and make me pay for it? They hold my note for $175.00. I would like to know if they have to come and get the car, as I cannot pay for it, or can they make me pay for it.—F. H., LeRoy, Mich.

—When you purchased the car you entered into a contract with the company which both the company and you are bound to perform. In order to fulfill your part of the contract, you would have to pay the full amount of the purchase price and could not compel the company to accept the return of the car.—Asst. Legal Editor.

STANDARD RULE FOR SCALING LOGS

Please give me a standard scale for scaling logs. Thank you.—R. W. C., Ithaca, Mich.

—The Doyle rule gives too low a content for small logs and too high a content for big logs. The Scribner rule on the other hand is fairly close on small logs but gives too low a volume for large logs. The two rules coincide for logs 28 inches in diameter. Some buyers of logs take advantage of this and use a combined Doyle-Scribner in which the Doyle is used up to 28 inches and the Scribner is used for logs 28 inches and over.

The Doyle rule is the legal rule for Arkansas, Florida, Mississippi and Louisiana and is a standard for hardwoods in many parts of the Ohio Valley and for the yellow pine in the South. It's inaccuracy has resulted in the loss of millions of dollars to the growers of timber (and a corresponding gain to those who are buying timber) but the rule continues to be nevertheless widely used. The Scribner rule together with its modifications, the Scribner decimal C. is the legal rule for Minnesota, Wisconsin, West Virginia, Oregon, Idaho and Nevada and for the United States Forest Service and the Canadian Forest Service.

A check on forty-six firms in Michigan buying timber, which was made by the Forestry Department of the Michigan Agricultural College, shows that fifty-nine per cent of them are using the Doyle rule, thirteen per cent the Scribner and 28 per cent the Doyle-Scribner.—John C. DeCamp, Assistant Professor, Dept. of Forestry, M. A. C.

HER MARRIAGE WOULD NOT CHANGE CHILDREN'S NAME

I would like to have you answer a question or two for me. If a widow marries a second time and she has children by her first marriage can the children change their name along with their mother without any legal proceedings. What would the boy have to do to change his name if after two years he still has his father's name and he finds a name he wants more than his step-father's?—W. P., Fennville, Mich.

—The widow's children by her first husband would retain the name of their father until they had it changed by marriage or legal proceedings in the probate court. To have name changed, file petition with the local probate judge.—Asst. Legal Editor.

MAY SELECT MAIL CARRIER HE PREFERS

A farmer lives on a federal highway and for a short distance two rural mail routes cross on this road. We will designate the farmer's regular address route as "A" and the other route "B." On "B's" route there are several very convenient stores such as a grocery, hardware and garage to which the farmer can telephone order for commodities sent to him parcel post. Now, one carrier claims that the farmer has absolutely no right whatever to avail himself of the convenience of route "B." The farmer claims the rural routes are at the disposal of anyone who can use them for mail service. Who is right?—E. K., Brooklyn, Mich.

—Section 790 of the Postal Laws and Regulations provides that a patron residing on a road traveled by two or more rural carriers may select the carrier by whom he prefers to have his mail delivered and collected, in which case only the designated carrier shall handle his mail.

Unless such selection is made by the patron each carrier passing the box shall deliver mail into it and collect therefrom any mail which can be expedited in dispatch or delivery.—H. H. Billany, Fourth Assistant Postmaster General, Washington, D. C.

SNOW BLOCKS ROAD

Do parents have to break roads for two miles to school, or does the township have to, or do children have to walk two miles in snow two feet deep?—J. B., Eaton County, Mich.

—The compulsory education law provides that children under nine years of age and who live two and one-half miles from school, cannot be compelled to attend school. Aside from this one provision in the law, a child can be compelled to attend school. It is the duty of the parent to get his child to school. The compulsory education law says nothing relative to condition of roads.—W. L. Coffey, Deputy Superintendent of Public Instruction.

DANCING IN SCHOOL

We have a mothers' and teachers' club here, and at the last meeting one of the public schools here sent a letter to our school here asking them to have a dancing committee club. The letter was read before the club and the president asked that all mothers that rather have their girl dance come to school one evening in a week with their friends in the evening and have them well chaperoned by one of the club and their son, no movement. Then she said "I wish that some mother would speak up and say what she thought of it," and one mother got up and said that she for one was against dancing in the public schools. And then it was put to a vote, those mothers who wished to have the dance and have it well chaperoned to stand. Then she made the statement: "Don't be afraid to keep your seats because one was against it." Then she put it to a vote for those to stand that was against it. But, did not use her influence to urge them to stand. The majority was for the dance and I would like to know if any organization or school board has any right to organize a dancing class in the public school?—Mrs. C. A., Pontiac, Mich.

—There is nothing in the law that prohibits dancing if the school authorities deem it the proper thing to do. It appears from the letter, that in the particular place where this dancing is to be carried out in the schools, the proper provision is made for the supervision of the young people who are given the privilege of dancing in the school building.

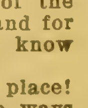
Many school authorities take the position that the school building exists for more than simply school instruction; that it should be used for social control and social betterment, and that it is much better that young people have the opportunity to dance at the school building when provision has been made for such and where there can be proper discipline than to dance in public auditoriums without this discipline.—W. L. Coffey, Deputy Superintendent of Public Instruction.

WHO IS LIABLE?

A gives B a note with signer in 1915. The interest was kept up until the year of 1918, since which time no interest has been paid. The signer not being notified note was not paid. Is note collectable and is signer holding?—C. M., Shepherd, Mich.

—The indorser on a note would not be liable unless given notice of its non-payment, except where notice is waved. The maker would not be liable after 6 years from the due date, this being the time limited by the statute of limitations.—Asst. Legal Editor.

Uncle Rube Spinach Says:



TRAVELED SOME-WHAT

GOOD folks I've been on quite a jaunt since I wrote you last. Seems like I've been purty nigh to the bottom of the world. You wouldn't scars'ly believe it but I've been clear way down in Florida. Don't seem hardly pos'ible does it? An' goin' down there, mostly in the night as I might say, I see some of the strangest sights. I took a sleepin' car from Chicago, if you know where it is—its on the Grand Trunk & Michigan Central railroads. An' so of course I got into Chicago. Its quite a big town by looks of things from the depot. See nothin' but Chicago. Guess it costs a lot of money to live there when a shoe shiner charges 10 cents fer a shine an' 25 cents for a tip. You know a tip is what most of our congressmen is lookin' fer when they git to Washington. But don't ever think one of 'em is lookin' fer 25 cents. Why you know lots of our servants down there would stick their nose up at. well at any thing less'n ten or twenty thousand dollars. An' some of 'em would think that small pay for their great ability.

Well down here in Florida I meet all kinds of folks. White, from the north, black or colored, real denizens—I guess they're that, anyway they seem to live thou a little colored I might say but not painted as lots of our Northern folks seen to be. No matter, we're white or black as painted—God never put no painted onto nothin' he ever made—but we see 'em painted down there jest as we see 'em up here.

As I wuz sayin' its a great place down there—you can wash off you feet an' any thing an' it don't cost a single cent 'cause you know you can wash your feet, if you're careful 'thout a bathing suit on to you otherwise not.

An' then its so kinda nice an' warm down there—Why even when its cold, its nice an' warm 'cause of what you see an' you can wade out into the water kinda salty it is, an pick up shells of most every kind guess mebbe they git tired of the sea, and ocean, an' come to land for rest an 'reclermation, if you know what I mean.

Oh, Florida is a great place! Back in the cenetery a little ways lives the nicest an' biggest snakes I've ever seen an' alligaters—Allegators 'at you leve at first sight. They have such an open countenance an' look so friendly. An' seminole indians—you don't hardly ever see anw of 'em but you know they're there. They don't look so friendly as the alligators quite, an' yet they ain't to bad if you dont rite 'em up.

There's lots of things I could say 'bout Florida but as the feller sed—the less the better, meanin' not to talk to much. 'Course you'll want to know 'bout the women down there an' I'll tell you. The Women are mostly females—dress in their rooms an' undress on the bathing beaches. They live on ice cream, lipsticks and powder puffs. They seem happy an' contented jest lazy as some poor fish can keep 'em goin'—when one's gone they bait their hook fer 'nother an' the supply seems to meet the demand—lots of fish and lots of beit an' that's 'bout all I know 'bout Florida. Cordially yours UNCLE RUBE.

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

GRAFTING money from unwary folks is one of the easiest ways to make a living—while it lasts. This is the testimony of Pete Dexter, who, in "Forty Years of Faking," tells the story of his life. The grafter may get caught in the end, but in the meantime he is taking hard-earned money away from people who need it.

Dexter, in his story, gives a pretty complete record of devices for corralling easy money. What he didn't learn from more experienced fakers, he invented on his own hook. His story, according to our Service Bureau Editor, isn't overdrawn. There are records in the Service Bureau files of grafting schemes just as raw as anything Pete ever pulled.

"Forty Years of Faking" will run in the next six issues of THE BUSINESS FARMER. You will want to read every installment. Learn the grafter's tricks, and be ready to give the horse laugh to anyone who tries to put over the same stuff on you.

"GATHER up closer, boys. That's right; step right up here in front. These snakes are not going to hurt you. We have them under perfect control. Now, folks, before we begin our little show today, I want to tell you in just a few words some of the marvelous qualities of this famous Wizard Oil."

I decided this was worth listening to. Anyway, I wanted to see the ferocious reptiles which the man in buckskin suit had mentioned, and which kept wriggling around in the canvass bag he held on the top of the table before him.

"Folks," continued the speaker, "I hold here in my hand one bottle of my famous oil. This oil will penetrate—completely pass thru—the thickest of leather, instantly. Watch me closely. Here, son, hold this bag a moment.

"Wizard Oil," continued the speaker, "is a marvelous preparation. It is extracted at a great expense from the fat stored in the tails of these enormous reptiles of the desert, the diamond backed rattler. Indians long ago discovered the magic power of this oil and it was while I was scouting with General Phil Custer, just before the famous battle, that an old chief who had been captured, told me how to use it."

Meanwhile the speaker was preparing the famous demonstration which showed how the oil penetrated a piece of sole leather.

"Now, folks, just a drop of Wizard Oil on this thickest piece of leather. See it pass thru immediately. This oil will get thru any skin or leather just as quick. Makes it a wonder cure for rheumatism, sprains, aches or any ailment of man or beast. Folks, it's the best remedy that was ever put out. Absolutely cures many ailments. Not only is it a wonder cure, but a few drops rubbed on leather boots prevents water from soaking thru. A great preservative for leather and a fine oil for harness. Keeps that razor strop in shape, and there are thousands of other uses it may be put to.

"Now, folks, this marvelous oil is going to be sold today at a bargain. This oil, which generally brings much larger prices is offered to you today for the small price of one dollar a bottle. Money back if it does not do everything we claim it will. Now while our agents pass among the crowd" (which was pretty big by this time) "I am going to reach my hand into that bag the boy is holding and pull out Old Sitting Bull, the largest rattler in captivity. Boy hand the bag to me."

Well, I did that all right and stood by ready to leave in case the snakes jumped out of the bag. The speaker started to reach in for one of the snakes, meanwhile carefully watching the crowd. As he noticed that some of the onlookers were moving on, he began a story about the habits and life of a rattler. But he never did pull Old Siting Bull out of that bag.

A couple of times a snake's head came out, but the rattling part never showed up. It was not until later on in the day that I learned why. Sitting Bull was kept there because he was safe, being an absolutely harmless old bull snake.

But I stayed in hopes of seeing the mighty rattler. The agents, who had collected many dollars for the sale of Wizard Oil, returned and one of them began to do a few gymnastic stunts in front of the speaker. He was a dub as far as I could see, and my scorn of his ability soon made me utter a remark of, "That's nothing!"

Old Turner, that was the name of the boss, heard me, and said, "Well, son, are you able to beat that stuff?"

"Beat it!" says I, "Well, if I can't beat it, I will eat Old Sittin' Bull!"

"Folks," suddenly announced Old Turner to the crowd. "Here's a local boy who says he can beat our star acrobat. Beat a man who has been with a circus until he joined up with me this spring. Son, here's a five spot if you can show us some stuff. What do you say?"

Well, I was fussed, flabbergasted and the like, but that five spot represented a whole week's work on the farm of old man Dupray, so I throws off my hat and showed the gang some real tricks I started out by turning a few hand-springs to get limbered up. Did a few back somersaults and then walked on my hands and a lot of simple ones. I was a pretty good acrobat, and of course I got the money. The crowd was for me, and the old man handed over the cash.

That was the first time I ever helped with a fake deal, and was the real beginning of my long career in the game of chance.

Just after the old man handed me the cash, he stepped over and says to me, "Boy, we need you. What do you say to taking a job with us."

The deal that finally resulted amounted to nothing more or less than that I was to get $25 a month and keep, with a chance to travel, to go with Old Turner and his show. I was only 16 years old at the time, and had been farmed out by the folks in town who had raised me after Pa and Ma had died. Farmer Dupray, where I worked, was a tough old cuss and got me out too early mornings to suit me. Only the day before he had me carry a hive of bees into a shed, and when I fell down with them he was mad because I busted a good hive, and didn't care if I was stung a lot before I could retreat to safety. So I agreed to start that night. Didn't have any clothes worth while at the farm, and, besides, I thought it was safer if the folks didn't know which way I went.

That's how I got my start. Have worked at most every kind of a fake since then and have been in a lot of states. Have made a lot of money and lost most of it. Have had pretty good luck until a few years ago, when things started to break against me and I got taken up in an oil deal. Got a pardon, but luck was against me, and after a few more whirls I had to quit. So I finally reformed, and even tho the old desire to get started comes on frequently, I am managing to hold back. Long as I am settled down I decided to write this story, and if my rheumatism gives me a chance I will tell you how I made out in business life.

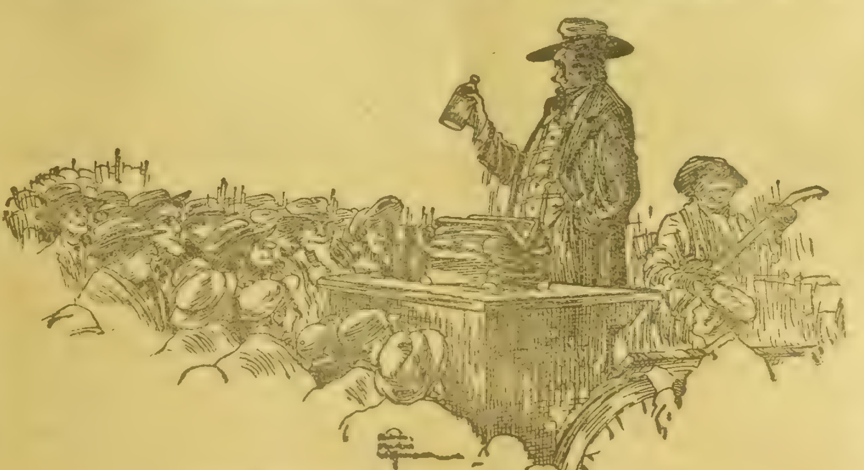
My name doesn't amount to much. Never had the same one two years running, so it ain't particular. But the first time I gave it was just after I joined up with Turner's medicine show. "Pete Dexter" was what I had answered to when he asked what he would call me, and so Pete I was for about a year and a half.

As I said before, I started out with the medicine show. That was a great game. The Wizard Oil which the old man was selling at a dollar a bottle, and which was guaranteed to cure everything he could think of, we made early in the morning at about 10 cents a gallon. As far as its coming from snakes—well, if it did come from the snakes, it was because they got out of their cage and crawled out over into the big barrel. That oil was the cheapest kind he could get hold of, and all he had to do was to put it in the bottles. The bottles cost about a nickel apiece and the profit on the deal amounted to about 90 cents a bottle.

The old man had a great stunt which he used to pull when he got around a crowd to show the wonderful qualities of the oil. Down behind the box he used to talk from, he had a piece of leather about a foot square. In another bottle, he had some fusal oil, which is highly penetrative. Of course he could get a crowd around by promising to exhibit the snakes and after he had delivered a talk on the wonderful oil he would give a demonstration as to how this oil would go thru the thickest of hides. All he had to do was to apply a little of the fusel oil to the square of leather before he brought it into sight. This fusel oil would immediately go thru the thick leather as if it was cloth. Having done this, Turner would bring the leather out in full view of the crowd, but being careful to keep his hand over the spot where the oil was. A few passes and he was applying the Wizard Oil. Without waiting for anyone to look, he immediately showed the piece, and apparently the Wizard Oil had penatrated the leather. As a matter of fact the Wizard Oil was never put on the leather during this demonstration. But if the crowd had been skeptical of its qualities up to this time, this little piece of slight-of-hand work sure brought them, and the dollars came rolling in.

We worked that game all that summer, and I soon began to see how easy the people will give up their money. I decided right there that there ought to be a chance for me to get some of that money. So soon after, I broke with the show and started on my own hook.

You see, the reason I broke with Turner was this. He had been taking a lot of money in that fall but he had held up paying us fellows saying that he was investing all his funds. I got suspicious and one night Turner didn't come back to the lot, like he was in the habit of doing. I got excited and trailed him down town. At the hotel the clerk said he had gone to the depot. Immediately I decided to follow him. I had an old revolver I had found a couple of weeks before so I took that along. Well, before Turner left town I collected the $150 coming to me but the other boys didn't get anything but the snakes and the oil. The oil business busted up after than. We didn't have a good ballyhoo and the other boys decided there was nothing in it. So I left on my own hook.



"Folk's it's the best remedy ever put out."

During my travels around the fairs I had met a lot of fellows who were doing a big business running lemonade stands. That looked to me like a pretty good graft. All a fellow had to do was get a few cents' worth of lemon salts at the corner drug store, a little coloring matter for another dime, one half dozen thick glasses and everything was all set. We kept track of all the county fairs and I soon had a circuit of my own. I managed to hit town about a day before the fair opened up, getting a permit, if necessary, from the head man of the fair to sell lemonade. Of course I did not get the permit unless I had to, as they cost money, but I always did manage to get hold of an old barrel which would hold water and a few boards to make a stand of.

During my career with the snake show, I had got the ballyhoo idea down pretty good and after I had mixed up my lemonade out of the lemon salts, a little color with the water and a few lemon rinds on the top, it was easy to sell. Of course we never had to worry about what was in the lemonade. The big idea was to sell it and we did not care how the stuff tasted after we got the money.

I made a lot of money that summer, but I had ambitions for a big game, and I decided that as long as I was as clever as that, I ought to be working at something in the winter, too. I had managed to drift into Florida where everything was balmy and liked it so well that I decided that it was a great place to winter, but it took a lot of money and my lemonade profits were dwindling pretty fast.

I chanced upon a circular one day that gave me a good idea. It seems as tho this company was offering silverware such as teaspoons, knives and forks and the like to people who saved enough coupons. Of course I soon got wise to the fact that the extra 50 cents or $1 which they asked to be sent along with the coupon, more than paid for the cheap grade of silver which was furnished. My idea, however, was somewhat different. I figured out a scheme to the effect that if I could get hold of a lot of names of some of my northern friends and send them a postcard to the effect that they had been awarded a prize of a half dozen teaspoons in a contest, that they would bite. So I went to a small print shop and got some cards printed which read as follows:

"You have been one of the lucky winners in our contest which has recently closed. If you will send 98 cents to cover shipping charges to the following address, we will be pleased to forward your premium of one-half dozen genuine silver teaspoons."

As long as I never had a title, I decided that now was a good time to get one, so I signed the card the National Awards Committee and put my street address on the bottom. Of course I left my name off for various reasons because I did not want my friends to know who was pulling this scheme.

When I was having these cards printed. I noticed in the print shop an address of a company who would furnish mailing lists of good prospects thruout the middle west. That was just what I wanted, so when the proprietor was looking the other way, I appropriated the letter for my own use. This mailing list cost me about three dollars, if I remember correctly, and I received a list of about five hundred names. When I had added on the list of all the names of my friends and relatives thruout the corn belt, I found I had a list of about seven hundred fifty prospects. In about a week I had cards addressed and mailed them and sat down to await results.

The first letter came from a wo-

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100 000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family learn that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement.

(Continued from March 1 issue.)

"YOU aren't sorry—the money came?" Mr. Smith was eyeing her with a quizzical smile.

"Oh, no, no, indeed!" Mrs. Blaisdell's answer was promptly emphatic. "And I hope I shall be found worthy of the gift, and able to handle it wisely."

"Er—ah—you mean—" Mr. Smith was looking slightly taken aback.

"I mean that I regard wealth as one of the greatest of trusts, to be wisely administered, Mr. Smith," she amplified a bit importantly.

"Oh-h!" subsided the man.

"That is why it distresses me to see my daughter so carried away with the mere idea of spending. I thought I'd taught her differently," sighed the woman.

"Perhaps you taught her—too well. But I wouldn't worry," smiled Mr. Smith, as he turned away.

Deliberately then Mr. Smith went in search of Mellicent. He found her in the music-room, which had been cleared for dancing. She was surrounded by four young men. One held her fan, ane carried her white scarf on his arm, a third was handing her a glass of water. The fourth was apparently writing his name on her dance card. The one with the scarf Mr. Smith recognized as Carl Pennock. The one writing on the dance programme he knew was young Hibbard Gaylord.

Mr. Smith did not approach at once. Leaning against a window-casing near by, he watched the kaleidoscopic throng, bestowing a not too conspicuous attention upon the group about Miss Mellicent Blaisdell.

Mellicent was a picture of radiant loveliness. The rose in her cheeks matched the rose of her gown, and her eyes sparkled with happiness. So far as Mr. Smith could see, she dispensed her favors with rare impartiality; though, as she came toward them finally, he realized at once that there was a merry wrangle of some sort afoot. He had not quite reached them when, to his surprise, Mellicent turned to him in very evident relief.

"There here's Mr. Smith," she cried gayly. "I'm going to sit it out with him. I shan't dance it with either of you."

"Oh, Miss Blaisdell!" protested young Gaylord and Carl Pennock abjectly.

But Mellicent shook her head.

"No. If you will both write your names down for the same dance, it is nothing more than you ought to expect."

"But divide it, then. Please divide it," they begged. "We'll be satisfied."

"I shan't be!" Mellicent shook her head again merrily.

"I shan't be satisfied with anything—but to sit it out with Mr. Smith. Thank you, Mr. Smith," she bowed, as she took his promptly offered arm.

And Mr. Smith bore her away followed by the despairing groans of the two disappointed youths and the taunting gibes of their two companions.

"There! Oh, I'm so glad you came," sighed Mellicent. "You didn't mind?"

"Mind? I'm in the seventh heaven!" avowed Mr. Smith with exaggerated gallantry. "And it looked like a real rescue, too."

Mellicent laughed. Her color deepened.

"Those boys—they're so silly!" she pouted.

"Wasn't one of them young Pennock?"

"Yes, the tall dark one."

"He's come back, I see."

She flashed an understanding look into his eyes.

"Oh, yes, he's come back. I wonder if he thinks I don't know why!"

"And—you?" Mr. Smith was smiling quizzically.

She shrugged her shoulders with a demure dropping of her eyes.

"Oh, I let him come back—to a certain extent. I shouldn't want him to think I cared or noticed enough to keep him from coming back—some."

"But there's a line beyond which he may not pass, eh?"

"There certainly is!—but let's not talk of him. Oh, Mr. Smith, I'm so happy!" she breathed ecstatically.

"I'm very glad."

In a secluded corner they sat down on a gilt settee.

"And it's all so wonderful, this—all this! Why, Mr. Smith, I'm so happy I—I want to cry all the time. And that's so silly—to want to cry! But I do. So long—all my life—I've had to wait for things so. It was always by and by, in the future, that I was going to have—anything that I wanted. And now to have them like this, all at once, everything I want—why, Mr. Smith, it doesn't seem as it could be true. It just can't be true!"

"But it is true, dear child; and I'm so glad—you've got your five-pound box of candy all at once at last. And I hope you can treat your friends to unlimited soda waters."

"Oh, I can! But that isn't all. Listen!" A new eagerness came to her eyes. "I'm going to give mother a present—a frivolous, foolish present, such as I've always wanted to. I'm going to give her a gold breast-pin with an amethyst in it. She's always wanted one. And I'm going to take my own money for it, too, —not the new money that father gives me, but some money I've been saving up for years—dimes and quarters and half-dollars in my baby bank. Mother always made me save 'most every cent I got, you see. And I'm going to take it now for this pin. She won't mind if I do spend it foolishly now—with all the rest we have. And she'll be so pleased with the pin!"

"And she's always wanted one?"

"Yes, always; but she never thought she could afford it. But now—! I'm going to open the bank to-morrow and count it; and I'm so excited over it!" She laughed shamefacedly. "I don't believe Mr. Fulton himself ever took more joy counting his millions than I shall take in counting those quarters and half-dollars to-morrow."

"I don't believe he ever did," Mr. Smith spoke with confident emphasis, yet in a voice that was not quite steady. "I'm sure he never did."

"What a comfort you are, Mr. Smith," smiled Mellicent, a bit mistily. "You always understand so! And we miss you terribly—honestly we do!—since you went away. But I'm glad Aunt Maggie's got you. Poor Aunt Maggie! That's the only thing that makes me feel bad, about the money, I mean,—and that is that she didn't have some, too. But mother's going to give her some. She says she is, and—"

But Mellicent did not finish her sentence. A short, sandy-haired youth came up and pointed an accusing finger at her dance card; and Mellicent said yes, the next dance was his. But she smiled brightly at Mr. Smith as she floated away, and Mr. Smith, well content, turned and walked into the adjoining room.

He came face to face then with Mrs. Hattie and her daughter. These two ladies, also, were pictures of radiant loveliness—especially were the radiant, for every beam of light found an answering flash in the shimmering iridescence of their beads and jewels and opalescent sequins.

"Well, Mr. Smith, what do you think of my party?"

"I think a great deal—of your party," smiled the man. "And you?" He turned to Miss Bessie.

"Oh, it'll do for Hillerton." Miss Bessie smiled mischievously into her mother's eyes, shrugged her shoulders, and passed on into the music-room.

"As if it wasn't quite the finest thing Hillerton ever had—except the Gaylord parties, of course," bridled Mrs. Hattie, turning to Mr. Smith. "That's just daughter's way of teasing me—and, of course, now she is where she sees the real thing in entertaining—she goes home with those rich girls in her school, you know. But this is a nice party, isn't it Mr. Smith?"

"It certainly is."

"Daughter says we should have wine; that everybody who is anybody has wine now—champagne, and cigarettes for the ladies. Think of it—in Hillerton! Still, I've heard the Gaylords do. I've never been there yet, though, of course, we shall be invited now. I'm crazy to see inside of their house; but I don't believe it's much handsomer than this. Do you? But there! You don't know, of course. You've never been there, any more than I have, and you're a man of simple tastes, I judge, Mr. Smith." she smiled graciously. "Benny says that Aunt Maggie's got the nicest house he ever saw, and that Mr. Smith says so, too. So, you see, I have grounds for my opinion."

Mr. Smith laughed.

"Well, I'm not sure I ever said just that to Benny, but I'll not dispute it. Miss Maggie's house is indeed wonderfully delightful—to live in."

"I've no doubt of it," conceded Mrs. Hattie complacently. "Poor Maggie! She always did contrive to make the most of everything she had. But she's never been ambitious for really nice things, I imagine. At least, she always seems contented enough with her shabby chairs and carpets. While I—" She paused, looked about her, then drew a blissful sigh. "Oh, Mr. Smith, you don't know—you can't know what it is to me just to look around and realize that they are all mine—these beautiful things!"

"Then you're happy, Mrs. Blaisdell?"

"Oh, yes. Why, Mr. Smith, there isn't a piece of furniture in this room that didn't cost more than the Pennock's—I know, be cause I've been there. And my curtains are nicer, too, and my pictures, they're much brighter—some of her oil paintings are terribly dull-looking. And my Bessie—did you notice her dress to-night? But, there! You didn't, of course. And if you had, you wouldn't have realized how expensive it was. What do you know about the cost of women's dresses?" she laughed archly. "But I don't mind telling you. It was one hundred and fifty dollars, a hundred and fifty dollars, and it came from New York. I don't believe that white muslin thing of Gussie Pennock's cost fifty! You know Gussie?"

"I've seen her."

"Yes, of course you have—with Fred. He used to go with her a lot. He goes with Pearl Gaylord more now, There, you can see them this minute, dancing together—the one in the low-cut blue dress. Pretty, too, isn't she? Her father's worth a million, I suppose. I wonder how t'would feel to be worth—a million." She spoke musingly, her eyes following the low-cut blue dress. "But, then, maybe I shall know, some time,—from Cousin Stanley, I mean," she explained smilingly, in answer to the question she thought she saw behind Mr. Smith's smoked glasses. "Oh, of course, there's nothing sure about it. But he gave us some, and if he's dead, of course, that other letter'll be opened in two years; and I don't see why he wouldn't give us the rest, as long as he's shown he remembered he'd got us. Do you?"

"Well—er—as to that—" Mr. Smith hesitated. He had grown strangely red.

"Well, there aren't any other relations so near, anyway, so I can't help thinking about it, and wondering," she interposed. "And 'twould be millions, not just one million. He's worth ten or twenty, they say. But, then, we shall know in time."

"Oh, yes, you'll know—in time," agreed Mr. Smith with a smile, turning away as another guest came up to his hostess.

Mr. Smith's smile had been rather forced, and his face was still somewhat red as he picked his way through the crowded rooms to the place where he could see Frank Blaisdell standing alone, surveying the scene, his hands in his pockets.

"Well, Mr. Smith, this is some show, ain't it?" greeted the grocer, as Mr. Smith approached.

"It certainly is."

"Gee! I should say so—though I can't say I'm stuck on the brand myself. But, as for this money business, do you know? I'm as bad as Flo. I can't sense it yet—that it's true. Gosh! Look at Hattie, now. Ain't she swingin' the style to-night?"

"She certainly is looking handsome and very happy."

"Well, she ought to. I believe in lookin' happy. And I believe in takin' some comfort as you go along—not that I've taken much, in times past. But I'm goin' to now."

"Good! I'm glad to hear it."

"Well, I am. Why, man, I'm just like a potato-top grown in a cellar, and I'm comin' out and get some sunshine. And Mellicent is too. Poor child! She's been a potato-top in a cellar all right. But now—Have you seen her to-night?"

"I have—and a very charming sight she was," smiled Mr. Smith.

"Ain't she, now?" The father beamed proudly. "Well, she's goin' to be that right along now. She's goin' where she wants to go, and do what she wants to do; and she's goin' to have all the fancy flumadiddles to wear she wants."

"Good! I'm glad to hear that, too," laughed Mr. Smith.

"Well, she is. This savin' is all very well, of course, when you have to. But I've saved all my life, and, by jingo, I'm goin' to spend now! You see if I don't."

"I hope you will."

"Thank you. I'm glad to have one on my side, anyhow. I only wish— You couldn't talk my wife 'round to your way of thinkin', could you?" he shrugged, with a whimsical smile. "My wife's eaten sour cream to save the sweet all her life, an' she hain't learned yet that if she'd eat the sweet to begin with, she wouldn't have no sour cream—'twouldn't have time to get sour. An' there's apples too. She eats the specked ones always; so she don't never eat anything but the worst there is. An' she says they're the meanest apples she ever saw. Now I tell her if she'll only pick out the best there is every time, as I do, she'll not only enjoy every apple she eats, but she'll think they're the nicest apples that ever grew. Funny, ain't it? Here I am havin' to urge my wife to spend money, while my sister-in-law here— Talk about ducks takin' to the water! That ain't no name for the way she sails into Jim's little pile."

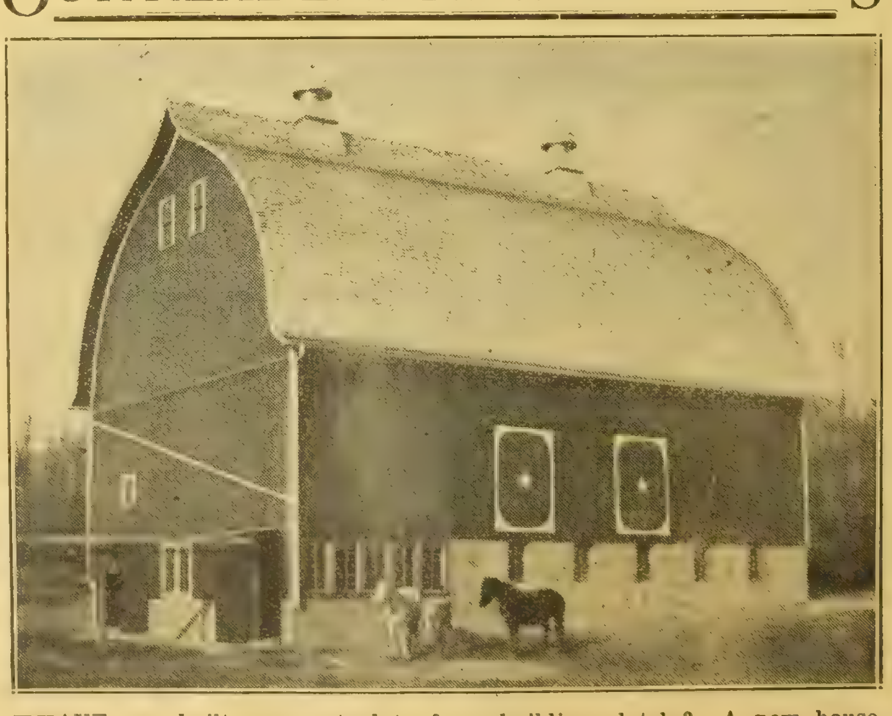
Mr. Smith laughed.

"By the way, where is Mr. Jim?" he asked.

The other shook his head.

"Hain't seen him—but I can guess where he is, pretty well. You go down that hall and turn to your left. In a little room at the end you'll find him. That's his den. He told Hattie 'twas the only room in the house he'd ask for, but he wanted to fix it up himself. Hattie, she wanted to buy all sorts of truck and fix it up with cushions and curtains and Japanese gim-cracks like she see in a book, and make a show-place of it. But

OUR READERS' NEW BUILDINGS



HAVE you built any up-to-date farm buildings lately? A new house, barn, hen house, hog house, or granary? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide just the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Send in your pictures. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.

This picture was sent in by one of our readers, Mr. Pearl Bear, who resides on route 2 at Tustin, Michigan. Mr. Bear says his barn was built last year and it cost him $4,000. It certainly is a fine looking barn, one any farmer would be proud to have on his farm.

Jim held out and had his way. There ain't nothin' in it but books and chairs and a couch and a big table; and they're all old—except the books—so Hattie don't show it much, when she's showin' off the house. You'll find him there all right. You see if you don't. Jim always would rather read than eat, and he hates shindigs of this sort a little worse'n I do."

"All right. I'll look him up," nodded Mr. Smith, as he turned away.

Deliberately, but with apparent carelessness, strolled Mr. Smith through the big drawing-rooms, and down the hall. Then to the left—the directions were not hard to follow, and the door of the room at the end was half-way open, giving a glimpse of James Blaisdell and Benny before the big fireplace.

With a gentle tap and a cheerful "Do you allow intruders?" Mr. Smith pushed open the door.

James Blaisdell sprang to his feet.

"Er—I—oh, Mr. Smith, come in, come right in!" The frown on his face gave way to a smile. "I thought— Well, never mind what I thought. Sit down, won't you?"

"Thank you, if you don't mind."

Mr. Smith dropped into a chair and looked about him.

"Ain't it great?" beamed Benny. It's 'most as nice as Aunt Maggie's, ain't it? And I can eat all the cookies here I want to, and come in even if my shoes are muddy, and bring the boys in, too."

"It certainly is—great," agreed Mr. Smith, his admiring eyes sweeping the room again.

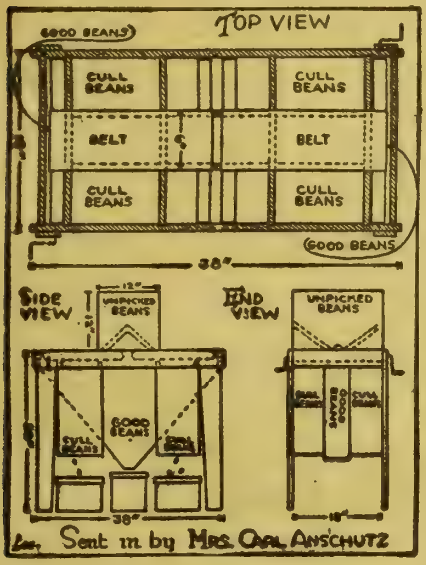
To Mr. Smith it was like coming into another world. The deep, comfortable chairs, the shaded lights, the leaping fire on the hearth, the book-lined walls—even the rhythmic voices of the distant violins seemed to sing of peace and quietness and rest.

(Continued in March 29th issue.)

FARM MECHANICS

HOME-MADE BEAN PICKER

AM sending you a picture of our bean picker which we have found very convenient as two can pick at the same time, and thus encourage competition. Every winter we hand pick our beans and find it a great saving. Where two can pick it seems the time flys faster than if you work alone, and then on stormy days friend husband can give his better half a helping hand if she is picking alone.—Mrs. Carl Anschutz, Bay County, Mich.



Sent in by Mrs. Carl Anschutz

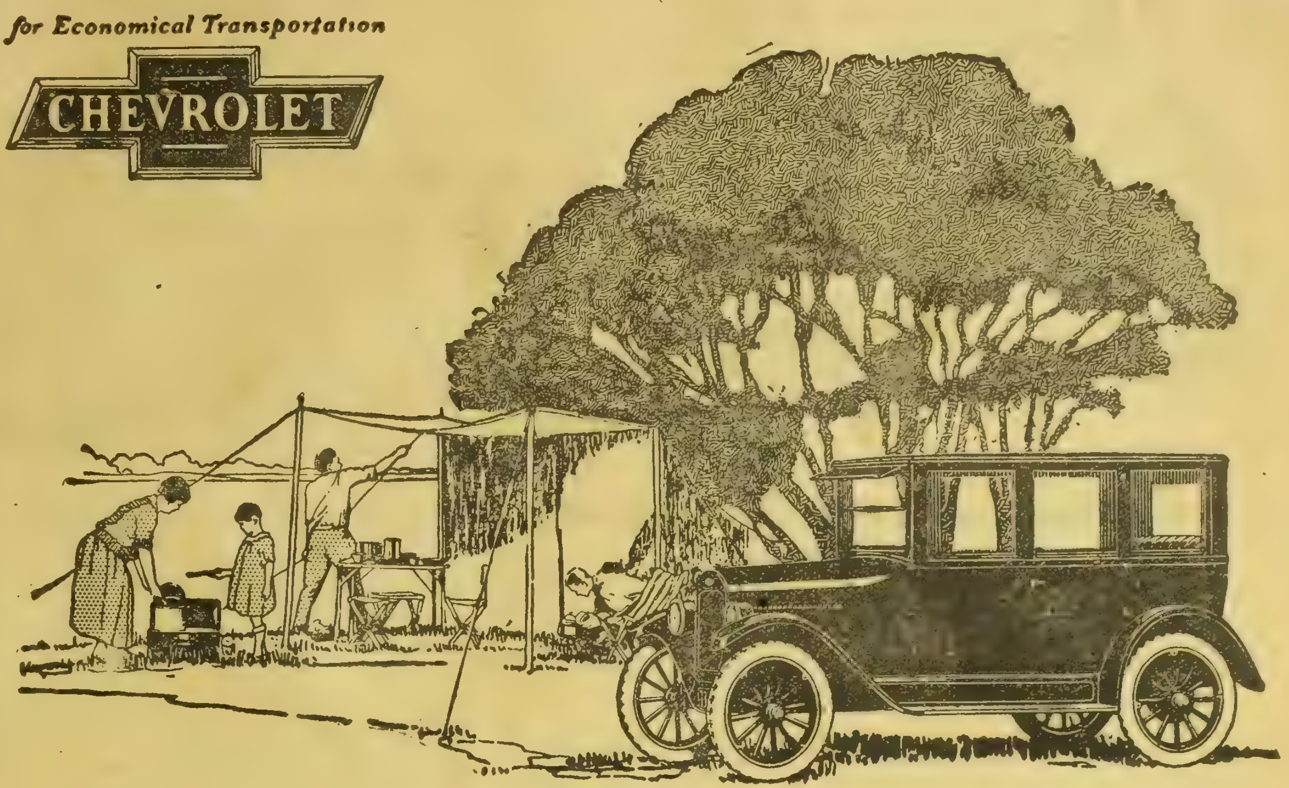
CAUSE OF BULGING OF CONCRETE FLOOR

The concrete floor of my cellar bulges in the center. Could you tell me what would cause it to do that? The floor was put in several years ago.—A K., Brown City, Mich.

—Either the floor has been lifted from the center by the weight of the outside walls so that it is hollow underneath or the surface layer of the floor may be lifted from the same cause.

If this cellar has been built tight enough to withstand water pressure, it might be possible that the water has surrounded the cellar and created enough pressure on the bottom to lift the floor. In case the cellar has been surrounded by water, and the pressure on the bottom upward would be quite effective in breaking the cement.

However, it is not likely that the cellar has been built absolutely water tight and any pressure by water on the outside would be likely to leak through some place until the pressure on the inside is approximately the same as on the outside.—H. H. Musselman, Professor, Agricultural Engineering Dept., M .A. C.



Will Your Family Be Happy Next Spring?

A low-priced, modern automobile like the Chevrolet has become indispensable to the American family of ordinary income. Without it they are prisoners on limited range—like hobbled horses in a pasture.

The inspiring beauties of Nature, the interesting and educational features of other places and other types of people and ways of living remain things to be read about, or seen dimly in cold photographs, until you are free to GO TO THEM at your convenience and pleasure.

Suppose you have definitely decided to buy a Chevrolet next Spring.

That does not necessarily mean you are going to get it.

Anyone posted on conditions in the automobile business will tell you that thousands of families are going to be unable to get cars next Spring. That has been true almost every Spring for the last ten years, but the shortage in April, May and June, this year, is going to be more serious than ever before.

There are just two ways of making sure of getting your Chevrolet for use when the flowers and balmy breezes of Spring lure you to the country roads:

Buy it NOW, or order it NOW.

If you do not want to pay for it in full at this time, any Chevrolet dealer will arrange terms to suit your convenience, so you can *pay as you ride.*

You will be surprised to learn how easy it is to pay for a Chevrolet and to get possession and use of it.

The only way to be sure of a Chevrolet next Spring is to order it NOW.

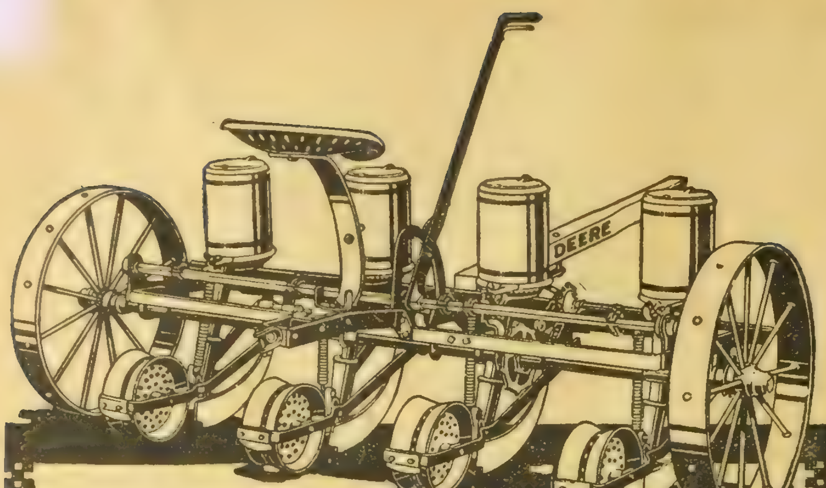
Dealers and Service Stations everywhere. Applications will be considered from high grade men only, for territory not adequately covered.



Gets Extra Tons of Sugar Beets

Start your beet crop right by using the most accurate and uniform planter. Correct planting pays big dividends at harvest time. Use a

JOHN DEERE BEET AND BEAN PLANTER

Saves seed — none wasted — this planter is equipped with the most accurate John Deere seed-dropping mechanism. Special-shaped seed cells and sloping hopper bottom cause seeds to be dropped just as accurately as you could do it by hand. The seed is spaced properly—less thinning out is required after the beets come up.

Distance between rows is easily varied; machine can be converted into a three-row bean planter; depth of planting easily regulated; pressure wheels can be changed to either open or closed wheels quickly to cover seed effectively. Spring-pressure runners insure seed furrows of equal depth. Irrigating shovels extra. Sold by John Deere dealers.

Get extra tons per acre by using tools made especially for that purpose. Write today for booklet describing John Deere beet planters. Address John Deere, Moline, Ill., and ask for Booklet ED-633

What the Neighbors Say

REDUCED TAXES

EDITOR—I am a firm believer in and am member of the Farm Bureau. I believe that the farmer's stand squarely back of the Farm Bureau slogans: "Pay as you go" and "tax reduction." I believe the farmers look to the Farm Bureau to live up to these slogans. I do not believe that one farmer in ten would vote for the proposed plan to increase our national indebtedness $39,000,000 for college extention throughout the various states. Junior college extention is all right. The state appropriates $150,000 for this purpose. But they are not teaching all dogs new tricks. I have never seen much better than a corporal's guard attend a college extension meeting called for that purpose. And even if their methods are good, the farmer's great need just now is ability to roof his buildings to properly store his present overproduction and not a program of increased taxation which will help delay his needed roof.

The farmer is looking to the Farm Bureau to guard the pork barrel and not be a partaker of it. Their $39,000,000 appropriation would start a program of congressional log rolling which would prove very expensive to all except promoters and bond holders.—Howard Smith, Saginaw County, Mich.

SETTING MR. JORDAN RIGHT

DEAR Editor:—As I am a reader of your paper, THE BUSINESS FARMER, I wish to answer parts of your editorial page.

Through the farm papers the average farmer is fed on propaganda and being tired and wore-out physically he is an easy victim to your mental poison. But things are different and a great many farmers see through your misleading editorials now. The large and yes small industries have not begun to take care of the vast amount of unemployment in towns and cities. Nor will they for some months yet. The immigration of the farm people to towns and cities keep up daily. Why? For high wages? No. But for just a chance to live better than cattle. You speak of high wages. Yes where the workers have well organized unions the wages can be called the saving wage. And where the workers are not organized they receive starvation wages.

You speak of attracting peasants to this country. Why a peasant with a large family to even last a year here on a farm had ought to land here with $5,000. Could he?

And referring to the large amount of laborers who have returned to their native land. Why of course they will. This country did not give them their heart's desire. They left slavery over there for wage slavery of the worst sort here. Farms they could not buy and the speed up system here they would not stand for. Being ignorant and unorganized they work for common wages which the merchants and manufacturers have agreed upon. This high wage runs from 30c to 50c per hour. Get out of your editors chair for a few days travel around in the various towns and cities and see the high wages offered to common laborers. See how they live. No Mr. Editor, you and others are not fooling all the farmers now. And as to a Farmer-Manufactor Party. Say a farmer isn't the stick that he was 30 years ago.—Ralph Jordan, Petoskey, Mich.

—Good for you, friend Gordan! The only wa ywe can get these facts out from under cover is to discuss them. Inasmuch as you have taken several direct slams at my editorial, you will I am sure, allow me to point out a few descrepencies in your letter of criticism.

he is through with the political spell-

In the first place there is little or no unemployment in either cities or towns in this country. My authority for this is the report to the President made by the Secretary of Labor, within the past ten days. Personally I know that any man able and willing to work can get employment in Detroit and for that matter in this city of ten thousand where THE BUSINESS FARMER is printed.

Men and women in the United States do not "live like cattle", in fact it is probably true that never before in the history of the world have so many people lived in such comfort as they do in this country today. Why, man alive, there are more telephones in New York than there are in the whole British Isles and probably more bath-tubs, too!

A farmer with an automobile in England or on the continent would be a "lorded-landholder, or a profligate spendthrift looked upon with suspicion by his rural neighbors. Are there no farmers near Petoskey who own automobiles, have telephones in their homes or enough fuel to keep them warm the long winter evenings? You know there are and we know too, that a good many readers whom you say we are trying to "mentally poison" have pianos, phonographs, radios and bath-rooms and they have won all of these so-called luxuries from the fields, orchards or dairy that surrounds their homes.

Perhaps, friend Jordan, they have a mystic key to all of these treasures, but the one we most often find them using is labeled Hard Work, and the strange part of that key is that it will fit the door of success on the farm, in store or factory.

When I finished high-school in Tuscola county the sugar companies were just bringing in their families of "hunkies" (as we unthinking young nit-wits were wont to call them.) They landed on our shores with a big family as their sole asset. Today thousands of acres of the best land in Michigan is cultivated by these sturdy farmers and their red-barns and tall silos are tangible evidence of their prosperity.

Thank you for the suggestion that we do some traveling, Mr .Jordan, we did some twenty thousand miles, mostly in Michigan last year, but we will try and do more this year, if you think that by doing so, we will learn what you have come to believe.

In your last statement, Mr. Jordan, we agree perfectly. "The farmer isn't the stick he was thirty years ago," nor will he ever be again, for he is through with the political spellbinder who wept alligator tears over the "pitiable plight" of the farmer that he might feather his own nest in a soft political job, from the farmers votes.

The man whom we are proud to call a "business farmer", is not crying himself, nor asking others to cry for him. He is working to get other farmers to join with him, control the output of their farm factories, and have a selling agency through which they may determine the price for which their produce is to be sold. That is the farmers' problem, as we see it, Mr. Jordan, and it is the farmers problem, not the politicians. We admire union labor, as much as you do, but what union labor has won they have won by organizing to sell their product, which is time, at a price which they determine. They have won, but not by crying or letting politicians cry for them. They have won by organizing and then standing by their organization, even if their feet were unshod, their bellies empty and their children kept home from school. So far we have not found a farmer organization which has been put to so strenuous a test, but we know that the farmers of America are built of as sturdy-stuff and we believe, that by the right kind of leadership they will never have to resort to the test.—Editor.

ENFORCE THE LAW

DEAR EDITOR:—It is a regretable fact that our Republic is endangered because of disrespect for law and that a portion of those in official position are laxin their efforts to enforce the law, especially is this true in the matter of enforcing temperance legislation in some of our cities and it is hoped that farmer organizations and others, will give expression to their views upon this matter through the state press as the Essex Farmers Club, Clinton county, has done in the following resolution:

Whereas, the question of securing compliance wih the provisions of law is of paramount importance, especially that portion dealing with the sale and use of intoxicating liquors as a beverages, and

Whereas, our public officials are

responsible in a large degree for the execution of the law, therefore be it

Resolved, by the Essex Farmers Club that each and every aspirant for public office is hereby requested to state in the public press, his attitude in the matter of the faithful enforcement of the law, especially that portion dealing with the question of temperance.—J. F. Daniells, Clinton County, Michigan.

IS PROHIBITION AND OTHER LAWS ON TRIAL?

DEAR EDITOR:—I notice in M. B. F., Feb. 16 issue, on page 14, an article "Prohibition On Trial." Now ALL laws are being violated and it seems more so than usual since the World War. In speaking of law violation people are apt to conclude that the prohibition law is what is meant mainly. But we also have a lot of trouble with various other crimes, bandits, speeding of autos, overloading of trucks and a general disregard of the rights and safety of other people. The violations are many and varied and affect people in all walks of life. There has been in the past a disposition and a practice on the part of certain lawless elements to "get around" the laws someway. We had law violaters in saloon days also and their number was legion. We had blind pigs, tigers, joints, slums, and so forth where lawless people congregated and held law in defiance. But our best citizens have ever stood for and labored for higher and purer ideals of American citizenship. If our race is to progress and flourish each generation must be better and nobler than the one before.

And so, I for one would never lower the Stars and Stripes, and all it stands for, to an inferior type or ideal of civilization. The grand old flag looks nobler to me as it floats over righteousness and justice. True, we have too many of the vicious criminal sort, and weak kneed officials too who are too careless, and disloyal. We have to strive and toil and sacrifice for the nation and the people, and the best things of life one must work for hardest to attain. So that we may be true to those who, in times past gave their best and their all that America might become the glorious nation that it is today. Let us stand firmly for the laws (all laws) of our land. Shall we become frightened because of untrue officials, or afraid of personal loss because we dare to stand for the right? Shall we fall in line with a lower element who value too lightly the principles our nation stands for?

To those who oppose the 18th amendment we have a word of warning. Do they really want the conditions that would come if violation of all law should become popular? Of what value would their property be in a community where law afforded them no protection? If might makes right what will the future of America be? Did the saloon or the blind pig, or the dens of iniquity ever contribute any thing to the well being of humanity? Answer these questions fairly down deep in your own heart and you will then know what to do about it when evil is striving for a permanent foothold upon American soil.

Let our course be "upward and onward." Let our best efforts be given to the building of a nation, and the uplifting of a race of people whose ideals are grounded in justice, mercy, progress, peace and all that the best in humanity means. — Mrs. Florence Howard, Vice-Pres. Monroe Co. W. T. C. U.

P.S.—Use this letter as you think best.

More than 85 per cent of the United States corn crop is fed to livestock and somewhat less than 10 per cent is used for human food, according to recent data compiled by the United States Department of Agriculture. The hog is the largest consumer, 40 per cent being fed to swine on farms.

Please find enclosed my check for $1 to renew my subscription for 2 years as I would not be without your paper for two times the price of it.—B. Britts, Arenac County, Michigan.

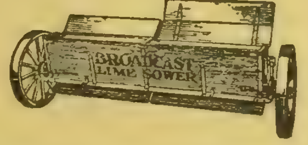
We appreciate your paper very much. It is the best farm paper for the farmer. —Walter Walson, Mason County, Mich.

FARMERS' FAVORITE
GRAIN DRILLS

AN even stand of grain—uniform ripening — and a full harvest — all yours if you plant your grain with a Farmers' Favorite Grain Drill.

This highest-quality planting machine has been a real favorite among progressive farmers the world over for three quarters of a century. It can be depended upon—always —to do a perfect seeding job. It sows accurately, evenly, uniformly. Every seed is deposited in the ground at the proper depth — in a roomy trench — and then covered perfectly.

See this better grain drill at your dealers or write direct to us for literature that tells the complete story.



Farmers' Favorite Lime Sower

Positively the best lime spreader money can buy. Unequalled for uniform sowing of agricultural lime and commercial fertilizers. Simple in construction. Exceptional strength. Built for long years of hard service. Write for folder today.

Mail the Coupon Today

You can't raise grain profitably if you have to depend upon an old worn-out drill for your seeding. Write today for the fact-story of the Farmers' Favorite. And if you need a Lime Sower, Alfalfa Drill, Corn Drill, Beet-and-Bean Drill or Potato Planter, check the coupon.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

NOTES ON OPERATING YOUR RECEIVING SET

SOME of our readers who have built sets such as we have described in the February 2nd issue of THE BUSINESS FARMER have had success to start with and others have not. It is for the benefit of those who are having trouble that these notes are written, yet the successful ones may find a hint or two of value.

The batteries must be connected properly to the indicated binding posts. The B battery especially, as it will not work unless the positive side of the battery is connected to the "plate" of vacuum tube. The A battery will sometimes work better with the positive connected to one post and with other tubes the negative is so connected. Try changing your A battery connections.

Trace out all connections, a loose connection will make your set howl at times, or be very noisy and it will prevent it's working.

Be sure that all four contacts on the socket are making contact with the 4 prongs on the bottom of the tube.

Do not use to heavy a pencil line on the grid leak. If you buy a grid leak complete get one of 3 megohms for the WD-11 or WD-12 tube. Too much of a leak makes tuning difficult and looses much of the received value. Too little is just as bad. Try pencil lines of varying strengths. Be sure that your screws are making contact with the pencil lines.

If after trying the above your set does not work, reverse the connections on the rotor of your variocoupler. This alone causes more trouble than any other thing in sets like this, but is not a fault but is due to the fact that each make of instrument has its windings connected differently.

USE A RHEOSTAT—This will save your battery, and in many cases will help. If your set howls when first connected or when you go to tune, it may be because your filament is too hot. Use the rheostat (6-ohm) and keep the filament just heated enough to work.

Make your turnings on the condenser and coupler very slowly, you may miss a station without realizing it.

If in doubt write this department or send your set to have it tested. It costs you nothing but the postage. Do not send batteries—we have them.

PANELS AND THEIR MATERIALS

IN the articles on "How to Build" we have told you to use wood for the base and panels, emphasizing the need to parrafin or shellac them. This using of wood gives good results in spite of all that may be said against wood for panel use.

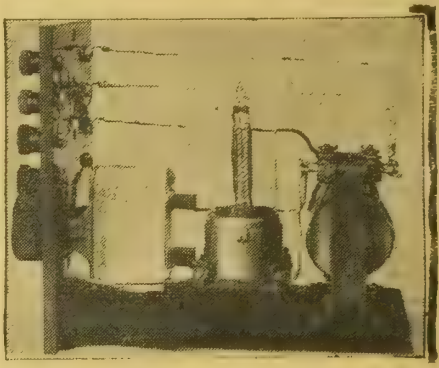
Wood is not considered a good dielectric, whereas hard rubber, bakelite, condensite and other materials are of good dielectric properties. The last named compositions are excellent insulators also, and in radio work good insulation is absolutely necessary as we are dealing with high frequency currents that have a way of finding all the weak spots. Wood is apt to hold a small amount of moisture at all times and hard rubber and the others are without moisture. Moisture will always cause leaks of electric current. Wood properly treated in hot parrafin has all the moisture driven from it and becomes an excellent insulator and has good dielectric properties.

For sets as we have been describing, to meet the needs of the small pocket-book, wood treated as described will give you as good results under ordinary usuage as the prepared composition panels. Laboratory tests alone will tell or show any difference.

For appearance and neatness and satisfaction of knowing that you are using the best we do suggest that you use one of the regular panels such as bakelite, hard rubber or condensite. A panel 6 by 10 inches will cost approximately $1.00 and will do for the receiving set, tho not large enough for a combined set including amplifier. If you wish to mount both sets in one, then get a panel 6 by 15 inches.

Before making any holes in the panel for mounting the different parts be sure that you first lay your plan out on a piece of paper, then using this paper as a template (pattern) mark the holes on the panel with a center punch or prick awl. After marking, remark deeper so that the drill point will not slip and mar the appearance of the panel.

To bore the holes you will need twist drills (not necessary wood) of one-eighth inch and one-quarter inch diameter. Use a breast drill if you have one, or an ordinary brace with bit shank drills. Bore carefully as the panel material is somewhat brittle and may chip a little. Start your boring from the face side of the panel and then the chipped edges where the drill breaks thru will be on the back and not show. A larger drill lightly run over the top of a small hole will smooth off any roughness on the edges. In this manner holes can also be counter sunk to make screw heads flush.



A side view of one stage amplifier, described in our last issue.

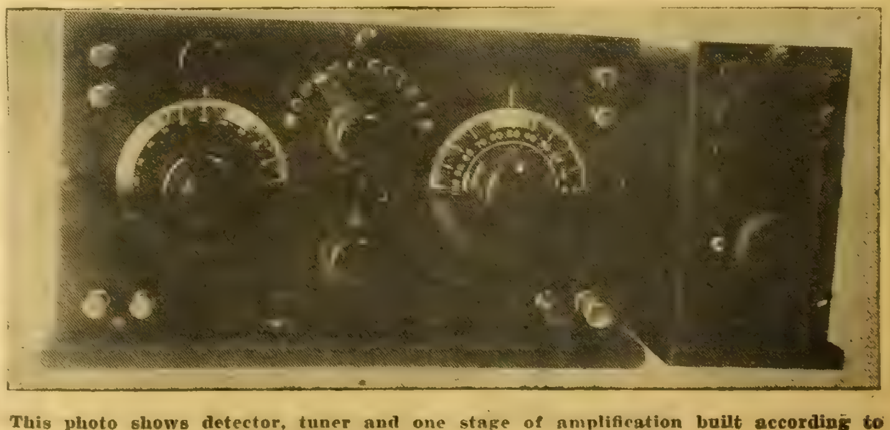
One great advantage of the regular panel materials mentioned over wood is that they not have a grain, do not split and crack nor warp like wood. A panel of bakelite one-eighth inch thick is rigid and stronger than a half inch piece of wood for a panel.

Questions and Answers

NOT REGENERATIVE CIRCUIT

I noticed in a recent issue of your paper an invitation to submit raido problems to you for advise, so I am doing so.

I am using a Duck type CV crystal set. The hook up I think is called a single circuit regenerative circuit, but I am not sure. It consists of a variometer, 45 plate variable condenser, small fixed condenser, and crystal detector. It gives mighty good results for a crystal set I think. Have received as far as 700 miles. But my main trouble is that often



This photo shows detector, tuner and one stage of amplification built according to the instructions given in our last two issues.

KDKA interferes so much that it is impossible to listen to anything else. Sometimes that station will come in as loud in any possible position on my dials as on any other. Sometimes when I am trying to listen to that station it will go out entirely, like a loose wire on a telephone, then if I shift my dials over to where 400 to 600 meters should come in it will come in again, though often badly distorted. Is there anything that I can do to shut KDKA out entirely, when I want to listen to Detroit? Would a loading coil placed in the aerial do it? If so how should it be made? Would the substitution of a variocoupler in place of the variometer be much better? Any advice you can give me I would appreciate.—Alfred Clark, St. Clair County, Mich.

—The circuit you use is not regenerative but is a single circuit and if changed to a two circuit would clear up your difficulty of tuning out undesirable stations. A variocoupler used, with your condenser across the primary and the present variometer in series with the rotor of the coupler would give you much better results and would be a two circuit tuner which would be sharp but not as loud as you now get your stations. Sometimes a poor connection or a grain of dirt will make your station go away, or it just naturally fades which no one can help.

SET WORKS FINE

THE parts for the radio receiving set came last Wednesday and we got it hooked up and tuned in last night for the first time. I want to thank you for getting the parts for us and for the help in telling us how to build it. I never had any experience of this kind before but we had no trouble in following your directions and making it work. We had WCBD, Zion City, Illinois, for over an hour last night and it came in nice and clear so that we could understand every word and hear the music real plain, except at times it sounded as though someone had stepped on the cat's tail, but we expect to get away from that as we get a little experience. We also had another station for a while but am not sure where it was. Again thanking you, I am, E. J. Delamarter, Cheboygan Co., Mich.

WANTS SET WITH 1,500 MILES RANGE

I read the Radio Department in the Busines Farmer with interest. I do not know much about sets and would like to know which set you think is best for receiving a distance of 1,500 miles. Also what are the prices?—M. M. Patrick, Eaton County, Mich.

—We are glad that you are interested in radio. It will be a great benefit and pleasure to farmers when they all have them in their homes for both business and pleasure.

There are a number of excellent and good sets that will cost you from $75 to $150. Yet many of these sets will not bring in the broadcasts any better than the set we describe in our February 2nd issue, especially when you add the amplifiers and loud speaker to it.

On such a set, here in northern Michigan I hear KYW, Chicago, give out the hourly news and market quotations every day. And it has brought in broadcasts from Dallas, Txeas, as well as Springfield, Mass., and many others.

The De Forest, Westinghouse (or Radio Corporation), Tuska, Clapp-Eastham, Atwater Kent, are all good and reliable sets.

Some dealer in Grand Rapids could show you these sets, but beware of extravagant promises. The dealers have not yet realized that the farmer is the next and largest market for good radio parts and sets, and so sometimes tries to "stick" you. Why not build yourself a set?

USES UP BATTERIES TOO FAST

I have a radio, 4 tubes, that I am operating on dry cells and the batteries are a big expense It will cost me around twelve or thirteen dollars a month. Is that unreasonable?

(Continued on Page 19)

DODGE BROTHERS
TYPE-B SEDAN

The Type-B Sedan could well stand as a concrete symbol of everything the name Dodge Brothers itself has come to represent.

It is honestly and wisely built. It stands up under the sternest kind of service. It will serve long beyond the span of life usually allotted to a motor car.

The price is $1250 f. o. b. Detroit

I'll Save You Big Money On This Beautiful Range

Galloway's WORLD BEATER BARGAINS

Are biggest values ever offered—and I challenge the world to match them--beating them is impossible--because big factory capacity--big demand, has brought manufacturing costs and overhead clear down. Selling direct from the factory to farm at small profit cuts out all waste--all unnecessary expense--puts high quality merchandise into users' hands by shortest route--and saves farmers millions of dollars.

FREE

To advetise Galloway Bargains, to make friends and boosters, I will give a customer who takes advantage of my special bargains an aluminum milk pail filled with aluminumware as shown in picture without extra cost. Get yours--time is limited.

Cream Separators, Engines Spreaders known as "Galloway's Big Three," are masterpieces of construction, famous everywhere for satisfactory service--long life--ecnomical operation--low upkeep--proven by actual test on thousands of farms. You can have

90 Days' Trial on Your Farm

Test them any way and every way. Compare them with any other similar products--if Galloway products fail to meet all claims, fail to perform better than all others--if you are not convinced by actual experience that they are BIGGEST VALUE YOUR MONEY CAN BUY--ship them back if you do not like them--get any or all on easy terms--small payments down. WRITE TODAY FOR SPECIAL BARGAIN BULLETIN prices, terms, etc. and facts to prove that you can get your share of the saving on what you buy the Galloway Way.

"The Farm Paper of Service"

GET THIS STRAIGHT!

SOME people have a habit of reading more between the lines than they do in the printed words themselves. Two letters addressed to the Editor bring this fact to mind and are worth commenting on.

One accuses us of having sold-out to big business. Another that we don't understand how bad things are on the farm.

We will try, in plain language to make ourselves clear.

THE BUSINESS FARMER has only one interest to to serve and that is the best interests of the farmers of Michigan. We have no political, organization or religious entanglements of any name or nature!

THE BUSINESS FARMER is the only farm paper in Michigan which is not owned by a politician drawing a salary from the state or national government.

No man residing outside of the state of Michigan owns one dollars worth of the voting stock in this company.

We have not sold-out to big business or little business and, confidentially with the continued support of the better class of business farmers in Michigan we will never have too.

* * * *

Now, answering the second good reader, who thinks because we try to talk optimism we do not know how bad things are on the farm.

It is our opinion that the farming business needs sound leadership more than anything else. Sound leadership knows that no one can help the farmer out of the present situation but the farmer himself.

The present situation had to come. The farming business is the last to be organized for its own protection. It is the lamb in the lions den. The laborer is organized so strongly that he demands and receives a profit on his labor. The manufacturer, by cost accounting and keen salesmanship, makes a product and sells it in the face of competition at a profit. The transportation company knows it costs and demands a profit. The farmer alone is unorganized, unprotected and each individual farmer is every other farmers' worst enemy. That is, under the old order of things!

We are optimistic, because there is a proven way out of this dilemma. Cooperative marketing and the control of production is the key.

California led the way. The east was first to apply it in dairy products. We see plainly that it can be extended to all of the minor crops immediately and to the major crops eventually.

The weak-kneed, the jelly-spined and yellow-backed farmers have mostly left the farms. Good ridance! It is their farms which are "abandoned." It is they who listened to the calamity-howling politicians who rode to their soft-cushioned offices on their promises of "farmers relief!"

Now we have left, a sturdy lot of business men, who are sticking to their plows and their harrows, because they have millions of dollars invested in a business which they will not see fail, because it cannot fail.

* * * *

If thirteen grocery stores are starving to death because the town is not large enough to support them. And if five of the thirteen get cold-feet and go into the real-estate business, it is obvious that the remaining eight will divide the business which previously thirteen handled. And it is probable that each of the eight will then make a fair profit.

Apply that to the farming business and the answer must be the same.

* * * *

No, neighbor, THE BUSINESS FARMER has preached optimism, not because we have not known conditions on the farm, but because we hoped that our feeble words might lend a little ray of sunlight to that discouraged farmer or his wife. That we might hold a few of the stirling boys and girls who were scurrieing from the farm as they would from a plague—

Why?—

Because a certain type of individual has from platform and editorial page tried to make farmers believe he was their friend by telling them how badly they were off and promising relief which was never forthcoming.

If you want to hold a single boy or girl on the farms of Michigan—

If you want to hold a single man or woman in your employ from the magnet of the city factory—

If you want your farm to maintain its present value—

YOU will chase out of your neighborhood and bar from your homes, not only the politician, but the publication which he dominates with his poisoned pen.

* * * *

That the real, thinking, working business farmers of Michigan know these things without our stating them, is proven by their subscription renewals and their letters of encouragement which accompany them.

And they are the only kind we care to call business farmers anyway!

THE INCOME TAX

NO series of articles which we have been able to present to our readers for some time has stirred up the interest already manifested in the taxation series by Mr. Stanley M. Powell, begun in the March first issue.

In this issue Mr. Powell takes up the question of the income tax, a measure which has been voted on favorably by every farmers organization of standing in Michigan and one which we believe has the almost unanimous approval of the farmers in this state. Obviously it is not as popular in the metropolitan sections, and we can expect opposition that will make this a very difficult measure to get on the statute books-

It should be remembered that the income tax as proposed is not an additional tax but is to take the place of the general property tax as collected by the state. Inasmuch as incomes of less than $4000.00 are exempt, it is apparent that the larger proportion of farmers in Michigan will be entirely relieved of this burden, and when it is considered that they are the fundamental source of revenue and must pay the taxes indirectly through on all purchases of manufactured articles which they buy, it is quite apparent that it is not a matter of class legislation but rather a more equitable distribution of state taxation.

Other states, notably New York, where the bulk of the population are engaged in industrial pursuits, have an income tax, and with so illustrious an example it should not be hard to convince the voters of Michigan that such a tax is highly equitable and practical.

Mr. Powell points out that the first step is to procure 60,000 signatures to a petition for a constitutional amendment, so that it would be placed upon the ballot at the regular fall election of 1924 and voted on by all votors in the state. It will be largely up to the rural citizens of Michigan as to whether or not they get a chance to vote on this important measure at the coming election. By all means read Mr. Powell's series of articles: there is no use kicking about high taxes unless you are fully informed on them and that is the purpose of this series.

THE WILLIAMS BILL

REPRESENTATIVE ARTHUR B. WILLIAMS, of the third district of Michigan, introduced a bill "to establish a federal cooperative marketing system," which we mentioned on this page in the last issue, calling the attention of our readers and farmers organizations generally to the fact that they must get behind this bill if Mr. Williams is to be enabled to put it over.

Briefly it provides for the following features:

> **ORGANIZATION—Board of five members, of which secretary of agriculture shall be the head. Other members—a market expert, transportation expert, accounting expert, a practical farmer.**
>
> **APPLICATION—Country will be divided into five districts. All information and all business of the local co-ops of the district will pass through the district office. The general plan is much the same as followed in the federal bank system.**
>
> OPERATION—All co-ops will be required to keep standard accounts. Director, as he sees fit, may call for reports of condition of individual co-ops as is required now of national banks. Provision is made for publication of these reports so individual farmer member will know just how business is progresing.

A letter just received from Representative Williams reads as follows:

> "My attention is just now called to your very fine editorial of March first with reference to the cooperative marketing bill that I have introduced. You have hit the nail squarely on the head when you urge farmers of Michigan and farm organizations to go on record regarding this measure immediately. We are likely to have a hearing on the bill within the next two or three weeks, and if I could have support from farm organizations available at that time it would be very helpful. Anything that you can do to assist along this line will be very much appreciated. I have enlisted in this matter very seriously, and as time goes on am gathering strength and believe that the bill I have introduced can at least form the basis for very beneficial and needed legislation. Please accept my thanks for your editorial as it is very sympathetic and is along the right line."

Here is apparently a worthy bill prompted by a Michigan man. If you are interested write a postal card or letter today to Representative Arthur B. Williams, care of House of Representatives, Washington, D. C. Ask him for extra copies of this bill and tell him you are willing to help. This is a chance to do something that is worthy and do it quickly.

EDISON A "DUMBELL" AT SCHOOL

THIS is a special message to fathers and mothers who have become discouraged because of the seeming lack of interest or the slow progress of their offspring in school.

Thomas A. Edison, who has contributed more to the present generation of human kind than any living man, gave out recently an interview which sheds a ray of hope. "I was a youngster going to school in Port Huron, Michigan, and I was about eight years old," said Mr. Edison, "A teacher said my brain was 'addled.' Probably this was true but it hurt my vanity. So I ran to mother and sobbed out the story and she smoothed my hair and comforted me and told me I was the finest boy alive. From that time my mother, who had been a high school teacher, took charge of my education and I did not go back to the public schools. There remains with me yet, however, two great impressions—that of the hurt the teachers caused me and the comfort my mother was quick to give.

"It is not always a child's fault if he fails to catch on as quickly as his teacher thinks he should. It is sometimes the honest child who doesn't try to hide his deficiencies."

All human beings are not of the same temperament and that a boy or girl is backward in mathematics or in grammar may not mean that they do not have special capabilities for working with their hands or with their minds which may far outdistance those who must procure from books their learning.

How often we see the boy or girl who had the best record in school, who was able to reel off the chapters which they read in their school books as easily as a phonograph repeats its record and yet, who in later life were unable to apply the veneer of education which they received, while the so-called "backward" students in the same class stepped out in the world and made a great success.

Some day a school system will be devised which brings out the latent talents of each individual and until that time we beseech patience and encouragement, rather than harsh words or mortification

Every human being comes into the world with some especial talents and it is the crime of our civilization that there is not some means of finding these in the child and polishing them by the means of education.

As we go to press, the Ford bid for Muscle Schoals nitrate plant has been accepted by the house of representatives. Dispatches tell us the cities down south on receiving the news held great celebrations, comparable only to those of the original armistice day. Henry Ford is looked upon as a savior of the south.

* * * *

If you miss "Forty Years of Grafting" which starts in this issue you are going to miss one of the best series we have ever offored for your approval.

PUBLISHER'S DESK

THE DETROIT PACKING COMPANY

Please tell me something of the Detroit Packing Company. Is the company any good? Several have had money in the company for two or three years and have never received any interest. A year ago last October their man was here again selling stock and claiming we would ge our dividend and interest the following January but we never got any. Please tell me what this stock is worth per share? It was sold for $60.00 per share.—J. M. I., Charlevoix, Mich.

ALL I can tell you, without making an investigation of their recent financial statement which you as a stockholder, already have, is that this company has a splendid packing plant in Detroit, and that it is operated by men whom I believe to be honest, efficient, and trustworthy.

It is not to be expected that any new company can start off, within two or three years and make a profit, unless conditions are exceptional. This is one reason why farmers should not rush into businesses with their money, unless they are prepared to leave it in over a period of time, until the business is adjusted, and on a money making basis.

You paid $60 a share for this stock, and it may be worth more or less today, so unless you are pressed for money, I would not advise you to sell it, unless you find you can do so at a satisfactory profit to yourself. Personally, I have not lost faith in this company, nor the men behind it, and I believe with the great consuming market of Detroit at their very doors, that with efficient management they can make a success of this business, and certainly their institution has offered a market for a great mass of livestock on which the grower formerly had to stand the excess freight to the Chicago or Buffalo livestock markets.

WRITING SHOW SIGNS

Having been a reader of your paper for years and noted your advice to others. I would like to have you advise on the reliability of the West-Angus Show Card Service. I am sending you some of their literature which they have sent me. It sounds great but can it really be done?—A. B., Milford, Mich.

IF the company you mention can give you the name of a student who is satisfactorily making money from the scheme here in Michigan, and you can find out that what they say is true, I would be very glad to have you write me. So far I have not been able to find anyone who is making money at this card writing scheme, which is now being worked by a half dozen companies, evidently to their profit. It may not pay others, but it certainly pays them!

GREAT WESTERN INSTITUTE

I believe this is the best part of the M. B. F. Is the Great Western Institute an honest Institute? They say they will get you a government job or give you your money back. Their course costs $9.00. I wrote to them and asked for the names of ten persons that got their money back. They did not give me even one name. I also asked how long a person would have to wait after they enrolled? This they did not answer at all. They said if I wanted the names they would look them up but it would take quite a long time. Could you tell me where I could get a good map of the U. S. about 3x4 feet?—W. R., Elkton, Mich.

THE fact that the Great Western Institute will not send you a list of ten people who got their money back, proves that there is apparently something wrong with this scheme, and I would not advise you to send them any money.

THE HANDKERCHIEF SWINDLE!

Having seen the report of the swindle of the Underwood Art Goods Company of Portsmouth, Ohio, I thought it my chance to report too. I sent a dollar early last summer for my try-out, and they sent me a ready-made handkerchief to crochet an edge on, which I did, and sent it in for inspection. They sent it back and said the edge wasn't up to the standard, and sent me another try-out to be hemstitched. This I did also, and sent it in. Then they made me an offer of one dollar per dozen to hemstitch, and I took up the offer, and they sent me three to draw threads out, and draw silkthreads in to make a double border. This I did, and sent them in, and it was a month or six weeks before I received the next three, and so on it went through the rest of the year. It was January, 1924, when I received the last three, and I made them right up and sent in, and I haven't heard from them since. Now, if there is any chance of getting my money through your efforts, I surely will appreciate it, and I give you the liberty to use my name in this matter if you see fit to do so, and perhaps it will save someone else from investing their money in it.—Mrs. S., Marion, Mich.

* * *

I am a reader of your paper and just see where a lady writes and asked what could be done to get even with the Art Goods Company, Portsmouth, Ohio. I want to say that my daughter answered this woman's ad and sent $1.00 to her for work, which she was to send to her. Well, she sent as a trial a cheap cotton handkerchief, which she was to work and send back to her. She did so, but never heard from her. She promised to send the dollar back if the work was not satisfactory.

Hoping you will do something to stop this woman from swindling the public, even if you cannot get the dollar back for my daughter, I shall be very grateful.—Mrs. R., Gratiot County.

* * *

I for one have had some dealings with the Underwood Art Goods Company of which Ruth Underwood is manager, but did not go as far as the lady which complained in the issue of February 16th. I answered their advertisement and she wrote me she would send a finished article for which she charged a price of $1.00. I sent the money by check, and she sent the article which was a hand-made handkerchief, which I was to keep and a try-out, but she didn't send the try-out, and said I should send one of my own in for inspection, and if the work was satisfactory I would receive $3.00 per dozen, and should send stamps for its return if wanted. She sent the handkerchief back, and offered to pay me $1.00 per dozen for what work I would do for her, and we stopped right there, for no one could make a dozen handkerchiefs for a dollar. It is a scheme to get peoples money, and also their work. I also hope this will keep other readers from sending their money with such advertisements.—Mrs. L., from Indiana.

A POSTMASTER SPEAKS

DEAR SIR:—I note in your issue of Feb. 16th, that others are having trouble with I. R. Hough Fur Co. As postmaster here at Fairview, Mich., I am trying to get a fraud order against this concern which would deprive them of the use of the mails. One of the patrons of this office sent them about $20 worth of furs and received check for $3.25. After having given orders "to hold separate and aside" he could not get his furs back after returning the check for the third time. They have a form letter they use telling the shipper their fur was green, mildewed, etc. You are certainly doing your subscribers a favor in exposing this concern.—R. H. Kolb, Fairview, Mich.

"The first work to be accomplished in bringing about a better enforcement of law must be the awakening of the public to a clear sense of responsibility for it. Improvement in our laws can accomplish little unless accompanied by a determination on the part of our citizens to have these laws enforced."—Committee on Law Enforcement, American Bar Association.

Cletrac—More Than a Plow Tractor

Having a tractor enables a farmer to plow deeper, better and far quicker than with teams. Turning over the land is one of the biggest jobs of the whole year. The 12-20 Cletrac turns over the evenly cut furrows at the rate of eight to ten acres a day. But the farmer's tractor, to be a real investment, must do more than plow well. It must be able to go right onto the freshly plowed ground and quickly work it down to a perfect seed-bed. Here is where the Cletrac owner's foresight is rewarded. His tractor is admirably suited for ground fitting.

A Better Seed Bed Insures a Bigger Crop

Where the soil is loose—perhaps even wet in spots—the broad tracks carry Cletrac smoothly along without slip; full speed and load is maintained, the ground is mellowed and made fine and ready for planting without any packing down, and in the quickest possible time. When work is pressing and weather uncertain, to be able to fit and plant quickly and perfectly is the farmer's best assurance of a bigger yield and a better product. It often means the difference between profit and loss on the crop. No tractor is so well suited for *seed-bed preparation* and planting as the Cletrac.

Write for catalog and let us tell you more about the use of Cletracs.

10,000 miles guaranteed and yet you save 1/3

Riverside Oversize Cord Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schworm, Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

CONQUERING THE WORLD THRU MEEKNESS

A SERMON BY REV. DAVID F. WARNER

TEXTS: "Learn of me for I am meek and lowly of heart." Mt. 11:29. "Blessed are the meek for they shall inherit the earth." Mt. 5:5.

BUT, said the Kaiser this Jesus stuff is the silly talk of children. It is weak and ignoble. It does not belong to super-men And this is ever the notion of such cultus. Blessed are the strong for they shall conquer the earth. This is yet the world's ideal. And this is the law of the jungle; of the survival of the fittest. "To the victor belong the spoils." That is, to the conspicuous, daring, and heroic. And so, this virtue of meekness has been seriously misunderstood. According to profane conception, it forfeits its right to be a virtue. It is void of vigor and strength. But this, we know, is the direct opposite to the Jesus way. According to our texts, meekness is replete with comfort, energy, and strength.

"Jehovah upholdeth the meek." Ps. 147:6. He did the patient Job, tho that patriarch yelled and tore his hair. Not so meek you say. Well, a blind young man, led by his sister, got on my train. I beckoned to have him sit by my side. I was too quick to express my sorrow for his seeming misfortune. "O", said he, "you needn't be sorry for me." "No?" said I. "Tell me about it." And he did. About a year before he lost his sight thru heavy lifting in his father's store. He immediately called a physician who told him he would never see again. Then, rather than brood or wail over his affliction, he began at once a course in a blind school. And when I met him that day on the train, he said to me, "I am one of the happiest men in the world. I am now preparing to teach the blind the Jesus way of living." Verily, what recreating power in new objectives! Even so, in accepting willingly the hard experiences and providences of life, being disposed not to chafe under them, we are perfecting ourselves in Christian character. When sorrow and disaster come, we need something more than natural strength to carry us thru gracefully and joyfully.

But the will is the citadel of one's life. And that must be conquered thru meekness. With this submission accomplished, and an obedience that does not question, the soul is far on its road heavenward. All of God's providences, whether sunshine or shadow; all the commands of his will; and all the holy impulses of his Spirit, are to the end that we may yield a meek compliance to him. Do you have such an inconspicuous spirit? While the world idealizes the gorgeous sunflower, you be as the little violet, hidden away, but shedding fragrance everywhere.

In all this, Jesus is our human pattern. "I am meek and lowly." How wedded are meekness and humility! Both grow out of a right notion of and faith in God. We are humble because of a creaturely dependence upon God; and meek because of a non-retaliating disposition in consequence. When faithfulness to his mission required suffering and death, Jesus accepted in meek willingness. "Not my will, but thine be done." Meekness enabled Christ to conquer natural tastes and desires when opposed to the will of God. And it will do as much for you and me.

"Showing all meekness toward all men." Titus 3:2. This is the relationship that christians are to sustain toward men. Not a natural timidity and fear; not a craven weakness; but we must be to all men the strength of nobility and virility that is to produce the most happy results in fellowship and good-will. We are to conquer the "eye for an eye and tooth for a tooth" spirit. We are on unfriendly territory and are bound to be barked at, and sometimes bitten, by the dogs of the world; then meekness steps in to keep us unprovoked What a masterful spirit!

Friend, pour the divine chemical of meekness on the fires of antagonism. The icebergs of the North disappear only when they hit the warmer waters of the Atlantic. So pour on coals of fire. Overcome evil with good. Go the second mile.

The divine patience and meekness that grows out of love is not easily provoked. It has its way over self-assertiveness and restrains anger so that friendly relations might be kept up. It expects no bouquets pinned upon its coat. It does not look for the appreciation of men, and therefore, does not whine when not getting it. It is satisfied unfamed and unnoticed. May God be praised for the great company of immortals who are quietly and unassumingly making this world better in the Master's name!

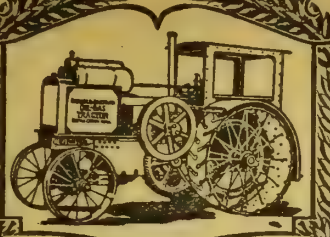
But what is meekness after all? In its totality, it is a world-conquering principle. "The meek shall inherit the earth." Not so, says the world. We shall build battle-ships and airplanes, equip armies, fill the air and sea with death dealing destructives, and by these we shall conquer the earth. Ah, the world would fain crucify the dearest hopes of the Christian. And here the writer must declare himself against the Coolidge policy of a strengthened army and navy. And why this policy? Well, investments are flowing into foreign quarters; and big money must be protected. The flag must follow trade. It is ever the way with any form of political imperialism. And who pays the taxes in men and money to promote this scheme of capital? How do you like it, farmer friend? But generations ago, that Rural Peasant in Galilee of the nations, proclaimed the freedom of men thru bread instead of bullets. Said he, "Disarm yourself of selfishness and retaliation. Arm yourself with meekness. Do not exploit men. Feed them. By this I conquered. So can you.

"The meek shall inherit the earth." Not thru outward possession, which was the Jewish conception, and is yet (ask the Jewish financiers), but thru the dominion of character. The meek, in accepting God's will and providences as the discipline of the soul, have overcome the world and mastered earthly things. Do you hear Paul and Silas singing praises in the prison stocks? Said the mystic, Madame Guyon, imprisoned in the French Bastile, "A little bird I am, shut in from the fields of air; and in my cage I sit and sing to Him who placed me there; Right pleased a prisoner to be, because, my Lord, it pleases thee." These and a thousand others have truly established sovereignty over the earth. Those who are calm under fire of opposition and wrong, show themselves able to counsel and guide men. This is what history will say of the late Woodrow Wilson.

"My heart was heavy, for its trust had been
Abused, its kindness answered with foul wrong;
So, turning gloomily from my fellow men
One summer sabbath day, I strolled among
The green mounds of the village burying place;
Where, pondering how all human love and hate
Find one sad level; and how, soon or late,
Wronged and wronged-doer, each with MEEKENED face,
And cold hands folded over a still heart,
Pass the green threshold of a common grave,
Whither all footsteps tend, whence none depart,
Awed for myself, and pitying my race,
Our common sorrow, like a mighty wave,
Swept all my pride away,
And, trembling, I forgave."
—Whittier.

One who is touched with the spirit of the meekened Christ, finds too much to pity in a world of sorrow to cherish the feeling of revenge. When we persist in an injurious spirit toward others, we become a social menace to a well-ordered society. We need the sweet, chastened spirit of Jesus. This is God's higher gift to men.

THUS SAITH THE LORD that created thee, O Jacob, and he that formed thee, O Israel. Fear not; for I have redeemed thee, I have called thee by thy name; thou art mine.—Isaiah 43:1.



Furnishes Power Like Steam

The Nichols-Shepard 20-42 Oil-Gas Tractor

delivers as steady power to a thresher as a steam engine.

When coupled with the 30x52 Red River Special it makes the most economical and profitable threshing outfit possible.

You have been waiting for this kind of an outfit.

It is just the right thing for either a group of farmers or a thresherman.

It will do all the work you want in a day's run, because it will thresh all the average crew can get to it.

The 20-42 Tractor is also adapted to plowing, grading, silo filling, wood cutting and other power applications on the farm.

Easily handled, starts quickly in cold weather and burns kerosene economically.

Write for catalog and learn of the great advantages which this tractor and this outfit possess.

FARMER PUTNAM'S PHILOSOPHY

BARGAIN huntin' is all right fur the wimmin folks, but my advice to the men is, keep away from it, especially them bargains in seeds, which there ain't none. I tried that onct, sendin' back east fur some alfalfy seed which I seen advertised by a feller that said he had a few carloads to share with other dirt farmers, that it wasn't tested, but he could guarantee it true to variety and strong in germination, and at half price it was a big bargain. Well I hadn't never heard of the feller, but I sent fur some seed because it was cheap, and I planted it. When it come up the field looked fine and green, but it worried me, because it was the first time I ever got something fur nothing, and more than I bargained fur. It hurt my conscience so I wrote the feller a letter, sayin':

"Thanks for filling my order so prompt. You sure made good on guarantee. You said your seed would be true to variety and I don't doubt what it is. You didn't say what variety, or how many and I never saw so much variety, so I can't kick. I found dodder, peppergrass, mustard, sweet clover, dandelion, milkweed, morning glory, wild buckwheat, dog fennel, ragweed, sheep sorrel, sandbur, foxtail and sow thistle—everything except alfalfa. I suppose that will be up later, if there is room for it. I feel like I ought to apologize to you for sending you such a small sum for so many kinds of seed. Maybe you made a mistake. I don't want to be arrested for obtaining goods under false pretenses, so if you will let me know how much I owe you, I am willing to make a settlement on a variety basis, instead of in bulk. I feel this whole thing is my fault for not buyin' from a reputable seed house that sells its product at a fair price under the label of purity and germination of our State Laboratory."—Thomas Jefferson Putnam, Specialist in Rural Devilment.

DOESN'T PAY TO PRUNE PLUMS

VERY little difference was noted in the behavior of heavily pruned plum trees and trees receiving much less pruning in tests conducted over a number of years with several standard varieties of plums on the grounds of the New York Agricultural Experiment Station at Geneva. In the opinion of the station horticulturists most varieties of plums require but little pruning subsequent to the proper shaping of the trees after they are planted. Since little pruning gives just as good if not better trees, it is regarded as a waste of time and effort to pay much attention to the pruning of trees. The chief recommendation is to thin out thick growths where necessary and to remove broken or injured branches.

Ten varieties of plums were used in the tests, including Abunda Bradshaw, Burbank, DeSoto, Grand Duke, Wayland, Pottawattamie Reine Claude, Shropshire, and Italian Prune. Referring to these tests the station specialists say, "Practically the only difference between the trees subjected to these two styles of pruning was that the little-pruned trees had larger and broader heads The heads on the little-pruned trees too, were more symmetrical than those which had been given heavier pruning. The increased size, however, in no way retarded the maturity of the fruit or impeded harvesting. The size of the trunks and and branches of the two lots of trees were practically the same and there was very little difference in the height of the trees.

OUR BOOK REVIEW

No Odor—No Wicks *No Noise—No Smoke*

Gain new cooking ability with a smokeless, odorless Vapo Oil Range

Operates same as a gas stove because it burns gas

The Vapo is the highest grade oil range built and the most economical. Wickless, smokeless and odorless, it gives you more service per gallon of fuel, more service per square foot of space and more service per dollar than any other oil stove because of the remarkable, patented Vapo burner. Users everywhere are delighted. Thousands of dealers now sell this year-around oil range.

Cuts down work in the kitchen

No more long hours in the kitchen over a slow cooking stove. No more soot on cooking utensils. No more smarting eyes. No more trouble and annoyance with wicks and chimneys. You turn the Vapo flame up or down with a lever valve, same as a gas range. It has no wick. It has no wick substitute.

Cook a week on 7 qts. of fuel

That is what users say they are doing with the Vapo. A single burner operates 32-36 hours on a gallon of kerosene with flame turned high. At simmering heat it gives 50-60 hours service.

Vapo burner generates gas

It converts kerosene into hydro-carbon gas which burns with a hot, clean, blue flame which does not smell nor smoke nor smart the eyes. Flame can be turned from low to high and back again easily. This wonderful burner can't be clogged. Food or liquids can't boil over into burner and put out flame.

Bolo oven bakes and roasts same time

Movable Bolo plate makes oven big or little. Heat can be crowded into small space and intensified for quick baking and roasting. Makes two ovens in one. Slow and fast baking and roasting can be done at the same time. No other oil stove offers this advantage. Have your dealer show you this and other Vapo conveniences.

Write for folder describing the complete Vapo line. Sent free on request. Postal will bring it.

The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland

SQUARE-DEAL FENCE

Square Deal Fence Leads

New "Galvannealing" invention stops destructive rust.

Square Deal's stiff, picket-like stay wires that make fewer posts necessary; its well crimped line wires that spring back into place after every shock and strain and its famous Square Deal knot guaranteed never to slip—all these facts make Square Deal the fence that stands tight and trim, looks better and raises the value of your farm.

2 Books FREE

Ropp's New Calculator tells you your grain and livestock profits; measures capacities of cribs, wagons, silos; figures interest, wages; contains commercial law, parcel post rates, etc. Sent with Square Deal catalog. Both books FREE to Land Owners. Write today—find out how to cut fence costs with "Galvannealed."

Stops Rust

"Galvannealed" newly discovered rust-resisting fence wire, is guaranteed to last 2 to 3 times longer in any standard test than ordinary galvanized wire, therefore, should give you many years more service at a much lower cost. Fence this time with "Galvannealed."

The Children's Hour

DEAR girls and boys: What do you think of the suggestion of Muriel Frey in her letter below? Shall we have a "Correspondence Scramble"? It is up to you, girls and boys, as I am anxious to do only what you want me to. You send in your letters and I will do my part—and you can start right the moment you read this if you wish. Who will be the first?

"Kitty" of Chesaning is a real poet—or poetess, rather—isn't she? Let us hear from some of the other poet readers of our Children's Hour. Also you story writers get busy and write a real interesting story for our page. No doubt you can write one about some happening in your life that will be very interesting to us all. And you young artists can also have space on this page so send me some of your drawings. I will publish some of them, or as many as I can. Make the drawings with pen and ink and not with water colors. Let's see how much literary and artistic talent there is among the farm girls and boys.—UNCLE NED.

OUR GIRLS AND BOYS

Dear Uncle Ned:—While reading the letters in The Children's Hour I notice so many express a wish to correspond with others who write to the M. B. F. I have been wondering why you do not conduct a "Correspondence Scramble". When I have read letters asking for the boys and girls to write I have some times thought that I would; but some way I found it a hard thing to do; in fact, so hard that I never did do it. This would be an easy way to obtain correspondents and no one would really be writing first. I'll tell you a good way to conduct a "Correspondence Scramble" so that each one who writes will receive two letters. I know of course, Uncle Ned, that you know far more about this sort of thing than I do and, if you would rather follow out your own ideas on the subject; it will be alright with me. The only thing about it is that I am sure the readers of The Children's Hour would enjoy a scramble. My way is for each one who wishes to receive letters from other boys and girls, to write a letter (of course no one knows who will receive their letter) and enclose it (the letter) and a stamped self-addresses envelope to you, Uncle Ned, and then you open the letters and put some one else's into the other's envelope and mail them out. This way each child will receive some unknown friend's letter and some other child will receive the letter that they wrote. Each child then answers the letter they receive. This way each child gains two correspondents (the one who receives their letter and the one from whom they receive a letter). Its just heaps of fun. I know—for I entered such a scramble and am still keeping up an interesting correspondence with two new friends that I have made. I wish to thank you for printing my first letter in The Children's Hour. I know its asking a lot to ask you to print two letters in so short a time, but I really do wish this one could be printed to see if the other readers would like this idea. I think it would be fun for the readers of The Chidren's Hour if they would write to the M. B. F. telling whether they would like to try my idea.

I enjoy the puzzles on the children's page very much and I almost always try to solve them. My solution to the one in the March 1st issue is:—"Abyssinia". Wouldn't it be fun to have the children send in their answers and compete for prizes? Your new niece,—Muriel Frey, Caledonia, Michigan.

JUST A WISH

I WISH I were the month of June;
With all its pretty flowers in bloom.
I'd bow my fragrant head to all.
And be a little friend to all.

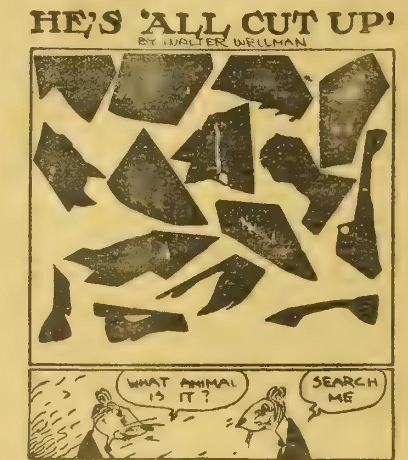
I'd also love to be the trees,
And watch the leaves play in the breeze,
And see the birdies build their nest,
In the trees they love the best.

And how I'd love to be the song
The birdies sing the whole day long.
I'd find my way in all sad hearts,
And make them once again glad hearts.

But just listen! All my dears,
And let me whisper in your ears,
God has given us all these gifts,
So for what more could we wish.
Composed by "Kitty" of
Chesaning, Mich.

Dear Uncle Ned:—My grandmother has taken the M. B. F. for quite a while, and I have been reading the letters in the Children's Hour. They are very interesting. Also I am quite a hand to read. I live in Benzie county about two miles from the town of Beulah. The community in which I live is called Eden. We call it the Garden of Eden just for fun. It is a nice place and I would hate to leave it. Everyone else has described themselves so I will also. I am five feet and two inches tall. I weigh 120 pounds, and am fourteen years old. I have light brown hair and it is bobbed. My grandparents are always making fun of it. My eyes are gray. I call them green mostly because they are such a funny color. I love music but only have an organ to play on. I have taken a few lessons and am as far advanced as the third grade. I must close or my letter will be put in the waste basket, because it is so long. Will write again sometime. Your want-to-be niece,—Margaret Link, Beulah, Michigan.

Dear Uncle Ned:—Well! We got here, and as we can see the waste paper basket peeping around the corner, we won't stay very long for fear of it getting us. We are two farm girls, our descriptions are: Dorothy has black bobbed hair, dark brown eyes, is 5 feet in height, and is 16 years of age. Mary has dark blue eyes, blonde hair, (which isn't bobbed) is 5 feet 5 inches in height, and is 17 years of age. Have we a twin? We love to dance, and all out-of-door sports. Will some of the boys and girls please write to us? We will answer all letters received. We have composed a poem. How do you like it, Uncle Ned? We will close with a few riddles. Those who guess them will receive a card from us:—Why is St. Paul like a horse? What is the difference between a mule and a postage stamp? What do lawyers do when they die? Well good-bye Uncle Ned, also hoping to hear from some of the cousins.—Mary Kulbanck and Dorothy Welling, both from Chesaning, Mich.



Cut out the pieces and paste them together to form a well-known animal What is it?

Answer to last puzzle: ABYSSINIA.

Dear Uncle Ned:—I have often thought of writing but, I don't like to, so kept putting it off. I have read the letters in the M. B. F. and enjoyed them very much. I was fourteen years old December second, and am in the eighth grade. I have dark brown hair, which is not bobbed, blue eyes and am about five feet two inches tall. Last week Wednesday I and another girl from my school went to a school nearby and wrote in a Spelling Contest and I won and so I represent Lyons township in Ionia county as the best speller. The words were not very hard but they were such as the two kinds of (write, right). And a week from today I go to Ionia court house to spell against girls or boys representing their townships in Ionia county. The one that wins receives a gold medal for their self and a gold cup for their school. I live three-quarters of a mile west of Pewamo on a farm of ninety-eight acres, opposite the Grand Trunk railroad. I don't have very far to go to school as it is on our farm. I have two sisters, Phyllis and Catherine Constance, and two brothers, Stanley and Billy. I think that Louise Fergusen is about thirteen years old. I wish some of the boys or girls would write and hope that my letter does not reach the waste basket. Your friend,—Hyacinth Blackmer, Box 73, Pewamo, Michigan.

Dear Uncle Ned:—May I come in and join your merry circle? I have been a reader of the Children's Hour for some time. I suppose my letter will fall a victim to the waste basket. I am 12 years old and weigh 125 lbs., have light brown hair, blue eyes and light complexion and am in the 7th grade at school. I have 2 brothers. My younger brother and I go a mile and three-quarters to school on skiis. We live on a garden farm of 10 acres. I help sell vegetables and fruit. We have a cow, a horse and 30 hens. Well as my letter is getting long so I will close. Your want-to-be-niece,—Pearl L. Schloppi, R. F. D. No. 2, Box 39, Petoskey, Michigan.

Dear Uncle Ned:—May I come back for a while? It has been so long since I have written to you that you can't remember who it is that is writing. I am not at Hubbard Lake now. You see I stay with my brother in Alpena, while I am attending high school. I read the Children's Hour tho, for mother saves the M. B. F. until I go home. My! but aren't we having wonderful weather for this time of the year? It sure is grand out. We are having exams this week in school. So far they haven't been very hard. Tomorrow we will have Algebra. I don't think it is hard. Now its getting pretty late, and I want to get up early in the morning and start with my Algebra, so will say good-night. Lovingly, your niece,—Eleanor Stovel.

Wanted---A Wife!

LONG, long ago their lived a dear little, downy little woodpecker. "Friend Downy," the Little Comrades of the Woods, called him.

We was a most handsome, dressy little fellow. He wore a black coat speckled with white, and the most enticing grey vest and trousers. and grey spats. And he carried a gold-headed cane. And, at the back of his dear little, downy little head there was a bright red spot. Which was meant for a tie. But he always wore it backwards.

But Friend Downy was Lonesome. Yes, sir-ee! 'Way down inside Friend Downy was lonesome!

So one day he spoke to one of his little Comrades of the Woods about that lonesome feeling, 'way down inside.

"Do you know," and Friend Downy looked thoughtful and wistful, "I want a mate, Mr. Chickadee!"

"A mate!" chirped Mr. Chickadee, "Well, why don't you advertise?"

"Advertise?" Friend Downy frowned. "How in the world would I advertise!"

"Oh, I don't know," and Mr. Chickadee gave a mysterious little chuckle. and away he hopped.

Well, for days and days Friend Downy thought over what Mr. Chickadee had said.

And one day, a month later, all the little Comrades of the Woods heard a strange drum, drum, drumming. It sounded as if someone were striking something against an old, partly decayed tree.

Mr. Chickadee, who was most curious, was the first to investigate.

Sure enough! It was Friend Downy drum, drum, drumming, with all his might on an old, old tree.

But, "I'm advertising!" was all Friend Downy would say.

"Hm-m-m!" observed Mr. Chickadee. "That's a strange way to advertise!"

But it wasn't long till a gay little woodpecker appeared, frisking her saucy, little self about the very tree on which Friend Downy was drumming.

"Oh! Oh! Oh!" cooed Friend Downy, his dear little heart dancing. "She's answered my advertisement!"

And Friend Downy drummed harder than ever, blinking his dear little, bright little eyes at the gay miss, dressed in a sweet black and white costume.

In short the drumming stopped, and the courting began.

And in a few days there was a wedding. Oh, dear me, such a grand one! All the little Comrades of the Woods were invited.

And so, from that day to this, when any one of the descendants of Friend Downy wants a bride, he simply drums, drums, drums, sending out his message "Wanted-A-Wife."—Helen Gregg Green.

.."FORTY YEARS OF FAKING"..

(Continued from Page 7)

man in Iowa who said she was glad that she had won a prize and enclosed the 98 cents asked for. Some sent the money without any comment and others gave minute descriptions of the kind of silverware they desired. It was surprising how easy the people bit on this deal. One fellow wrote that there must be some mistake as he had never entered any contest and therefore could not see why he should send the money. It was surprising to me to know that after fifteen days had passed, I had taken in over expenses nearly $200. The game was looking so good that I was just about ready to get a second collection of cards printed, when one day I stopped in front of the hotel and overheard a big fellow say: "Did you ever hear of the National Awards Committee in this town?"

Another fellow whom I had seen around town quite a bit said that was a new one on him. However, I decided it was time to beat it and in less time than ten minutes I had my grip packed and had started north. I picked up a paper on the train and discovered quite an article which told how some person had defrauded a lot of people on a silverware deal, and how they were looking for the fellow who was playing the game, so I decided it was time to put a lot of distance between myself and that town in Florida.

(Continued in March 29th Issue)

USES UP BATTERIES TOO FAST

(Continued from Page 13)

Can you give me any advice on a liquid "B" battery, 90 volts? Can I reduce the expense and get satisfaction? My set brings in the distance stations in good shape but, oh the pocketbook! I have a built-in horn but get better results with the headset.—Bert Lyon, Eaton County, Michigan.

—In reference to your difficulty with your radio set we do not know just what tubes and batteries you are using now as you do not mention them. However, we will do the best we can for you and think that if you follow directions that you will not have to buy new batteries more than once a year.

When ever you finish listening-in on your set always disconnect the "A" battery. This will prevent accidental drain on this battery. If your set has a switch for this purpose be sure that it is at "off" when not using the set.

If you are using 4 tubes of either WD-11 or WD-12 type you will need for your "A" battery 4 No. 6 dry batteries connected in multiple. These connected in multiple will give you from 100 to 300 hours of intermittant service. If you are using either UV-199 or C299 tubes you should uses 3 No. 6 batteries connected in series, better to use 6 batteries three in series and two in multiple. Your life then would be from 200 to 500 hours.

The "B" battery of 90 volts would be too expensive if you used wet batteries. Burgess or Eveready "B" batteries of 22½ volts each will give you 1,000 to 1,500 hours service (which will mean at least a year). Four of these 22½ volt batteries will cost you from $6 to $10 and that will be the limit for a whole year. Your total should not exceed $15 a year.

If we knew just what your set was and what tubes we could help you more, also tell you how to make your horn work. It should be better than head phones with so many tubes. Tell us what aerial and ground you use also the tubes and we can help you more.

We think that your trouble is mostly in leaving your filaments burning all the time which will use up your batteries quickly.

NOT CHEAPER TO BUILD THIS SET

Would it be very much cheaper to buy the parts to construct a receiving set like the Federal, type DX58, than to buy one already assembled?
—It would not be much cheaper for you to build a set like the Federal set that you mention than to buy one complete. You would have all the work and then not be sure of the results as their set is made from parts that they manufacture and fit their requirements and are assembled in their own shop.

If you desire to build your own set and have not done so previously in any way, the type of set that you suggest is too hard as a beginning. There are too many things that can go wrong with it and you would not be able to understand what is causing the difficulty. We advise building simpler sets to start. The set that we have described will give you a range of a few hundred miles to over a thousand at times. I listen to many stations on one like it every night and during the day I listen to KYW of Chicago regularly.

SCARLET FEVER

IF, at ten years, the child has not had scarlet fever, the chances are that he never will have it.

So say Drs. Hektoen and Perry of the McCormick Institute for Infectious Diseases, Chicago, in the first of a series of articles on "Neighborly Diseases," which appears in the March issue of Hygeia, the popular health magazine published by the American Medical Association.

Nine out of every ten cases of scarlet fever are among children under ten years, and the greatest number of cases are among children from three to six.

Scarlet fever can be prevented, say the doctors. Ways to prevent its spread are these:

1. Every person sick with the disease should be so confined that all discharges, such as from nose and throat, may be kept from direct or indirect contact with other persons.

This means, first of all, that all nasal and similar discharges must be caught on papers or cloths that can be burned at once.

2. No article should be taken from the sick room until it has been disinfected.

3. No person should leave the sick room without removing a protective garment and washing his hands.

4. No person who takes care of a scarlet fever patient, who has been in the room near one, or who has recently had the disease himself, should mingle with children or should handle food, especially milk.

Once the child gets scarlet fever there is no "cure." The disease must run its course, so the best care should be given him and the rules of isolation strictly followed.

Hundreds may be saved from suffering if a person takes conscious care of his own child and sees that if "exposed," he is kept at home and, if he develops the disease, he is properly isolated.

INDIA STILL PLOWS WITH FORKED STICK

THE Indian farmer has made only one or two improvements on the forked stick with which his forbears plowed in the days of King Tut-Ankh-Amen, 3,000 years ago.

The main improvement, says Don Griffin, an Ohio boy who went to India in 1915 and now is agricultural engineer for the Rajah of Gwalior, a central native state, is in the addition of an iron point to the sharp end of the stick. A plow like this goes 2 inches deep, and will not cover more than a third of an acre in a 12-hour day. Oxen pull it.

The plow is also used for a grain drill, this by the addition of a sort of funnel with a lang spout. The farmer drives the oxen, and his wife walks beside the implement dropping grains down the funnel at what she judges to be the proper rate. Then when the crop comes up the plow comes in for its third use; it is used as a cultivator.

In harvesting and threshing, methods are equally antique. The first modern thresher, demonstrated in the province only last year, aroused so much interest that it took ten armed men of the local constabulary, with bayonets fixed, to handle the crowds. Most threshing is done by the hoofs of oxen, and it takes two months to accomplish what a modern thresher can do in a day, or less. Gwalior, where Mr. Griffin is located, is four-fifths the size of Ohio. Its greatest farm problem is to save crops and people from wild beasts that come out of the jungle at night.

Zinc Insulated
TRADE MARK
Fences
No Extra Cost
INSULATED AGAINST RUST
40% TO 100% MORE ZINC

AMERICAN, ANTHONY, ROYAL,
NATIONAL, ELLWOOD, U. S.

Our New Wire Has Double the Heat Treatment in the Zinc Bath—the Proper and Only Way to Give a Heavier Coating with Lasting Quality

This new galvanizing *insulates* the wire with zinc, or spelter. The wire passes through a long molten bath where it accumulates this greater protective coating, *thus inseperably uniting the zinc with the steel.*

You know, of course, that all fence wire is galvanized—to protect it from rust—to make it last longer, in all kinds of weather.

Perhaps you *don't* know that there's as much difference in galvanized coatings as there is in the thickness of bark on trees.

It is not only the amount of zinc applied that gives the wire long life, but the coating must be uniform and even to be durable *and made inseparably a part of the steel.*

The temperature of the bath, the great length of time the wire takes to pass through it, the great amount of zinc that can be applied by this process without cracking or peeling—all these are important factors.

Our Zinc Insulated Wire Fences Have 40% to 100% More Zinc Than Other Fences

Our Zinc-Insulating process perfectly protects the wire. It repels rust. It protects the wire from the oxygen in the air and the storm elements. It safeguards the steel.

By this process the zinc is practically a part of the steel, giving it a super-protection that adds many years to the life of the wire. As a result, OUR WIRE FENCE WILL OUTLAST ANY OTHER WIRE FENCE MADE, and its use greatly reduces your fence cost per year—to say nothing of the better protection its staunchness and sturdiness insures.

All our Farm Fences — of every brand — American, Royal, Anthony, National, Ellwood and U. S. — are Zinc-insulated—*at no extra charge.*

Some wire fence makers market several qualities—a very small percentage of their total production bearing even good galvanizing, and that usually sold at a marked price advance. It all looks alike. You can't tell the grades apart. We make one grade only.

When you buy this ZINC INSULATED FENCE you are purchasing added years of fence service, without extra charge.

Your local dealer sells Zinc Insulated Fence and we stand back of him for your protection. We prepay the freight to the dealer.

WARDS 85 lb
Slate Surfaced
ROOFING
$1.85 PER ROLL
Guaranteed 15 Years

SAVE 50¢ A ROLL
Ward's RADIO ROOFING

Regular 85-pound standard weight

Don't confuse this full-weight 85-pound roofing with cheaper, lighter roofing sold at the same price.

Lay it over old roofs. There is enough in one roll to cover 100 square feet—yet a roll costs only $1.85, with nails and cement.

Fire Underwriters Approve It

Radio Roofing is surfaced with red or green slate that beautifies as well as protects it. Resists fire. Not affected by heat and cold.

We guarantee it for 15 years—it should last many more.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—Some of us dread the cleaning period and some of us cannot wait until we are off and at it. Strange how differently work effects us.

Let us try this spring to have some special convenience that we have wanted so long installed in the home. Maybe just a shelf in the kitchen or a new drop-leaf table or a place to hang our broom and dusters. Maybe John can fix it for you. So many times a simple device in the kitchen will make a woman's whole disposition change. We Sometimes do not realize the trivial things are the ones that get on our nerves. How about some short cuts in spring cleaning. $1 for the best letter received before April 1.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

WHEN MOTHER SLEEPS

When Mother sleeps a slamming door
  Disturbs her not at all;
A man might walk across the floor
  Or wander thru the hall;
A pistol shot outside would not
  Drive slumber from her eyes—
But she is always on the spot
  The moment the baby cries.

The thunder crash she would not hear,
  Nor shouting in the street;
A barking dog however near,
  Of sleep can never cheat.
Dear Mother, but I've noticed this
  To my profound surprise
That always wide-awake she is
  The moment baby cries.

However weary she may be,
  Though wrapped in slumper deep,
Somehow it always seems to me
  Her virgil she will keep.
Sound sleeper that she is, I take
  It in her heart there lies
A love that causes her to wake,
  The moment baby cries.

—Edgar A. Guest.

A PLACE TO WASH UP

MOST people hate to go all the way up stairs to the bathroom or bedroom washtsand just to wash their hands or freshen up before a meal The boy who naturally ignores his dirty hands until he is sent from the table groans and stamps all the way up and down; it is such a lot of trouble! And the men, coming in from the field or shop or garden work are apt to "track up" the house if they can not have a place to wash somewhere near the back door. Children can not take time from their play for washing faces unless a basin is provided very close to the yard. And mother herself, climbing stairs a dozen times a day, finds a trip up for hand-washing just the last straw that breaks a tired back.

And yet the kitchen sink is not the right place for all these necessary ablutions. The chief excuse for performing them there is that the water is handy. The idea of cleansing the skin where fruit and vegetables must be washed and dishes set down is not pleasant. Usually the people trying to clean up are in the way just before meal-time; and there is a great temptation among the masculine members of the family to dry the hands either all on the same roller towel or to take the tea towels!

Some sort of special washing-up place either on the back porch or in a corner or alcove of the kitchen is clearly necessary in every house where this problem occurs. In houses where there is running water the question is often easily solved by putting a lavatory somewhere on the ground floor—in a closet or at the end of the hall, or in some room where space can be spared A very good location is just inside a side entry which often occurs halfway down the steps leading to the cellar.

Farm housewives in Virginia who took part last year in home improvement contests directed by extension workers of the United States Department of Agriculture and the Virginia Polytechnic Institute, solved this washing up problem in a number of ways. One woman put the usual basin, bucket and soap on a bench on the screened-in back porch, and above it hung a medicine cabinet with a mirror in which were kept brushes, combs and other necessary toilet articles. A towel bar below provided a place for the individual towels.

Another woman placed a washstand in a storeroom opening off the kitchen, so that it was easily accessible and yet not conspicious. In a third home an old unsightly box for storing away shoes, rubbers, and other small articles was fitted with a shelf, painted white, and screened with a curtain of oilcloth bound with blue cretonne. This stand provided a place for keeping the basin and pitcher out of sight when not in use. When wanted they were easily set on top of it.

A fourth kitchen had a small extension, practically an anteroom which was useless except as a passageway. This was fitted with a child's shelf, built to suit the child's height, and provided with a bucket of water, basin and soap dish. There was a hook for a towel nearby. A lower shelf was put up to keep his overshoes on, and hooks at the right level were put on the opposite wall for the boy's cap and coat. The most untidy child can be helped to form orderly habits if a place like this is arranged especially for him.

Maybe some of you have schemed a way out of this problem, which means so much to every housewife when it is meal-time. If you have found a new and efficient way let us all share with you the knowledge.

BE FAIR TO THE BOYS

THE usual spring argument about taking the boys out of school and putting them to work in the fields will soon begin in the farm home. The father is very busy. Plowing and planting must be done on time. It is hard to hire men that can be trusted with the machinery and horses. Hired men mean more work in the kitchen for mother and daughters. The school may not be interesting. The boys are dependable, like to be out of doors, and are proud to take a man's place and help with the work. That is the easy, lazy way of looking at it and the boy gives up his spring school term and becomes a rural child laborer. It that occurs two or three years in succession he has lost his chance for an education.

The stronger, better way is to sacrifice something of the present comfort and expediency for the child's future welfare. By his work this spring or next spring the boy may save to the family two or three dollars a day for a few weeks but he does it at a very great loss to himself and probably to his people. He is giving up the time that should be used to deepen, broaden, and refine his life. Besides that, if he does not get proper schooling and enough of it now, he will not be able to earn as much as he ought when he becomes a man. Then he, too, will feel that his children must give up their chances for an education and spend their childhood days at some kind of labor. So the circle goes on from father to son. Keep the boy in school. That may be the way to bring the entire family to a finer plane of life.

FOODS FOR A MARCH APPETITE

THIS month sees the end of some of our morning fruit. Here are a few suggestions that may help you keep your health if watched carefully these days.

Apples soon will be done; and another breakfast delicacy, the baked apples, will pass for a time. To prevent this misfortune, baked apples may be canned in the home. Plenty of empty jars will be available at this season. The process is easy; simply bake the apples as usual, pack them in clean hot sterile jars, fill the jars with a thin hot syrup and seal. Take some care that the apples are kept as whole as possible. Rhode Island Greenings and Baldwins are good varieties for baking.

Perhaps you've had some turnips or onions in the cellar? If they have felt the coming of Spring and have put forth tender, green young sprouts, cut them off and use them in salads.

In cooking stewed prunes you probably improve them by adding a dash of lemon juice or a slice of lemon. Just for a change, try a bit of tart apple instead of the lemon. It's merely that a sharp flavor is needed to offset the mild and natural sweetness of the prune. However, with lemon or without, with apples or rhubarb or alone, don't, with the passing of Winter and the coming of the fresh fruits, don't neglect prunes. They still have a mission to perform in your food life.

Are you already looking forward to the maple season, and have you planned your favorite maple desserts to serve the family? Sometimes when you are just "too tired" to fuss with an elaborate dessert, try giving them apiece of fresh bread cut about an inch thick and two or three inches square, covered generously with fresh stirred or shaved maple sugar and served with thin cream. It will satisfy the family as well as yourself.

Spring lamb is one of the delicacies of this season. Why so few people really care for mint sauce with lamb is often the talk of the table. It may be because dried mint is often used instead of fresh mint, which should be available at every good butchershop. Two tablespoons of fresh chopped mint, a tablespoon of sugar, two of vinegar and six of water heated (never boiled) until sugar is dissolved make a good mint sauce.

This is a good month to put the canning equipment in shape, order new supplies and plan the Summer's canning.

As soon as the first daffodils appear, have some for breakfast—a few in a low bowl as a table decoration, of course. But even though not edible, they will have a tonic effect on the well-known jaded appetite of Spring.

THE PINT JAR METHOD HOT LUNCH

THE public health nurse of Ramsey County, Minnesota, has a novel plan for serving hot lunches in the rural schools of her county which she calls "The Pint Jar Method Hot Lunch." Each child brings from home some particular kind of food in a tightly closed Mason pint jar. Upon reaching school the jar is set on a rack in a clothes boiler. This boiler is partly filled with water and placed on a two-burner oil stove. At the morning recess the stove is lighted and by noon the contents of the jars are hot. Then monitors distribute the jars and the children supplement the warm dish with the cold food in their lunch baskets Each child has his initials scratched on the cover of his jar in order to insure identification. The nurse recommends the following kinds of foods for the jars: Cocoa, milk, soups, certain kinds of fruits and vegetables, macaroni, rice creamed eggs, baked beans, and stewed meat. The equipment required consists of a two-burner oil stove, a clothes bailer, rack, and hot can lifter.

SAVE TIME ON BUTTONHOLES

BUTTONHOLES on a baby's dress may be cut off in a strip when the dress is worn out and sewed under a tuck in little girls' blouses. The buttonholes in little boys' trousers are made in bands of durable material and can be ripped out and sewed into other garments when the trousers are discarded. Also the buttonholes in men's shirts may be ripped off and sewed under a tuck in children's aprons.

Personal Column

Ammonia for Cookies, Who Can Help?—I wish to know if any one can tell me how much 5c worth of Bakers Amonia used to be twenty years ago? A neighbor of mine moved into the home of her deceased aunt, with whom she used to make her home when she was a very young girl. She remembered that her aunt and also her own mother, who were sisters, used to make lovely cookies; so she was delighted when she found a recipe written in her aunt's hand for Lemon Cookies, but when we tried it we found there was not enough levening or enough oil of lemon. The recipe read 5c worth Bakers Ammonia, 5c worth Oil of Lemon, 2½ cups sugar, 2 eggs, 1 cup shortening, 2 cups sweet milk, salt. Can you correct this recipe, as we do not know how to tell how much Ammonia or Oil of Lemon to use with the other things as given. —A Subscriber.

—I am sorry that we are unable to answer query regarding Bakers Ammonia. It has been out of use for household baking for so many years and prices have changed so radically that I doubt if you will be able to find anyone who can give you the information that you seek.—Jean Krueger, Dean of Home Economics, Michigan Agricultural College.

—As you will notice, the college cannot answer this question. Maybe some of our kind readers will be able to help you.

"There'll Come a Time"—is a poem asked for by one of our readers who so kindly sent in poems "After the Ball was Over" and "Just Break the News to Mother". Maybe one of our readers will send in this one so she will realize the old saying "Give and ye shall receive."

Maybe This Has Happened to You.—We smoked some bacon and got it smoked too much, so it isn't very good. Do you know of any way we can take some of the smoke out of it? Please let me know through your column as soon as you can.—Mrs. J. A. T., Allegan, Mich.

—I know of no way of removing the excess smoke from meat that has been smoked too much. A small amount of excess smoke from the woods ordinarily used in smoking should cause no harm.

Green hickory is the best obtainable wood for smoking. Next comes maple wood, apple wood, or in fact most any hardwood. Corn cobs also may be used. Any of the pine woods or those having a resinous flavor should by all means be avoided.

The meat should be hung a considerable distance above the fire and it is usually best to suspend a piece of sheet-iron above the fire, in order that the smoke does not reach the meat directly. —Geo. A. Brown, Professor of Animal Husbandry, M. A. C.

Cannot Be Done.—Will you inform me through the columns of the M. B. F. of a matrimonial paper.—A Subscriber.

—This is something our department cannot do. Too much unhappiness may be caused by doing just this thing and I do not feel we should use our valuable space for it.

It pays, always, to do right and it never pays to do wrong.

I want to thank the reader who sent me the above motto. It is splendid and I am pleased to know that it is in some of our schools.—Annie Taylor.

A FORD

The first car I bought was a little tin
    Ford,
And every time I shifted gears it made
    the engine roar.

I started down the road one day,
  At driving I was green
I darned nye ran over everything I seen.

I ran down the neighbors chickens,
  Also their cats and dogs,
I ran through ditches and over
  Stumps and logs.

The only thing that I could do,
  Was just to let it spin,
And the way the darned thing rattled,
  You would know 'twas made of tin.

The way the people talk, about the Ford,
  It fairly makes you sore,
They claim that you can buy repairs,
  Down at the ten-cent store.

But let them say what e're they please,
  There's no other in their class,
That will go a greater distance,
  On the same amount of gas—than a
    Ford.

—Mrs. R. C., Fenwick, Mich.

Caramel Pudding with Meringue
Coffee

Veal and Ham Pie.—One and one-half pounds of veal, two hard-cooked eggs, few grains of red pepper, dust of powdered mace, one-half teaspoon grated lemon rind, one-half pound ham, one tablespoon flour, one teaspoon salt, six whole peppers, powdered sweet herbs, and pastry.

Cut veal and ham into very thin pieces; mix on a plate, flour, salt, pepper, sweet herbs, lemon rind, red pepper, and mace; roll in this seasoning each piece of veal and lay in a pie dish alternating layers of veal, ham, and egg, cut in slices; pile this in center of dish cover and decorate with light pastry; when baked add a little very good seasoned stock, which should become a jelly when the pie is cold, or a little gelatine may be added; garnish with parsley.

—if you are well bred!

The Christening Date.—Modern usage in general favors delaying the baby's christening until the young mother is conveniently able to attend in person. There is also the religion factor to be taken into account which in some denominations makes christening optional during a period of several years. The first or second Sunday after birth, formerly set as the proper day for baptism in the observance of the Roman Catholic and Episcopal Churches, now is not so strictly adhered to in practice. Though christenings are most common when the baby is from two to six months old, if the child is baptized when but a few weeks old, the event takes on a very intimate home character.

RECIPES

Overnight Cookies.—One and one-half cup brown supar, one and one-half teaspoon soda, one-half cup granulated sugar, two eggs, one-half teaspoon salt, one and one-half teaspoon cream of tartar, one-half cup butter, and lard mixed, three cups flour, one and one-half teaspoon vanilla.

Mix the ingredients in the order given, sifting the flour, soda and cream of tartar together before adding them. Shape in a loaf and cover with oiled paper. Let stand over night in the refrigerator. In the morning slice and bake in a moderate oven.

Apple Sauce Cake.—One and one-half cups sugar, one cup butter, one and one-half cups sour apple sauce hot. (Takes about three medium apples), three scant teaspoons soda, one cup chopped raisins, one and one-half cup chopped walnuts, one-half teaspoon cinnamon, one-half teaspoon nutmeg, one teaspoon vanilla.

Flour enough to make stiff batter, add a little salt. The nuts may be omitted if in a hurry, but it is not quite as good, of course.

Plain Cake.—One cup of sugar, one-half cup of cream, two eggs, one cup of cold water or milk, sweet, two and one-half cups of sifted flour and two teaspoons of baking powder, pinch of salt, and flavor.—Mrs. Ethel Short.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

He that keepeth understanding shall find good. Prov. 19:8.

Make no friendship with an angry man; and with a furious man thou shalt not go; lest thou learn his ways, and get a snare to thy soul. Prov. 22:24-25.

Self-pity must be strangled the moment it is recognized. It is the worm that dieth not. To indulge in self-pity is to tear down your strong holds. If you have spiritual understanding even in a small degree, you will know that continued misfortune indicates that something is clouding your consciousness of Ever-Present Help, you are engaged in wrong doing, are holding to the belief that some act of the past has power to harm you, are indulging in some form of hate, or you are not protecting yourself as you should "from the firy darts of evil." Self-pity has no place in the divine economy and should be reckoned with, worry and regrets as agents of death. No cure can come, nor harmony be banished while any one of these three has control of the thoughts.

AIDS TO GOOD DRESSING

BE SURE AND SEND IN YOUR SIZE

FASHION BOOK NOTICE

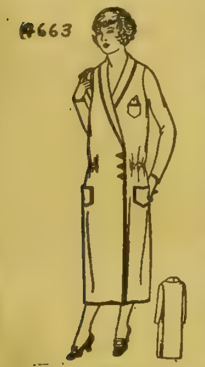
Send 10c in silver or stamps for our UP-TO-DATE SPRING AND SUMMER 1924 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (Illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

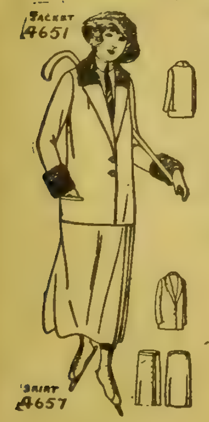
4641. A Popular One Piece Dress.—The straight line dress is here shown with pleasing and attractive features. One may have the fronts rolled low and open, or buttoned to the neck. The sleeve is pretty in wrist length with the narrow tab cuff, and very smart and comfortable in elbow length. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 4 ¼ yards of 40 inch material. The width at the foot is 2 ⅛ yards.

4639. A Pretty Garment for "Breakfast Time."—This would be lovely in silk crepe or embroidered crepe de chine. It is also attractive in corduroy, cotton crepe, batiste or China Silk. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 5 ⅝ yards of 32 inch material.

4651-4657. A Smart Street or Sport's Suit.—Twill, serge or broad cloth could be used for this model. The skirt is in "wrap" style. The Jacket has new lines and a very smart closing. The suit comprises Jacket 4651 cut in 6 Sizes: 34, 36, 38, 40, 42, [illegible] 44 inches bust measure, and Skirt 4657, cut in 7 Sizes: 25, 27, 29, 31, 33, 35, and 37 inches waist measure, with corresponding hip measures 35, 37, 39, 41, 43, 45 and 47 inches. The width of the skirt at the foot with plaits extended is 1 ⅞ yard. To make the suit for a medium size requires 5 ¾ yards of 40 inch material.

4658. A New Skirt Model.—This is a good "sports" model. It is attractive in plaid suiting, serge, wool rep, mixtures and in the new mohair weaves. The Pattern is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure, with the corresponding hip measure, 35, 37, 39, 41, 43, 45, and 47 inches. To make the skirt for a medium size requires 2 ⅝ yards of 54 inch material. The width at the foot with plaits extended is 2 ⅛ yards.





4663. A Simple Stylish Coat Dress.—Twill, serge or alpaca, as well as linen or rep could be used for this model. If preferred the fulness of the fronts may be held with belt or string girdle portions attached at the side seams. This Pattern is cut in 4 Sizes: 14, 16, 18 and 20 years. A 16 year size requires 3 ⅝ yards of 40 inch material.

4663. A Good School Frock.—This is a splendid style for remodeling, or for combining two materials as illustrated. Plaid or checked suiting and serge or wool rep would combine well. Gingham and chambrey or linen are also attractive together. The Pattern is cut in 4 Sizes: 8, 10, 12, and 14 years. A 12 year size requires 1 ¼ yard plain material, and 2 ⅝ of figured or checked material 40 inches wide.

4666. A Jaunty Style for a School Dress.—The new and pretty plaids are nice for this model, or, one could use serge, or wool rep. Wash materials are also attractive for this style. It is cut in 4 Sizes: 6, 8, 10, and 12 years. A 10 year size requires 3 ⅜ yards of 32 inch material. To make revers, collar and cuffs of contrasting material will require 1 yard.

4652-4572. A Unique Dinner or Evening Gown.—Here is a very attractive version of the "long waist" and tiered skirt, combined to make a very smart gown. The Blouse 4652 is cut in 6 Sizes: 34, 36, 39, 40, 42, and 44 inches bust measure. It may be finished with the neck line higher, and with a peasant sleeve in wrist length. Embroidered flouncing or bordered goods, as well as taffeta, linen, crepe and crepe weaves are attractive for this style. The skirt 4572 is cut in 7 Sizes: 25, 27, 29, 31, 33, 35, and 37 inches waist measure. The width at the foot is 1 ⅞ yard. To make the dress as shown in the large view will require 4 ⅝ yards of 40 inch material. To make the dress with long sleeves on the blouse requires 6 ⅛ yards.

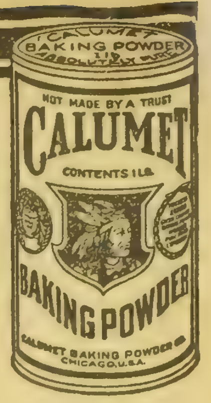
Millions of Bake Day Tests and not one failure~ made CALUMET THE WORLD'S GREATEST BAKING POWDER



—that's why it is the biggest selling brand on earth today. No other leavener of anywhere near the same quality is sold at such a low price. Remember that for day in and day out success on bake day Calumet has no equal. There are hundreds of other kinds—but it is the most economical of all. You save when you buy it—you save when you use it.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times as much as that of any other brand

Best By Test

THE WORLD'S GREATEST BAKING POWDER

The Remedy of 100 Uses

For Ills of All the Family

VICKS is good for all cold troubles—common colds, sore throat, bronchitis, catarrh, croup, tonsilitis and grip. These are all inflammations of the nose, throat or lungs. The ingredients—camphor, menthol, eucalyptus, turpentine, juniper tar, cedar leaf, etc.—make Vicks equally effective for inflammation of the skin such as cuts, burns, sores, bruises and skin itchings. An ideal household remedy — useful almost every day.

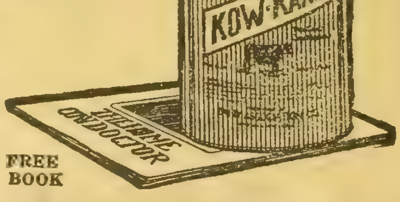
Turn Slacker Cows Into Big Milkers



FREE BOOK

The only difference between just breaking even at dairying and making a real profit lies in seeing that there are no slackers in the herd. A poor milker can soon eat up the profit of several productive cows.

Almost always the so-called poor milker is unproductive because of some sluggish condition of the genital or digestive organs. If these functions are impaired the milk flow is quickly reduced.

Kow-Kare helps to make good producers of poor milkers through its direct medicinal action on the milk-making organs. The vital organs of production are made to function with new vigor. Not only does the milk pail benefit, but the cow is able to ward off disease.

Such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, etc., find their origin in weakened genital and digestive organs. Kow-Kare is a reliable aid in treating these disorders. Its use and reputation is nation-wide.

By feeding a tablespoonful of Kow-Kare to all of your cows one week out of each month you will keep down expensive disease-loss and add greatly to the volume of milk Dairy experts say that you can double the net profit by increasing the yield only 10%.

Let us mail you free our 32 page book, "The Home Cow Doctor." Your feed dealer, general store or druggist sells Kow-Kare; $1.25 and 65c sizes. If your dealer cannot supply you, remit direct to us and we will send postpaid.

BARLEY FROM MICHIGAN

(Continued from Page 4)

The Wisconsin has big heads with long spreading beards that overlap in the field and give a good impression to anyone who passes that way. The Wisconsin is a good yielding barley. Don't mistake me. It is the best yielder that can be obtained in quantity in the state today. The point is that the Mich-2-Row was better. This was a two-rowed barley, it is true, and some have said: "It stands to reason that a six-rowed barley will yield more bushels per acre than a two-rowed variety." However, that may be the Mich-2-Row had enough more heads to the acre, to more than make up for the difference. But the Mich-2-Row held its beards in a close cluster out from the end of the head, and the heads instead of nodding, stood straight. Thus, in looking down on the field you saw little more than the ends of the heads. This fact seemed to have deceived farmers, who did not stop to look further. Those who went far enough to get the barley threshed have many times been surprised, because they did not think that piece of barley could yield so much. The fact remains that farmers did not select this variety, and therefore there is no seed available at the present time.

The plant breeding work at M. A. C. has also produced a winter barley, known as the Michigan Winter. This barley was distributed in 1914. It came from an individual plant selected in 1910. Up to that time, winter barley had not been a commercial success north of the Ohio River. Mr. H. B. Derr, who was then head of the Barley Investigation of the U. S. Department of Agriculture believed in winter barley and believed that it could be made a success for that purpose and turned them over to the Michigan Experiment Station in the fall of 1909. Thus our work with winter barleys started with these lots of seed. The seed was planted that fall in what we call beds. That is, each seed was individually planted five inches from any other seed. There were eight of these beds planted in the fall of 1909. Two of the eight lots winter-killed as a whole the first season. A third lot was injured enough to be proven distinctly inferior, and was discarded as a whole. Individual plant selections were saved representing the remaining five sources of seed. These became mothers of plant rows sown in the fall of 1910. As a result of that year's test, a fourth source of seed was eliminated, and six strains now represented the remaining four original sources of seed, to be replanted in the fall of 1911. The fall rains soaked the ground before freezing and the temperature reached 20 degrees below zero. A very large portion of the wheats in Southern Michigan were killed or badly injured that winter, and most of the wheats on the Michigan Experiment Station were badly injured. The winter barleys were tested that winter along side of wheats that winter-killed. Three of the selections coming from the Wisconsin Winter, had winter killed. This left a selection from each of three sources, but one of them was discarded as not as good as the other two, which were again tested in 1913 and increased in 1914 for distribution that fall. One of these barleys was distributed as the Derr Winter and the other as the Michigan Winter. Farmers have generally preferred the Michigan Winter, and that is the only one for which the Michigan Crop Improvement Association could furnish seed this fall. During the seasons 1913-1915, the Michigan Winter averaged 58.9 bushels per acre on the experimental plats at M. A. C. and in 1915 seven acres of Michigan Winter averaged 59.3 bushels per acre. When compared on the basis of pounds of grain per acre, 59 bushels of barley equals 88.5 bushels of oats.

I could cite many good things that farmers have said about this barley in the first few years after distribution but the fact remains, that most of these people have neglected to grow it. The principal reason in my mind is that if planted late it is injured by the winter. Even as late as we plant wheat is not safe. It needs to be planted in the last days of August or about September 1. The 59.3 bushel yield on seven acres at M. A. C. was planted September 4, 1914. Experience shows

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARK H. JACKSON
No. 265-K Durston Bldg.
SYRACUSE, N. Y.

Mr. Jackson is responsible. Above statement true.

that winter barley must cover the ground with a good vigorous growth by the time that winter sets in, if it is to winter well. This seven acre piece became loaded with Hessian Fly in the fall of 1914, so much so that the entomologist advised to have piece be plowed up. But the farm superintendent did not do so. In the spring a search for Hessian fly found only four insect in this barley field. It seems that the tops froze down so completely as to include the winter lodging-place of the Hessian fly, thus killing the fly, and these frozen tops protected the crowns of the plants from injury. The appearance of such a field in the early spring, (to anyone who is not familiar with winter barley), would be that the crop is dead. Several have plowed up pieces of winter barley on appearance alone. If it has winter killed, one can not be sure until the crowns decay. If the yield has been well covered with tops in the fall and with snow during the winter, it usually takes but a short time for the barley to grow up through the frozen tops and turn the yellow to green.

We have let this crop weather Michigan winters now for ten years. At one time it appeared that farmers would discard it as they have Alexander, College Success, and College Wonder Oats, and the Mich-2-Row barley, but it is still with us and it seems increasing in favor. If the Michigan Winter barley can be properly planted during the latter days of August, it warrants more serious consideration among farmers, at least in a small way.

There are three improved varieties of barley that can be gotten through the Michigan Crop Improvement Association. Address the Secretary at East Lansing in season. The Michigan Black Barbless and Wisconsin Pedigree can be obtained now for spring planting, and the Michigan Winter can be obtained when a new crop is available next July.

(Editor's Note: The third article of this series by Mr. Spragg will appear in an early issue.)

BREEDS OF BEEF CATTLE

1. (a)—Polled Shorthorn

THE Polled-Shorthorn breed was formerly known as Polled Durham. The name was changed in 1919 because not more than 5 per cent of the animals now being recorded in the Polled Shorthorn Record are other than "double standards." The "single standards" were produced by breeding polled cows to Shorthorn bulls, selecting the polled offspring and breeding them to other Shorthorn bulls. This grading up was continued until the polled offspring was brought to the fifth cross which contained 96⅞ per cent or more of Shorthorn blood when they were qualified for entry in the "Polled" record only. The double standards were the polled offspring from parents both of whom were registered in the American Shorthorn Herd Book. Double standards may be recorded in both the Polled Shorthorn Herd Book and the American Shorthorn Herd Book.

The breed is similar to the Shorthorn in every way except that it is hornless. The Polled Shorthorn is a comparatively new breed of cattle and of late years has been increasing very rapidly in popularity, especially since breeding Polled Shorthorns affords an added incentive to constructive breeding. The American Polled Shorthorn Association was organized in 1899 and its rules are such that one parent may be a horned Shorthorn, provided the other is a recorded Polled Shorthorn. There is no limit to the breeder's introducing into his Polled-Shorthorn herd the blood of any horned animal whose breeding and contour appeal to him, and since some breeders have developed the dual-purpose qualities in the animals, the result is a considerable variation in type.

We Know How He Felt

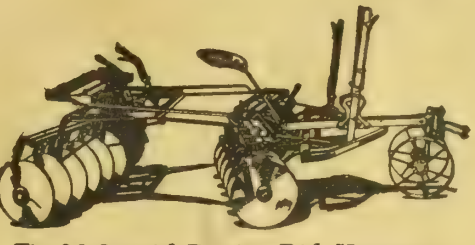
A rickety flivver chugged down the street faster than the cop thought the owner ought to be driving. The cop signalled him to stop, but the flivver kept right on going.

After a pursuit, the cop demanded angrily: "What's the idea? Why didn't you stop when I told you to?"

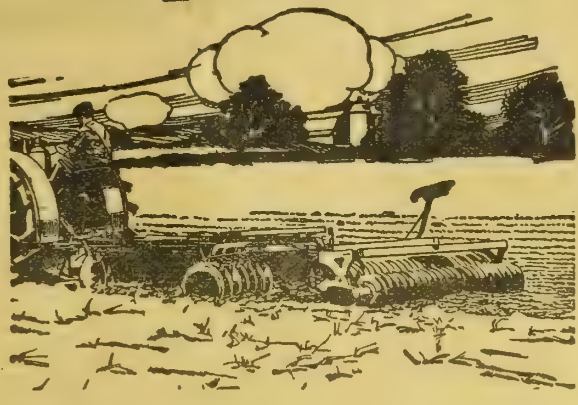
"Well," answered the man, "it seemed a shame to stop after I spent two hours gettin' the ol' bus started."

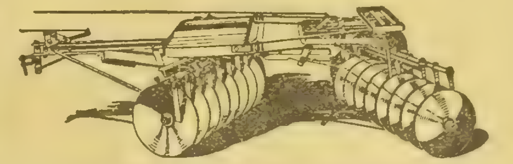
It is reported the cop let him go.

McCormick-Deering Tillage Implements



The *McCormick-Deering Disk Harrow* is a simple and efficient implement, built and trussed like a steel bridge, to serve many years. You will like the details and conveniences—the dust-proof bearings and the bearing oil cups set above the frame, the built-in angle-steel weight boxes, the oscillating disk scrapers, the forecarriage, etc. Made in sizes for everybody—4 to 10 feet. All sizes can be equipped with the tandem attachment which is shown above. Double disking is popular—farmers know that it more than pays for itself.





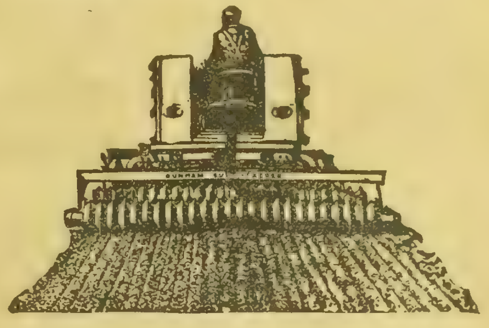
The *McCormick-Deering Leverless Disk Harrow* is a genuine tractor disk, not a made-over horse harrow. It is built for heaviest duty. It is controlled entirely from the driver's seat, without levers, yet it is very simple. Merely backing the tractor automatically sets the angle of both front and rear gangs. When the tractor starts forward the gangs hold that angle until released by a pull on the rope. In 5 to 10-foot sizes to fit your power.

SEED-bed making will call for fast and thorough work this year as always. The planting season will roll around in a twinkling, but no matter how few the days between plowing and planting you can have a profit-building soil by using efficient equipment.

McCormick-Deering Tillage Implements combine the three essentials—good work, long life and convenience. They are of practical design, their construction being based on ninety years of farm and factory experience. They are priced on the basis of economical quantity production, and as an investment they offer you attractive returns.

To Fill All Your Tillage Tool Needs See the McCormick-Deering Dealer. It Pays!

INTERNATIONAL HARVESTER COMPANY
OF AMERICA
(INCORPORATED)
606 So. Michigan Ave. Chicago, Ill.



The *Dunham Culti-Packer* has no equal as a seed-bed finisher. It pulverizes the soil, fills out air spaces, and saves moisture content. Following the drill, it helps the little plants to get a quick start, firmly set in finely mulched soil. Use it to prevent winter-killing of wheat; to rejuvenate meadows, etc. It is far ahead of a roller for small grains. Made in eight sizes, for horse and tractor use.

NATIONAL SILO

TAKE CARE OF THAT FEMALE CALF TODAY

(Continued from Page 4)

the end of the second or third week. This change should be made gradually by substituting a small quantity of skim milk for whole milk in the daily ration. About a week or ten days should be taken for this change. In this way the calf will go off the whole milk gradually and will not have a distaste for the skim milk.

Temperature of Milk

Care should always be taken to have the milk warm and sweet; especially is this necessary when feeding the young calf. As the calf grows older it will do just as well on cooler milk if it is fed at the same temperature every day. The right temperature for the milk fed the young calf is blood heat, 100°F. The milk should be as nearly this temperature as it is possible to get it. There is no way by which the digestive system of the young calf can be upset more easily than by feeding cold milk at one meal and warm milk at another. If there is any doubt about the temperature, or if the milk has to be warmed at all, the thermometer should be used. Judging the temperature of milk by putting the finger into it is not satisfactory. Milk at 90° F. will feel warmer on a cold morning than it will on a warm morning, and the calf's digestive system is very sensitive to any change. It is also important to feed sweet milk. One feed of sour milk may upset the digestive system of the young calf for months, and one feed of such milk often causes the death of the calf. It is better to let the calf miss one or even two feeds than to feed it on sour milk, however, they may be raised on sour milk entirely after the first few weeks, but if sour milk is fed it should contain about the same acidity at all times.

Clean Pails Necessary

The pails from which the milk is fed should be kept as clean as possible. They should be kept as clean as the milk utensils. It any milk is left in them it will sour, and the calf will soon show the effects. The pails should be thoroughly cleansed and sterilized often.

Length of Time to Feed Skim Milk

The length of time that the calf should be fed on skim milk will depend upon the amount of skim milk available for this purpose. Some feeders wean their calves at four months of age, but it is a better practice to feed skim milk until the calves are six months old. If one has an abundance of skim milk it is a profitable practice to feed heifers until they are eight months or a year old. This will insure a better growth and better development. Many feeders give their calves as much as twenty-five to thirty pounds of skim milk per day when four to six months of age. This, however, is a wasteful practice. Eighteen or twenty pounds per day is all that can usually be fed profitably.

Feeding Grain and Hay

At the time the calf is changed from whole milk to skim milk it will begin to eat grain. The best way to get the calf started eating grain is by placing a little grain in its mouth after it has consumed its milk. It will like the taste of grain, and will soon eat without assistance if the grain is placed within its reach. Some feeders practice the feeding of grain with the milk. This is a serious mistake, especially if the grain consists of corn or other starchy feed. Such feed as corn must be acted upon by the saliva of the mouth in order to insure its proper digestion. When the grain is fed with the milk the calf simply gulps it down and does not masticate it in the least. In such cases indigestion often follows. When the calf once begins to eat grain readily, only such an amount should be given it as will be cleaned up at each meal. Here again the appetite of the calf is the best guide as to the amount of grain to feed. Usually the calf will not eat over a half pound of grain per day for the first two months. From this time until it is six months old a pound of grain per day will be sufficient.

Skim milk is deficient in fat, and in supplementing it one must make good this deficiency. Grains which contain a high percentage of carbohydrates may be substituted for the

R.F.D.................State.........................

betterfat. Corn contains a high per cent of this material, and on account of its low cost in the corn belt it is the logical grain to feed with skim milk. Many farmers and dairymen make the mistake of feeding linseed oil meal with skim milk, as the only grain or concentrate fed. This mistake is made on account of the idea that some have regarding the composition of oil meal. Many assume that oil meal contains a high per cent of oil, which will replace the fat that has been taken out of the milk. Linseed oil meal is valuable for feeding on account of the high content of protein. It does not contain a very high per cent of oil. Oil meal may be fed in connection with corn, but this is not necessary, and it is very expensive. The corn has invariably given the best results as a supplement to skim milk. When teaching the calf to eat grain it is better to use ground corn, as the calf get a little older shelled corn may be fed.

Hay should be kept before the calf after it is two weeks old. At this age the calf will begin to nibble at the hay, and will soon consume quite a little of it. The eating of hay should be encouraged by keeping nice clean, bright hay within the reach of the calf at all times. For calves under two months of age, mixed or timothy hay is better than alfalfa or clover. The latter are usually too laxative and have a tendency to produce scours. After the calf is two or three months old it will do much better on alfalfa and will eat a great deal more of it than of the mixed hays. If alfalfa can not be had at this time, good clover or cowpea hay should be fed. If the calf is on pasture it will not be necessary to feed any hay.

The Calf Needs Water

Clean, fresh water should be provided at all times. Many feeders assume that the calf does not need water on account of drinking milk. It will consume a large amount of water even after drinking fifteen or twenty pounds of skim milk per day.

Calf Scours

The most common disease of the young calf is indigestion, or scours. Naturally the digestive system of the young calf is weak and is very easily upset. The old adage, "An ounce of prevention is worth a pound of cure," is very applicable here.

There are two kinds of scours that commonly affect the young calf—white scours, sometimes called calf cholera, and common scours, caused from indigestion. The white scours is a contagious form, and if the calf becomes affected at all it is within a few days after birth. The remedy for this disease is a preventative one, and the best way to insure against it is to keep the stalls and pens clean. Stalls used for calving purposes should be cleaned and disinfected after each calf is born. Additional precaution should be taken by tying a string around the navel cord of the young calf immediately after it is born, and applying some good disinfectant to the exposed parts.

The common scours, or indigestion, may usually be traced to faulty methods in feeding the young calf. The principal causes are as follows: overfeeding, feeding cold milk, irregular feeding, feeding alfalfa or other highly nitrogenous hay to the young calf, using dirty pails, and dirty stables.

Many cases of ordinary scours or indigestion are caused by the calf lying on the cold cement or damp cold bedding in the stall. The same effect is noticed when calves are turned out in the lot or pasture early in the spring before the ground is warm. They lie on the cold ground, their stomachs get cold, and scours inevitably result.

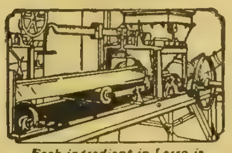
The first sign of indigestion or scours among calves is usually the characteristic foul-smelling dung. When a calf shows the first signs of scours the milk should be reduced one-half or more, and then gradually increased again as the calf improves. This method of treatment is usually sufficient to check a mild case. There have been many remedies suggested for treatment of the scours, and all are used with more or less success. The feeding of dried blood to calves has proved very effective. This may be fed by edding about a teaspoonful of soluble dried

(Continued on Page 26)

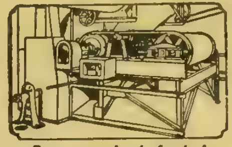
No Chance for Human Carelessness in Making—

Larro

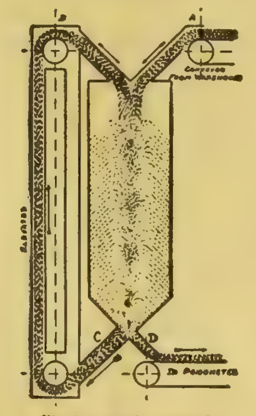
The Safe Ration for Dairy Cows



Each ingredient in Larro is continuously and accurately weighed as it flows through these poidometers to the mixer. All poidometers are driven by a single shaft. If one stops, they all stop.



Every pound of finished Larro passes over this big electro-magnet. It keeps Larro free from nails, wire and "tramp iron."



Warehouse and tank standardizing of each separate ingredient are exclusive features. This diagram of one of 14 blending tanks shows how it combines many different carloads of the same ingredient into one uniform blend of unvarying quality.

Human mistakes in making dairy feed are paid for, dearly, by the man who feeds cows.

Right there is where Larro offers you a tremendous saving. For Larro is made where they take no chance on human carelessness.

After being inspected, analyzed and approved by the chemists, each ingredient is standardized by blending to insure an absolute uniformity. These standardized ingredients flow continuously to the mixer through super-human machines called "poidometers" which weigh (not measure) the proportions with a most uncanny accuracy.

From the mixer the feed goes to the Jumbo Electric Magnet which removes all nails, tacks and wire from the finished Larro.

The Larro Mill is a great machine that never tires or forgets. If something goes wrong the mill automatically stops until that thing is made right. It can't work at all unless it works the right way.

The Larro Mill at Toledo, Ohio, is open to visitors all day every working day—no permits or letters of introduction necessary.

Feed Larro for the biggest profit, for safety, for healthy cows—and keep for yourself the money you may now be paying for some one else's carelessness.

PAPEC

The Biggest Value in Ensilage Cutters

Throws And Blows Saves One Man.

THOUSANDS of farmers agree that the Papec is the biggest value in ensilage cutters—simple, rugged, long-lived. Fills the highest silo without plugging the pipe. Light of draft; costs less to operate. Every part is easy to get at.

The Papec is made in four sizes: R-10; N-13; L-16 and K-19. A gasoline engine, developing 3 h.p. or more, will operate the R-10 size. Any tractor can be used with the medium sizes. For heavy tractors use a K-19 Papec—capacity practically unlimited.

Write for free catalog and U. S. Gov't Bulletin "Making and Feeding of Silage." Every silo owner should read them. Mention size of your silo.

blood to the milk and stirring it in well. Dried blood not only acts as a tonic, but often is fed along with milk at each feed on account of its feeding value as well as its value as preventative treatment against the scours. A fresh egg given to the calf when the scours is first noticed often checks the attack. Castor oil is also used with good results. Two tablespoonfuls is sufficient for a dose. This may be given as a drench with milk.

Feeding After Weaning

After the calf is weaned from milk the grain ration should be somewhat changed. The object in forming a grain ration for any growing animal is to feed it bone and muscle-forming feeds. The grain ration at this time will depend upon the kind of roughage fed. If alfalfa is used the calves will do well on a ration of corn alone, or corn and oats mixed, or corn and bran. If mixed or timothy hay, cane or corn fodder is fed, the grain ration should be changed some what. More nitrogenous foods, such as bran, linseed oil meal and cottonseed oil meal should make up the grain ration. If the calves are stunted by lack of proper food at this time they will usually develop in undersized cows. During the pasture season calves under a year old will make a more satisfactory growth if fed a grain ration while on grass. Yearlings and two year olds will make satisfactory development on a good pasture where a liberal amount of clovers abound

Young heifers should not be allowed to become too fat, they should be kept growing at all times, but a heifer that gets too fat before she is bred usually does not develop properly. After the heifer is bred she may be allowed to put some flesh on, particularly during the two or three months just before calving.

Exercise is a very important factor in the development of the young heifer. They should spend the greater part of their time in the open after they become a year old. Many dairymen follow the practice of keeping their milk cows either in the barn or in small lots all the time, but this practice does not give best results with the growing heifers.

Age of Breeding

The age to breed the heifer will depend first upon the breed and second upon her development. Jersey, Guernsey, or other early maturing breeds should be bred to calve about twenty-four months of age if fully developed. Heifers belonging to the Holstein, Ayrshire, or other late maturing breeds should have their first calves at about twenty-six to twenty-eight months of age. It is a better practice to have heifers calve early rather than late. The heifers calving early usually develop into more typy individuals, late calving tends to produce coarser animals that are particularly full or coarse over the shoulders and they usually retain this heaviness through out their life.

TEMPORARY SUMMER PASTURE FOR COWS

I will not have much pasture for my five milch cows during the coming summer except ten acres of marsh and would like your advice as to what to sow for green feed. I also have several geese and there seems to be very little grass in the yard and no clover field. I am wondering what I would plant in a poultry yard containing about one-half acre so that the goslings would have green feed. Would oats and rye be all right?—O. W. N., Milford, Mich.

—Sudan grass makes one of the best temporary summer pastures for cows as well as for horses. Would recommend seeding twenty-five pounds of Sudan grass on a well prepared corn soil about the middle of May. This should provide pasture by the 20th of June, and if pastured judiciously will pasture untill killed by frost in the fall.

Oats may be used as a pasture for geese. However, the oats will become woody and unpalatable. If the Sudan is not allowed to become tall and coarse, it will provide excellent pasture for the geese.—C. R. Megree, Associate Prof. of Farm Crops, M. A. C.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 680, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for a box of Walko, or $1.00 for extra large box—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

BUY BABY CHICKS WITH CARE

THE buying of baby chicks is a far more important problem than most purchasers realize. Baby chicks constitute the foundation stock of the future layers and breeders and, therefore, too much care can not be exercised in deciding upon the hatchery from which to buy.

Officials of the United States Department of Agriculture have observed that practical poultry raisers and farmers are relying upon the hatcheries more and more each succeeding year as a source of supply for their new crop of chicks. In other words, each year sees fewer and fewer chicks hatched under hens and the mammoth hatcheries are taking the place, to a certain extent, of the smaller incubators which are commonly operated on the farms. It is because of the fact that farmers are buying baby chicks from the commercial hatcheries in such large numbers that the officials of the department fell the necessity for urging them to exercise great care in deciding upon where to buy this year's supply of chicks.

At the same time it should be pointed out that many farmers, perhaps the majority, will still find it more economical to do their own hatching. This is especially the case where the farm flock is of good standard quality and has been bred for egg production. A farmer hatching his own chicks knows the quality of chicks he can expect.

The commerical hatchery business has developed to a very remarkable extent in the United States in the last two years. Some of the hatchery men have estimated that practically double the number of baby chicks will be hatched in mammoth hatcheries this year compared with last. There is a great increase in the number of hatcheries, each varying in capacity from a few thousand to several hundred thousand chicks.

The question of importance to a purchaser of baby chicks is the source of supply of eggs for the hatcheries. Many of the hatcheries have their business well organized and are able to guarantee the quality of the chicks. Some of the hatcheries, however, are not so particular where they purchase the eggs they use and are not able to guarantee high-quality chicks.

Purchasers of baby chicks would be well advised, officials of the department say, to make sure of purchasing from a reliable hatchery. Only purebred chicks should be bought and in addition to this, the purchaser should insist upon a satisfactory statement from the hatchery man as to the quality of eggs used. Were the eggs from a standard-bred flock with trap-nest records and was the flock in good breeding condition? Purchase baby chicks with great care. It is better to pay a few cents more for good quality chicks than can be guaranteed.

FIRST CARE OF BABY CHICKS

THIS is the season of the year when arrangements must be made to raise chicks to replenish the poultry flocks. Pullets are the most profitable part of the laying flock and a well-balanced laying flock should consist of at least half pullets; which allows careful culling of the hens during the summer and fall before the pullets are matured, according to the United States Department of Agriculture.

Baby chicks need especially careful attention in breeding and feeding during the first weeks of their lives, which should be followed by careful and regular attention throughout their growing period. Early hatched chicks are by far the most profitable whether grown to maturity for laying or sold as poultry flesh.

The brooder house and stove heater which are used for caring for the chicks during the first few weeks of their lives, must be in working order before the chicks arrive. The most common style of brooding is the use of a stove brooder in a colony house, keeping from 350 to 500 chicks in a flock in each house, and placing the houses about 150 feet apart on a good grass range. A house 10x14 feet makes a suitable colony house which can be readily moved if built on runners. Chicks brooded in the winter will do better in a larger house, about 10x20, partitioned so that one side is used for a brooder stove and the other for

(Continued on Page 28)

Raise all the Chicks You Hatch

Raise them the PAN-A-CE-A way.

Start them right—keep them growing right along without any backset.

PAN-A-CE-A gives chicks good appetite and good digestion—helps them develop rapidly—gives them vigor to resist disease.

PAN-A-CE-A prevents fermentation of the food; fermentation is where most of the bowel troubles start.

PAN-A-CE-A is a gentle tonic to all the little-chick organs—keeps the system in order.

PAN-A-CE-A contains the Salts of Iron, so essential to early chick life, and during the rapid growth of feathers.

PAN-A-CE-A prevents and cures gapes, indigestion, diarrhea and leg weakness.

PAN-A-CE-A your chicks and then watch them feather! A Pan-a-ce-a chick will outfeather a non-Pan-a-ce-a chick every time.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

C. EM. LAY EGG FARM
Francis M. Kent, R. 4, Muskegon, Michigan.

a cool exercising room. Wire netting should be placed in the corners of the brooder house to prevent the chicks huddling and crowding in the corners.

Chicks should not be fed for the first 36 to 48 hours, after which they should be supplied regularly 4 or 5 times daily with easily digested feed which contains little waste material. They should be fed sparingly until about the 5th day; then they can be put on a full ration. An excellent feed can be made of infertile eggs taken from the incubator boiled for 15 minutes, chopped and mixed with a dry mash of equal parts of cracker meal, bran and corn meal, using a sufficient amount of the grain to make a dry, crumbly mixture. Middlings can be used in place of the cracker meal. Dry rolled oats are excellent for chicks and can be used as one feed, the other two or three feeds being the commercial chick grains.

At two weeks of age the chicks can be given a dry mash, in a hopper, consisting of 4 parts, by weight, of rolled oats, 2 parts bran, 2 parts corn meal, 1 part high-grade meat scrap, 1 part middlings, and ½ part dried buttermilk. Commercial chick feed should be fed three times daily in addition to the dry mash.

Milk is an excellent feed for chicks and should be provided either as a liquid or in the dry form to secure best growth. If liquid milk is available the dried milk can be ommitted. When the chicks are one month old they should be fed a coarser or intermediate chick grain, and at about two months of age the scratch feed can be changed to equal parts of wheat and cracked corn. This should be fed two or three times a day.

PROF. FOREMAN COUNTS EGGS BEFORE THEY ARE LAID

HENS are no mystry at all to Prof. E. C. Foreman, head of the poultry husbandry department of the Michigan Agricultural College.

Prof. Foreman not only can tell how many eggs a hen has laid during the last year, but how many she probably will lay during the coming 12 months.

At poultry shows Prof. Foreman frequently astonishes experienced breeders with his accuracy in estimating the number of eggs laid in the preceeding 12 months by a given hen. Usually his estimate is within five or six of the actual number, recorded by means of a trap-nest.

"It all comes from practice," he said. "One must make observations from trap-nesting and judge accordingly. And it isn't enough to say a hen is long-headed or short-headed. One must see deep into her nature."

Prof. Foreman judges a hen's egg-laying ability from three standpoints—intensity, or the number of eggs per month; endurance, or the number of months during the year she can maintain her performance; and interruptions, due to broodiness and other causes.

Intensity of production he gauges mostly by the head. There are several distinct types of heads. Birds that are crow-headed are usually slow to mature. Some have heads overly refined and these produce weight rather than eggs. The heads of some are sluggish and coarse in appearance, indicating beef type. Such birds are similar to the beef breeds of cattle. Hens with a masculine type of head are apt to be diseased and usually do not produce any eggs. Birds with heads lacking in distinctive characteristics are not good egg producers. But those with refined, well-proportioned heads, wide-open, protruding eyes and alert expression, may be depended upon to produce the maximum number of eggs in a month.

Endurance is indicated by body conformation, which in the best hens resembles that of a dairy cow, muscular rather than fat, with a broad, flat back; long, deep, flat ribs, giving a wedge-shaped body; and a layer of flesh along the back and breast.

Broodiness usually accompanies a round skull, following the outline of the eye, and the presence of a prominent bone structure over the eye. It is natural for hens to become broody and a greater perecentage of the eggs of such hens hatch. However, they are not the hens that make world's eggs-laying records.

Wyngarden Strain WHITE LEGHORN BABY CHICKS
EGG BRED for 18 YEARS

Here's what you get when you buy Guaranteed Wyngarden Baby Chicks

(1) Pedigreed stock, sired by males whose dams had records of 260 to 289 eggs per year, and grand dams 298 to 304 eggs. (2) 100% live delivery. (3) Chicks guaranteed to be healthy. (4) Absolutely pure bred. (5) Absolutely no culls. (6) Stock that withstands winter cold as well as summer heat. (7) Free entry in our animal flock performance contest, whereby you may obtain 200 of our best Barron English White Leghorns free. We know the quality of our stock because we maintain 42 hatchery farms of our own, instead of buying eggs wherever available.

MARKET FLASHES

MARKET SUMMARY

Wheat is easy. Corn unchanged. Oats weak. Rye dull and steady. Beans firm. Potatoes easy. Butter and eggs in demand. Cattle active and higher. Hogs and sheep active but prices show no change.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Michigan Wealth Doubled

THE wealth of Michigan and Maine more than doubled in the decade from 1912 to 1922, as shown by the census bureau, but Maine's per capita wealth shows a larger increase than that of Michigan Statistics for the two states have just been made public. Michigan's wealth at the close of 1922 was $11,340,150,000, an increase of 116.7 per cent over 1912. The per capita wealth was $2,883, and increase of 59.5 per cent. Maine's wealth was $2,006,531,000, a gain of 100.1 per cent. The per capita wealth was $2,586, an increase of 94.1 per cent. To this it may be added that the Michigan farmers are as a class progressive and determined to make their farms yield more than in the past. They will stick to raising beans as one of the leading crops, and while realizing the importance of growing fewer acres of wheat than in recent years, will not abandon that grain because the country has overdone that industry since the war. Diversified farming is planned as the most promising scheme, and fruits and berries will unquestionably continue a big source of revenue. At the present time the sheep industry is especially attractive to farmers in Michigan, and those who own flocks of well bred sheep are extremely fortunate, prices having undergone enormous advances recently because of greatly inadequate marketings, with wool an important factor, as well as mutton. It should be added to what has been said that the existing farming conditions in Michigan are extremely varied, and many farmers have undergone hard experience, causing many farmers to leave farms untenanted. It is believed, however, that better times are coming, and a hopeful feeling is expressed in all parts of the state. Financial conditions have improved, and farmers entitled to credit are accommodated at ruling interest rates. High wages check the hiring of farm helpers, and the average farmer is managing to get along with little outside help except at harvest time. Not many farms are changing ownership, and war time prices for land cannot be obtained by sellers.

Important Government Statistics

The aggregate value of crops and live stock products, including animals raised, produced in the United States last year is estimated at $12,204,000,000 by the United States department of agriculture. This was $960,000,000 more than the estimate for 1922. The total includes $9,953,000,000 for crops, and $6,111,000,000 for animal products, less an allowance of $3,860,000,000 which is the estimated value of crops fed to live stock. The crop value last year was larger than for any year prior to 1917, the year the United States entered the world war, and was larger than for 1921 and 1922. The value of live stock products exceeded that for every year before 1918, and also for 1921 and 1922. The distress of wheat growers is shown by the estimate of the value of the 1923 wheat crop which is $726,000,000, compared with $874,000,000 in 1922 and with $2,080,000,000 in 1919. Corn was the largest single item of value, being $2,222,000,000 compared with $1,912,000,000 in 1922. Other important items in the cereal group were oats, of an estimated value of $539,000,000 compared with $479,000,000 in 1922, and barley $107,000,000 compared with $96,000,000 in 1922.

Swine was the outstanding item of value among animals raised, being estimated at $1,145,000,000 compared with $1,273,000,000 in 1922. Cattle had an estimated value of $924,000,000 compared with $975,000,000 the preceding year.

Firmer Wheat Market

It cannot be said that general trade conditions governing wheat have changed materially of late, but the bears find it more difficult to put prices on a lower basis, and they are slower to sell wheat "short" than was the case earlier in the year. Crop conditions begin to be more talked about, and samples of winter wheat from Champaign County, Illinois, show the plant was winter killed, the crown being soft and rotten. Thus far most of the bad crop news has come from Illinois, Indiana, Ohio and Kentucky, while favorable reports have come from Kansas and Oklahoma. Reductions in the visible wheat supply in the United States are slow, the stocks in sight being close to 64,000,000 bushels, comparing with 47,507,000 bushels a year ago. Canada has a large exportable wheat surplus, and this country is above an export basis, although fair north American exports of wheat and flour were made a short time ago. Hopes have been entertained by owners that placing a decidedly higher duty on wheat and flour imports would help to place values on a higher basis, the market being on a domestic basis, whereas in former years our exports really made ruling values. Recent sales of wheat were at decidedly lower prices than a year ago, and it is recalled that two years ago wheat for May delivery sold on the Chicago market as high as $1.50 per bushel. Obviously, the proper course for our farmers to follow at this time is to curtail their wheat acreage and thereby help to bring about pre-war smaller crops and correspondingly better prices. The general belief is that the spring wheat acreage will show a fairly large reduction from that of 1923. The tariff question on wheat has been settled by the announcement of the President, the duty on wheat being advanced to 12 cents, making it 42 cents. The import duty on flour is fixed at $1.04 per 100 pounds, a raise of 26 cents. The new duties take effect in thirty days. To help stock feeders, the import duty on mill feeds is reduced 50 per cent ad valorm.

Wheat Statistics

Farm reserves of wheat of 123,000,000 bushels as shown by the Snow-Bartlett-Frazier report, are the smallest since 1918, and compare with 153,000,000 bushels last year. States west of the Rockies have 6,000,000 bushels more than a year ago and those east have 37,000,000 bushels less. There is a marked shortage in reserves in the Dakotas and Minnesota, where farm holdings are 158,593,000 bushels, or only about sufficient for seed requirements, compared with 44,036,000 bushels last year. After allowing for the balance of the season, B. W. Snow estimates that there are 94,000,000 bushels for export to July 1 and for carryover, compared with 101,000,000 bushels actually on hand July 1, 1923. Reserves of corn are 1,165,000,000 bushels against 1,092,000,000 bushels last year, and of oats 447,000,000 bushels against 421,000,000 bushels in 1923.

Good prices for Corn

High prices for corn have caused rather extensive selling by farmers who had more than they required for feeding to their stock, and the visible supply has increased materially, exports from our shores continuing small, whereas a year ago they were of good proportions. Corn is fetching decidedly better prices than last year, while a little more than two years ago May corn sold on the Chicago Board of Trade for 62½ cents. Much corn has been fed on farms, but much is left, although little corn grown in 1922 was carried over to the following crop year. For weeks there has been activity in organizing corn farmers in Illinios, and a short time ago Iowa farmers started along the same lines, with a few of getting better terms. Oats are plentiful, with farm reserves larger than a year ago and far smaller exports than at that period, although prices are not especially high. The visible rye supply in the United States is reported at 21,205,000 bushels, comparing with only 14,954,000 bushels a year ago. Ruling prices are much below those of a year ago, but very little is exported, whereas last year it was exported freely. May corn sells around 81 cents, comparing with 74½ cents a year ago. May oats sell at 48 cents, compared with 44¾ cents a year ago. May rye sells at 71½ cents, comparing with 83¾ cents last year. May wheat sells at $1.11½, comparing with $1.19½ a year ago.

Hogs Highest in Four Months

A wonderful change has taken place in the hog industry, and former huge marketings and fast declining prices have been followed by a great falling off in marketings and a real boom in values, with sales at the highest figures recorded in four months. All this seems surprising and comes as an unexpected boon to great numbers of stockmen in the corn belt states. Eastern packers bought freely, taking an unusually large percentage of the daily offerings in the Chicago market, and this outside competition was a great help in advancing the better class of swine. Bad country roads account for much of the falling off in marketings, while in most hog growing districts remaining holdings are much reduced. Offerings averge up well in quality and the bulk of the Chicago sales cover a price range of 25 cents, the best light bacon hogs selling 15 cents under the best butchers. Recent receipts have averaged 229 pounds, or within a pound of the lightest since January, 1922. In Sympathy with the great fall in hog prices, provisions are far below prices of a year ago and have an enormous sale at home and abroad. Hogs on the Chicago market have been bringing $6.50 to $7.70, comparing with $7.10 to $8.50 a year ago. Combined receipts in twenty markets for the year amount to 10,763,000 hogs, comparing with 8,755,000 a year ago and 6,981,000 for the same time two years ago.

Fat Cattle Sell High

Prices for beef cattle have ruled very high in recent weeks, with plenty of the other kinds offered on the Chicago market, but not many of the best heavy long fed steers or prime yearling steers and heifers. The bulk of the beef steers sold quite recently at $8.25 to $11, with the best weighty steers selling at $11 to $12 and no good steers taken below $9.50. The best yearling steers sold for $10.25 to $11.25, and sales were made down to $6.75 to $7.75 for the commoner lots of light steers, with inferior little steers selling at $4.75 to $6.65. Butchering cows and heifers had a good demand at $3.85 to $9.35, canner and cutter cows selling at $2 to $3.75, bulls at $3.50 to $7.25 and calves at $5 to $12. Stockers and feeders are in improving demand, and good lots are much higher than a few weeks ago. Common stockers sell as low as $4.50 to $5.50 and fair to good feeders at $7.50 to $9, not many going above $8. A large share of the stockers and feeders sell at $6.50 to $7.50. A year ago beef steers sold at $9 to $10 for the best and nine years ago at $8 to $8.75. Fewer cattle have been marketed this year than a year ago.

Conditions are all favorable for men engaged in the sheep breeding industry, there being a serious shortage in the country, and prices have had a wonderful boom in recent weeks, prime lambs selling unexpectedly high, as well as yearlings and sheep. Recent sales of lambs have been made in Chicago at $16 to $16.50, feeders fetching $14.25 to $15.50.

WHEAT

A decline of 1 cent in price is the only change in the Detroit wheat market during the two weeks ending Saturday, March 8th. Demand is only sufficient to keep prices from declining. Farmers were liberal sellers during February as they needed the money to pay their taxes and reports are that they are continuing to bring their surplus to market at about the same rate. Export sales are reported moderate and some markets are experiencing an increase in milling demand.

CORN

The Detroit corn market is just about holding its own and the market is steady. Indications are that there will be a decrease in receipts soon and dealers are expecting higher prices. How long before this change in prices will take place is hard to predict. In the meantime demand is fair.

OATS

Oats followed the trend of other grains and the price declined 1 cent during the fortnight ending last Saturday. The market at Detroit is lifeless at this writing.

RYE

Prices for rye have declined 2 cents in Detroit and there is a steady tone to the market. Chicago reports increasing demand. Export demand has been quiet but the grain has been going to Europe steadily.

BEANS

Bean prices declined the fore part of the fortnight ending Saturday of last week but before the closing day prices were back to the level quoted in our last issue. The Detroit market is firm after an advance of 5 cents last Saturday. Eastern dealers say that recent receipts of good foreign beans have stopped any advance that might have taken place in the near future. Trade is not active. The present situation can be partly blamed to the fact that the advertising campaign fell through. It is a case where the housewife needs to be educated to use beans as part of the family meal more often. No doubt something will be done before another year's crop appears on the market.

POTATOES

At Detroit potatoes are active and in good supply. New York dealers declare old potatoes are doing fully as well as holders expect at this time of year. Demand is fair. New southern potatoes are selling well on eastern markets as prices are reasonable. Potatoes are steady at Chicago with no material change in price.

HAY

The markets are practically unchanged from a week ago. Receipts have fallen off some and have consisted of a goodly quantity of poor grade stuff. The demand has been fair for the better grades and prices as a consequence have hardened slightly in some markets.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 1 red, $1.13½; No. 2, $1.12½; No. 2 white, $1.13½; No. 2 mixed, $1.12½.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of March 16

PRECIPITATION—either rain or snow—will average above the normal for this week in Michigan and temperatures for the greater part of the seven days will average mild for the season. As a result of the melting snow many rivers in the state are expected to reach flood stage. The fact that we believe there will be numerous freezes during this period is all that keeps us from predicting serious floods. The two high temperature points during the week will occur, one at very beginning and the other during middle part; the two low-temperature points will be reached about Monday, Thursday and Saturday.

Storminess at very beginning of week with wind and moderate rain or snow flurries will give way to clearing about Tuesday. A more severe storm is expected in this state following Wednesday when winds will be of gale force and precipitation moderately heavy. The week will end with fair, cold weather.

Week of March 23

Spring showers, summer thunder storms and strong winds during early part of this week will show severe characteristics in many counties of the state. Despite the high temperatures, however, snow flurries may be expected in various parts of Michigan on or before Wednesday.

The coldest part of the week will be around Wednesday and Thursday after which time temperatures will gradually moderate.

The weather during last half of the week will be generally fair, although by Saturday the sky will become overcast and the weather appear threatening to stormy.

February Forecast Verified

Our forecast of precipitation above normal for the month of February has been fully verified in Michigan which also includes the severe sleet and snow storm during early part of month. Marketing has been greatly hindered because roads have not been opened in many parts of the state and with all the snow plows highways have been blocked to auto traffic.

FOOT AND MOUTH DISEASE APPEARS AGAIN

AFTER several years freedom from foot and mouth disease the infection has appeared in the United States, this time in California. It is now the prime duty and privilege of livestock owners to fully cooperate with state and federal officers in the quarantine and slaughter of affected and exposed animals, in the disinfection of infected premises and in all other measures essential for checking the spread of the disease and accomplishing its eradication.

If a condition suspicious of the disease, such as vesicles (blisters) in the mouth or on the feet develops among any cattle, sheep or swine, the owner should immediately notify his state veterinarian or the nearest inspector of the Bureau. Pending arrival of an official veterinarian the owner of suspicious animals will as a matter of course close his place to all visitors and with his family and help refrain from visiting other farms.

If the animals are found by the inspector to be infected with foot-and-mouth disease all stock on the premises, including horses, will be carefully confined and all dogs be prohibited from running at large. No animals are to be received on or shipped from the place or moved across any highway, and no milk, hay, feed, or manure is to be removed from the farm. It should be borne in mind that the curiosity of neighbors to see affected animals or their well meant desire to be helpful may result in infection of their own farms and further dissemination of the disease. There must be close alherence to all the necessary quarantine requirements until all susceptible animals have been slaughtered and cleaning and disinfection of the premises have been accomplished.

WHAT ABOUT THE PROPOSED STATE INCOME TAX?

(Continued on Page 3)

graduated income tax would drive capital out of Michigan. It hasn't worked that way in other states, even in New York where they have the triple system of levies mentioned above.

Why prolong this discussion? It is apparent that the proposed tax is a step in the right direction in that it will help relieve over-burdened real estate and tend to distribute the tax burden a little more nearly in proportion to the individual's ability to pay. If you agree with the sentiments expressed in this article, the first step is to see that the necessary 60,000 signatures (and preferably several thousand more) are secured to the initiatory petitions. The next job is to put the thing over big at the November election next fall.

(Editor's Note: We want to call your attention to a mistake in connection with the first article of this series which appeared in the last issue. The lines that appeared under the chart on page 3 belonged under the chart printed on page 19, while the lines under the chart on page 19 referred to the chart on page 3. No doubt you have already noticed this.)

BAY COUNTY FARMERS AND BUSINESS MEN COOPERATE

"THESE two meetings today are about the best that I have attended in a long time," said Prof. E. C. Foreman, head of Poultry Department, M. A. C., last Friday, March 14th, after he had made an address before a point meeting of farmers and business men at Pinconning in the afternoon, and a similar meeting at Standish. "It is seldom that I am flattered such a large and attentive audience."

A great deal has been said about the remarkable results which have been obtained in Arenac County in one year thru the co-operation of business men and farmers, but it is only when one who attended the first meeting last year attends one this year that the vastness of the change really sinks in. Now farmers and business men sit side by side, drinking the coffee, which is served after every meeting, swapping stories and talking business and farming. Last year, a group of business men congregated in one corner and farmers in another. About the only exchange made was by means of glances of suspicion and distrust. Then the lunch hour was mostly a quiet and gloomy affair—now it is noisy and jovial. A genuine community spirit has taken the place of suspicion and depression. All this in addition to the material benefits. Mr. Tom Weaver, the hardware merchant said, "Had it not been for this movement I do not know where we would have been now. Our farmers had $900 a day more to spend in August 1923 than they had in 1922 and I believe that stood between us and bankruptcy." Mr. W. H. Gillett, Manager of the Standish Creamery, reports that the average daily yield of his patron's cows increased from 6¾ to 10 lbs. in one year—over 50 per cent increase. His total volume doubled in one year and it was that factor alone which prevented the abandonment of his plant this year.

Pinconning folks are following closely upon the heels of their neighbors. Every two weeks they hold a rally at which some prominent man gives an address on better dairying and farming. Among the speakers have been Prof. O. E. Reed, J. F. Cox and E. C. Foreman, all of M. A. C. At no meeting in spite of the impossible roads, has the attendance dropped below 150 folks. Every business place, including garages and pool-rooms, were closed when Prof. E. C. Foreman spoke Friday afternoon. The Pinconning Boosters' Club claims 100% membership and is back of the movement heart and soul. "Agriculture is the leading industry of this town," said Mr. J. R. Fotheringham, the local banker, "and we want to treat it as such, especially because our material benefit depends upon it. A plan of financing the purchase of grade and purebred cattle has been developed by the Club and farmers are taking advantage of it. A cow-test association is being planned and a carload of sodatol is being handled. A series of chicken culling demonstrations are being planned for the summer. All these things are being accomplished thru the enthusiasm and co-operation of business man and farmer. But, most important of all, a community spirit is being developed which will make life just a little more worth while in Pinconning and vicinity.—E. J. Leanhouts.

WGY WILL BROADCAST FARM TALKS MARCH 31

RADIO broadcasting station WGY, General Electric Co., Schenectady, N. Y., will broadcast two talks the evening of March 31st that will be of great interest to our readers. Beginning at 7:15 P. M., eastern standard time, Mr. H. E. Babcock, of the N. Y. State Farm Bureau Federation, will give a 10 minute talk on, "The Essentials in the Cooperative Marketing Movement." He will be followed by Dean A. R. Mann, N. Y. State College of Agriculture, who will address the invisible audience on "The Extension Service of the College of Agriculture." This station opearates on a 380 meter wave length.

The Business Farmer is sure a great paper and I hate to miss one single copy of it.—Mrs. F W., Kingston, Michigan.

State Gasoline Tax Is An Invisible Toll Gate

All Who Own and Drive Automobiles or Trucks in Michigan Would Pay Their Share for Building and Maintaining Our Highways

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

IN trying to analyze the popular sentiment in favor of a gasoline tax for Michigan, Mr. Powell says, "The gas tax is the only practical method of getting highway revenue from visiting tourists, it automatically takes into account both the weight of the car and the distance driven, it puts the burden onto the people who get the benefit from the improved highways, it would lower the tax on real estate, lessening the burden of the general property tax."

Evidence is presented to show that gas taxes now being employed in 36 states are working satisfactorily and they are easily and cheaply collected.

Neighboring states either have gasoline taxes or are in the process of getting them. Michigan autoists touring in those states help pay for their roads, and fairly so. Should not the tourists who are yearly coming to Michigan resorts in increasing numbers, causing great highway depreciation, make some contribution to our highway expense account? A gasoline tax is the only solution to this growing problem, according to Mr. Powell. Do you agree with him?

WHEN a great vital issue which involves a fundamental principle of taxation justice becomes a political football, there is danger that it may not be settled entirely on its merits and according to the desires of a majority of our citizenship.

Such has been Michigan's history with the state two cent gasoline tax. Demanded by an overwhelming majority of the voters of nearly every county in the state, it was passed by the Michigan House of Representatives last spring by a vote of 80 to 18 and later, despite persistent and unprincipled lobbying and political wire pulling it also passed the Senate 19 to 11.

The Governor's veto which killed the bill aroused such a wave of popular resentment that Michigan's chief executive has relented somewhat and has come out with a conditional statement in favor of gas tax, but he has as yet failed to make his actions correspond with his words, for he has steadfastly refused to allow the State Legislature any opportunity to enact legislation of this type.

Sentiment Solid for Gas Tax

There is no question but what, if given a chance, the Michigan Legislature would pass a gas tax without delay. After the first week of the recent extra session of the Legislature the sentiment among Michigan's law-makers was so apparent on this issue that the Detroit Free Press on December 11th said, "Enactment of a gasoline tax is a foregone conclusion. Since Governor Groesbeck withdrew his opposition his entire following became superconscious of its conspicious position out on the end of a limb and marched into camp." But apparently the Free Press spoke too soon. Perhaps the opposition of the Governor had not been entirely withdrawn!

It is a unique situation to find people uniting in favor of any new form of taxation. When they virtually demand it and threaten to initiate it by petition, we may be sure that it has considerable of merit to recommend it.

Every Michigan farm organization has passed resolutions favoring a gas tax, for Michigan farmers are convinced that the gas tax is right and sound in principle, that it is a measure for justice and that it is a step in the direction of a policy of specific taxation which will give much-needed relief to sadly overburdened real estate.

Nor do the farmers stand alone in this position. Everywhere one goes in Michigan today he discovers people enthusiastically in favor of a two cent gasoline tax and finds that they are ready with plenty of arguments to tell why we should have one similar to those already in effect in 36 other states in the union.

Why the Gas Tax Is Favored

Briefly summarized, the arguments most commonly advanced are these: The gas tax is the only practical method of getting highway revenue from visiting tourists, it automatically takes into account both the weight of the car and the distance driven, it puts the burden onto the people who get the benefit from the improved highways, it would lower the tax on real estate, lessening the burden of the general property tax.

These popular arguments appear sound. They cannot be dismissed lightly. We are coming to realize more and more that we must continue to expend large sums for highway construction and maintenance in Michigan and for the payment of interest and principal on the State's bonded highway indebtedness which now amounts to about $38,000,000 and the refund of the $5,000,000 due from the State to the several counties.

People everywhere are interested in good roads. Speedy and comfortable transportation by auto from place to place appeals to our independent and liberty-loving natures. Then, too, the motor truck is fast becoming an indispensible part of our modern life and is used largely by farmers and commercial enterprizes of every description.

We must have roads, and better roads, and roads cost money. In commenting on this situation, the Governor himself admitted in the veto message, "Pavements ill adapted to withstand modern traffic conditions have been laid—poor engineering methods have prevailed and adequate safeguards have not been provided for the protection of the traveling public."

Every state needs good roads, but we in Michigan have a peculiar reason for being interested in the extent and condition of our highway system, for in recent years we have been developing a tremendous asset in the form of the tourist business.

The Michigan Farm Bureau News, the spokesman and official mouth of a large group of organized Michigan farmers who have been leading in the fight for a state gas tax, in discussing the tourist problem, declares:

"The summer tourist business has grown so rapidly that it is impossible to fully appreciate or accurately determine its present magnitude. However, reliable and competent men estimate that there are fully 200,000 visitors here in Michigan each day throughout the summer for a period of ten weeks.

"A questionnaire conducted among scores of visiting tourists by the Grand Rapids Herald has revealed that one of the most common complaints of these visitors is with reference to the condition, or lack of condition, of our highways. Many stated that they would not have objected to a gasoline tax, because they were accustomed to paying one at home. It is interesting to remember that motorists in 36 states pay gas taxes at home, but can tear up Michigan highways without making even a slight return.

"If Michigan is to retain, develop and promote its precious asset of tourist patronage it must maintain and improve its highways. It would be a short-sighted policy for us to 'kill the goose that laid the golden egg' by falling behind in our road buiding program. The burning question is, 'How shall this be financed?' Shall it be done as at present through confiscatory taxes on adjoining property, through general township and county levies and through the pyramiding up of a staggering burden of public debt by continuing to mortgage the future through the issuance of millions of dollars worth of highway bonds? Seemingly no satisfactory provision has been made for retirement of such outstanding highway bonds in Michigan.

"Shall highway financing be achieved through a system which is grossly unfair to the present generation and flagrantly unjust to generations yet unborn? Or shall we follow the beaten path, already taken with satisfaction by 36 states of the Union and adopt the gasoline tax idea?

"We don't expect the owners of adjoining property or the public in general to pay for the construction and maintenance of our railways or interurban lines. That is taken care of by those who use these facilities, in proportion to the amount of use.

"Since 95% of our modern traffic is furnished by gasoline driven vehicles, it is apparent that a gas tax would automatically distribute a large portion of the burden of highway expense among the users of the roads in proportion to the benefits derived."

Popular opinion and editorial comment therefore agree in favor of a gas tax as the most logical solution of our present problems.

The gas tax might not have been a fair means of raising highway revenue a few years ago when autos were scarce and most of the traffic was by horse-drawn vehicles. But today this situation is entirely different. In 1912 Michigan had but 39,579 registered motor vehicles. By 1922, ten years later, this number had increased nearly 15 times, reaching the total of 584,291. 1923 showed an added increase of 27%, bringing the total of registered Michigan cars up to 737,388. Today there are enough cars in Michigan so that our entire population might take a ride at the same time.

It is a fact beyond dispute that the great volume of gasoline consumed in Michigan is used for automobile and truck transportation on the public highways. The automobile has caused the insistent demand for a greatly enlarged program of highway development. To meet this demand the Legislature has authorized the issuance of $50,000,000 of state highway bonds, $38,000,000 of which has already been issued. No adequate provision has been made for the retirement of these outstanding bonds. We'll have to pay them. Our real estate will foot the bill unless we get help from those who use the roads. The automobile has also brought us a tremendous increased road repair and maintenance cost. Therefore, it is just that the automobile should contribute accordingly to defray highway expenses.

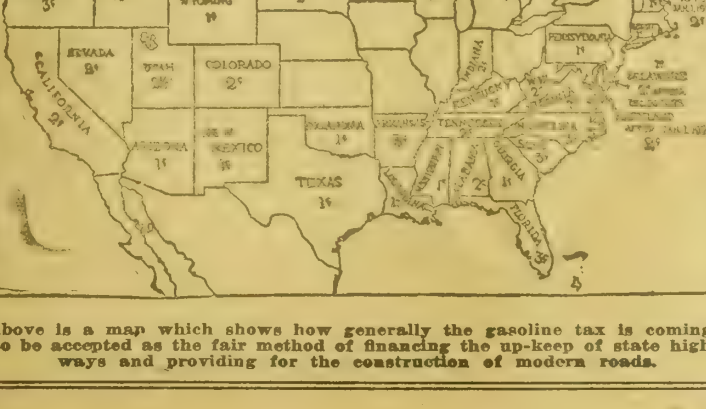
An Automatic Toll Gate

It is reasonable that the amount of such contribution should be in proportion to the use of the highway by each automobile. This situation might be met by the establishment of a network of old-fashioned toll gates on our public highways. This would prove highly inefficient and bunglesome. It is unnecessary. There is a simpler way to accomplish the same process. The gas tax is an automatic toll gate. It automatically takes care of both the mileage driven and the weight of the car, the two factors contributing to wear and tear of highway by automobiles. The gas tax would exact a substantial increase in revenue from trucks and busses that enjoy the profits accruing from their operation over the improved highways.

It is logical, too, that the man who drives his car 15,000 miles per year should pay three times as much into the highway fund as his neighbor who drives his car only 5,000 miles. The present license fee system or any plan of weight tax would charge each alike for the same car.

Certain opponents of a gas tax advocate an increased auto license fee to provide additional revenue for highway purposes. It is hard to understand how such a proposal would operate with any great degree of fairness to those who drive their cars but a little.

(Continued on Page 23)



Above is a map which shows how generally the gasoline tax is coming to be accepted as the fair method of financing the up-keep of state highways and providing for the construction of modern roads.

Farmers Can Safely Increase Clover Acreage

More Clover Can Be Grown in Michigan Without Danger of Over-Production and With Assurance of Profitable Returns

By J. F. COX

Professor of Farm Crops, Michigan Agricultural College

THE clovers have always been and are today the chief leguminous crops in Michigan. Red clover, Mammoth clover and Alsike clover are unusually well adapted to Michigan soils and climatic conditions, and to the common short rotations in use in the state. Red clover is the fundamental crop in Michigan rotations, and successful stands are almost invariably followed by more profitable crops of corn, potatoes, beets and beans. Alfalfa, sweet clover, and soybeans have recently gained an important place on Michigan farms; nevertheless, the clovers still occupy the greatest acreage, and dairying and live stock industries of the state are dependent upon the production of an abundance of clover hay for profitable production. As Dean R. S. Shaw of M. A. C. says, "the development and maintenance of a permanent agriculture in the state is dependent on leguminous plants. The clovers are more widely distributed, and far-reaching in their influence, than any of the others."

Michigan has long been known as a region particularly adapted to clovers, and to clover seed production. The fact that the clover acreage has decreased rapidly in the past few years and that many are failing to get dependable catches, particularly of red clover, is a matter of great concern.

When Clover Fails

When clover fails in communities where it once succeeded, agriculture is on the down-grade, "run-down" farms are frequent, less live stock is fed, crop yields are lower, and farms change hands rapidly. In regions where clover and alfalfa thrive, farmers are generally prosperous, crop yields are high, dairying and live stock raising are successful, and farm ownership is more stable, and land values are higher.

Without doubt, the two leading causes of red clover failures are the planting of unadapted seed and the decrease in the content of organic matter and lime in the soils of many farms, which have long been under cultivation.

Michigan Grown Seed Best

During the past four years, Professor C. R. Megee of the Michigan Agricultural College, has given his attention to the testing out of red clover seed from practically all commercial sources. These tests show conclusively that Michigan grown seed is best for Michigan. Seed from other northern states and Canada is also well adapted. Of the imported seed, the Italian is practically worthless and French seed gives only fair results. Seed from Northern European regions is good, but under present conditions, much Italian seed is being sent to northern ports and reshipped to the United States. There is a good supply of Michigan grown clover seed in the state. Michigan's leading seed companies and the Farm Bureau Seed Department are carrying good stocks of Michigan grown red, mammoth, and alsike clover seed. There is not enough seed, however, to supply the entire state demand with Michigan grown clover seed, because a considerable amount has been moved to out-of-state seed companies. Michigan farmers should buy their seed from dependable sources. Native grown red clover seed is selling at a considerably higher price than imported seed, hence cheap seed is especially dangerous this season.

Alsike seed is comparatively cheap and is available for those who cannot get Michigan grown red clover. Without doubt, alsike will be more largely used in mixing with red clover than previously. Much less alsike seed is needed per acre and it often gives good stands on soils were red clover fails to catch well, and during adverse seasons.

Michigan is particularly adapted to clovers, and clover seed production. And clover hay is in strong demand.

Rather than grow imported clover seed of doubtful origin, Michigan farmers will find alfalfa much more valuable. There is a large supply of northern grown alfalfa seed at prices about the same or somewhat less than native grown red clover. While Grimm costs more, it is harder under Michigan conditions and is available at cheaper prices than formerly.

Early Plantings Usually Best

As a general rule, plantings made in early spring, from the time the ground is in a honey-comb condition to early May, give best results in Michigan. Of red clover and mammoth, ten to twelve pounds per acre is the usual seeding; of alsike, alone, six or eight pounds; of red and alsike mixed, six pounds of red and three pounds of alsike. When seeded with timothy, from four to six pounds per acre of timothy is usually added to these plantings. Clover starts best when planted on a firmly rolled seed bed with oats or barley, or with wheat or rye, in which case the ground is in a firm condition.

The use of commercial fertilizers and manure with the grain crops, with which clover is usually planted, greatly benefits clover seedings. Lime and manure are frequently essential in getting good results with the clovers, red and mammoth clover particularly. Soils which are acid should be limed, using from one to two tons of finely ground limestone or three or four cubic yards of marl per acre or more on very acid soils. Manure greatly aids in increasing the moisture holding capacity of soils, and hence tides new seedings over dry spells of the first summer.

Michigan Seed In Great Demand

In tests at many other stations, Michigan grown seed ranks very high, hence seed producers can expect a strong demand. Under present conditions, the seed crop ranks as a very profitable one. It would pay farmers to use fertilizers with grain crops, particularly phosphate, in order to benefit the clover hay and seed crop seeded with the small grain.

In removing the first crop of red clover for hay, it should be cut when in full bloom before the heads begin to turn brown, in order to reduce the almost certain loss from the clover seed midge. Professor R. H. Pettit of the Department of Entomology, M. A. C., states that cutting when in bloom rather than after a number of heads have turned brown will reduce clover seed midge injury to a minimum. Attention to this one thing will greatly increase clover seed production on the majority of Michigan seed producing farms. It will also pay to clean up weedy fields by cutting weedy patches for hay and by pulling out or hoeing out such weeds as stick-cockle and dock in alsike and docks, thistles, and other weeds in red clover.

The average yield of Clover in the state is a bushel and a quarter per acre but good growers, giving proper attention to the seed crop, can expect, under favorable seasonal conditions, to receive from two and one-half to four bushels of red clover, and from three to six bushels of mammoth or of alsike per acre. The straw after threshing is a useful roughage, particularly for sheep.

A Safe Crop to Increase

The average yield of clover in the grown for hay and seed, and the use of clovers in hay and pasture mixtures, can be safely increased without danger of over-production and with assurance of profitable returns. Clover hay is in strong demand in Michigan. Michigan pastures are markedly improved by using red, alsike, and white clover with the original grass seedings, or reseeding with these legumes. Soils are greatly benefited by the successful growing of leguminous crops.

If You Have Not Tested Your Seed Corn Yet This Year Do So Now

By J. R. DUNCAN

Department of Farm Crops, Michigan Agricultural College

GOOD seed corn, according to Mr. Duncan, is a mighty scarce article in Michigan right now, and if farmers do not test their seed by Rag Doll or some other method they are going to be greatly disappointed with the stand this year. In this article he discusses the seed corn situation, what to look for in making a test, and describes the Rag Doll tester for the benefit of those who do not understand it. It will mean a little extra work to test your seed but it is better to be safe than sorry.

THE reports coming in to the Farm Crops Department from various sections of the state indicate that a large number of farmers are going to be surprised and disappointed in their seed corn for planting the corn crop this spring, and unless a germination test is run by the Rag Doll or some similar method, the seed corn to be planted will result in a very poor stand this year.

There are several factors which are responsible for the present condition of seed corn generally

1st.—Failure to mature corn at harvest time.

2nd.—Failure to mature corn with a high moisture content.

3rd.—Lack of proper storage after harvesting.

4th.—Failure to look for or recognize the apparent evidence of frozen or moldy kernels in the ears since harvesting.

The results from my variety plat at the Michigan Agricultural Experiment Station show a moisture content ranging from 39.5 for an early variety corn to 53 per cent for a late variety in the group of varieties, which we normally call adapted to this territory for grain. It is quite difficult to estimate the approximate moisture in grain but a great many farmers know that corn to keep in the crib without spoiling must be dry enough to shell some at least when shoveling into the crib. Corn in that condition would carry approximately 22 per cent moisture, so this year corn was evidently carrying an average excess of 23 per cent moisture, which of course is a dangerous condition to start with and perhaps was not fully appreciated.

Silage corn, harvested at the same time, contained from 55 to 71 per cent moisture.

With such conditions existing there is only one safe course to pursue and that is: Hang seed corn up so one ear cannot touch another, in a well ventilated room or building.

One good sized lot (40 bu.) of seed corn was inspected March 7. It was in a pile about two feet deep on the floor. The corn could have been spread out to less than half the depth. The windows were closed allowing no ventilation. A stove could easily have been operated. This was not done. The result of this improper handling is total loss of seed corn. The sample of this corn, brought into the Farm Crops Laboratory March 10th, showed a moisture content of 25.4 per cent and the germination test indicates zero.

With the facilities at hand and very little additional expense, this entire lot of corn (40 bushels) could have been saved for seed and would have been sold at a good figure, since Crop Improvement Association Registered Seed is selling at $6.50 per bushel, and certified seed is $4.50.

Another large lot of well sorted seed corn, if properly handled in the early part of the winter, could have practically all been sold for seed, but on account of improper handling will have to be resorted to get 45 per cent of the pile to germinate, 91.4 per cent. The balance, 55 per cent, germinated 69.4 per cent with a great many weak sprouts, which means less than 50 per cent germination if planted in the field.

A great many samples of seed corn have been tested for moisture and germination for farmers of Michigan this winter in the Farm Crops Laboratory, and only the corn that was placed on racks or hangers is showing satisfactory results. A great many samples run from 0 to 80 per cent germination, when no one ought to be satisfied with seed which does not test 90 per cent or better.

Our High School Agricultural Teacher reports that the seed corn brought in by boys from farms, shows about 50 per cent germination.

Methods of Testing Seed

The Rag Doll makes the simplest, inexpensive, efficient method imaginable and any boy taking Agriculture in High School knows how to operate one.

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

PETE DEXTER, grafter de luxe, began his career as a faker when he was hired out to a traveling medicine show to care for some snakes and do a few acrobatic tricks. He tells us that one season with the dispenser of the famous "Wizard Oil" was enough, especially when he had to resort to force to get the pay coming to him.

Following a season at selling red lemonade at county fairs, he drifted south, and, after he had made a pretty fair clean-up by selling cheap silverware by mail, he hopped a train for the north. His move was speeded up particularly when he heard that officers were looking for him, but he made a safe get-away.

Pete, who has written his life history for THE BUSINESS FARMER, was an amateur in those days, but he admitted he was fast becoming an expert, and the story of his adventures in extracting easy money from the public follows.

(Continued from March 15th issue)

AFTER the little flyer I had in Florida, I decided that it wasn't safe to travel with a show or make the fair circuits, because I had already learned that a fellow was in danger if he was seen in public too much.

Money was getting scarce, and it looked as if I was going to have to get a job and do real labor if I intended to eat. I landed in South Dakota before my money ran out, and it was there that the next best scheme I figured out came to me. A fellow came around the job one day canvassing us boys so that we would all order tailor-made suits. He would take our measure, take a five-dollar deposit, and promise the suit in a couple of weeks. That gave me an idea. The job I had was kind of tough, and summer was coming on, so I wanted to get out in the air.

A couple of weeks later found me in a little town about forty miles away, with a bunch of cloth samples that I had taken out of a tailor shop when the boss wasn't looking. I also had on my new suit which the fellow had sold me, and I was armed with a pad of order blanks, a receipt book and a tape-line.

The suit I was wearing cost me twenty-five dollars, which in those days was a lot of money. For my purpose, I announced that a suit like mine could be had for fifteen dollars. Pick over the samples and choose the style. A five buck deposit was all I asked. I claimed to represent the New England Woolen Mills, and I had prepared some letters telling who I was.

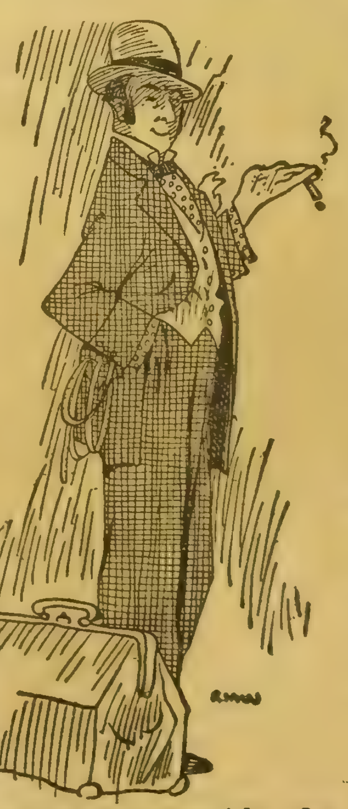
The first day I took orders for three suits. On the strength of that, I got five more next day, and the third day I had nine customers that handed over the five spot and took my receipt. That allowed me enough profit after I had paid my bills to get a pretty good start. I jumped two hundred miles into another state, worked the small towns till I had about a hundred dollars, and then moved again. That summer was the beginning of my big money time, and altho I was a couple years short of twenty-one, I cleaned up nearly two thousand dollars in about four months. I never did hit any of these towns again, but I'll bet the fellows who are waiting for me to deliver those clothes are getting pretty mad. They sure were easy. The way they fell for that cheap suit idea and handed me five spots was just like taking candy from a kid.

I had an aunt in New York, so I visited her that winter. She was glad to see me, and when she found I was a money-maker she kept me around until spring. She tried to get me to go to school, but that was out of the question for me. Cash was coming too easy for me in my line.

While I was stopping with her at Rome, New York, I figured out my next summer's business. Aunt bought her tea and coffee from a fellow who peddled it in a wagon. Every time she brought a dime's worth of tea, he gave her a lot of pretty coupons, and if she saved enough she eventually got a phoney silver tea set. The way women will buy stuff to get premiums is a joke. Why last year I met a fellow who was selling a paper that gave a great big dishpan with a year's subscription. That dishpan, he told me, cost the company 14 cents, but it sure pulled the three bucks away from them women. That agent got one dollar every time he unloaded the tin pan, and the company had another subscriber tied up for life.

Well, I began to hunt around for a cheap silver set. I read all the catalogs and finally found a firm that offered a knock-out for $11.80. It consisted of a sugar bowl, cream pitcher and a coffee pot and a tray all "genuine silver," and it was a swell lay-out. Next thing I did was to go over to a small town about five miles away, and had a lot of tags, receipts, cards and stuff printed, announcing that with every ten pounds of "Colonial Coffee" purchased from out traveling salesman, the Colonial Tea and Coffee Company would deliver one of the beautiful silver sets as a premium. This offer, the tickets stated, was to introduce a new coffee and better tea to the public. I sure was proud of the job that fellow did with those cards, and the swell way he fixed up them order blanks.

I fixed up my outfit, and as a sure business getter I bought a few pounds of the coffee that my aunt was using—and it was good stuff, too—and a week later I bid the folks good-bye, telling them I was going to Chicago to look up a business connection. I had never worked Illinois and Iowa very much, so I took my outfit and started about forty miles from Chicago. I had a Chicago address on my cards, and that helped, and it wasn't very long till I had enough money to buy a horse and buggy. The game I was working was that the coffee would be delivered at once and the silver set was to come from the factory. All I had to do was to exhibit the silver and the order sure came quick. At the close of each day, I would get some cheap coffee in a town, take it to my room and resack it for the next day's business. I always took full pay for the coffee and delivered as much as possible. The coffee I bought never cost me over fifteen cents a pound, and I sold it for thirty cents, and the silver set brought an extra dollar for shipping expenses. Say, I used to clean up twenty-five to thirty dollars a day, and folks in towns would come to my headquarters to get in on the silver set offer. Well, I worked Illinois for several weeks. I had told my customers that it would be a few weeks before the silver would be shipped, as the sets came from the east, so I was safe.



He would take our measure, take a five-dollar deposit, and promise the suit in a couple of weeks.

My next territory was Wisconsin, were every one drinks coffee, at least part of the time. Say, the way those women gobbled up my offer was something fierce. I ran out of order blanks twice and had new ones printed. I was wise enough to change the name of the town, and as long as I was going to Iowa late in the summer I had a set made for DesMoines, so that Iowa people would feel better about the company. Well, I cleaned up a wad of money that season. When I sold my horse and wagon and checked up, I sure felt rich.

Every one was going to California about that time, so I just packed up my things and went, too. I gave my silver set to a nice old lady in the last town I had stayed in, as her boarding house was the best on the road, and she was the tickeldest woman you ever saw—and the only one who ever got a silver set from the Colonial Tea and Coffee Company.

I had peddled along on that small line of stuff for several years, and didn't get caught, either. I was always careful to work different territory all the time, but I was beginning to find that the good sections were in the middle-west, and I wanted to try out some of my new schemes a second time. But I wanted bigger deals.

I had taken up with a bunch of fellows while I was in California, who were selling gold-mining stocks. They owned the Silver Star Company, located at Cripple Creek, Colorado, and shares had been going fast. I sure learned a lot of things from those boys, and even tho they gave me a job which paid pretty good, they eventually got all of my cash back, as I fell for their line and took shares whenever I could spare the price of a meal ticket. One day when I went to work, the police was standing in the door, so I figured that something was wrong. I kind of stepped up easy like and inquired of the cop what was the matter, a murder?

"Naw," said the cop; "the chief just got wise to the game that these birds is working and they are raiding the place and taking the books."

Right then and there I quit working for that gang, and about all I had when I left town was a considerable bunch of experience and a lot of stock.

But the experience sure came in handy a few years later when I went into business myself. Maybe those fellows is in the pen, but their spirit went marchin' on, for I sure went them a heap better, as I never got caught.

Well, the only time I ever had to bum a ride on a freight train was when I left California after the mine went bad. I had a couple of dollars, but I had to eat, too, and I hated to think about those cops lookin' for me, so I climbed on a train and after a week's travel, in which I got kicked off often enough so that I didn't miss any meals, I found myself down in Texas.

(Continued in April 12th issue)

A school board was visiting a school, and the principal was putting his pupils through their paces.

"Who signed Magna Charta, Robert?" he asked, turning to one boy.

"Please, sir, 'twasn't me," whimpered the youngster.

The teacher in disgust told him to take his seat, but an old tobacco-chewing member of the board was not satisfied; so, after a well-directed aim at the cuspidor, he said: "Call that boy back. I don't like his manner. I believe he did do it."

"This law is a queer business."
"How so?"
"They swear a man to tell the truth."
"What then?"
"And every time he shows signs of doing so, the lawyer objects."

When the Red River Special Outfit pulls in, you KNOW you are going to get all the grain in your crop.

Whether you buy or hire a threshing outfit, the one way to get complete satisfaction is by using a

Red River Special

No great amount of grain is lost if it is threshed and cleaned the Red River Special Way, which means beating out the grain instead of expecting it to fall out by its own weight.

The "Man Behind the Gun" is the greatest single improvement ever put into a thresher. It is found only in the Red River Special and in conjunction with the Big Cylinder, the Beating Shakers and the Graduated Chaffer.

RESILVERING MIRROR

Some time ago you published directions on how to resilver a mirror and I intended to save that copy of the paper but I mislaid it and now cannot locate it. Will you be kind enough to publish the directions again?—B. C., Washington, Mich.

—First, clean the glass very clean. Lay it on a flat surface with the back up. Pour some quicksilver on it at the center, lay a sheet of smooth tinfoil on it, and work the quicksilver out from under the foil with a rubber squeege roller such as photographers use for mounting pictures. Care must be taken to keep out wrinkles and air bubbles. After it is worked down flat, the foil should be painted or shellaced to prevent injury.—Managing Editor.

ONE HEIR CANNOT HOLD UP SALE

A man dies leaving widow, and three children, all of age, and an estate consisting of a farm and personal property but no will. Property has been in probate and all claims paid and administrator is trying to sell property. One heir says he will not sign off but wants farm divided. What proceeding is necessary in this case? Can the farm be sold without all the heirs signing off? Can one heir call for a division of farm? How long is administrator allowed to settle estate? How long can widow hold possession of farm home? Does she have to pay rent after a length of time?—Reader, Flint, Mich.

—Upon the authority of a majority of the heirs the probate court may order the farm sold and the proceeds divided among the heirs. One of the heirs cannot compel the administrator to divide the farm against the will of the majority. As soon as the debts have been paid and the share of each heir determined, the probate judge may order the estate settled immediately by the administrator. A widow may hold possession of the homestead without paying rent until her share of the estate has been assigned to her.—Asst. Legal Editor.

MUST BUILD FENCE

Will you please answer the following question through your paper? A and B each buy 5 acres of land joining; it was a ten acre farm. A gets house and rents his half, after three years B builds and goes to live on his half. There is no dividing fence. A's tenant has chickens and B wishes to raise garden. Now does A's tenant have to shut chickens up or does A and B have to build dividing fence?—F. E. W., Plymouth, Mich.

—A and B would be required to build a dividing fence, each party building and maintaining his share of the fence.—Asst. Legal Editor.

SHOULD NOT HOLD BOTH OFFICES

Please let me know if a man can be township clerk and school director in the township or is there a law that says he can not?—W. J., Gaylord, Mich.

—As a general rule a person may hold two offices at the same time unless it is prohibited by statute or unless the offices are incompatible.

It is our opinion that the offices mentioned by you are incompatible. The township clerk has numerous duties to perform relating to school matters. We would call your attention to Section 5758 of the Compiled Laws of 1915 which provides that:

"Any township clerk who shall neglect or refuse to certify to the supervisor any school district taxes that have been reported to him as required by this act * * * shall be liable to any district for any damage occasioned thereby, to be recovered by the treasurer in the name of the district in an action of debt or on the case."

Under this provision of the statute, the clerk might become liable to the district in damages for neglecting to perform his duty as clerk. It would be inconsistent for him to be a member of the school board which authorized or directed the treasurer to bring an action against him for damages.

He would be in a position where he could use his influence to prohibit the district from bringing a legal action against him for damages.—Clare Retan, Deputy Attorney General.

START SUIT AGAINST GARAGE

I had a good tire, 35x5, slightly damaged. I sent it to the garage by a neighbor to have it repaired. It was sometime before I sent for it. I sent by another neighbor, they said it was brought there but the man took it away with him. Then the man who took the tire there goes for it and they say they took it to the vulcanizing shop and they go there for it but can't find it. Then I go for it and they say it was so damaged by a nail functure that they threw it in the junk but say they will find it. They don't find it. Can I get damages and how? It's value is $20. It has been over a year.—V. G. Mattawan, Mich.

—You have a right of action against the garage for the value of your tire. The proper procedure would be to start suit before the local justice of the peace.—Asst. Legal Editor.

ASSESSING FOR DRAIN

Can the officers of a district on one side of the township, having put in a drain for the benefit of their farms, not the road, spread a tax for the same over the whole township? People in this vicinity will derive no possible benefit whatever from the drain because the river runs between and said drain goes to the river. It seems to me the people benefitted by this drain should pay for it. Any advice you can give me will be appreciated.—B. B., Harrisville, Mich.

—I presume that the drain in question is a drain being constructed under the provisions of Act 316 of the Public Acts of 1923. You do not state whether a drainage district has been established or whether the proposed drain is a county or an intercounty drain. We think that you should consult some local attorney who will be able to ascertain the facts necessary to give you proper advice.—Clare Retan, Deputy Attorney General.

SHE IS NOT 'AN HEIR

If my father, a widower with two adult children, should die without making a will, what share of his estate would my deceased brother's widow receive? A lawyer has told me that she is still an heir.—O. Y., Belding, Mich.

—She would not inherit anything. —Asst. Legal Editor.

We all like The Business Farmer. The Home Department and the Pattern Department are fine and the stories are much enjoyed, while the rest of the reading is very intertsting and good sound sensible reading. Yours for success.—Mrs. H. M. Shreeves, Oakland County, Michigan.

DODGE BROTHERS
TYPE-B SEDAN

The Type-B Sedan could well stand as a concrete symbol of everything the name Dodge Brothers itself has come to represent.

It is honestly and wisely built. It stands up under the sternest kind of service. It will serve long beyond the span of life usually allotted to a motor car.

The price is $1250 f. o. b. Detroit

One of the Things Mr. Royster Discovered About the Feeding of Crops

Cured Fertilizer Has Increased Farmers' Earnings

Haven't you heard about the more thorough and scientific feeding for plants—hastening maturity and helping to grow crops that bring higher prices? Everywhere you find farmers talking about the remarkable results through the use of Royster's Cured Fertilizer.

Why Cured Fertilizer Grows Better Crops

Mr. Royster discovered that by aging or curing fertilizer for four to six months he could increase its value as a plant-food. He found that this curing brought about a certain chemical action which prepared the fertilizer for the use of crops and made food elements available *at the very time they are needed.*

Why Mr. Royster can Cure His Fertilizer

Naturally it requires vast quantities of material in order to anticipate a season's supply, half a year before it is needed. (This half year representing the aging period). It also requires strong financial resources. Thus;—only a company like Royster's can offer this improved type of fertilizer.

Look for the Name on the Bag

Don't guess about fertilizer. Look for the name "Royster's" and *know* that your crops will be well fed—for the sake of greater earnings.

What the Neighbors Say

FARM VS. CITY

DEAR EDITOR:—I am a reader of your paper and have been reading Mr. Jordan's articles. I must say, I am more than pleased to read your answer to his criticising of your paper also farming in general. I think you hit the nail on the head when you spoke of that key they call hard work. I know Henery Ford believes in it too, and he also wants every man that works for him to believe in it (I know, I been there nearly 8 years).

If the city looks so good to Mr. Jordan why doesn't he go there and live. He talks of unemployment in the cities. I lived there 15 years and always saw men idle. But they are the kind, as a rule, that are looking for the soft jobs.

There is no need for me to take up any more space as I think you fully answer all of his criticism. Hope he comes again as I enjoy reading his letters.—H. C., Caro, Mich.

PAY MORE ATTENTION TO SIDE ROADS

DEAR Editor: I was just reading the 1924 road program in your issue of January 19th. It says everyone interested in good roads in Michigan will praise the present plans. Very true, but did you ever stop to think that there are hundreds of groups of farmers that do not live on those trunk lines and cannot get to their market in the fall of the year with one ton of potatoes or sugar beets, or anything else, without over-drawing their team, and their taxes are so high that they dare not raise township road funds to gravel those roads.

Do you think the State Highway Department is giving the farmers a square deal to put so many millions in concrete roads for joy riding and to let the farmer get his produce to market the best way he can? I have often wondered if it was more necessary for the sports and travelers to have a fine concrete road to drive on than it was for the farmers to have a gravel road to get the real necessaries of life to market, so the consumer could have them at a reasonable price, and the farmer could live and use his teams as dumb animals should be used. I do not believe there could be anything done to cut down the high cost of living more than that every farmer in the state of Michigan have a gravel road from his market as near to his farm as possible.

Do you not think the State Highway Department would be doing a little more fair to the majority of taxpayers to make a fairly good gravel road of their great tourist routes and see that they stopped such speeding as they are doing on those roads, and put in a little more money on roads leading from the farm to their market?

I love to read the M. B. F. and I read nearly everything in it when I can spare the time, but I would like it much better if I could read a piece in each issue explaining the great mistake of our state and county highway departments are making in spending so much money for sport roads instead of making roads that would benefit the tax payers.—Ben Richards, Wexford County.

CHICKEN THIEVES

EDITOR THE BUSINESS FARMER—I would like your assistance and that of your paper in a matter that is causing a great deal of trouble to the farmers (and farmer's wives) in this neighborhood. As I am afraid if something is not done soon it will be the ruination of the poultry business, and so shorten by at least half, the supply of ready cash available for the farmer's wife, for herself, the children and the house, I am writing to you for aid. It is in short the existence of a ring, consisting principally of foreigners brought in for beet help, who systematically clean out the neighborhood they live in by gathering the chickens nights in the places they are most familiar with and disposing of them to some fellow worker who runs a truck or car, and crates for carrying the chickens.

Two years ago I had unusually good luck, hatching over three hundred early chickens besides half as many more, later ones. Of these I intended to sell the cockerels in the early fall and keep the pullets for myself. But in August they were all taken that were big enough to be called broilers which meant all of my early chickens and only the late ones were left. We managed to keep them by locking one door and nailing the other doors and windows fast and keeping wire on the inside of the windows although an attempt was made to steal my later ones, At the same time several of my nearest neighbors lost their chickens. Last year I raised only about fifty, most of them late, but five or six of my neighbors who were fortunate enough to raise a larger number, had them all stolen.

One friend who had spent a large part of the summer caring for eight hundred chickens, had three hundred carried off in one night, while she was visiting a daughter at some distance from home. A near neighbor, who purchased from two other neighbors, two batches of chickens, numbering twenty or twenty-five each, to add to his small flock of Anconas, had both batches of heavy chickens stolen inside of two weeks, and in place of his small chickens, they crossed the road and took fifty of his nearest neighbors.

I could go on with like illustrations for some time, but would only waste time and ink. Still something must be done to save a few hens for the farmer's hen-roosts or there will be no further use of raising chickens. Many of the sufferers here declare they will not raise chickens again for others to sell.

The horse thieves out west were hung, but a man who would steal a horse from a man, and ride it away, is still a man compared with a sneak who comes at night and steals some farm woman's chickens, the sale of which would bring money for her children's shoes, stockings and winter wear. If you can help in any way or by the help of other subscribers suggest some way of curbing this evil, I would greatly appreciate.—L. C. S., Breckenridge, Mich.

DOES NOT APPROVE OF DOG TAX LAW

DEAR Editor—In a recent issue of your paper there was an article "Must pay dog tax." Not wanting to criticise, but your assistant Legal Editor says that there is a state law except in cities where there is an ordinance providing for such tax. The law reads: "A state law, excepting cities of over 250,000 inhabitants"—that means Detroit, which includes all Wayne county. They have the right to make their own dog law. A state laws with exceptions that does not look reasonable or constitutional, and fine or lock a person up if he does not pay $3.00 or $6.00 as the case may be, is outrageous. Is it not? The Auditor General's report on the affair is $54,000 paid out for damages done by dogs in the state, and $310,000 collected to pay the fifty-four thousand dollars. Where does the rest of that money go according to the constitution? Other cities and counties should have the same rights, as Detroit, and Wayne county, and any county or township official that tries and does enforce that dirty outrage is doing an injustice to the people they represent. I contend that it is no more of a criminal offense to keep a dog than a cow or horse. Wayne county exempt. Wayne county has officials that stand for their rights and I admire them for that. Let other county officials do the same and there would be less taxes to pay, and less of the taxpayers' money spent for autos for some of our state officials, gasoline and repair bills.—W. B. Ellerthorpe, St. Clair County.

RADIO DEPARTMENT

By J. Herbert Ferris, B. E.

GROUND AND EARTH CONNEC-

TO properly receive radio messages a good earth connection is absolutely necessary. This connection may be made in several different manners, the easiest and simpliest ones for the average person to use will be described in a way that will enable you to have as good a "ground" as necessary for receiving.

The need of a ground is twofold: first, to act as an earth return for the wireless wave that your aerial picks up and passes thru your set, second as a protection for your set against lightning damage during the summer when thunderstorms are quite frequent.

If you have a house that has running water in it, piped from a spring or well you are fortunate as this will make a very good ground. Under these circumstance we would suggest that you plan to have your receiving set in a room near to one of the water pipes. The pipe may be in the cellar or in the next room or even outside.

The shorter the wire from your set to the ground connection, the pipe, the better your results. If you have to go much over 15 feet to reach a water pipe you may find that it will be necessary to shorten your aerial a little. Every foot of wire used in the aerial, the leadin, the ground connection all act as part of your receiving system, and should the wire be too long the natural wave length of your antenna system including ground leads will be higher than the low wave length of some of the broadcasting stations that you may wish to hear. Hence the necessity of having short leads to the actual ground connection.

Those of you who do not have a water system in the house, but have a windmill tower and driven well very near the house, can run a wire on short posts or under ground to your pump and make a connection there. In this case you may have to go as far as fifty to seventy-five feet and yet you will get good results. If you have to go as far as fifty feet shorten your aerial to not exceed 75 feet (if 30 feet high) in fact 50 feet long would in some instances be better.

And for those that do not have a pump near at hand or water pipes in the house a connection to the cistern pump as long as it is partly immersed in water will give a satisfactory ground. Sometimes this gives a better ground than the piping in the house, but cannot be relied upon to do so. It will give good results.

Lastly we have to consider those who have no pump near or any piping. To them we will say it will be necessary to get an iron pipe or rod and drive it into the earth 6 to 10 feet, or until it is in permanently moist ground, and make their connection to that rod. A piece of half inch pipe is large enough, and in very dry weather one can pour a bucket or two of water in the pipe to keep the earth damp so that a better ground will result. Using a rod or pipe as just described placed near the house will be better than running a wire 50 feet to a pump that is away from the house.

Now to connect to the pipe, pump or rod. First, with a file or sand paper clean off a spot on the pipe or rod, all the way around it, and about 2 inches long so that all the rust is completely off. Around this cleaned spot wrap six or eight turns of your ground wire, close together and as tight as possible, twisting it tight with pliers. This will make a good connection, but must be wrapped with adhesive or electricians tape to keep out the dirt and mosture so that the connection will remain clean and free from rust.

The better connection is to buy what is called a "ground clamp" (about 10c) and fasten your wire to this and then clamp the ground clamp to the cleaned place on the pipe. If you can solder your connection to the pipe or rod it will be the best way and will always give you good contact with the pipe or rod.

You can use the same earth connection for your lightning arrester ground, as it should be as good as that used for your radio. If you use a lightning arrester, and you should, do not use smaller than No. 14 copper wire for the lead wire.

The Coach $975

Touring Model $850 *Tax and Freight Extra*

A 30 minute ride will win you to the new Essex.

And you will join the legions who know this new Six, that is built by Hudson, in saying it provides ideal transportation.

It continues the well known Essex qualities of economy and reliability. It adds a smoothness of performance which heretofore was exclusively Hudson's. Both cars are alike in all details that count for long satisfactory service at small operating cost.

Steering is like guiding a bicycle. Gears shift easily. Care of the car calls for little more than keeping it lubricated. For the most part that is done with an oil can.

Fuel economy is impressive. Oil consumption is unusually low and tire mileage surprisingly high.

The New Essex is backed by a service policy that keeps maintenance down to the minimum.

Bigger Beet Yields from Better Cultivation

In order to do good work a beet cultivator must be built right. It must have the necessary strength with light weight, and must be easy to operate and adjust. You get these features in the

JOHN DEERE BEET AND BEAN CULTIVATORS

With Quick Adjusting Tool Bar

It is easy to change the tools and the distances between rows on John Deere 2-, 3- and 4-row beet and bean cultivators—not even a wrench is required. Slots are provided one inch apart, entire length of tool bar. Slip the tools through the desired slots and drop the clamps into position. A complete set of tools can be assembled on the tool bar in from two to five minutes—and we can furnish the type of cultivating tool you require; tools that get down and do extra good work.

You can follow crooked rows with these cultivators—a push of the foot makes them dodge as desired, and a powerful spring causes them to return to normal line of draft after dodging.

Ask your John Deere dealer to explain the advantages of the tilting lever and the hinged pole on John Deere beet cultivators.

Write today for free booklets describing these cultivators and any other type of John Deere beet tool for preparing seed bed, planting, cultivating and harvesting. Address John Deere, Moline, Ill., and ask for Booklet AD-633

Oh Money! Money!

by ELEANOR H. PORTER

THE STORY TO DATE

MR. STANLEY G. FULTON, 50-year old bachelor and possessor of twenty million dollars, calls on his lawyer and they discuss the disposition of this large fortune after its owner's death. The lawyer is in favor of giving the money to colleges or charities while Fulton is opposed to these ideas. He remembers that he has some distant cousins and decides to leave the money to one of them, but first he determines to learn which one will use it to the best advantage. To find out who is the worthy one he, through his lawyer, gives, each cousin $100,000 to use as they will. Before giving them the money grows a beard and, using the name of Mr. John Smith, goes to the town where they live to find out what kind of people they are. Upon arriving in town he visits James Blaisdell, one of the cousins, where he tries to hire board and lodging. While there he meets Miss Flora Blaisdell, another cousin who is a dressmaker. They decide they cannot rent a room to him and supply him board and refer him to Frank Blaisdell's, the third cousin. He gets a room there and, passing as a writer gathering material for a book on the Blaisdell family in this country, he starts out. He calls on all of the Blaisdells and as they all talk of a relative by the name of Miss Maggie Duff he decides to call on the lady. He finds her living with her father, an old man who seems to have soured on the world. He secures what information he can from her and her father. He then writes a letter to his lawyer discussing the various relatives he has met. The members of the Blaisdell family learn that each cousin of Stanley G. Fulton has fallen heir to $100,000 and there is much excitement. Mr. Fulton decides to change his rooming place and secures room and meals at Miss Maggie Duff's house.

(Continued from March 15th issue.)

"DAD'S been showin' me the books he used ter like when he was a little boy like me," announced Benny. "Hain't he got a lot of 'em?—books I mean."

"He certainly has."

Mr. James Blaisdell stirred a little in his chair.

"I suppose you have crowded them a little," he admitted. "But, you see, there were so many I'd always wanted, and when the chance came—well, I just just bought them; that's all."

"And you have the time now to read them."

"I have, thank— Well, I suppose I should say, thanks to Mr. Stanley G. Fulton," he laughed, with some embarrassment. "I wish Mr. Fulton could know how much I do thank him," he finished soberly, his eyes caressing the rows of volumes on the shelves. "You see, when you've wanted something all your life—" He stopped with an expressive gesture.

"You don't care much for that, then, I take it," inferred Mr. Smith, with a wave of his hand toward the distant violins.

"Dad says there's only one thing worse than a party, and that's two parties," peped up Benny from his seat on the rug.

Mr. Smith laughed heartily, but the other looked still more discomfitted.

"I'm afraid Benny is—is telling tales out of school," he murmured.

"Well, 'tis out of school, ain't it?" maintained Benny. "Say, Mr. Smith, did you have ter go ter a private school when you were a little boy? Ma says everybody does who is anybody. But if it's Cousin Stanley's money that's made us somebody, I wished he'd kept it at home— 'fore I had ter go ter that old school."

"Oh, come, come, my boy," remonstrated the father, drawing his son into the circle of his arm. "That's neither kind nor grateful; besides, you don't know what are you talking about. Come, suppose we show Mr. Smith some of the new books."

From case to case, then, they went, the host eagerly displaying and explaining, the guest almost as eagerly watching and listening. And in the kindling eye and reverent fingers of the man handling the volumes, Mr. Smith caught some inkling of what those books meant to Jim Blaisdell.

"You must be fond of books, Mr. Blaisdell," he said somewhat awkwardly, after a time.

"Ma says dad'd rather read than eat," giggled Benny; "but pa says readin' is eatin'. But I'd rather have a cookie, wouldn't you Mr. Smith?"

"You wait till you find what there is in these books, my son," smiled his father. "You'll love them as well as I do, some day. And your brother—" He paused, a swift shadow on his face. He turned to Mr. Smith. "My boy, Fred, loves books, too. He helped me a lot in my buying. He was in here—a little while ago. But he couldn't stay, of course. He said he had to go and dance with the girls—his mother expected it."

"Ho! Mother! Just as if he didn't want ter go himself!" grinned Benny derisively. "You couldn't hire him ter stay away—'specially if Pearl Gaylord's 'round."

Oh, well, he's young, and young feet always dance when Pan pipes," explained the father, with a smile that was a bit forced. "But Pan doesn't always pipe, and he's ambitious—Fred is." The man turned eagerly to Mr. Smith again. "He's going to be a lawyer—you see, he's got a chance now. He's a fine student. He led his class in high school, and he'll make good in college, I'm sure. He can have the best there is now, too, without killing himself with work to get it. He's got a fine mind, and—" The man stopped abruptly, with a shamed laugh. "But—enough of this. You'll forgive 'the fond father,' I know. I always forget myself when I'm talking of that boy—or, rather, perhaps it's that I'm remembering myself. You see, I want him to do all that I wanted to do—and couldn't. And—"

"Jim, Jim!" It was Mrs. Hattie in the doorway. "There, I might have known where I'd find you. Come, the guests are going, and are looking for you to say good-night. Jim, you'll have to come! Why, what'll people say? They'll think we don't know anything—how to behave, and all that. Mr. Smith, you'll excuse him, I know."

"Most certainly," declared Mr. Smith. "I must be going myself, for that matter," he finished, as he followed his hostess through the doorway.

Five minutes later he had found Miss Maggie, and was making his adieus.

Miss Maggie, on her way home, was strangely silent.

"Well, that was some party," began Mr. Smith, after waiting for her to speak.

"It was indeed."

"Quite a house!"

"Yes."

"How pretty Miss Mellicent looked!"

"Very pretty."

"I'm glad at last to see that poor child enjoying herself."

"Yes."

Mr. Smith frowned and stole a sidewise glance at his companion. Was it possible? Could Miss Maggie be showing at least a tinge of envy and jealousy? It was so unlike her! And yet—

"Even Miss Flora seemed to be having a good time, in spite of that funeral black," he hazarded again.

"Yes."

"And I'm sure Mrs. James Blaisdell and Miss Bessie were very radiant and shining."

"Oh, yes, they—shone."

Mr. Smith bit his lip, and stole another sidewise glance.

"Er—how did you enjoy it? Did you have a good time?"

"Oh, yes, very."

There was a brief silence. Mr. Smith drew a long breath and began again.

"I had no idea Mr. James Blaisdell was so fond of—er—books. I had quite a chat with him in his den."

No answer.

"He says Fred—"

"Did you see that Gaylord girl?" Miss Maggie was galvanized into sudden life. "He's perfectly bewitched with her. And she—that ridiculous dress—and for a young girl! Oh, I wish Hattie would let those people alone!"

"Oh, well, he'll be off to college next week," soothed Mr. Smith.

"Yes, but whom with? Her brother!—and he's worse than she is, if anything. Why, he was drunk to-night, actually drunk, when he came! I don't want Fred with any of them."

"No, I don't like their looks very well, but—I fancy young Blaisdell has a pretty level head on him. His father says—"

"His father worships him," interrupted Miss Maggie. "He worships all those children. But into Fred—into Fred he's pouring his whole lost youth. You don't know. You don't understand, of course, Mr. Smith. You haven't known him all the way, as I have." Miss Maggie's voice shook with suppressed feeling. "Jim was always the dreamer. He fairly lived in his books. They were food and drink to him. He planned for college, of course. From boyhood he was going to write—great plays, great poems, great novels. He was always scribbling—something. I think he even tried to sell his things, in his 'teens; but of course nothing came of that—but rejection slips.

"At nineteen he entered college. He was going to work his way. Of course, we couldn't send him. But he was too frail. He couldn't stand the double task, and he broke down completely. We sent him into the country to recuperate, and there he met Hattie Snow, fell head over heels in love with her blue eyes and golden hair, and married her on the spot. Of course, there was nothing to do then but to go to work, and Mr. Hammond took him into his real estate and insurance office. He's been there ever since, plodding, plodding, plodding."

"By George!" murmured Mr. Smith sympathetically.

(Continued in April 12th issue.)

LENT AND SELF-DENIAL

A SERMON BY REV. DAVID F. WARNER

TEXT: "Then said Jesus unto his disciples, If any man would come after me, let him deny himself, take up his cross, and follow me."—Mt. 16:24.

"A FAST of forty days beginning with Ash Wednesday and continuing until Easter." This is what the dictionary says about Lent. And just now many Christians are observing this period as one of self-denial in commemoration of the life of our Savior. And yet, I take it, that our Savior meant that we should practice self-denial three hundred sixty five days in every year. Do you think so? Is that what our text means?

Self-denial is, essentially, a part of religious character. There is no greater rogue in the field of Christian endeavor than Self. He must be denied his coveted place in our lives. To heed him may win us a reputation, but to deny him will win us a character. Always, there are many men and women in the limelight of the world. But it would be a surprising revelation to others and a burning condemnation of themselves to know the degree of self in the motives.

Self-denial includes a conquest over the demands of the body and a bringing under of the selfish ambitions of one's intellect and spirit. Perhaps just a simple study in the self-denial attitudes and teaching of Jesus might be helpful for the Lenton season.

In early times, the denying of the lower or carnal self was engaged in in a spirit and thru methods void of reason. We hear it called asceticism. It grew out of the exclusiveness and formalism of Judaism, as well as a misconception of Christianity by the heathen convert. It was a deliberate attempt to uproot the desires of the flesh and the instincts of nature. It was wholly a religion of negation and a self-excile from the world. Did Jesus teach and practice this? No. Jno. 17:15. But he taught and practiced reasonable self-denial and self-discipline.

Let us begin with fasting. This was practised by our Lord. Mt. 4:1f. It was made a logical and consequent part of religious life. Mt. 6:16f and 9:15f. But it was not the formal setting apart of a particular season or the parade of piety before the world. It was the outward evidence of a soul in its personal and sacrificial relation to God. And for its expression, it did not await a Lenton season of forty days, since it depended wholly upon a peculiar state of mind. And it seems, according to some such understanding as this, it was practiced by the early church. Acts 10:9, 13:3, 14:23.

And what about the marriage relation? Well, celibacy or the non-married state was countenanced and practiced by Jesus, but he did not generally recommend it for others. Mt. 19:12, Luke 14:26. But he did demand a pure and wholesome family life. So, the marriage relation is not debasing during Lent or any other time unless it be placed above the interests of the Kingdom of God. We read of some horrible crimes in church history because some religious leaders have denied themselves marital rights. And many communities and homes are suffering under low-toned morals because married people are not denying carnal lust.

Now, to what extent ought almsgiving to be featured in our life? Our Lord, tho poor, practiced this grace. Jno. 13:29. Indeed, it was a highpoint in his teaching. Mt. 6:1f and Luke 12.33. "Sell that which thou hast and give alms." We are urged to a determination not to be selfish in our abundance. Jesus' warnings on this are vigorous. Hence, to the man who is in danger of falling under the tyrany of money, he says, "Go and sell what thou hast and give to the poor." The love of money is a root of all kinds of evil. Why? Because it is not held subordinate to social demands. You have spent it in self-pleasure, and now, in your declining years you are losing your life. You have not been faithful in the unrighteous mammon, and therefore, you can not be trusted with the true riches. What fools we mortals are!

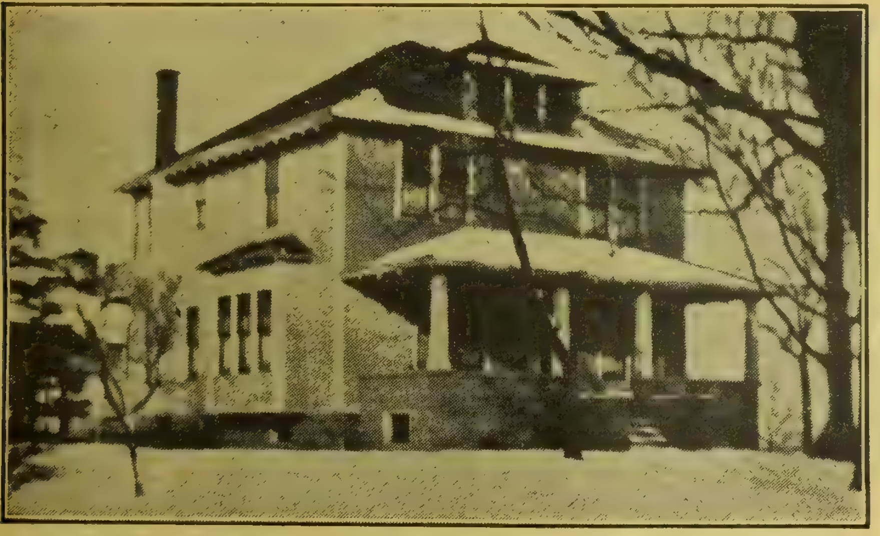
I think it was John Wesley who said, make all you can, save all you can, but give all you can. And when he preached that sermon you know where he placed the emphasis. To give wisely and unselfishly is to have discovered one of the fine arts. Few folks have learned the art of putting their dollars into the business of circulating good will. And in this economic world there are some spiritual things only money can do. When you give your dollars to Kingdom advancement you give so much of concentrated time and energy that God has given you. Consecrated money in the hands of a consecrated person is resistless in its power for good. "Whosoever that forsaketh not all that he hath can not be my disciple."

But again, we are urged to the refusal of luxury. Well, say in personal desires, in the household arrangements, and in the general surroundings of life. "Foxes have holes and the birds of the air have nests, but the son of man hath not where to lay his head," says the self-denying Jesus. And note the helpful hints in, "Behold, they that wear soft raiment are in king's houses;" and in the parable of a cer-

(Continued on Page 18)

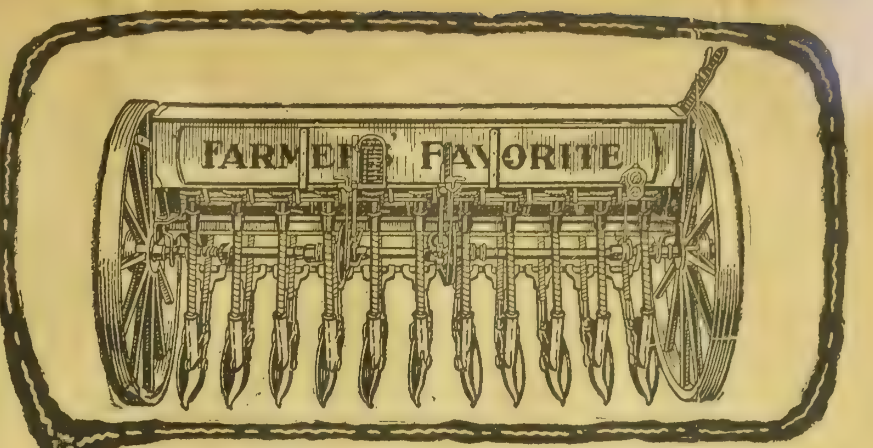
OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.



MODERN HOME OF MR. AND MRS. JOHN C. MILLER, WILLIS, MICH.

HERE is a modern home that would do credit to any farm in Michigan and it is located on the farm of Mr. and Mrs. John C Miller, Route 1, Willis. And both Mr. and Mrs. Miller are readers of The Business Farmer. In describing this fine home they write: "It contains 8 rooms and bath with basement under the whole house, 28 ft. by 32 ft., and fruit and vegetable cellar under the front porch, 8 ft. by 26 ft. Our home is all modern, equipped with hot water heat, hot and cold water both up stairs and down. Nearly all oak finish and all oak floors. It cost about $5,500.



The Favorite of Good Farmers ~ Since 1848

FOR more than three-quarters of a century the Farmers Favorite Grain Drill has been a money-maker on thousands of America's finest farms. Originally known as the Bickford & Huffman, this sturdy, dependable, even-sowing drill has always shown the way to bigger profits per acre.

FARMERS' FAVORITE GRAIN DRILLS

sow the seed evenly—at a uniform depth. Each individual grain is placed in the soil at the bottom of the drill furrow and carefully covered. All the seed has an even chance to get moisture and germinate perfectly. No "patchy" sowing. No spilling on top of soil—or half-way covering. No clogging. No empty furrows.

Write Today for the Facts in Full

Farmers' Favorite Grain Drills are made in every size and style. Write for full details; also folders describing our famous Lime Sower, Alfalfa Drill, Corn Drill, Beet-and-Bean Drills and Potato Planter.

In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

THE GASOLINE TAX AGAIN

YOU who have been following Mr. Stanley Powell's articles on taxation will not fail to read the one in the current issue on the popular gasoline tax, which has been a political foot ball in Michigan now for two or three years.

You will hardly fail to get the idea that Mr. Powell is an exponent of this method of collecting the necessary revenue to care for road building and improvements and we are inclined to believe that there are a great many of our readers who will agree with him.

One thing is certain, this gasoline tax proposition is going to come up again at the next general election and we want our readers to have all the facts. If there are any questions which Mr. Powell has not answered to your satisfaction in this or any of his previous articles on taxation I hope you will write to us, because there is no subject of more importance to the farmer today than that of increasing taxation and we shall be glad to open our columns to a full discussion of the proposition as it has been outlined in this series.

WALLACE ON COOPERATION

SECRETARY WALLACE made some pertinent remarks regarding farmers cooperation that that are well worth repeating, principally in view of our experience with cooperation in Michigan during the past few years.

It would not be fair to say that the farmers of Michigan are discouraged with cooperative marketing schemes. There is not a thinking business farmer who does not realize that this is the only way out, and it is interesting to note that Secretary Wallace agrees with us fully in that "cooperative associations will succeed or fail as they are efficient!"

"During the past three years," he continues, "farmers have turned to cooperation for the solution of their marketing difficulties in ever-increasing numbers. In a period of rapid expansion it is only natural that the essential principles and limits of cooperation at times should be overlooked. The department believes that its most helpful activity in this field consists in collecting and compiling the essential facts with regard to the cooperative movement and employing these data as the basis of careful studies of the older and more successful cooperative organizations. In this way an understanding of the general movement may be gained, and the principles which have guided well established organizations made available to newcommers in the field.

"It is important to remember that there have been previous periods of expansion and decline in cooperative activity in the United States. Cooperative sentiment is always stimulated by agricultural depression. The first great cooperative movement in agriculture reached it apex about 1874, but lasted for only a few years thereafter. Local work went forward in the later years of the nineteenth century, but it was not until after 1900 that the present period of expansion began. It increased gradually for a number of years, gaining momentum about 1914, and is not today at its maximum.

"There have been many failures of cooperative associations, although there is no reason to believe that the number of failures of such organizations during a given period varies materially from the number of failures in other enterprises under similar conditions. It was only natural that the number of failures of cooperative associations should be especially large following the world war, during the period of falling agricultural prices, just as the number of business failures in cities should be and was very large. the causes of the failures appear to be similar to the causes of failures in other lines. The main cause was falling prices. Other causes were poor management, inadequate financing, and too small a volume of business in proportion to the overhead expenses. Some associations purchased, largely on credit, buildings and equipment at war prices, and the subsequent decline in the value of such property, coupled with the decline in the price of agricultural products, was largely responsible for their failure.

"Business failures in cities are as natural economic phenomenon which we record statistically from day to day. It is a barometer of business activity. It is taken as a matter of course, but when a cooperative enterprise composed of farmers fails it flashes across the metropolitan press in glaring headlines!"

THE WORM HAS TURNED

WE have it on the authority of Verne H. Church, federal crop statistician located at Lansing, Michigan, in charge of this district, that the movement of young people from farm to city factory districts has largely lost its pulling power during the past few months.

Mr. Church says, in a recent report, "there is some movement from country to cities, but many are remaining on the farm because of more encouraging aspects. There will be an adjustment of crops to obtain a more profitable acre return. With the expected improvement in other factors, the farming situation is expected to show a step upward toward a more normal condition this year."

We are willing to give space on this page any time to an encouraging report, and we would point out to many a young man or woman who is discouraged with farm conditions of the past few years that pastures on the other side of the fence are always the greenest and that there are many objections to the congested and harrassed life in our modern cities which is not apparent to one who views it from the perspective of the country.

These may be trying times but it must be apparent to all that the conditions which toss them about are changing, that the decrease in farm acreage and population can only increase the returns of those who stick and surely even the hardships that have been undergone cannot compare with those of the pioneer forefathers who wrestled from the forest the fertile acres which we are now asked only to plant, cultivate and harvest.

We predict that the first slacking up of city employment will send labor back to the farm a-scurrying. Many a man has given up a good farm and moved to the city who is going to wish he had it back within the next year or two. Paste this in your hat and see how near we come to hitting the mark!

LESS WHEAT—MORE CORN IN PROSPECT

A STATEMENT just issued by the Bureau of Agricultural Economics of the U. S. Department of Agriculture, based on reports received from 43,000 farmers, shows that the farmers in every section of the country are beginning to apply business methods to their farming operations.

This report shows that on March first, farmers were planning to increase the corn acreage about 3 per cent over the country generally, but in Minnesota, South Dakota, and Kansas they are planning an increase of 10 per cent due to their disastrous season with wheat.

In almost the same territory wheat shows a prospective decrease of 14 per cent in acreage, while oats and barley show an increase of 7 to 9 per cent respectively.

The rye crop, according to this report, will only be 79 per cent of last year's production, and this too is influenced largely by the price change during the current marketing season.

Flax shows the greatest increase as farmers report they are planning to grow 54 per cent more than last year. Hay will receive 4 per cent larger acreage and potatoes a 2 per cent decrease.

These figures, if they are based on facts, prove that farmers are working as much with their heads as with their hands these days, and we predict that their profits will be readjusted accordingly. The day may come when farmers will decide in advance, the total amount of a product to be grown to supply the market on a profitable basis. The whole future of agricultural prosperity as we see it, not only in the United States, but in the other producing countries of the world will be determined by the control of production as well as of the markets.

Sometimes we thing it takes farmers as a class a long time to learn a lesson, but once it is learned you can depend upon them never, to forget it.

SAFE INVESTMENT

SURPRISING as it may be to some folks, there are a considerable number of farmers in Michigan who have funds in excess of their farming needs and must find a place for investment.

It is not usually this type of farmer who is attracted by the glowing terms of the stock salesman who finds those who must give notes in payment the easiest to approach and sell.

It would seem that after the experiences with which each rural community in Michigan is familiar there would be little opportunity for the glib stock salesman and yet every once in a while we run into a condition where, by painting a rosy picture and getting one or two influential farmers into the scheme, a veritable clean-up is made. The old adage that "One is born every minute" is evidently proven by actual experience in the constant supply of fresh money which these parasites find for their schemes.

There are so many good bonds on the market at this time and they are issued in such small denominations that there is no excuse for the farmer who has additional funds to be speculating unless he is an out-and-out gambler and is willing and can afford to take the loss as well as the gain. Federal Land Bank Bonds offer a tax-exempt security which are attracting a growing number of farmer investors. First real estate mortgage bonds pay a considerably higher rate of interest and are tax exempt, and when purchased from a trustworthy company with years of reputation behind them are probably as safe an investment as one can hope to secure. There are also forms of railroad and industrial bonds, all of which pay a higher rate of interest than the government bonds, and if wisely chosen may be as secure.

The point is that there is no excuse whatever for a farmer with funds to invest to experiment with unknown quantities and for the one satisfied purchaser of industrial oil or mining stock it is easy to find a hundred who have never received a penny from the amount they invested in such schemes.

The moral should be apparent.

PLANTING TIME

THERE are two articles in this issue which ought to be read by every farmer who is completing his plans on crops for the present season.

The first is by Prof. J. F. Cox, of Farm Crops Department of the College, in which he points out the desirability of increasing the clover acreage in Michigan. Prof. Cox is too well known to our readers to need any sort of introduction and when he has a message he usually delivers it because he believes it is needed. We hope every busines farmer will read this and profit by the suggestions given.

Another article by J. R. Duncan, of Prof. Cox's department, takes up the matter of testing seed corn and gives his reason why it is especially necessary this year. We have appended to this article a method of making "rag dolls" or corn testers, which ought to be in use on every farm in Michigan this season.

"A stitch in time saves nine" and a bushel of seed tested now may save nine bushels wasted to say nothing of the countless hours of worthless cultivation and planting.

"FORTY YEARS OF FAKING"

PETE DEXTER, we find, is likely to get himself into a new batch of trouble. Pete, as our readers will recall, is the villian or the hero, according to how you look at it, of the story, "Forty Years of Faking," that is now running in THE BUSINESS FARMER. In that story every name of a commodity, a person or a corporation, is entirely fictitious. Unfortunately, however, there are just so many names available in the world, and it is hard to put a label on a rogue that some honest may does not believe he has pre-empted.

We have been asked if Dexter was trying to expose some particular individual or some particular company or corporation. He is not. If names in real life happen to match the names in Dexter's story, it is purely an accident.

All that the story purports to do is to show the methods of grafters in different lines. Every incident in the story has for its basis in fact, but every incident is likewise completely altered so far as the names of the participants are concerned.

PUBLISHER'S DESK

HOW TO BE A FINGER-PRINT EXPERT

Having been a reader of your paper for years and noted your advice to others, I would like to have your advice on the finger-print work. I would like this work and want to know about the schools that are best.—E. B.

HERE is another young man who has been attracted by the glamour of the "Be a Finger Print Expert" circulars. It the number who have inquired through this department is any indication of the number who probably "bite" on this scheme, there will be more finger-print experts someday, than there are fingers!

It seems as though it is easiest to attract people to a profession of which they know absolutely nothing. Even becoming an "expert electrical engineer" or a "chiropractor" by mail, carries with it the suggestion that there may be some work connected with the job, but when you suggest so elusive an occupation as making finger-prints, the fish bite like hungry wolves.

For the benefit of those who read this column we will give a simple lesson in making finger-prints: Rub your thumb with lamp-black, press it firmly on sheet of white paper, lift it up, and Lo! you have left the imprint of your finger which is different, (so we are told) from that of any other finger in the world. To prove it compare the imprints of other members of your family. This system is used by every police department in the world, the army and navy and others for a positive mark of identification.

There you have it—the first lesson—ten dollars please!

FITTING SPECTACLES BY MAIL

"Dear Friend:—Let me send you Free On Trial a pair of my very finest Shell Rim Spectacles! No matter where you live I promise to send you a pair that will enable you to see perfectly and satisfy you in every respect or you will owe me nothing. I positively guarantee a perfect fit or there will be no charge whatever. They will protect your eyes, preventing eye strain and headaches; and enable you to read the smallest print, thread the finest needle, See Far or Near!"

IF any of our readers have not received a letter of which the above is the opening paragraph they can feel slighted. Here is a company so liberal and possessed of such occult powers, that without seeing the patient, without examining the eyes or testing in any way, can fit you with "a pair of glasses that will enable you to see perfectly."

If this statement were not a plain lie on the face of it, why would it still be necessary for universities and colleges to insist on a man giving from two to four years of study before giving him a diploma to practice as an optician?

Any sane man or woman ought to know that their priceless possession is sight, beside it the wealth of a Henry Ford or Rockefeller are as nothing. They know too, that the improper glasses might in a few months entirely ruin their sight and yet enough of them succomb to the magic words of such fakirs, so that they remain in business and probably prosper on their deception.

The day will come when Uncle Sam will scrutinize the advertising matter which he delivers into the home as carefully as does the responsible publisher, and laws will be enacted preventing such schemes being perpetrated on the public, but until that day arrives all we can do is to try to bring them to light in our humble way, through the medium of this column.

TOO MUCH BUNK

"I got an idea," says Farmer Brown,
"There's too much buncombe floating around,
You can't go here and you can't go there,
And you can't go travelin' anywhere,
But what some feller is on your trail,
With a sure investment that cannot fail,
He tells you how you can get rich quick,
And his method, it sounds pretty doggon slick,
He tells you how to make dollars grow
Until you will jes' be rollin' in dough.
He'll sell you mine stock for a song
That's going to be double fore very long,
And he puts up such a winning speil
You feel yourself ownin' an automobile,
A place in the county and one in town,
And a private yacht—for a dollar down.
But hang unto your dough for a rainy day,
And make your money in the good old way,
Save up your dollars as wise folks do,
And the poorhouse never will yawn for you."
—Creede, Colorada Candle.

RAISING AIREDALES

A READER writes to ask if we know if the scheme of raising Airedales for the Oorang Kennels, LaRue, Ohio, is a profitable and successful side-line in which a farmers wife can engage.

The company which operates under the name of the "Oorang Sportsman's Association" states that one "can make from $1000 to $10,000 net profit yearly, with but little expence." No wonder our reader is interested!

We are wondering if any of the friends of this column are successfully raising puppies for this concern or if you have had any experience with them, if so, without mentioning your name we would be glad to pass the information along.

WROTE POSTAL AUTHORITIES ABOUT "ART WORK" COMPANY

"Dear Sir:—One of the subscribers to your paper sent me the enclosed article cut from your paper (Feb. 16, 1924 edition) asking me to write to you as I have had experience with the Underwood Art Goods Co. I was worse off than she for I completed one dozen handkerchiefs for which labor I received no pay. Just one year from the time I sent in my last installment of 3 handkerchiefs to them, this company had the nerve to advertise in my home paper (I had answered their advertisement in the Detroit Free Press). I went out and go council on the case and the postmaster said it was a clear case of using the mails to defraud. I wrote to the chief inspector of the postal laws in Washington, D. C., and he took up the case. Three months after my complaint to him, I received part pay from the company and they tried to cheat me out of the rest by saying they did not receive all of the dozen completed. I wrote back to them that their contract read "paid by the dozen" and that I had sent the whole dozen back, also that I wanted my money and an answer immediately or I would take further steps to collect it. In 2 weeks I received the rest of my money but the $1 I never received. I am going to write the inspector of this $1 proposition soon. It would be a good plan for all complaints to go to the chief inspector and by so doing it may dissolve this company's business entirely. I feel sure they are a fraudulent company, and is a case for the U. S. authorities at present seeing one complaint has already gone in."
—Mrs. W., Oakland County.

RECEIVED CHECK

I wish to thank you for helping me regain my money. I could hardly believe my eyes when I received the check for Ihad lost all hopes of ever getting it. Thank you and I won't forget it and shall speak a good word for THE BUSINESS FARMER at every chance.—Mrs. M. S., Custer, Mich.

CEMENT

"SETTIN' BREAD!"

By Anne Campbell

THE old-fashioned lamp shown warmly
On the tablecloth of red,
And the silvered hair of Grandma
Who was busy "settin' bread!"

As I drowsed there in the kitchen,
Though I should have been in bed,
I enjoyed the home-like picture
Of my Grandma "settin' bread."

Bright the kitchen fire was burning,
She revived the embers dead,
And the kitten drowsed beside it,
Warmed by Grandma's "settin' bread."

As I watched her dear hands hover
O'er the mixing bowl, she said,
"You must run to bed, my darling,
While your Grandma's "settin' bread."

Oh, I wish I could revive them
Happy evenings that have fled—
All the simple ways of living,
Like the rite of "settin' bread!"
(Copyright, 1923.)

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—Bread is one of the most important foods that we have, and in this issue I have tried to give you a small idea of how to make good bread for the family. It is so easy to go wrong and just as easy to have it turn out alright.

Thanks for the many letters received to help on a "subscriber in need."

I want you to know that if the name and town is not given me when you write, I cannot answer you. Sometimes our page is too full of the more general news and interest and personal letters can always be answered direct. I always use my own discretion about publishing the names of our readers and I never abuse the fact that those names are with me.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

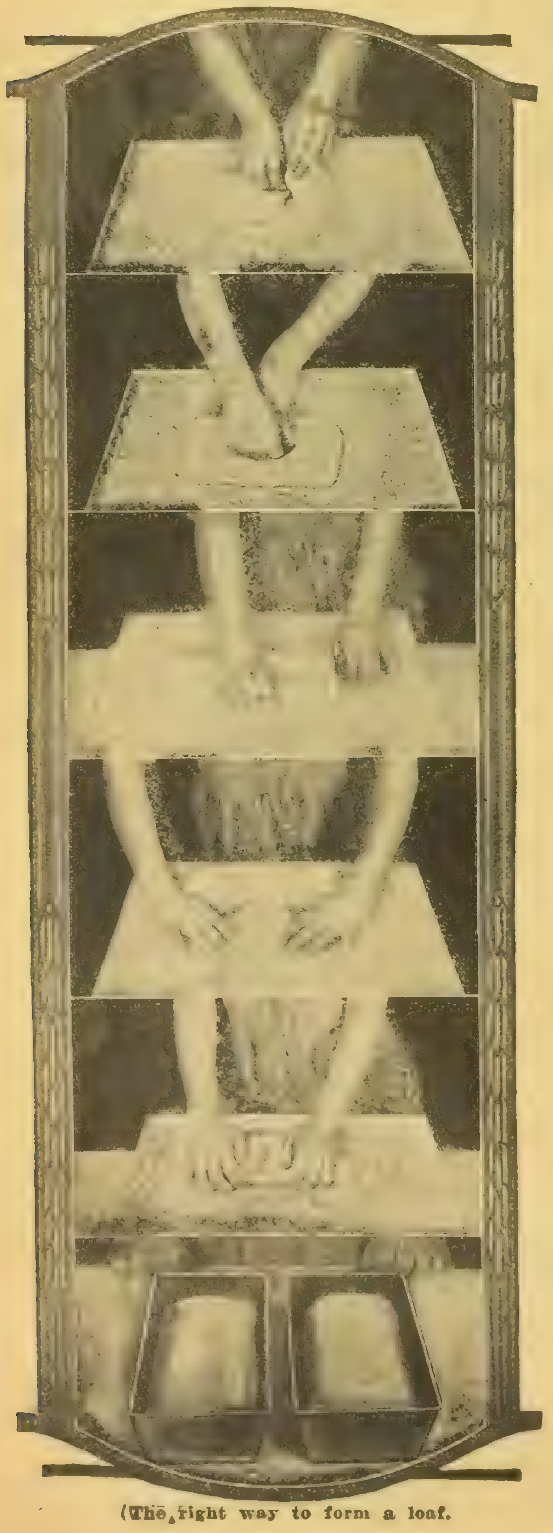
METHODS FOR MAKING BREAD

THERE are two general methods for making bread, one known as the "straight-dough" process and the other as the "sponge" process.

Straight-dough process.—In the "straight-dough" process all the ingredients are mixed at one time and the dough is made of the proper consistency before rising. Either compressed or liquid yeast may be used for this, but not dry yeast.

Sponge process.—In the "sponge" process only half the total amount of flour is used at first, with all or nearly all of the liquid, the yeast, and frequently the salt and the sugar. Compressed, dry, or liquid yeast may be used for this. This mixture is simliar to a soft batter, and after the first rising the remainder of the flour, the shortening, and any other desired ingredients are added. It is then kneeded until of the proper consistency and smoothness.

The sqonge process usually requires less yeast than the straight-dough method, because of the softer consistency of the mixture which facilitates the growth of the yeast. However, by using larger or smaller amounts of yeast one may shorten or lengthen the time required for rising. In a similar way the straight-dough process may be shortened or lengthened by increasing or decreasing the amount of yeast used. Hence recipes for the different variations of time are given and the housewife may select that which suits her convenience as to time and the kind of yeast she has on hand, or which seems to her most economical. Great care should be taken when using a sponge or dough which stands a long time—as, for example, the "overnight straight dough" or the "overnight sponge"—to keep it much cooler than when the quicker methods are used, since the former have a greater chance of becoming sour.



(The right way to form a loaf.

Flours In Quick Breads

The hard winter wheat flour is the best flour for the making of yeast breads while the soft flours are considered the best for the quick breads. The former contains more of the elastic material known as gluten and the latter more starch.

The gluten must be present in the yeast breads to allow for the expansion of the dough necessary to make a good bread. The gluten can be easily separated out by making a stiff smooth dough ball, placing it in a cloth and washing out the starch under the faucet or in a pail of water. If the sticky mass is then placed in a hot oven it will be found to stretch to at least twice its size. When baked it is hollow, hard and greyish tan in color. This action takes place when the bread is baked but then the gluten particles are distributed in the starch and consequently small holes are made throughout the whole mass.

The soft wheat flours, that is, the pastry flours, will yield very little gluten. While the two kinds of flour are on the market as bread and pastry flour, the tendency is to use one flour for most of the baking. The millers know this and as a result there are brands which are the result of the blending of two kinds of flour in the mill. These flours are not so high in gluten or starch content but that they will make both excellent quick breads and yeast breads.

When barley, rye or corn meal flours are used in quick breads it is often necessary to modify a plain recipe because these flours contain cellulose material and the quality of the gluten is not as good for bread purposes. The moisture content may also necessitate a slight change in the amount of liquid used in a recipe. Always sift white flour for quick breads.

Recipes

Four loaves straight dough:—Four cups (1 qt.) lukewarm liquid; 4 teaspoons salt; 2 teaspoons sugar; 1 or 2 cakes compressed yeast, or ½ to 1 cup liquid yeast; 3 to 4 quarts sifted flour.

Parkerhouse Rolls (Quick Method)

1 cupful milk; 2 tablespoonfuls sugar; 2 tablespoonfuls butter; 1 teaspoonful salt; ¼ to ½ cake compressed yeast or 2 to 4 tablespoonfuls potato yeast; 3 to 4 cupfuls sifted flour. Add the sugar, salt and butter to the scalded milk. When lukewarm, add the compressed yeast, which has been soaked in ¼ cupful of lukewarm water or the potato yeast. Add flour until no more can be worked in with a spoon. Cover tightly and let rise until three times its bulk. Turn on a floured board, kneed lightly and roll ¾-inch thick. Cut with an oval or round floured cutter. Crease in the middle with a floured knife handle, rub one half inch melted butter and fold over. Place the rolls one inch apart in an oiled tin and let rise until light. Bake in a hot oven 20 minutes.

THE MONTH OF EASTER BRIDES

TO complete the loveliness of spring, some time ago, somewhere far distant there was the first Easter bride. So this year, in the beauty of mid-April, there will be many formal weddings and many charming brides. From a purely feminine standpoint, at least, the most interesting feature of a wedding is the bride's gown. "What did the bride wear?" as the age-old question after every marriage ceremony and as time passes by the bride of today will always grow a bit reminiscent about her wedding attire, eager to describe how lovely it was.

This year's bride may choose her gown from an unusually attractive array of beautiful fashions.

The fabric, too, is a very important consideration in a bridal gown, and this season offers a wonderful silken selection in rich brocades and plain weaves of heavy quality. Satin, silk crepe, moire, crepe satin, charmeuse, satin brocade, crepe de Chine, Georgette, lace over satin and chiffon are some of the most desirable silks for this special occasion, and an ivory tint which is more becoming to most complexions than white is much in vogue for wedding-dresses.

The veil is a matter near and dear to the heart of the bride. The cap style caught with orange-blossoms appeals to many; others prefer the veil held in place at the back of the head by a bandeau of some more novel arrangement. Thus is every bride just a bit different.

Anniversaries

First, cotton. Second, paper. Third, leather. Fifth, wooden. Tenth, tin. Fifteenth, glass. Twentieth, china. Twenty-fifth, silver. Thirtieth, pearl. Fortieth, ruby. Fiftieth, gold. Seventy-fifth, diamond.

Personal Column

Helpful Hints.—If you have tough liver, run it through your food chopper with some salt pork, beat up an egg, add a little flour, and stir in. Then dip out by spoonfuls and fry.

A long steel fork, such as you can buy for 5 or 10 cents is dandy to turn fried cakes and to take them out of kettle, as grease will all drip out between the tines.—M. H.

How One Reader Made Attractive Curtains.—Japanese table cloth and 12 napkins were given to me. As my table was round I could not use the cloth. The square Japanese table cloths and napkins can be used for window curtains. The table cloth could be cut in half and hemmed on raw edge, and one hung on each side of large window or double window, in a dining room. Use a strip of scrimm one-half yard wide or more, to go across top of window frame, hemming it so it will hang full. Have a casing at top to run on pole; hem lower edge, then sew one side of napkins to the scrim, leaving the rest of edges loose. This will form a balance clear across top. One must sew napkins on so that they will all hang right. Mine were white and printed in blue birds and baskets to match tablecloth. They are very cute made up in this way.—M.

Some Useful Hints by a Reader.—To run curtain rods through curtains when starched or otherwise, is hard on the curtains, but will be easier to accomplish and easier on the curtains if there is a sewing thimble or waxed paper wound on the end of the curtain rods. Then the edges will slide without catching on the delicate mesh. I use wax paper or silk over the ends of the square rods, and my thimble on the round rods.

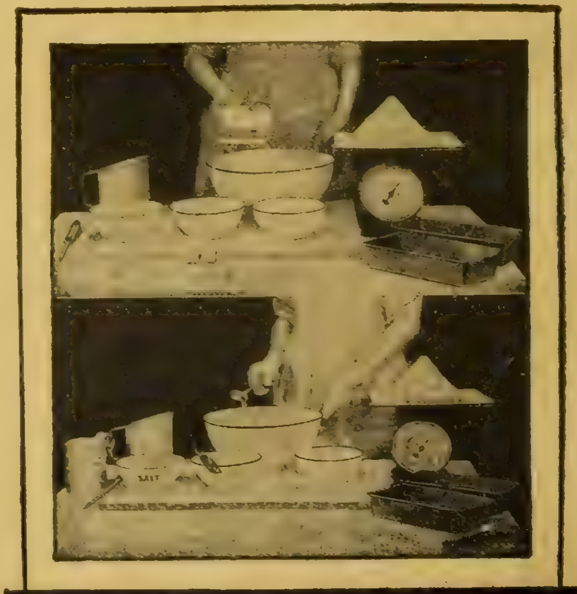
If making flour into gravy it tiresome to get smooth and takes too great a time, try my methods. Sift well a quart of flour with a heaping teaspoon of good baking powder, and store away in a dry glass jar, and use this prepared flour for gravy. It will be a smooth gravy, and all trace of powder will be gone.—Louise Lindley.

Menu for March 29th

Cream of Barley Soup
English Chicken Pie Stewed Tomatoes
Vegetable Gelatine Salad
Biscuits Cheese
Coffee

English Chicken Pie.—One chicken, one-half pound of veal fillet, four ounces bacon, three hard boiled eggs, one-fourth pound mushrooms, two tablespoons fat, pepper and salt to taste, chopped parsley, puff-pastry, stock, and one egg.

Cut fowl into small joints, season these with salt and pepper. Slice veal thinly, line bottom of fireproof dish with this, place on top a layer of chicken. Chop mushrooms finely, saute them in fat in small stew pan; sprinkle half of this over pieces of chicken, then layer of hard-boiled eggs, over that thin slices of bacon, and chopped parsley. Continue in this way until all ingredients are used up and the fireproof dish is full. Fill dish three parts full with stock. Put a strip of pastry round the edge of dish, wet this slightly with water, cover the pie with puff-pastry rolled out to the proper size and thickness, press down the paste on to the wet edge of paste trim round. Brush over pie with beaten egg, make a slit in center of the lid, put pie in moderate oven and bake one and one-half hours. Pour in a little stock before serving.



Careful measurement is a requirement of good bread making.

Biggest Bargain in America!

$50 Style

The Decorative Factor.—Decorations at a home christening should be simple. Any white or pink blossoms or buds, in spring or summer, there is a wide range of choice—and in Autumn the white or pink flowers of the season—Asters, Chrysanthemums, Cosmos, etc., are in keeping a bit of tapestry or an Altar-cloth should be used under the font, and flowers can be used to decorate the table on which the font stands. An improvised font should always be a bowl of some kind.

Sometimes it is impossible for the mother to go to church, and home christenings are very informal and can be made lovely home affairs.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

112.—Lovely plush, percale and gingham quilt pieces for anything useful.—Mrs. Geo. Morgan, Vicksburg, R3, Michigan.

RECIPES

Inexpensive Cake.—One cup of sugar, one-half cup cocoa. Then add one-fourth cup of butter in one-half cup hot water, and stir, add three fourths teaspoon of soda in one-fourth cup sour milk, one cup flour, add last one egg, the white to be beaten very stiff. Flavor with vanilla, and a pinch of salt. Bake in moderate oven.

I always make white frosting, most always White Mountain.

One cup sugar, five tablespoons of water or milk, and boil until it forms a ball in cold water, and have the white of one egg beaten very stiff. Set dish of syrup in basin of cold water and beat until it starts to sugar around edge of dish. Then beat white of egg in and flavor with vanilla.

Molasses Cookies.—One cup of brown sugar, one cup of molasses, one cup of shortening, two or three eggs, four tablespoons of vinegar, one teaspoon Ginger, three teaspoons of soda, flour to roll out. I only use three eggs when I double the recipe.—Mrs. O. M. R., Sparta, Mich.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Awake thou that sleepest and arise from the dead, and Christ shall shine upon thee.—Eph. 5:14.

Imagine what this awakening means; to learn that all has been but a dream; all of one's mistakes, sins, illnesses, misfortunes, all the woe of the whole world a hideous nightmare, unreal and to be forgotten! Picture the reality: oneself at rest in a kingdom of love, wholly under the care of the Creator; perfect health, Peace and Happiness one's own; the light of truth (Christ) always shining, always a glorious now. This is the Gospel of Good Tidings which Jesus Christ brought to earth, and which he commanded to be preached throughout the world, and is the message which you and I must deliver to those about us in one peculiar way—the Truth which must be expressed and proved in our daily lives, that the children of men (Rom. 9:8) shall know themselves as the children of God, without blot or blemish.

The cuts on bread making appearing on the opposite page are used through the courtesy of Dairymen's League News.

HOUSEHOLD HELPS

To prevent plaster from cracking when puting a tack or nail into the wall, first stick the point of the tack in soap.

When cut-glass jugs and vases become cloudy and ordinary washing does not remove the film, fill the glass piece with wet potato peelings, and let stand twenty-four hours or longer. When washed it will sparkle like new.

If you wash your phonograph records with soap and water and rinse well with clear water, then dry well they will sound clearer.

Thrust rusty knives through onions and let stand for a day. Remove, polish with sand-soap, and wash.

When cups have lost their handles or china is broken, try mending with collodian. You will find that the more it comes in contact with water the firmer it will become.

Instead of wearing gloves when sweeping, glue a six-inch strip of velvet, felt or any other soft material around the grip of your broom handle, and you will not have blistered hands again.

Do You Carry
Citizens' Mutual
Protective Insurance?

If you are the driver or owner of a motor car or truck can you really feel SAFE and SECURE without automobile insurance?

Suppose TOMORROW you should be held liable for damage to another vehicle, a pedestrian, or the occupant of your own or another car? The steady increase in production of automobiles means a greater risk every day you drive. Even though you were innocent, circumstances might point to YOU as the GUILTY one. What WOULD you DO? What COULD you DO except "Face the Music."

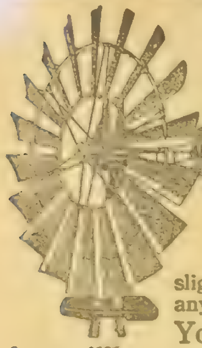
"Don't Wait Until After Your Accident—See Us Before It Is Too Late—"

The WINDMILL with a RECORD



The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

HEARING RESTORED OFTEN IN 24 HOURS

Amazing Results Secured In One Day By Use of Virex Formerly Known As Rattle Snake Oil.

Deafness and Head Noises need not be dreaded any longer since the discovery of a widely known physician. Now it is possible for some of the most obstinate cases of deafness to be relieved in a day's time by the application of a prescription formerly known as Rattle Snake Oil. This treatment is meeting with wide success all over the country.

Mr. D. Dey, a Nebraska resident, 67 years old, says, "I have used the treatment for only two weeks and my hearing is restored perfectly. The relief was almost instantaneous and now the head noises have disappeared. My catarrh, a case of many years standing, is improving wonderfully."

Mr. Ben Jackson, who lives in Indiana says, "Before I used Virex I could hear nothing. After ten days I could hear my watch tick."

Angeline Johnson, a Mississippi resident had been stone deaf for eighteen years. She says, "Virex has stopped my head noises and I can hear a train whistle 3½ miles away."

Roy Fisher, Iowa man, says "I hadn't heard a watch tick for eleven years—now I can lay my watch on the table and hear it plainly."

Mr. W. A. Lumpkin, of Oklahoma, says, "After being deaf 38 years, I used your treatment only a few days and hear fairly well."

Mr. Anthony Chapman, of Michigan, says, "The terrible head noises have stopped entirely and my hearing is practically back to normal.

Deaf Baby Now Hears

Mrs. Ola Valentine, of Arkansas, says, "My little boy, now 5 years old, had been deaf since about four months of age. Now he hears very well and is learning to talk."

Mr. Mather Pelleys says, "My young son, deaf for years, has used Virex for only three days and he hears almost as well as ever before."

Such amazing reports come from all over this country and Canada. The prescription which is known as Virex, is easily used at home and seems to work like magic in its rapidity on people of all ages.

So confident are we that Virex will re- [illegible] duce this remarkable treatment to a mil- [illegible] $2.00 treatment for only $1.00 on ten days' free trial. If the results are not [illegible] address to the Dale Laboratories, 1017 Gateway Station, Kansas City, Mo., and the treatment will be mailed at once. Use it according to the simple directions. If at the end of 10 days your hearing is not relieved, your head noises gone entirely, just send it back and your money will be refunded without question. This offer is fully guaranteed, so write today and give this wonderful compound a trial. (ADV.)

The Children's Hour

DEAR girls and boys: You all read my letter in the last issue, didn't you?

Well, I know several did because I am receiving some of the nicest stories, poems and drawings. I am having a great time going through my mail; every letter, it seems, contains something of special interest. I always did love to go through my mail every day, because the letters were all so interesting but with all the stories, poems and drawings coming in it is particularly interesting now.

Some of the cousins are very much in favor of the "correspondence Scramble" idea, and many of them have already sent in letters to be forwarded to unknown friends. I have sent many of them out, and as soon as a few of them come in I mix them up and send them out. There seems to be some misunderstanding about the "Correspondence Scramble." Some believe that I intended they were to send in their letters at some definite time, to be named later, while others thought they were to send in their letters whenever they wished and I would send them out. The latter idea is correct. Send in your letters any time and I will see that some unknown friend receives it.—UNCLE NED.

OUR GIRLS AND BOYS

Hello Uncle Ned:—I suppose this letter will reach Mr. Waste Basket. I do not see very many letters from Brown City. Well I just got through reading the Children's Hour. Do you like to go sleigh riding? I do and I hate to see the snow go away, but it must some time. A snowy winter is my favorite season. I am thirteen years old the 30th of May. Have I a twin? I have brown hair. (Bobbed of course), weigh about 120 pounds. I am in the 8th grade at school and like all my subjects except two and they are civics and history. Did you like them when you went to school, Uncle Ned? Well I must ring off and hope Mr. Waste Basket will write me a letter. Ha! Ha! You will get lots more letters besides me. Your want-to-be-niece,—Laura Klaus, R. 6, Brown City, Mich.

—When I went to school the subject I did not like very well was arithmetic.

Dear Uncle Ned:—My last letter was not in the paper and so I thought I would try once again. I am thirteen years of age and in the seventh grade. I am five feet one inch tall and have dark brown hair, which will be bobbed before another year rolls around. Do you like bobbed hair, Uncle Ned? I mean have you anything against it? I have nice heavy, curly hair and would like some advice on whether to bob it or not. I am only thirteen and am not old enough to do my hair up and it spoils it to let it fly. Would you bob it if you were me? Well I think the answer to Beatrice Campbell's riddle is: The boys name was Andrew. Wasn't it, Bee? Well as my letter is getting long and I don't want to have Mr. Waste Basket get my letter I better hang up. From your would-be niece,—Thelma Crosby, Box 77, Edenville, Michigan.

—If your mother and father do not object I suggest you have your hair bobbed. I think girls of your age or a little older look very nice with bobbed hair. And it is much easier to comb.

Dear Uncle Ned:—This is the first time I have ever written to the M. F. B. though I read it every week and I think it is the most interesting paper we take. We live on a forty-acre farm and have one cow and about thirty chickens and I also have a pet rooster and he is just as tame as he can be though he is three years old. I had a pet rabbit but he died last fall. I have two sisters and one brother. I have lots of fun sliding down hill and I just love to. We have some nice hills to slide down. Did you ever skii or slide down hill? I went to a coasting party two weeks ago. One of our sleighs we call Pete. It is the best sleigh we have. I am eleven years old and have dark hair and eyes, am in the fifth grade and am four feet one inch tall. As my letter is getting long I must ring off. Please will some of the boys and girls write to me. Your niece, —Grace K. Gibes, Pellston, Michigan.

—You just bet I used to slide down hill, and what fun it was!

Dear Uncle Ned:—I suppose that you and my cousins might thing it funny to get a letter from a boy that lives in a city. About four years ago I used to take the M. B. F. and enjoyed it very much. So recently I visited my aunt who lives near Sandusky and I read this paper and the same old thrill came to me again as I read the Children's Hour. So I subscribed. I wrote a letter to one of my cousins and she answered it. She certainly writes good letters. Interesting at that. I don't know many riddles but if any of my cousins will write me a letter I promise an interesting one in return. I certainly enjoy your paper and I think it is worth the subscription price to read the Children's Hour. The school I go to is seven stories high and cost $7,000,000. I am in the tenth grade and am 15 years old. Be sure and write and I hope that this letter does not have a flight towards the waste basket.—Leo Buck, 2436 5th St., Detroit, Michigan.

—So you enjoy reading what the country cousins have to say: Well, I am glad to hear that and I know they will be interested in your letter.

Dear Uncle Ned:—May I join your merry circle too? We take the M. B. F. and we all like it fine. I am a reader of the Children's Hour and like it very well. I will describe myself. I am four feet and ten inches tall, weigh 90 pounds and have blonde hair, blue eyes and fair complexion. My birthday is December twenty-seventh and am thirteen years old. I think that B. Durfee's name is Beatrice. Am I right? As my letter is getting long I will close. Hoping some of the boys and girls will write to me. Your want-to-be-niece,—Miss Eva Baleom, Route 5, Hesperia, Mich.

Dear Uncle Ned:—I have been a busy reader of the M. B. F. for many months since my brother gets the paper and now I decided to join your merry curcle. I enjoy reading the letters from all the boys and girls from many different places and as I haven't seen any from Bruce Crossing I would like to see this letter in print. I have been attending a country school until this term. I am sixteen years old. I am five feet and five inches tall. My hair is dark brown, and I haven't had a notion to bob it as yet. My greatest delight is living on a farm. We have thirteen cows, eleven calves, forty-six chickens, ten hogs, and a horse. My pets are a cat and two dogs. I have two sisters older than I am, and six brothers, and only two of my brothers continue going to school. I would like to have some of the girls and boys write to me and I will surely answer all letters. Your niece.—Miss Minnie Syrria, Box 23, Bruce's Crossing, Michigan.

—Haven't bobbed your hair yet, eh? I suppose you will take a notion to get it cut one of these fine days and off to the barber you will run.

Dear Uncle Ned:—I have read the lovely letters that you receive from many children. May I enter in your happy circle? I live in Dearborn, Michigan, and walk three miles each day to go to school, I am in the first year high, and love it very much. Perhaps you would like very much to know what I look like. Well, I am five feet three inches tall, weigh one hundred and three pounds, have light brown hair and light complexion, with a pug nose, (but not too puggy), am 16 years old, was born the nineteenth of July, 1907, have a twin sister. I wonder if I have a twin brother. If I have I would like very much to hear from him. Sincerely yours,—Fletcher R. Cox, R4, Box 139, Dearborn, Michigan.

TWO POOR FISH

IT PAYS TO TEST

"DO you belong to a Cow Testing Association?", a banker in Ingham county asked a farmer recently who wanted a loan. Bankers are interested in methods employed by their customers. They want to know that money borrowed is used in a productive enterprise, that the interest will be paid promptly, and that the principal will be paid without too much delay. And, they want to know that the cows milked by their customers are paying a profit on the operation. The cow testing association is a means by which a man can check up on his cows and find out the ones that are paying out and the ones that are not. Almost as important is the point of feeding. It is almost impossible to feed properly without milk weights and feed weights on each individual cow. These weights are obtained by the tester. Another point is the increased interest a man will take with his cows if he is in an association with a group of his neighbors.

There are three cow testing associations operating in Ingham county at present. One is located around Lansing and extends up into Clinton county. It has just finished a successful year and has started another. The second association is around Leslie. It will finish the year in April. The third association is around Mason and it will finish the year in May.—J. G. Wells, Jr., Dairy Extension Specialist, M. A. C.

INBREEDING

If a man has a pure bred bull and he breeds a cow and she raises a heifer would it be all right to breed her back to her father and if so how many generations can one breed back in that way and be all right?—F. M., Coleman, Michigan.

—Only in very especial cases would it be desirable to inbreed as closely as you suggest. Inbreeding has often been liked to a two-edged sword, or one that would cut both ways, meaning that inbreeding would possibly effect very rapid deterioration in the animals were all of such superior excellence and strong breeding powers that their superior qualities were transmitted and intensified, and the animals had no weak qualities to be intensified.

If one had an especial sire, with no weaknesses, and one that did not transmit any weaknesses or deficiencies of conformation, it would be alright to mate him to one of his daughters, but I would not care to go further than this.

Inbreeding in the hands of a very few keen, intelligent, stock men has proven rather disasterous. Close inbreeding is not, therefore, to be advised generally.—Geo. M. Brown, Professor of Animal Husbandry, M. A. C.

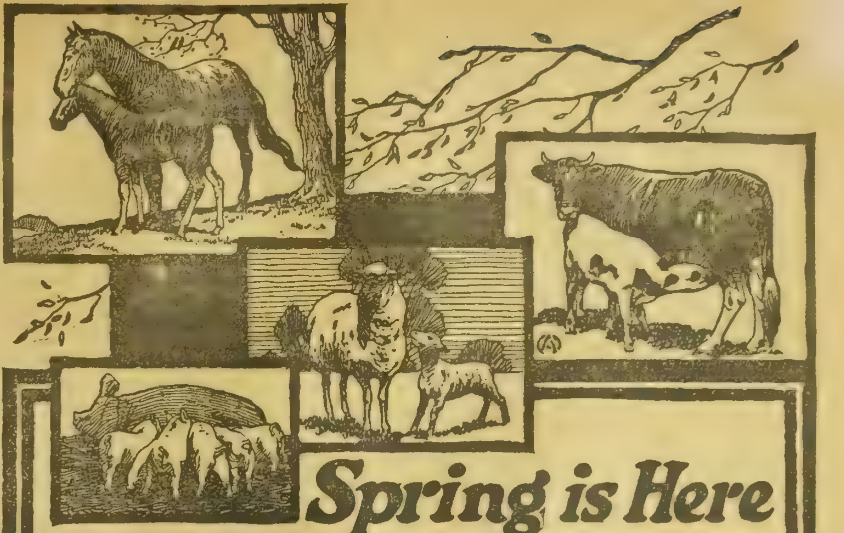
NEW BULLETIN DESCRIBES OPERATIONS ON HOGS

CASTRATION of hogs under various conditions is described in detail in a new Farmers' Bulletin, No. 1357, by S. S. Buckley, just issued by the United States Department of Agriculture. Besides giving directions for the ordinary operation, the bulletin gives the procedure for ridgelings, for spaying sows, and for operating on ruptured pigs. A number of illustrations help to make the methods easily understood.

In the case of males the operation of castration improves the quality of the meat and prevents the development of undesirable odors as well as doing away with the danger of indiscriminate breeding in the herd. Spaying is no longer practiced to any great extent as it has little influence on the quality of the meat. It is recommended that whenever possible the operation be done at an early age, preferably early enough so that the wounds will be healed before the pigs are weaned. It may be done at any season of the year, but on clear, cool days if the best results are to be obtained.

Copies of the bulletin may be obtained without cost, as long as the supply lasts, by addressing the Department of Agriculture, Washington, D. C.

I am a subscriber to The Business Farmer, which I consider a very good magazine, read every word of it.—L. J. A., Benzonia, Michigan.



Spring is Here

All out-of-doors is filled with the bleat of the lamb, the bawl of the calf, the grunt of the pig, and the whinny of the colt.

Youth asserting itself everywhere!

Keep their bodies healthy, and stomachs full.

You can then count on good growth—quick development—and begin to cash in on them before the summer-end.

Let

How to Check Cow Ailments at their Source

KOW-KARE
THE HOME COW DOCTOR

FREE BOOK

The dairy cow is an exceptionally hardy animal and subject to very few ailments except those which attack the digestive and genital organs. These particular organs, being the milk-making function, are often overworked and unable to throw off such diseases as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.

These ailments can be successfully treated —and just as surely prevented—by the use of Kow-Kare, because it is especially designed to tone up and strengthen the digestive and genital organs. A proper functioning of these important organs eliminates the cause of disease.

But the real profit of dairying today is made by keeping disease out while the milk-making organs are working at top-notch. Kow-Kare, in moderate quantity in the ration one week out of each month, induces a maximum milk flow and keeps the cow's disease-resistance up to par. In thousands of dairies Kow-Kare is now as much a part of the feeding routine as grains or silage. Its use costs, on the average, not more than a cent a day per cow.

Kow-Kare is sold by general stores, feed dealers and druggists—large size $1.25; medium size 65c. If dealer is not supplied, order direct. We pay postage. Ask for copy of free book, "The Home Cow Doctor."

Test Your Seed Corn Now

(Continued from Page 4)

Here are some of the things to look out for when deciding whether corn is fit for seed or not:

1st.—Good mature seed corn kernels have a bright glistening appearance when held up to the light.

2nd.—The hull or seed coat is drawn tight around the kernel and over the germ. It is not wrinkled.

3rd.—If you cut a kernel crosswise one-third the way from the tip, the hard starch should be of an amber color, hard and brittle in texture.

4th.—The germ should be creamy in color and the embrayo in the center yellowish green. The germ should be firm and cheesey in texture.

Poor seed corn will have kernels showing one or more of the following symptoms:

1st.—Dullness of color.

2nd.—Starchiness or lack of transparency.

3rd.—The tip portion of the kernel may have a dark brown appearance. Do not confuse the brown membrane, which surrounds the germ, with the germ itself.

4th.—The hull or seed coat may be blistered over the germ, on the edges or sides of the kernel. This indicates a frozen kernel and is not worth anything for seed, particularly if the germ has turned dark brown. Fine lines or cracks, running through the hard starch, also indicates freezing.

5th.—Do not use kernels showing cracked seed coats. Discard the whole ear if you find any such grains.

6th.—Mold around the kernels is indicated by a white cobweby mass of filaments sometimes showing black specks or spores. It very severe, tips of kernels next to cob will be very dark brown or black.

7th.—If some kernels have turned brown or pink and the hard starch has become chalky and mealy, discard the whole ear. It may be badly diseased. If the ear has some kernels which show a gray canker, which is surrounded with pink ring, discard the whole ear. It indicates fusarium. If the cob has a shredded appearance, where it broke from the shank, or if it has a pink appearance around the outside of the pith, discard the whole ear. It indicates fusarium.

8th.—When the kernel is cut crosswise, if the hard starch is chalky and mealy and the germ has turned a dark brown and is either watery or dry and brittle, discard the ear. It won't pay to test it.

9th.—Discard all rough, starchy ears on general principles. They are immature and will give a weakened, lower per cent germination to say the least.

10th.—Run an individual ear test on all your seed corn this year if you expect to get a good stand.

A full stand on ten acres is a lot more profitable than 60 per cent of a stand on twenty acres and it is impossible to have a uniform stand of corn, unless one plants seed of high germination. Planting too much seed of uncertain germination results in too many stalks in one hill and one or none in the next and this lowers the yield and quality of the crop produced.

If you have not the materials handy for a rag doll tester, then use a sawdust box or sand-box germinator, using clean sand.

The Rag Doll Tester

The majority of the farmers of Michigan have tested seed corn some time or other by the rag doll method, or have heard of it, and know how to go about it, but for the benefit of those who know nothing about the test we are giving directions:

Cut cloth (cambric, muslin, or flannel) into strips five feet long and ten inches in width. Bisect lengthwise with heavy pencil line. Beginning about fifteen inches from end draw eleven cross lines at right angles to center line, three inches apart. Number spaces from one to ten on upper side of line and eleven to twenty on lower side.

Select and number ears to be tested. Dampen cloth and lay out smoothly on table. Remove six kernels from different parts of ear number one and place germ side up in space number one, tips pointing in same direction. Proceed with each ear in like manner. When spaces are filled roll carefully so as not to displace kernels and tie roll around center with string, place each roll as finished in bucket, cover with lukewarm water for several hours. Drain, and cover top with damp cloth or newspaper. Place in warm room. After several days moisten with warm water. On seventh day test is usually ready to read.

To read test unroll cloth carefully on table and study kernels in each square. Discard all ears corresponding to squares showing dead kernels which produced weak or mouldy sprouts. Save for planting ears with kernals showing strong, clean, stem and root sprouts.

(Editor's Note: Further information can be found by reading Bulletin No. 289, "Corn Growing in Michigan." Write the Bulletin Office, Michigan Agricultural College, East Lansing, Michigan, for this bulletin.)

LENT AND SELF-DENIAL

(Continued from Page 11)

tain rich man who fared sumptously day by day but forgot his poor neighbor. Yes, we do find our Lord vigorously condemning every satisfaction of our lower natures which disengages us from Christian love and service. The Kingdom of God is our highest good and it, therefore, claims our exclusive devotion. All selfish hindrances must be renounced.

But we are called upon also, to recognize the vanity in much of our intellectual or higher self. Freedom of thought and a broad culture are much to be desired; yet here we see a selfish and anti-spiritual trend. We have a great itching to be great, and to many this is to detach oneself from manual work, cultivate intellectual attainments, and keep oneself before a constantly admiring world. To win a name we will pay any price. But what is in a name when daily the unholy demands of self are robbing life of strength and sapping it of character?

The ideal of Jesus Christ was quite different. He was narrow. That is, he set boundaries for himself. He shut himself up within safe limitations. He chose a narrow field of service. He lived, worked, and died in a little corner of the earth that was as insignificant to the cultured and great of the world as it was small. He could have been a world-wide figure, but he chose to spend his strength with saw and hammer in the home carpenter shop and in helping those of his own land.

He chose to do but one thing. He could have done many others. The spirit of the times wanted him to move out into the world-wide circles of usefulness; wanted him to broaden out; but he said he would rather be narrow. There were other roads to take but he would take the narrow and self-denying one to Jerusalem and the Cross, and, "If any man would come after me, let him deny himself, take up his cross, and follow me." Even so, every community has a thorofare called, "The Way of the Cross," upon which, those who walk in His steps, must tread.

He denied himself in intellectual belief. The world said to keep broad. Don't be so positive. This is narrowness and bigotry. Jesus Christ tolerated none of this. To him certain standards of duty and destiny were true. Others were false. He made the right his standard and put it into action. And, unyieldingly, he denied himself of the false.

Finally, Jesus' self-denial and the narrow way must be concreted in our lives. Until we undertake an unusual and year-round program of self-denial, the world will travail in thirst, hunger, lust, and war. And until this takes place the church will drag impotently along.

The narrow, confined stream is one of force and power. When unconfined, it broadens its sweep and becomes a putrid swamp. So with men. Ask Edison, Ford, Steinmetz, Conwell, or Woodrow Wilson. But hear the call of the Christ, "Follow me." Yes, it is the way of self-denial, but it will keep you out of the shadows and bring you home to God.

WHEN WRITING TO ADVERTISERS MENTION THE M. B. F.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 687, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used your money will be instantly refunded.

WALKER REMEDY CO., Dept. 687,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

FARMER PUTNAM'S PHILOSOPHY

THIS here eat more food propaganda is a good thing and I believe in pushin' it along, fur the benefit of humanity. Them experts sez we got to have more vittymines in the blood. They're all agreed on that, even the doctors is, at present. But when it comes to collecting them vittymines they is differences of opinion, some sayin' milk has got the most, some sayin' that meat is alive with 'em, some askin' us to take their word fut it that oranges is fifty per cent vittymines, others that cheese is rich with 'em, others sez tomatoes is made outen vittymines, others that green vegetables, like spinach, is the natural habitat of the true vittymine, others recommendin' cabbage, others carrots, because of their peculiar golden yellow color which is also good fut the complexion and kin be used inwardly to color the hair instead of henny, and so on and so forth, etc.

I been workin' on a bulletin of my own; that's how I come to have so much information on the life history and habits of the vittymine and my honest conclusions, after long and painful study of the subject is, that the people that recommends all them various kinds of vittymine infested foods is correct; that they do inhabit asparagus, tomato, spinach, carrot, cabbage, orange, apple (I bit into one onct in a apple, so I know) also, they are found in beef, pork, and mutton; also in milk which is fairly lousy with 'em accordin' to our food experts. My scientific conclusion which I'm givin' out herewith fur the benefit of humanity, is that the true vittymine is related to the California flea; that it hops about from plant to plant, from fruit to vegetable, from cow to goat, from pig to pullet, leavin' life givin' energy with all it comes in contact with.—Thos. Jefferson Putnam, Specialist in Rural Devilment.

SHORT COURSE IN FARM EXPLOSIVES AT M. A. C.

A ONE week's course in blasting and handling explosives will be an unusual type of school to be offered at Michigan Agricultural College, April 14 to 19 inclusive. The instruction will be under the supervision of L. F. Livingston, Extension Specialist in Agricultural Engineering and is a part of the program for the safe distribution and use of Sodatol, the new war salvage explosive, 1,500,000 of which will be placed in the state this year.

The instruction will consist of lectures and moving picture demonstrations of safe and economical methods of handling explosives to be given each forenoon. The afternoons will be confined to field stumps, rock blasting and ditching. Sufficient acreage of each of representative classes of work are available in the immediate neighborhood of the College to give the student a good working force, the number enrolling in these courses will be limited to forty men. For further information write to Short Course Department, Michigan Agricultural College, East Lansing, Michigan.

U. P. PRODUCES WORLD'S CHAMPION GUERNSEY

AGRICULTURAL development workers throughout the Upper Peninsula of Michigan are smiling complacently over the world's production record recently established by Rilma of Bay Cliffs 93480, a pure-bred Guernsey from the herd of the Bay Cliffs Stock Farm, at Big Bay, Marquette County. J. B. Deutsch is proprietor of the farm and owner of the herd.

Rilma of Bay Cliffs has hung up a record of 15,684.7 pounds of milk and 821.70 pounds of butter fat and her average test was 5.24 per cent. The record entitles her not only to first place in class D. D. but also places her fourth in class D. Rilma topped the former world's record in class DD by thirty-five pounds of butter fat.

Rilma's ancestry points to her grandsire Frank Rilma 21901 as the outstanding animal among her forefathers. Frank Rilma has over fifty registered daughters and over forty registered sons while the records of a number of his daughters appear in the Advanced Register.—L. D. Tucker.

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

Baby chicks dying

How to stop it in 48 hours

White diarrhea kills half of all the chicks hatched, yet this loss is easily prevented, easily stopped. For years, thousands of poultry raisers have stamped out the trouble almost entirely, by putting Avicol in the drinking water. Within 48 hours, the sick ones are lively as crickets. Mrs. Wm. May, Rego, Ind., says: "I was losing 15 chicks a day before I received the Avicol. I haven't lost one since."

Avicol costs nothing to try. Readers are urged to write to Burrell-Dugger Co., 311 Allen Ave., Indianapolis, Ind., sending 50c as a deposit for a package by mail prepaid (or $1 for large size holding nearly 3 times as much). If you prefer, send no money but deposit the money with the postman on delivery. If Avicol doesn't stop your chick losses immediately, if you're not fully satisfied, the money deposited will be promptly refunded by the manufacturers.

M. A. C. TO CONDUCT POULTRY CULLING SCHOOL

A ONE-WEEK poultry culling school is to be conducted at the Michigan Agricultural College from June 30 to July 5 by the poultry husbandry department, according to Prof. Ernest C. Foreman, head of the department.

It is planned, according to college officials, to develop several men qualified to cull flocks on a commercial basis. Certificates will be issued to students who satisfactorily complete the course as an assurance of their reliability. If the men are fast cullers they will be able to earn adequate pay at 2 or 3 cents a head.

A rapidly increasing demand for instruction in this specialized field is said to have developed, and with the launching in July of the certification service in which the M. A. C. poultry department and the Michigan Baby Chick Association will cooperate, the services of competent and reliable cullers are expected to be in considerable demand.

Plans of the M. A. C. poultry extension division also include 10-day culling campaigns, between July 1 and Oct. 1, in four counties and two days each in all other counties desiring help.

HENS MAY HAVE TUBERCULOSIS

I have Rhode Island Red hens which seem to be in healthiest kind of condition and occasionally there will be one that will start to droop around and refuse to leave their perch to eat and then later seem to be lame in one leg and keep that way for a long time before they die. Please inform me what it is ails them and what to do for them.—J. H. D., Dighton, Mich.

—The clinical symptoms described would indicate that Tuberculosis may be present in this particular flock. Associated with the leg weakness which you intimated is present, one usually finds that the hens become greatly emaciated and moreover they become dull and anaemic, and are inclined to mope around. Their appetite, however, remains good, and in addition the hens will be found to drink considerable quantities of water.

It may be advisable to forward one or more specimens to Doctor Stafseth of the Bacteriology Department, East Lansing, for post mortem examination in order to definitely determine the ailment or disease now prevalent in your flock.

Intestinal worms would also induce a form of leg weakness and may cause such a condition known as "going light." A post mortem examination in the case of Tuberculosis, would reveal nodules on the liver and in most cases, bunches on the long intestinal tract. These are creamy white in color. In the case of intestinal worms, the entire intestional tract, including the ceca would reveal various species of parasites including cecum worms, round worms, and possibly tape worms. In treating for intestinal worms, we would recommend using one teaspoonful of oil of American Worm Seed and one of turpentine to each twelve fowls. This can be given in a moistened mash after the birds have been starved for twelve hours, and should be followed with Epsom salts at the rate of one pound per hundred birds, in the drinking water. Lime should be liberally used on the roosts and dropping boards following this treatment.

If Tuberculosis is present, the poultry house should be well lighted and ventilated, dropping boards incorporated, and all factors eliminated that tend to create unsanitary conditions. The young stock should be raised on new ground away from the parent flock. The old stock should be tested by a veterinarian, and the reactives eliminated, or if the flock is but an ordinary one, it may be advisable to dispose of them after the heavy spring laying season, and thoroughly disinfect the house and yards.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

Teacher—Johnny, give me a sentence using the word "diadem."

Johnny—People who drink moonshine diadem sight quicker than those who don't.—Walworth Kewanee Craftsman.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARKET FLASHES

MARKET SUMMARY

Wheat easy after small decline. Corn unchanged. Oats and rye dull. Steady demand for beans and prices firm. Butter and eggs in demand. Potatoes firm. Good supply of poultry. Dressed calves in demand. Trade in cattle, hogs and sheep fairly active.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Promising Farm Outlook

THE general agricultural outlook for this year is promising for farmers who are out of debt and cultivate not too large tracts of land, while diversifying their products and exercising care in intensifying the yield of every acre. Where farm machinery is needed, it should be bought, even if time is required to make payment, and all manure piles should be spread carefully over the soil. It is pointed out by the Department of Agriculture in a bulletin just out that farmers are undertaking a normal production of products, while they are still confronted by difficulty of securing helpers, even at high wages and the general disparity between prices of farm and city products. Business interests are extremely prosperous, and the consumption of food is the largest ever known, yet the situation is not such as to warrant any expansion in production. Farmers are feeding plenty of cattle, while the hog industry is described by the agricultural department as going through a period of liquidation and discouragement; but this may be expected to right itself ultimately by curtailment of the number of sows bred. In this matter conservation is advised, and it should not be forgotten that in former such times heavy production and low prices brought about such reduction of breeding as to result in a hog shortage. The sheep industry is neglected by so many farmers that there is a shortage and unusually high prices, although Michigan makes a good record of flocks. Poultry production is expanding all the time, but no faster than the demand, and good prices are paid for poultry and eggs. As regards the dairy industry, the Department of Agriculture says: "The dairy industry has expanded to the point where gross domestic production, in terms of milk, slightly exceeds gross domestic consumption. Although 18,000,000 pounds net of butter and 64,000,000 pounds of cheese were imported during 1923, stocks of condensed milk and other products, more than equivalent to these imports, were piled up within the country. Judging from the number of cows on farms, there will be a further increase in domestic production in 1924. Foreign surplus production is likewise steadily increasing. This competition, coupled with the already heavy production in this country, and the possibility that consumer demand may not be definitely maintained at levels predicted upon great industrial prosperity, suggest the necessity for conservatism as to further expansion in dairy production."

Decrease in Wheat Area

Michigan wheat farmers are naturally deeply interested in the wheat acreage of the United States, as they have suffered extremely financially from the greatly excessive crop of wheat harvested last year, and judging from all that can be learned, the future of prices is going to be fixed mainly by the size of the crops of winter and spring wheat to be grown this year. With European conditions so abnormal and no prospect of any substantial early betterment, the American farmers must learn to depend mainly on the domestic consumption, and this, of course, means much smaller crops than those recently grown, for war time crops obviously imply sales at losses. The recent report issued by the Department of Agriculture is an extremely important one to every farmer interested in wheat, and unless the spring wheat farmers change their minds, there is a promise of a marked reduction in the acreage. Reports were received from 43,000 farmers as to what crops they plan to put in, and while the answers show that the spring wheat area promises to be 14 per cent less than in 1923, there is an indicated increase of 3.2 per cent in corn, 7 per cent in oats, 9 per cent in barley and 54 per cent in flax seed, the latter being due mainly to the unsatisfactory price for wheat in the northwest. In the corn belt states there is an indicated gain of 3.5 per cent in corn acreage. The total corn acreage promises to be the greatest on record, with the single exception of 1917, when 116,730,000 acres were harvested. The spring wheat acreage as indicated brings the total under that grain to the lowest in over twenty years, and, taken in connection with the 40,190,000 acres seeded to winter wheat, suggests of 56,347,000 acres, the smallest since 1917, when the harvested area was 45,089,000 acres. Still, the total is about 10,000,000 acres above the pre-war average. The spring wheat acreage is placed at 16,156,000 acres, comparing with 18,786,000 last year.

The Grain Markets

It has been found impossible to boost prices of wheat permanently under existing conditions abroad, and there has been a marked decline since the time, a number of weeks ago when wheat was selling in the Chicago market for future delivery around $1.13 a bushel. Our market is all the time above normal export standpoint, with exporting countries underselling us, and prices are on a domestic consumption basis. Not withstanding the large decline in prices, wheat is selling away higher than Canadian wheat, when exchange is figured, prices being much lower than in March last year, and it is startling to look back and recall that a little more than two years ago May wheat sold on the Chicago Board of Trade close to $1.40. European countries have been getting plenty of wheat from Argentina, and other exporting countries, and the wheat exports from the United States from the first of last July to the first of March were reduced to 120,000,000 bushels, or 48,000,000 bushels less than a year earlier, leaving a superabundance for home consumption. The visible wheat supply in this country was reported a short time ago as 61,656,000 bushels, comparing with 46,470,000 bushels a year ago. The most important recent event was the increase in the duty on imported wheat to 42 cents a bushel. In answer to inquiries as what to do with wheat on farms, it may be answered that numerous farmers are waiting for further information regarding spring wheat acreage. Of course, it is impossible to know what future prices will be. A short time ago May wheat sold at $1.04¼, comparing with $1.22 a year ago.

Corn prices have weakened recently on unincreased marketings, the visible supply in this country having risen to above 25,000,000 bushels, while exports from our shores continued much less than a year ago. Rye is still sold at far lower prices than last year, and exports have been surprisingly small. The rye visible in this country is up to 21,641,000 bushels, which compares with 17,518,000 bushels a year ago. Oats exports are not very large, although prices are low, but they look high if compared with two years ago when they sold down to 37 cents. About the same time May corn sold below 59 cents. It is reported that farmers of McLean county, Illinois, are planning to hold their surplus corn for $1 a bushel. Sales for May delivery were made in Chicago of corn at 77 cents, comparing with 74½ cents a year ago; oats at 47¾ cents, comparing with 45 cents last year; and rye at 67 cents, comparing with 84¼ cents a year ago.

Red Clover and Seed Corn

From many parts of the country reports are that there is going to be shortly a large demand for not only seed corn, but also for red clover seed. Farmers have been testing their seed corn, and in a great many instances the germinating power is found to be much too low for planting.

Larger Cattle Movement

Increased receipts of cattle in Chicago have lowered prices at times; following previous reduced supplies and higher values. Recent sales of the greater part of the beef steers were at $8 to $10.75, the choicer class of heavy steers bringing $11 to $12 and yearlings going at $10.50 to $11.50 No very desirable steers went below $9.25, and common lots sold for $6.85 to $8 and inferior lots at $4.50 and over. Fat cows and heifers sold at $6.50 to $9.90, but only a few sold as high as $8.50. A year ago the best steers were selling at $10.35. Canner and cutter cows go at $2.50 to $3.75, while calves bring $5 to $12.25. A fair demand exists for stockers and feeders at $4.50 to $8.75, the bulk selling at $6.25 to $7.50. The cattle industry is profitable so far as well finished kinds are concerned, but common lots are poor sellers. Thus far this year fewer cattle have gone to market than a year ago.

Good Demand for Hogs

Considering the huge marketings most of the time, hogs are selling better than might be expected, the local and eastern shipping demand being on a large scale, as low prices stimulate the consumption of fresh and cured pork products and lard. Hogs in the Chicago market sell largely with a range of 50 cents, with prime heavy butchers going the highest and the best light bacon hogs nearly as high. Recent receipts of hogs have averaged 230 pounds, being nine pounds less than a year ago. Combined receipts in twenty markets for the year to late date aggregate 11,400,000 hogs, comparing with 10,326,000 a year ago and 7,983,000 two years ago. Hogs are higher in Chicago, with sales recently at $6.50 to $7.65, comparing with $7.10 to $8.40 a year ago and $6.30 to $6.90 nine years ago.

High Prices for Lambs

Despite reactions now and then, prices are extremely high in the Chicago market, where wooled lambs have brought from $15.75 to $16.75, with culls selling at $13 and over and shearing and feeding lambs at $14.25 to $16. A year ago prime lambs sold at $15.50 and eight years ago at $11.90. Yearlings have been selling at $12.75 to $15, wethers at $10.25 to $13.25, ewes at $5 to $11 and bucks at $6.75 to $8.25. Shorn lots sell $1.50 to $2 lower than unshorn lambs and are preferred to wooled. These are great times for the sheep industry.

BEANS

Bean prices at Detroit declined during the fortnight ending Saturday, March 22nd, but advances took place bringing prices back to about what they were two weeks ago. The market is firm at Detroit. The eastern markets report an unsettled market with supplies good. Many close students of the bean market are of the opinion that we will not see higher prices the remainder of the season. Many eastern dealers are putting pea beans up in cartons and disposing of them readily with a good profit for their trouble. With the price per pound two or three cents higher the stock in packages finds a better market than bulk beans of the same quality.

POTATOES

A firm tone prevails in the market for old potatoes at Detroit. Eastern points are not proving a very good market for old potatoes, and trade is dull with irrigular prices. Government estimates on the intended acreage for this year show a decrease of 2 per cent under a year ago for the entire U. S. Michigan's acreage is expected to be from 8 to 10 per cent under that of last year.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of March 30

TEMPERATURES at beginning of this week in Michigan will be above the seasonal normal due to the storm center that is expected to be over the state at this time. More or less general rains may be expected at this time. Snow is probable in some counties as the temperature falls 10 degrees or more below freezing about Monday or Tuesday. Winds will be stronger than the average during early part of this week.

The balance of the week from about Tuesday will be generally fair with the probable exception of about Friday when some threatening weather is expected. The days will be warm and sunshiny while the night will be cool to cold.

Week of April 6

Little or no storminess of any severe character is expected in Michigan this week. Most of the period will be sunshiny days and star light nights except for the period around Thursday and Friday. On these last named days moderate showers and wind storms are to be expected.

April Wet and Cold

The month of April will prove backward to most farmers of the state with temperatures below the usual standard and rainfall more than the seasonal amount.

STATE GASOLINE TAX IS AN INVISIBLE TOLL GATE

(Continued from Page 3)

But no matter how attractive a proposition, such as the gas tax, may appear in theory and principle, it is only the part of common sense to see if that system has ever proved successful in practice. We naturally wonder about the matter of collections, are they complete and cheap or incomplete and expensive? Senator William M. Connelly of Spring Lake, champion of the gas tax in the recent session of the Legislature has made a particular study of this phase of the subject. As a result of this research he writes:

"A tax on gasoline is easily and cheaply collected. It has been stated by the opposition that the collection of a gasoline tax would create an army of soft job holders in the employ of the state and could only be collected at an enormous cost. This is the old game of the obstructionist, to base a poisonous argument on a dishonest hypothesis. The tax on gasoline would be remitted under sworn statements by the distributors, who would collect the tax from the retailers. The Secretary of State will handle the collections with probably two additional employees. The State of Indiana is collecting its gas tax at a cost of $7,000 per year. Is Michigan less competent or efficient than her neighbor? No." Senator Connelly goes on to give the figures for a long list of states, showing what each raises and the cost of collection in each case.

By doubling the length of this article it would be possible to give in full a list of 21 reasons for a gas tax which Senator Connelly has compiled, but lack of space prevents that. Let us merely hint at a few of them:—a workable rebate provision has been written into the proposed bill to exempt gasoline used other than in motor vehicles. The revenue would take care of the interest and sinking fund of our $50,000,000 highway bonds and leave a balance sufficient for trunk line maintenance and amortization of the large sum of reward money due the counties. The tax on gasoline is a comparatively painless method of procuring highway finances. It is spread over the year on an easy installment plan, it does not hit like a tax payable the first of the year when the coal bill, Christmas presents, general property taxes, etc., have reduced the payer to the brink of bankruptcy.

Thirty-six different states have a gas tax and declare it is a success, so why not give it a try here in Michigan?

Hank says to his wife the other night, "I sure miss that cuspidor."

"You always did miss it," says Mrs. Beasley, "that's why I threw it on the trash pile."

Old Leaky ROOFS Made Like New

MAKES OLD SHINGLE ROOFS WATERTIGHT AND AS GOOD AS NEW

WITH Saveall LIQUID ASBESTOS ROOFING

STOPS RUST AND LEAKS IN SHEET METAL ROOFING WITH ONE COATING

It makes no difference what kind of roofs you have— SAVEALL ROOFING, will stop the leaks—stop the damages—stop the repair bills and save you the cost of buying a new roof.

We will show you how to SAVE and RENEW every one of your old, worn-out, leaky roofs with SAVEALL Liquid Asbestos Roofing, for just about one-fifth the cost of a new roof—and we will do it—prove it 4 months before you pay.

SAVEALL ROOFING comes in liquid form ready to spread. It is composed of genuine rock fibre asbestos combined with gilsonites, minerals and pure asphaltum gums, made under our own special process. A roofing brush is all you need to apply it and when spread on your roof it penetrates and covers every crack, crevice, joint or seam, nail hole or rust spot and makes your old roof just as good as new.

RENEWS AND WATERPROOFS PAPER, GRAVEL OR COMPOSITION ROOFS

4 Months Trial Before You Pay

FREE With every order sent in from this advertisement, we will also include **Absolutely FREE** a Roofer's Brush for applying **Saveall** Roofing and a 25 lb. drum of our Plastikite Patching Cement for patching leaks around chimneys, flashings, gutters, cornices, etc. Send coupon at once and get this FREE Roofer's Brush and Patching Cement.

One gallon of SAVEALL covers an average of about 70 square feet of roof surface.

You take no risk when you put SAVEALL on your old roofs. We will ship you all the SAVEALL you need without a penny of pay in advance. You put it on and then after four months' trial you pay only if pleased. If not satisfied—you say so—we will cancel all charges and you won't owe us a cent.

GUARANTEED 10 YEARS

SAVEALL Roofing has been sold on this liberal "4 Months Before You Pay Plan" for years. It gives you a new roof surface which is not affected by heat or cold, does not rot, rust or decay and is guaranteed for 10 years. SAVEALL is furnished in Black only and is shipped in Steel Barrels or Steel Half Barrels. One gallon will cover about 70 square feet of roof surface. Never sold by Jobbers, Retailers or Salesmen. You buy it direct from the manufacturers —use it four months before you pay, and get our lowest factory prices.

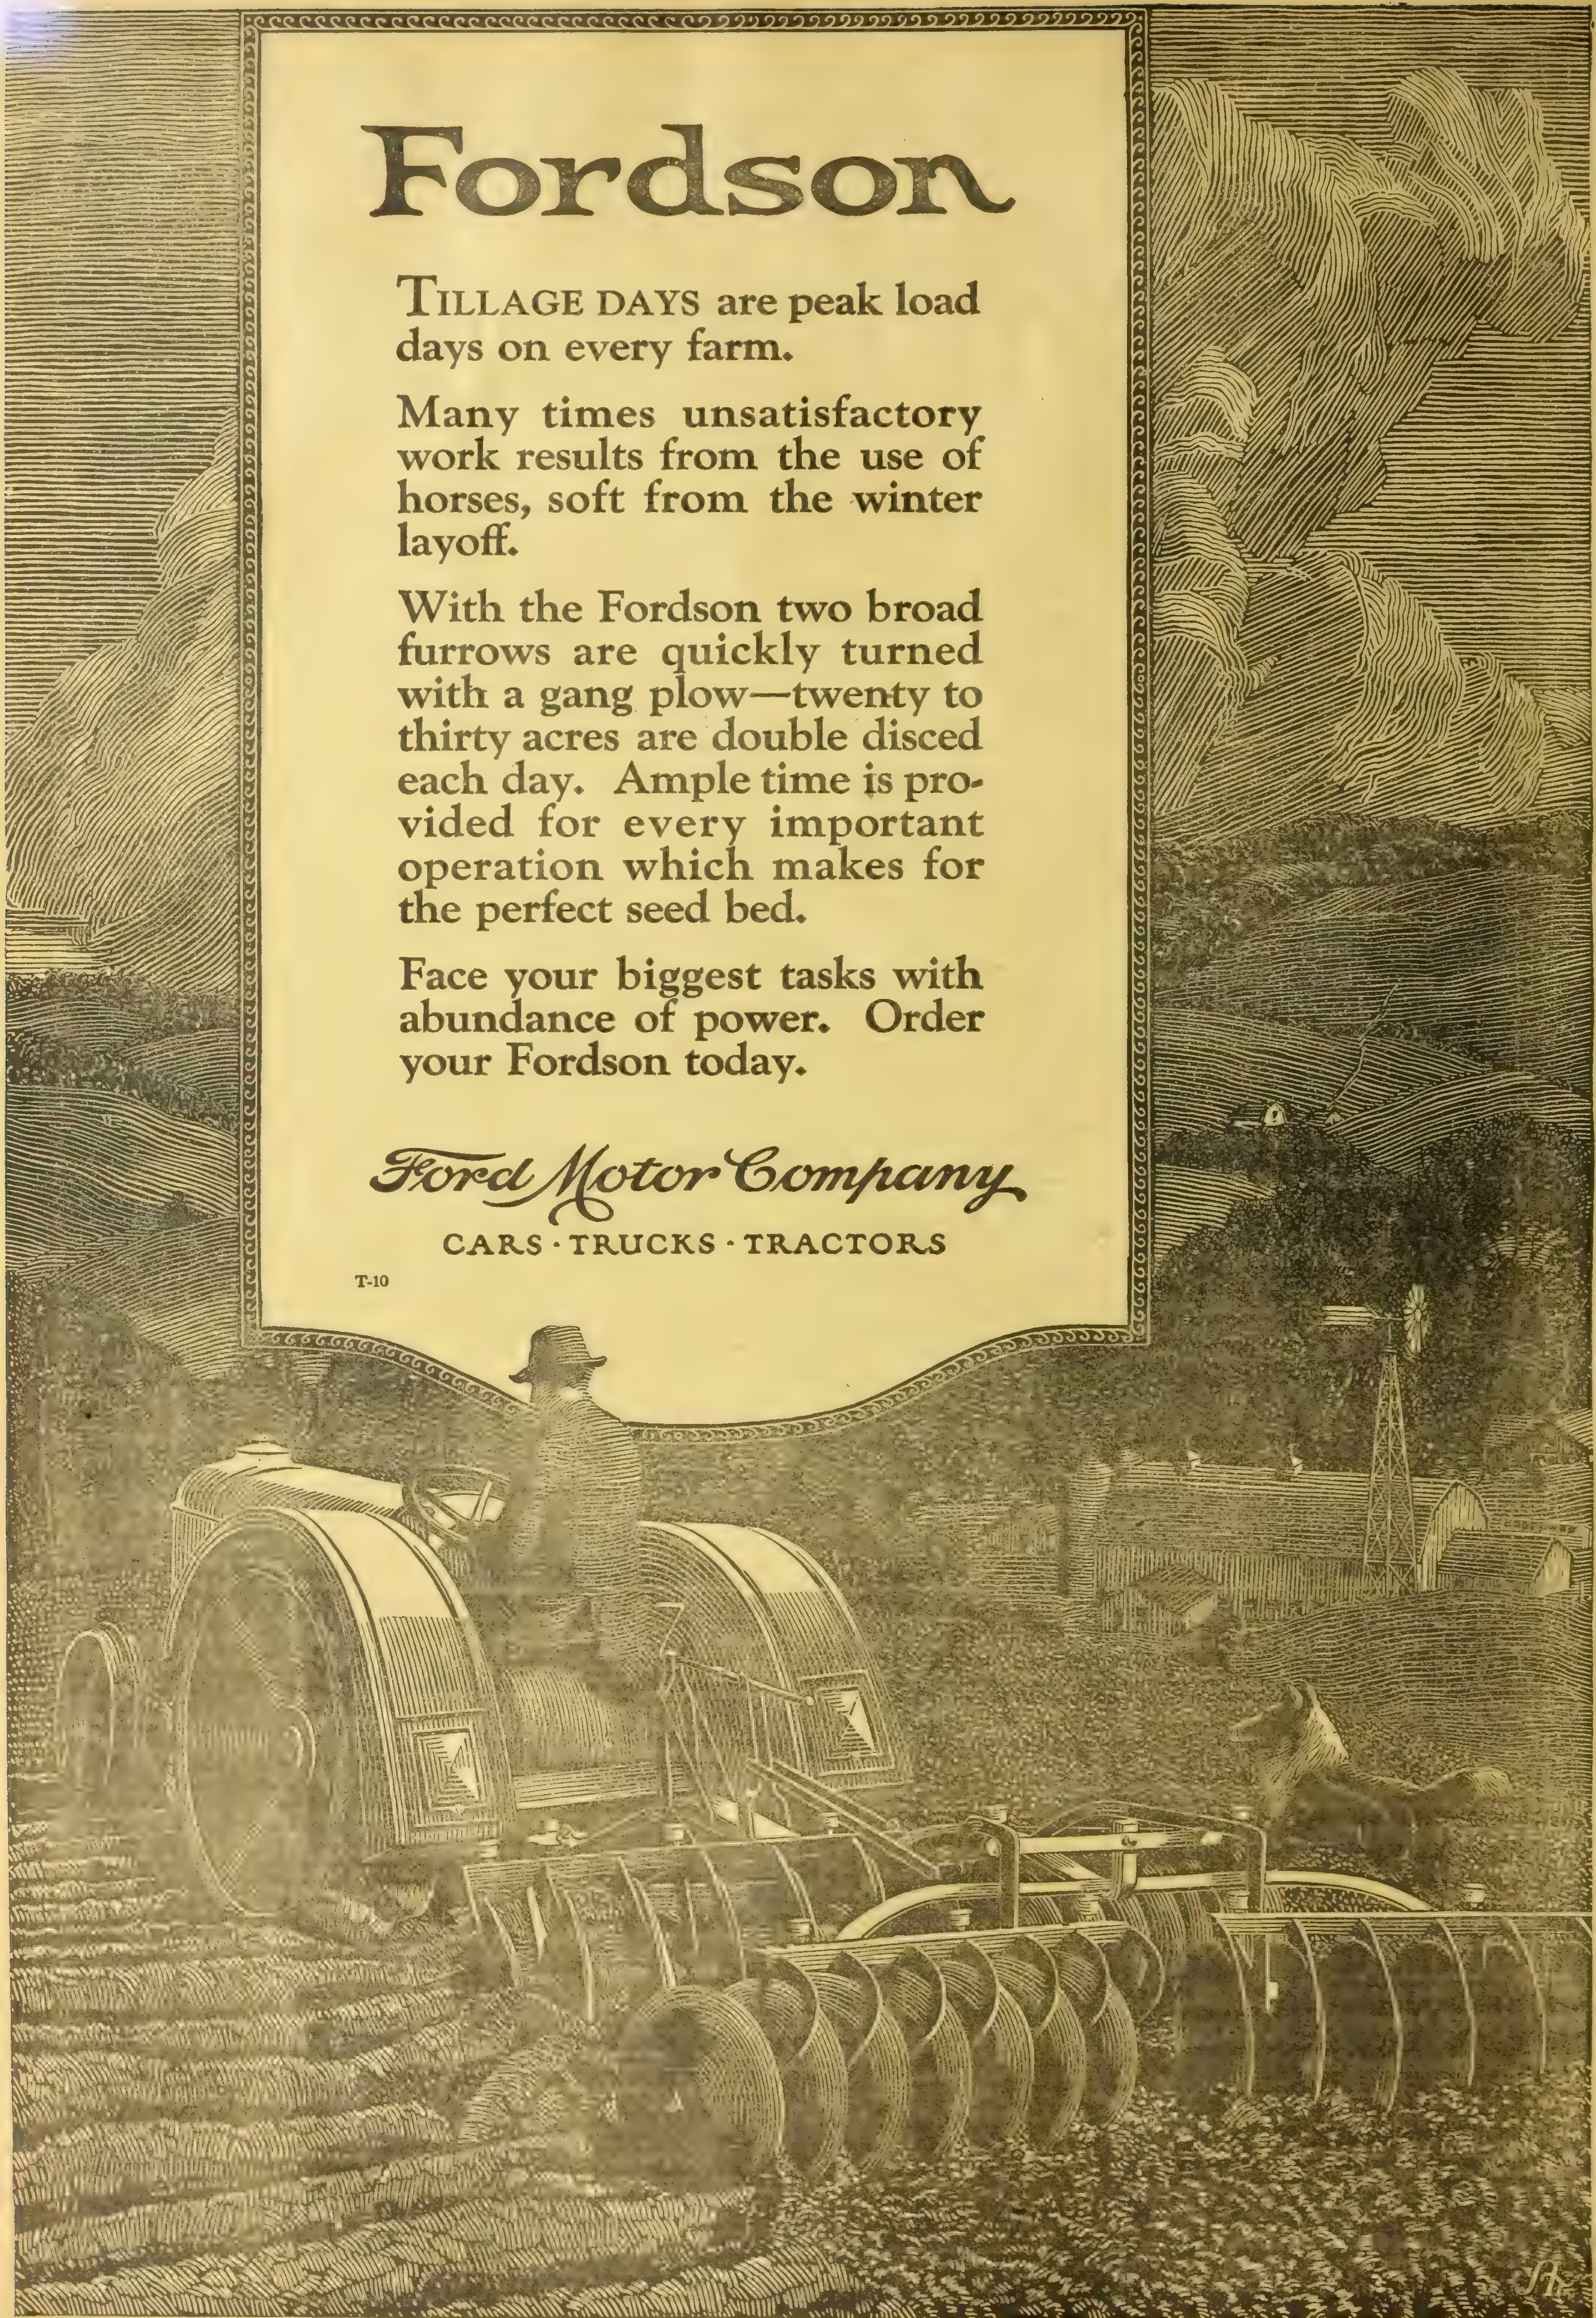
BUSINESS FARMER

An Independent
Farm Magazine Owned and
Edited in Michigan

VOL. XI, No. 17 SATURDAY, APRIL 12, 1924 TERMS: TWO YEARS $1
60c PER YEAR—5 YRS. $2

THE YOUNG LADY ON THE FARM PAINTS, TOO!



Fordson

TILLAGE DAYS are peak load days on every farm.

Many times unsatisfactory work results from the use of horses, soft from the winter layoff.

With the Fordson two broad furrows are quickly turned with a gang plow—twenty to thirty acres are double disced each day. Ample time is provided for every important operation which makes for the perfect seed bed.

Face your biggest tasks with abundance of power. Order your Fordson today.

What Funds Are Spent Must First Be Raised

General Property Tax for State Purposes Is Not Only or Even Principal Source of State Revenue

By STANLEY M. POWELL

(Lansing Correspondent of The Business Farmer.)

> IN your article, "The Time is Ripe for Tax Reform in Michigan," on page 3 of the March 1st issue, you say; only about 11 per cent of the taxes are levied for state purposes. I am asking for information. Does that 11 per cent pay the cost of state government? We are told that the cost of state government has more than doubled since 1909. Do we not pay an indirect tax? Don't we pay a corporation tax, which goes into the general fund of the state, when we buy the manufactured product of these corporations? And in other ways don't we pay an indirect state tax?—David Brake, Newaygo County.

I SAT in a farmers' organization meeting a few days ago and heard a certain program of action carefully explained and its many merits lauded by various people. Then one rural sage arose and said, "I am glad to hear that you are all favorable to the plan, but let us have a little criticism. Let us not merely be 'yes men.' When everybody agrees things look weak and sick. An organization can only grow strong by overcoming opposition and by receiving vigorous criticism."

And so it is with no little pleasure that we receive the accompanying letter from Mr. David H. Brake of Fremont asking some searching questions about the amount of revenue raised to run the state government of Michigan and who bears the burden directly and indirectly. It is flattering to receive this notice from Mr. Brake, for although he does not say so in his letter, he is none other than the Honorable David H. Brake, representative in the State Legislature from Newaygo county. We are convinced that Rep. Brake asks these questions in the spirit of fairness and friendliness for he is himself a staunch friend of tax reform in Michigan. He voted for the Byrum Income tax bill in the 1923 Legislature and even went so far as to vote to pass the Warner gas tax bill over the Governor's veto.

Taxation is Live Issue

The comments and compliments which we are receiving on this series of taxation articles is most encouraging and prompts us to go still deeper into the subject. It shows that Michigan farmers are awake as never before to the importance of this great subject of taxation and to the absolute necessity of prompt measures to bring relief. Such interest is not surprising. Just as in Detroit traffic there are just two classes of people, the quick and the dead, so in rural Michigan today we must be alert on these great public questions or we shall soon find ourselves sold off from our farms and homesteads through the operation of the general property tax which is fast becoming confiscatory.

Pardon this degression. From here on I shall stick to my subject and attempt to answer briefly, fully and convincingly the very pertinent and timely questions asked by Mr. Brake. I shall seek to avoid endering any tirade or wordy discussion as to the evils of high taxation, great as they certainly are, nor on the sad waste of public money, frequent as that is; nor on the growth of the bureaucratic class which will finally, it seems, equal the taxpayers in number.

Seen and Unseen Taxes

Yes, Mr. Brake, I did say and it is true that out of every dollar of general property tax which an individual pays, only about eleven cents goes to the state government and the remainder is spent by the various local units up to and including the counties. But you are also quite right, Mr. Brake, in your surmise that the general property tax for state purposes is not the only or even the principal source of state revenue. It is true beyond a doubt that we do pay an indirect tax and that the corporation tax, for instance, is no doubt passed on to the ultimate consumer.

The facts are that in Michigan the general property tax is only one of the many "taxes" which have been devised to raise an ever increasing amount of revenue. However, it should be noted in passing that in the local government units, where the big proportion of tax money is spent, the general property tax is still the principal source of revenue.

Money Spent Must Be Raised

In figuring the total tax load of maintaining our state government we must therefore add together all of the revenue raised from all the various sources, or perhaps a better way would be to take the total of all our state expenditures, for it is apparent that whatever is spent must first be raised or else it must be borrowed to be repaid latter. And so we may well approach this problem with the understanding that if Michigan spends a dollar she must have a dollar in revenue to meet that expenditure and also if Michigan has that dollar in revenue, we the people of Michigan must contribute our share toward the raising of that revenue.

We must also recognize that there is always a tendency that the tax will be "passed on" to the ultimate consumer. Of course the unorganized farmer can hardly hope to pass on his general property tax, for as a rule he sells on a buyers' market and has no voice or control in determining the price to be paid for his products.

Likewise it is extremely difficult to pass on a personal income tax such as is now being proposed in Michigan. This levy is made after the year's business is over and the profits determined and it is hard to see how the burden can be dodged or shifted.

Of course the gas tax would be passed on to the ultimate consumer but in that case that is the way it should be, for then the person who derives the benefits from improved highways will pay in proportion to the benefit derived, which is certainly no more than right.

Four Sources of Revenue

For the purpose of this discussion we may note that exclusive of bond issues, there are in Michigan today four principal sources of revenue, as follows:

The general property tax.

The specific taxes levied against the railroads and other utilities.

The corporation tax.

The various automobile taxes.

The first of these, the general property tax, has been kept down surprising and this fact has been used by the administration in an effort to bolster up claims of economy and efficiency in state government. For the year ending June 30, 1924, this item amounted to an even $16,000,000, which was less than that for any of the preceding three years. This fact is widely advertised. Little is said about the growth of other forms of taxation.

For instance, let us examine a few figures relative to increase of the specific taxes upon railroads, express companies, telegraph and telephone companies, etc. We may be sure that the utilities which pay this tax will demand it back from us, the people, in increased tolls and freight and passenger rates. For the year ending June 30, 1920, this tax amounted to $9,457,349.50. Three years later it had increased to $11,870,079.16.

Corporations Pass It On

The corporation tax, the third source of revenue, is one of the newer forms of raising state revenue. This was determined upon by Governor Groesbeck when he first came into office in 1921. It was supposed to be an emergency tax and it was stated that if the corporations would submit to this tax for two years the law would be repealed. But such was not the case. The 1923 Legislature amended the law so that it will probably raise more revenue than in the past. While during the year ending June 30, 1921, there was no corporation tax, during the next two years a total of more than $11,000,000 was raised by this means. During the first four months of the present fiscal year $5,385,838.57 was received from this source.

There appears to be little doubt but what in the long run this corporation can be quite successfully passed on. Previous to the 1923 legislature, George Lord, then a member of the house of representatives and by reason his acknowledged experience and ability along taxation lines chairman of the special legislative committee on taxation inquiry, asked Rep. Franklin Moore at one of the hearings of this committee what he thought about the rates for the state corporations tax, and Mr. Moore said: "I am not concerned about that. Every corporation, including the one I am interested in, always passes on to the consumer every class and kind of taxation heaped upon it. The terms of your corporation tax do not interest me at all."

Autos Are Revenue Getters

The fourth general class of state property receipts is an interesting one to study. In it we find a growing multiplicity of taxes upon the automobile. Almost every year has found some new tax of this nature and the rapidly increasing number of automobiles has made this one of the principal sources of state revenue. There is the automobile license fee, the driver's license, the certificate of title, the chauffeur's license, the transfer fee, etc. From these sources the revenue in the past two years has been as follows: Year ending June 30, 1922, $7,817,205.97; year ending June 30, 1923, $10,389,440.09.

We note that the automobile is paying a considerable sum toward state expense, but we cannot help but wonder whether or not the burden is as fairly distributed as it would be under a gas tax system. We fear not.

Michigan during recent years has found another important source of revenue and that is from the sale of bonds. During 1922 we sold $30,000,000 worth of soldier bonus bonds. A total of $50,000,000 of these road bonds have been authorized by the votors and about $38,000,000 of them have been issued to date.

Space, time nor patience does not permit a detailed statement of all the various minor sources of revenue. Suffice it to say that practically everything from hunters and barbers on down is licensed for fees that are more than nominal.

Total Receipts and Expenditures

To get a clear conception of this whole rather complicated situation, let us examine the total revenues of the state for the past few years in order to ascertain a view of the actual development of taxation conditions. Excluding from our calculations the revenue derived from the sale of soldier bonus bonds we find that recepits have been as follows: Year ending June 30, 1920, $48,926,554.30; year ending June 30, 1922, $73,072,192.49; year ending June 30, 1923, $88,499,301.15.

Let us also examine the matter of disbursements. Shorn of all the vagaries of bookkeeping and disreguarding as before the item of soldier bonus, we find the following to be the corrected totals for disbursements: Year ending June 30, 1920, $39,981,589.59; year ending June 30, 1922, $64,999,814.30; year ending June 30, 1923, $71,449,831.16.

Centralization and Efficiency

Such then is the situation in Michigan today. The people have demanded more and more things of the state government. A big bureaucratic system has developed. Under our present administration it has been centralized and supposedly made wonderfully efficient. We do not dispute the fact that it is indeed centralized. We are a little more in doubt as to the claim for efficiency.

Let us see how this centralized and so-called efficient state government works. Alleged "reform" comes high sometimes if we can believe the figures published in the "Michigan Tradesman" relative to the cost of running our prisons. The following comparative tables of the cost of the prisons in 1916 and 1923 are startling:

Ionia	$52,225	$ 807,700
Marquette	39,175	531,572
Jackson	Nothing	1,168,581
	$91,400	$2,507,853

Woodbridge N. Ferris was governor in 1916, followed by Albert E. Sleeper on January 1, 1917, and the good record of the prisons was continued during his administration. Otis Fuller was warden of the Michigan Reformatory at Ionia then and until the present state administration took hold.

The Tradesman continues: "There are two stock explanations of these figures by the governor and his defenders. In the first place they claim big building programs cost a lot of money and secondly that the population of the State prisons have all increased enormously. Now as a matter of fact, building programs are not the larger part of any of these increases in expenses. That can be verified by the records of the auditor general. In the second place it is a fair proposition to maintain that if 100 prisoners back in

Robust Beans Yield 25 to 30 Bushels Per Acre

In Experiments at M. A. C. Over Period of Four Years Robust Beans Produced One-third More Per Acre Than Other Michigan Variety

By FRANK A. SPRAGG
Associate Professor of Farm Crops, Michigan Agricultural College

This is a view of the bean varietal series of 1914 at the M. A. C. Two rows were planted to one variety and two rows to another variety, throughout the series. This is a view at harvest time and the puller has shoved the two rows of one variety into one, thus each puller-row represents a separate variety. The Robust was planted in each fifth plat throughout the series. The Robust plats have lost their leaves and are ready for harvest. The other varieties have their leaves. This is partly because they never drop all their leaves, largely because blight had been taking off their leaves all summer. Thus they are not ripe.

THE bean crop is very sensitive to its surroundings and yet resoonsive to proper conditions. A crop of beans can be made or destroyed quicker than almost any crop that I know. Because of these facts care must be taken to put them in the proper place in the rotation. They are not gross feeders. Alfalfa for example can be depended upon under most conditions to leave the soil richer than it found it. The same is true of clover in a less degree. Beans, however, although a legume, need to have not only a good supply of fixed nitrogen at hand but to have it in an immediately available form. To insure a good crop, beans should follow alfalfa or clover plowed not later than May 1, if possible. The month of May should be devoted to frequent dragging not only to precultivate the crop and kill weeds before the beans are planted, but to get the soil bacteria at work manufacturing available food, and getting the soil warm and in good tilth to give the bean crop a "send off." If this is done, the beans which should be planted about June 1 will get a good start and be able to outrun their troubles. Plant diseases like blight, for example, take time to develop. The growing of the common varieties of beans is a race for time between the bean crop and its diseases. If the diseases win the race and get the upper hand the crop is a failure, but if the conditions are such that the bean crop wins the race the crop is a success. Thus, more depends upon the farm and the farmer in the case of growing beans than in the production of oats or barley. Let us now turn our attention to varieties of beans.

Varieties of Beans

All that an improved bean can do is to produce more or better quality than the common sorts under the same expense. There are special problems in growing certain varieties that need to be known to get the best results. The Early Wonder and other navy beans of its class are very susceptible to bacterial blight and therefore need exceptionally good conditions for growth. The Early Wonder is an early variety and farmers have found that by planting it about the last week of June they still can have a long enough growing season to mature a crop before frost. Farmers have also found that these beans get a quicker start in late June than in early June, and by that means are able to make a fair growth before the blight develops. The blight will catch up with the Early but may only hinder it from giving a fair yield. Its quality may still be good. Blight usually takes more or less leaves from the Early Wonder all summer, compelling it to develop new leaves. The leaves are the factory that the plant has to produce starch. If the leaves are killed by disease, the plant must use up much starch in the production of new leaves. The plant may be working hard all summer and yet have a very poor crop, because it has been forced to devite so much energy in repair work. The Early Wonder may be likened to a weak harvester or other machine that is not able to withstand the conditions and must be continually repaired to continue its work. We make statements like this only by comparison. If we use the best machines that is available, that is all that can be done; but let us be sure.

Robust Good Yielder

On an average of four years at the Michigan Experiment Station the Improved Robust has yielded (1917-1920) an average a half more beans per acre than did the Early Wonder, under the same conditions. In other words the Early Wonder produced less than 16 bushels per acre while side by side with it for an average of four years the Improved Robust yielded 24 bushels per acre. It cost no more to plow or fit the land, nor to plant and tend the Robust than it did in the case of the Early Wonder. These low yields were due to the fact that the crop was poor in 1918 although the old line Robusts yielded 31.5 bushels to the acre at M. A. C. in 1920. In that year Improved Robust yielded 34.6 bushels per acre at M. A. C. Farmers get similar results.

We quote from the Bean and Pea Journal, "Wm. Myers, a farmer living near Carsonville, Michigan, grew 52 acres of beans during the season just passed. Forty acres were of the Robust variety from seed certified by the Michigan Crop Improvement Association, while the other twelve were of the common type. Early conditions seemed unfavorable to the later maturing Robust beans, but they made a rapid growth in late summer and threshed out seven bushels per acre more than did the commons. The quality and pick were equal, so the extra yield of 280 bushels at $4.50 per cwt. gives Mr. Meyers an added income of over $700.00 because of using Robust seed."

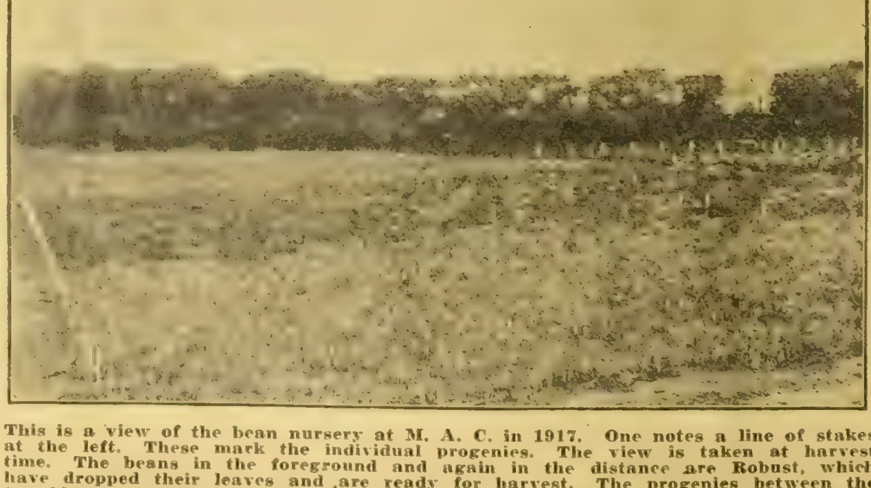
A farmer "near Bay Port who grew both Robusts and common beans reports much more uniform ripening of his Robust beans with an increased yield of five bushels per acre."

"An Ithaca grower got 25 bushels per acre on nine acres; one from McGregor 30.7 on 10 acres; one from Mildand 31.5 on seven acres, and one from Charlotte 33 bushels per acre on four acres." And Mr. Howard C. Rather, Secretary of the Michigan Crop Improvement Association states that on the average the 41 producers of pedigreed Robust obtained 21.6 bushels per acre. This is really a good showing when he observes that "Michigan's average bean yield the past two years has been 10.5 and 11.5 bushels per acre respectively."

Must Plant Earlier

These results cannot be obtained, however, unless the farmer knows and gives the Robusts a chance. They must be planted in good season. The first week of June is recommended and should be lived up to as a planting time for Robust beans. Some say that they can't, but they have been able to put in their oats and their corn before this, and we believe that they can plant the beans on time too. The principal trouble with these farmers is that they have been growing Early Wonder or some other bean of that type and experience has shown them that the Early Wonder becomes badly diseased when planted early. Then they try planting the Robust beans in the last week of June. The result is that the Robusts are caught by frost and they condemn the variety. The habit of the farmers in the bean districts is the principal obstacle in the way of the spread of Robust beans in those sections.

The Robust is a variety that the market has not been able to distinguish from other varieties of white navy beans. When beans get wet and swell in the field they are apt to dry with wrinkled coats, the coats now being too large for the beans. This is not a characteristic of any variety. They all do it, and careful observation of bean experts both at M. A. C. and over the state shows that the Robust do not wrinkle any worse than other varieties do. Some few elevator men evidently call all wrinkled beans "Robusts" and some have no doubt sold them as such. I quote from the Michigan Bean and Pea Journal: "A representative of an eastern concern picked what he called Robust beans out of a car of Michigan beans, the quality of which was objectionable to him. These beans were planted and they matured eight days earlier than known Robusts planted by their side the same day, and showed none of the plant characteristics of the Robust bean, the only place where the two varieties can be positively distinguished.



This is a view of the bean nursery at M. A. C. in 1917. One notes a line of stakes at the left. These mark the individual progenies. The view is taken at harvest time. The beans in the foreground and again in the distance are Robust, which have dropped their leaves and are ready for harvest. The progenies between the two blocks of Robust are also common navy beans. They are of the Early Wonder type, but because of the hot sun at blooming time they lost their flowers, had to set a second crop, and are not ripe as yet.

"Another elevator man who said positively that there was not a Robust bean in his community, claimed as much trouble from wrinkled beans as any dealer in the state."

A large elevator man, in central Michigan, says that he intends to discount "Robusts" a dollar next year. On being shown a lot of Robust beans grown at Eaton Rapids, that were not good enough to pass the inspection requirements of the Michigan Crop Improvement Association, he stated that that was one of the best lots of beans he had seen this year, not knowing that they were Robust beans. He can't tell Robust beans. We will be glad if elevator men would discount wrinkled and other injured beans in favor of those that have been taken care of, but we must object when they call them "Robusts."

The Robust variety comes from a healthy individual plant that was selected from among a lot of commercial beans containing mosiac in 1908 Investigation at the New York Experiment Station showed the Robust bean to be immunie to mosiac, and as a result I am told that almost all of the white pea beans now grown in the state of New York are of the Robust Variety.

Later Than Other Varieties

The Robust is a later bean than other varieties. It takes more time in developing a root system, but in the end develops a larger root system than ordinary varieties. The earlier varieties are first to bloom, while later the Robusts blooms profusely and has a very much larger setting of pods. The Robust cannot be said to resist drought any more than other varieties. In a test planted on sandy soil, the drought killed the beans in late summer. In such cases as this, other varieties have yielded more because they set their pods earlier and had more mature beans when the hot spell struck. However, under such condition the Robust beans could just about as well be planted two or three weeks earlier than is safe for other varieties, and produce a larger crop of beans because they too had had time to mature their crop of beans.

When the drought does not actually kill the crop, the Robust is able to set pods in hotter sun than can the common varieties. In 1916 the Robust was the only variety that had a good setting of pods at M. A. C. as other varieties dropped their flowers during a hot spell at blooming time. Most of them lost the second set of flowers and failed completely.

The leaves of the Robust are usually more wrinkled and drawn in at the edges than are those of other varieties which may be quite flat. The leaves of most varieties turn yellow and drop more or less all summer probably due to bacterial blight. The Robust being resistant to blight, holds its foliage and maintains it in a profuse development until a few days before harvest time, when the foliage turns yellow and drops off as a whole. The Robust actually matures the crop, and drops the leaves at maturity. Because of this characteristic, it will normally withstand frost that will kill the leaves without injuring the pods. The foliage then opens up, and the pods mature rapidly. A month before harvest the Robust is usually picked out as the greenest variety in a series. And yet if blight has so hindered the development of other varieties by dropping leaves, that they are not able to complete the work, the Robust may be ripe first. Also the Robust is the only variety that will drop all of its leaves at maturity. All other varieties will have some green leaves even when the pods are shattering the seed.

In growing a crop of beans, make sure that it is going to have an abundance of food and good healthy conditions. Otherwise you are apt to have a "stunted calf" on your hands that will never be worth raising. But, if you are going to grow beans why not have a strong robust variety? Among the navy beans there are two classes. One of these

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

A TRAVELING medicine show, selling "snake oil," was the cause of Pete Dexter's beginning of a life of graft. Pete has told how he happened to take up the career of living on easy money obtained at other people's expense, and how he went from the medicine show to working for himself.

A mail order deal in which he sold spoons in Florida, and then a job of canvassing in South Dakota gave him an idea of how easy some folks were to take in.

The canvassing graft got him into the tea and coffee business, and the premiums he offered sold the goods, but Pete never delivered the premiums, altho he left each section a little richer than when he started.

A winter in California gave him his first taste of the stock selling game. Dexter also found that the life of a de luxe faker also has its ups and downs and just when he thought he was getting away big, he came to work one morning to find the police there first. Dexter escaped, and about all he took along was experience. He hopped a freight train for Texas. He was getting to be a high-class faker, he admits, and this installment shows us some real inside stuff on a big land deal Dexter had a hand in.

(Continued from Mar. 29th Issue)

THE government had just given a lot of land away in Oklahoma and what was called Indian Territory. At that time everything was booming in the south. All the gang thought of at every town was to get land. Some of the boys were going over to the territory and marrying squaws so they could get some of the land they had, and I was almost on the verge of doing the same thing when a fellow one day told me I was a bright fellow and gave me a job. I was glad of it, as I hated to to think of hooking up with a savage.

The fellow I hired out to was about as clever a fellow as I had ever met. Tommy Conner they called him, and he had the head to put the stuff over. It seems that he had come to Texas for his health. He didn't have anything on me, as I had, too, but the climate had done him so much good that he had a wonderful plan worked out.

Tommy got a lot of the sage brush land lined up and the crew I was with worked hard to get a small stream of water headed onto it. After a couple of years we had about as pretty a spot as there was in the United States. It was only about 40 acres big, but it was sure some garden spot. Conner then goes to Kansas City and interests a lot of fellows with money in his game. They come down to the place and looks it over, and I was the fellow who showed them our place. Conner held a meeting, and they decided that here was a big chance to make a killing. Land about our place was selling pretty cheap and now and then a fellow was so glad to get rid of a section that he threw it in so that he wouldn't have to pay taxes on the sage bushes.

So I was commissioned to feel around and buy up the land. In order to keep up appearances, I opened a real estate office in town. Conner and his gang furnished me with the money I had and in a few months we owned land on each side of us. Meanwhile the beauty spot in our desert had been improved so that it had a hotel on it and a fence around it. The road from the station had been fixed up and it was lined with good looking plots which had gardens that were watered and kept up at considerable expense. That winter several meetings were held by our company and the boys from Kansas City and Chicago had some great times at the hotel. I was part of the company now as a reward for my work in the real estate office and we decided to keep my office going for future sales work.

In the latter part of the winter Conner announced that an advertising campaign was to start that spring to sell our land. Things were looking fine in our park and the land along the highway from the railroad sure looked as good as any place I have ever been. The irrigation system was working fine and the pipes were cleverly concealed. No one would have guessed that we hadn't had a rain for months.

The gang planned to invite all the editors of the farm papers to come down to look over our new section of the country. We named it the "Future Heart of the Agriculture of America" and we were going to run special trains down from the north, and every fellow who bought from us was to get his fare back. Things started fine. The first trainload of people who arrived were met by Conner at the station and welcomed like they were Columbus finding America. That boy had the line. I helped show the gang about and generally was handy with the fountain pen when checks for land were made out. Conner took the crowd out to our hotel and entertained them while they staid in Texas. He saw to it that they talked to no others than people connected with our company, and after a few days of talking those fellows decided that Texas as the place for them. Money was what we wanted, but Conner did take a few Iowa, Illinois, Indiana and Ohio farms as part payment.

The boys working for us in Kansas City and Chicago and other points sure kept a good crop of prospects coming to us, and the prices we got for that land were good. Lots of the bunch that came down thought Conner was charging too much for the land, and they would come to my office before they boarded the train for home. I would figure their case at once and confidentially show them maps of farms that could be had right in the same section as Conner's land and at a little cheaper price. Generally I got the stragglers, and Conner sure was generous with me in commissions. At the end of the year I had over $30,000 in the bank and that was a small part to what the rest of the gang cleaned up.

When the prospects moved in and began to find out what suckers they had been, we all beat it, and I sure had to keep under cover for a long time. If I hadn't changed my name and taken my money in my grip, I never would have staid clear for there was some row. But I sure learned how easy people like to give away their cash.

By this time I decided I was a promoter, so I frowned on the old lines and felt ashamed that I had mixed up in such little deals. So I began to look for big game.

Electric railways were than the popular craze. In St. Louis I met a fellow who had a plan where by an electric line was to be built to operate on an elevated track. Storms had been bothering lines built on the ground, and his scheme appealed to me as one that ought to sell, so after talking with the inventor, Mr. Henry Trainer, we formed a company. I furnished the money and he turned over the patent rights to me.

The first thing we did was to open an office in St. Louis, and as I had met a few fellows from St. Louis while working with Conner in Texas, I called on them and offered to let them in on my new company. Several of them were rather prominent in town and agreed to become directors in the new company, which we called the National Electric Service and Transport Company. I had a lot of certificates engraved and a young newspaper man whom I had met wrote up a description of the new type of railroad for our catalog. He had a friend who was an artist and for a few dollars he drew some sketches of the proposed railroad.

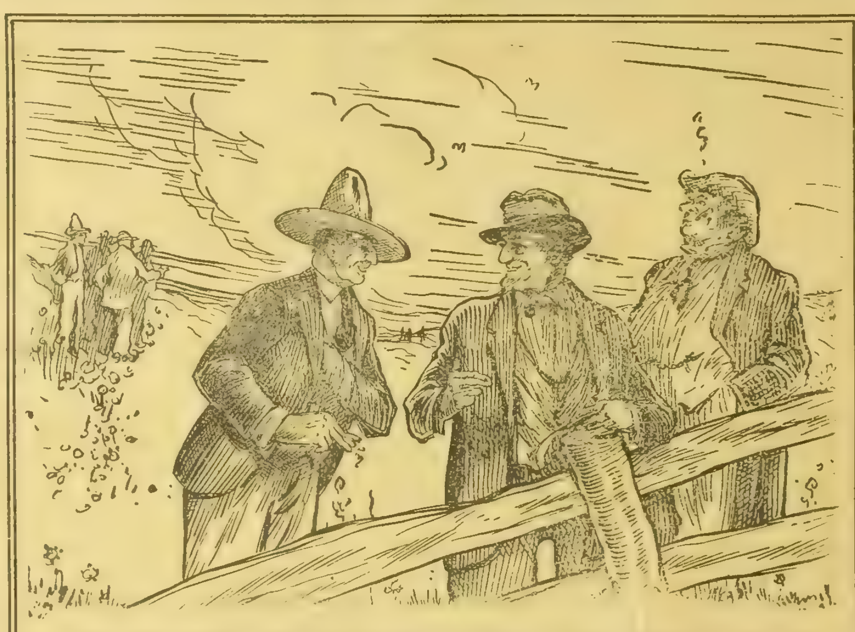
We had a small model of the new system built for our window and it sure worked pretty. Several of the newspapers sent men to interview us and that helped us a lot. We also ran a lot of advertisements and announced that our first line was going to be built in St. Louis. We also had a bunch of fellows lined up to sell the stock. Operations began in a short time and that stock went like hot cakes. We had a hard time filling the orders, and many a night we had to sit up till two and three o'clock, making out stock certificates and keeping things in good order. I was president and drew a big salary. Several directors who saw the money rolling in decided they had better start out, so I opened branch offices in various cities for them and put up more minature railroads. The stock sold fine for some time and all the boys were getting on in great shape, as I allowed them liberal commissions. Then things slacked up. Seems that the city fellows wanted action. So we gave them a dose of that.

Just outside the city was an old building with a pretty fair layout. It had been built for a watch factory but had gone broke. I found it could be purchased for about $8,000, so the board of directors announced one day that the first power plant was to be started. The old watch factory had been secured and was to be remodeled. We spent a few thousand for some architects' plans and more advertising, and that sure speeded the stock sales. Business was better than ever. We announced that the original capital stock of $2,000,000 was almost subscribed and as soon as we secured the full amount the first line would be built.

About this time, some fellow got peeved at a salesman and started a lawsuit, which lasted several months. With no sales in the meantime we announced that as long as there was a legal tangle we couldn't do anything, closed the branch offices and many of the directors left, leaving me and Trainer, the inventor, alone.

One day we heard that a bunch of stockholders were holding a meeting to see what could be done to save their money. Trainer told me about the deal, but not until it was too late. Then a fellow came with a warrant for my arrest and I had to put up a bond to account for the money paid to the company. It took about a year to get out of that mess, and when I did I was sadder, wiser and poorer. I saved a few thousand, but the railroad that was to have been built still remains a dream.

(Continued in April 26th issue)



I was quite handy with the fountain pen when a man wanted to make out a check for land.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

YEAR TO REDEEM FARM

I have a farm in Kalkaska county and being a subscriber to your paper I am asking for advice. The banker at Kalkaska is threatening to foreclose at once, the mortgage is $725. He requests me to sign and send him a quit claim deed stating that if he sells it for more than the mortgage what is over the mortgage will be mine. If I do not sign the deed and he forcloses, has he the right to sell farm at once, or do I have a year in which to redeem it? Would I have the privilege of renting the place after he forecloses or not? Do you think it possible for me to secure a loan from the Federal Farm Loan Bank? Would I have to live on the farm to get the loan or not. What would be the expense to secure a loan. The assessed valuation of the farm is $2500.—J. H. D., Durand, Mich.

—The mortgagor weuld have to give you three months notice before foreclosure sale. After the sale, you would have a year in which to redeem the farm. I would not advise you to sign a quit claim deed under these circumstances. You would be entitled to all the rents from the farm until the year had expired after the mortgage sale.

Write to the Federal Land Bank at St. Paul, Minn., and tell them just what security you have. They will inform you as to how much, and on what terms, you borrow it.—Asst. Legal Editor.

CANNOT VOTE WITH FIRST PAPERS

Please tell me if I can vote in my township with a first paper or not? —J. S., Turner, Mich.

—We assume you mean that you have taken out your first naturalization papers and desire to know if you can vote. In reply will advise you that you cannot under the present law.—Clare Retan, Deputy Attorney General.

RIGHT OF PEDESTRIAN ON HIGHWAY

What right has a person on foot on the trunk line? Has he a right to part of the gravel, for a path, or should he get off of it entirely, for convenience of cars?—O. R., Hersey, Michigan.

—A pedestrian has equal rights on a highway with other persons traveling by automobile or otherwise, but the rights of persons using the public highway for traveling, whether on foot or otherwise, depends upon facts and circumstances surrounding each particular instance,

For You and for Your Family

This book has been carefully prepared for you and for your family. It presents our merchandise to you honestly. It brings to you and to your family all of the advantage, all of the saving made possible by our 52 years experience in securing bargains for you.

At Montgomery Ward & Co. we believe that we owe a duty to our customers—a duty to you. We believe it is our duty to offer only reliable goods of standard quality, and always at the lowest possible prices.

That is our duty to you—and that is the policy of Montgomery Ward & Co. today. And that policy has been conscientiously carried out in this catalogue—for you and for your family.

Our Policy

As we serve—so shall we succeed

This business is founded upon the solid rock of Service to our Customers.

As we are of service individually to you, so shall we win and keep your patronage.

As part of our service to you we select for you and sell only goods that will give you satisfaction —only goods that will stand your inspection and use.

As part of our service to you we always offer you a saving. Fifty million dollars' worth of goods have been manufactured and bought for cash to make possible the low prices this book offers.

Twenty-four hour service in filling your orders is part of our work for you. Most of our orders are actually shipped within twenty-four hours, nearly all within forty-eight hours.

Our platform is one of Service. To be of real service to you is the basis upon which we solicit your patronage.

That for fifty-one years we have been of service, that today we are offering Service and a Saving and Satisfaction to over five million customers is the basis of our success.

As we serve—so shall we succeed.

What Can We Do For You?

A Personal Message from the President of MONTGOMERY WARD & CO.

As you turn the pages of this new Spring and Summer Catalogue there is just one thought uppermost in your mind:

"What is there of interest in this book for me?

How much saving is there for me?

What can Montgomery Ward & Co. do for me?"

In imagination I look into the homes of over five million customers into which this book goes, and in each I seem to hear these same questions asked.

And as I sit here in my office and look around at over one hundred acres of floor space, filled with new merchandise, I see the answer so plainly, the many advantages, the great saving, that I wish there might be some way of bringing you more closely together—you and Montgomery Ward & Co. —so that you might learn for yourself the answers to your questions.

If I could draw up a chair with you there at your own living room table and turn with you the pages of this Catalogue, I would tell you the most interesting business story you have ever heard.

It would be a story of how thousands of our bargains are secured, how our low prices are made. It would be a romance of ready cash and the tremendous buying power your patronage gives us. And of travel—travel through every part of this land and in Europe, searching for good merchandise at the lowest possible prices.

Do you know how our goods are bought —how our bargains are found? Let me give you an example: Here is a manufacturer who has a reputation for making the best goods, who lacks capital, who lacks business, so that his plant operates on half-time part of the year.

But he knows how to make good goods. We furnish the needed extra capital, we give him orders that make the wheels turn all day and keep his employees busy all the year. His own earnings are increased and his cost of manufacture cut far below anything he has ever known. And this saving goes to those who buy goods at Ward's—to our customers. What can we do for you?

You want to buy goods at a saving. You want to buy goods that will give you complete satisfaction. You want prompt service. You want your orders filled promptly, and your letters answered promptly—and you want your patronage appreciated.

At Montgomery Ward & Co. you get all these things. These are the advantages that are waiting here for you.

A saving—yes, we try always to offer you a saving; but always a saving on goods of Ward Quality. *I cannot lay too much stress on "Quality." We do not sell "cheap" goods.* It is our policy to offer you only goods that will stand up, that will give service, that will do exactly what you want them to do.

It is easy to sell at seemingly low prices. All you need do is to buy *low-priced goods.* Cut something out of the quality, out of the service, and you can always make a low price. *At Ward's we never sacrifice quality to make a low price.*

And, for fifty-one years this has been the policy of Montgomery Ward & Co. For fifty-one years in every dealing with every customer we have tried to follow a "deal as you would be dealt by" policy.

Millions of people will buy from this Catalogue— at a saving. The same saving, the same guarantee of satisfaction exists for you. We solicit your patronage. We will deal with you as you would be dealt by. And your orders and letters will always be appreciated at Montgomery Ward & Co.

Theodore F. Merseles
President

24-Hour Service

We have perfected our service for you. After much study and testing new systems and employing experts we have perfected a system that makes certain your orders will be shipped promptly.

Our records prove that during the past year most of our orders were shipped in 24 hours—nearly all of our orders within 48 hours.

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

ntinued from March 29th issue.)

“YOU can imagine there wasn't much time left for books. I think when he first went there, he thought he was still going to write the great poem, the great play, the great novel that was to bring him fame and money. But she soon learned better. Hattie had little patience with his scribbling, and had less with the constant necessity of scrimping and economizing. She was always ambitious to get ahead and be somebody, and, of course, as the babies came and the expenses increased, the demand for more money became more and more insistent. But Jim, poor Jim! He never was a money-maker. He worked, and worked hard, and then he got a job for evenings and worked harder. But I don't believe he ever quite caught up. That's why I was so glad when this money came—for Jim. And now, don't you see? he's thrown his whole lost youth into Fred. And Fred—”

“Fred is going to make good. You see if he doesn't!”

“I hope he will. But—I wish those Gaylords had been at the bottom of the Red Sea before they ever came to Hillerton,” she fumed with sudden vehemence as she entered her own gate.

CHAPTER XIV

From Me to You With Love

It was certainly a gay one—that holiday week. Beginning with the James Blaisdells' housewarming, it was one continuous round of dances, dinners, sleigh-rides and skating parties for Hillerton's young people, particularly for the Blaisdells, the Pennocks, and the Gaylords.

Mr. Smith, at Miss Maggie's, saw comparatively little of it all, although he had almost daily reports from Benny, Mellicent, or Miss Flora, who came often to Miss Maggie's for a little chat. It was from Miss Flora that he learned the outcome of Mellicent's present to her mother. The week was past, and Miss Flora had come down to Miss Maggie's for a little visit.

Mr. Smith still worked at the table in the corner of the living-room, though the Duff-Blaisdell records were all long ago copied. He was at work now sorting and tabulating other Blaisdell records. Mr. Smith seemed to find no end to the work that had to be done on his Blaisdell book.

As Miss Flora entered the room she greeted Mr. Smith cordially, and dropped into a chair.

“Well, they've gone at last,” she panted, handing her furs to Miss Maggie; “so I thought I'd come down and talk things over. No, don't go, Mr. Smith,” she begged, as he made a move toward departure. “I haint come to say nothin' private; besides, you're just like one of the family, anyhow. Keep right on with your work, please.”

Thus entreated, Mr. Smith went back to his table, and Miss Flora settled herself more comfortably in Miss Maggie's easiest chair.

“Sure they're all gone,” said Miss Maggie cheerily.

“Yes; ain't it time they did, to my way of thinkin'. Mercy me, what a week it has been! They hain't been still a minute, not one of 'em, except for a few hours' sleep—toward mornin'.”

“But what a good time they've had!” exulted Miss Maggie.

“Yes. And didn't it do your soul good to see Mellicent? But Jane—Jane nearly had a fit. She told Mellicent that all this gayety was nothing but froth and flimsiness and vexation of spirit. That she knew it because she'd been all through it when she was young, and she knew the vanity of it. And Mellicent—what do you suppose that child said?”

“I can't imagine,” smiled Miss Maggie.

“She said she wanted to see the vanity of it, too. Pretty cute of her, too, wasn't it? Still it's just as well she's gone back to school, I think myself. She's been repressed and held back so long, that when she did let loose, it was just like cutting a puckering string of a bunched-up ruffle—she flew in all directions, and there was no holding her back anywhere; and I suppose she has been a bit foolish and extravagant in the things she's asked for. Poor dear, though, she did get one setback.”

“What do you mean?”

“Did she tell you about the present for her mother?”

“That she was going to get it—yes.”

Across the room Mr. Smith looked up suddenly.

“Well, she got it.” Miss Flora's thin lips snapped grimly over the terse words. “But she had to take it back.”

“Take it back!” cried Miss Maggie.

“Yes. And 'twas a beauty—one of them light purple stones with two pearls. Mellicent showed it to me—on the way home from the store, you know. And she was so pleased over it! ‘Oh, I don't mind the saving all those years now,’ she cried ‘when I see what a beautiful thing they've let me get for mother.’ And she went off so happy she just couldn't keep her feet from dancing.”

“I can imagine it,” nodded Miss Maggie.

“Well, in an hour she was back. But what a difference! All the light and happiness and springiness were gone. She was almost crying. She still carried the little box in her hand. ‘I'm takin' it back,’ she choked. ‘Mother doesn't like it.’ ‘Don't like that beautiful pin!’ says I. ‘What does she want?’

“ ‘Oh, yes, she liked the pin,’ said Mellicent, all teary; ‘she says she never heard of such foolish goings-on—paying all that money for a silly, useless pin. I—I told her 'twas a present from me, but she made me take it back. I'm on my way now back to the store. I'm to get the money, if I can. If I can't, I'm to get a credit slip. Mother says we can take it up in forks and spoons and things we need. I—I told her 'twas a present, but—’ She couldn't say another word, poor child. She just turned and almost ran from the room. That was last night. She went away this morning, I suppose. I didn't see her again, so I don't know how she did come out with the storeman.”

“Too bad—too bad!” sympathized Miss Maggie. (Over at the table Mr. Smith had fallen to writing furiously, with vicious little jabs of his pencil.) “But Jane never did believe in present-giving. They never gave presents to each other even at Christmas. She always called it a foolish, wasteful practice, and Mellicent was always so unhappy Christmas morning!”

“I know it. And that's just what the trouble is. Don't you see? Jane never let 'em take even comfort and now that they can take some comfort, Jane's so out of the habit, she don't know how to begin.”

“Careful, careful, Flora!” laughed Miss Maggie. “I don't think you can say much on that score.”

“Why Maggie Duff, I'm taking comfort,” bridled Miss Flora. “Didn't I have chicken last week and turkey three weeks ago? And do I ever skimp the butter or hunt for cake-rules with one egg now? And ain't I going to Niagara and have a phonograph and move into a fine place just as soon as my mourning is up? You wait and see!”

“All right. I'll wait,” laughed Miss Maggie. Then, a bit anxiously, she asked: Did Fred go to-day?”

“Yes, looking as fine as a fiddle, too. I was sweeping off the steps when he went by the house. He stopped and spoke. Said he was going in now for real work—that he'd played long enough. He said he wouldn't be good for a row of pins if he had many such weeks as this had been.”

“I'm glad he realized it,” observed Miss Maggie grimly. “I suppose the Gaylord young people went, too.”

“Hibbard did, but Pearl doesn't go till next week. She isn't in the same school with Bess, you know. It's even grander than Bess's they say. Hattie wants to get Bess into it next year. Oh, I forgot; we've got to call her ‘Elizabeth’ now. Did you know that?”

Miss Maggie shook her head.

“Well, we have. Hattie says nicknames are all out now, and that ‘Elizabeth’ is very stylish and good form, and the only thing to call her. She says we must call her ‘Harriet,’ too. I forgot that.”

“And Benny ‘Benjamin’?” smiled Miss Maggie.

“Yes. And Jim ‘James.’ But I'm afraid I shall forget—sometimes.”

“I'm afraid—a good many of us will,” laughed Miss Maggie.

“It all came from them Gaylords, I believe,” sniffed Flora. “I don't think much of 'em; but Hattie seems to. I notice she don't put nothin' discouragin' in the way of young Gaylord and Bess. But he pays 'most as much attention to Mellicent, so far as I can see, whenever Carl Pennock will give him a chance. Did you ever see the beat of that boy? It's the money, of course. I hope Mellicent 'll give him a good lesson, before she gets through with it. He deserves it,” she ejuculated, as she picked up her neck-piece, and fastened it with a jerk.

In the doorway she paused and glanced cautiously toward Mr. Smith. Mr. Smith, percieved the glance, tried very hard to absorb himself in the rows of names and dates before him; but he could not help hearing Miss Flora's next words.

“Maggie, hain't you changed your mind a mite yet? Won't you let me give you some of my money? I'd so love to, dear!”

But Miss Maggie, with a violent shake of her head, almost pushed Miss Flora into the hall, and shut the door firmly.

Mr. Smith, left alone at his table, wrote again furiously, and with vicious little jabs of his pencil.

. . . .

One by one the winter days passed.

At the Duffs' Mr. Smith was finding a most convenient home. He liked Miss Maggie better than ever, on closer acquaintance. The Martin girls fitted pleasantly into the household, and plainly did much to help the mistress of the house. Father Duff was still as irritable as ever, but he was not so much in evidence, for his increasing lameness was confining almost entirely to his own room. This meant added care for Miss Maggie, but, with the help of the Martins' she still had some rest and leisure, some time to devote to the walks and talks with Mr. Smith. Mr. Smith said it was absolutely imperative, for the sake of her health, that she should have some recreation, and that it was an act of charity, anyway, that she should lighten his lonliness by letting him walk and talk with her.

Mr. Smith could not help wondering a good deal these days about Miss Maggie's financial resources. He knew from various indications that they must be slender. Yet he never heard her plead poverty or preach economy. In spite of the absence of protecting rugs and tidies, however, and in spite of the fact that she plainly conducted her life and household along the lines of the greatest possible comfort, he saw many evidences that she counted the pennies—and that she made every penny count.

He knew, for a fact, that she had refused to accept any of the Blaisdell's legacy. Jane, to be sure, had not offered any money yet (though she had offered the parlor carpet, which had been promptly refused), but Frank and James and Flora had offered money, and had urged her to take it. Miss Maggie, however, would have none of it.

Mr. Smith suspected that Miss Maggie was proud, and that she regarded such a gift as savoring too much of charity. Mr. Smith wished he could say something to Miss Maggie. Mr. Smith was, indeed, not a little disturbed over the matter. He did try once to say something; but Miss Maggie tossed it off with a merry: “Take their money? Never! I should feel as I were eating up some of Jane's interest, or one of Hattie's gold chairs!” After that she would not let him get near the subject. There seemed then really nothing that he could do.

It was about this time, however, that Mr. Smith began to demand certain extra luxuries—honey, olives, sardines, candied fruits, and imported jellies. They were always luxuries that must be bought, not prepared in the home; and he promptly increased the price of his board—but to a sum far beyond the extra cost of the delicacies he ordered. When Miss Maggie remonstrated at the size of the increase, he pooh-poohed her objections, and declared that even that did not pay for having such a nuisance of a boarder around, with all his fussy notions. He insisted, moreover, that the family should all partake freely of the various delicacies, declaring that it seemed to take away the sting of his fussiness if they ate as he ate, and so did not make him appear singular in his tastes.

Of the Blaisdells Mr. Smith saw a good deal that winter. They often came to Miss Maggie's, and occasionally he called at their homes. Mr. Smith was on excellent terms with them all. They seemed to regard him, indeed, as quite one of the family, and they asked his advice, and discussed their affairs before him with as much freedom as if he were, in truth, a member of the family.

He knew that Mrs. Hattie Blaisdell was having a very gay winter, and that she had been invited twice to the Gaylords'. He knew that James Blaisdell was happy in long evenings with his books before the fire. From Fred's mother he learned that Fred had made the most exclusive club in college, and from Fred's father he learned that the boy was already leading his class in his studies. He heard of Bessie's visits to the homes of wealthy New Yorkers, and of the trials Benny's teachers were having with Benny.

He knew something of Miss Flora's placid life in her “house of mourning” (as Bessie had dubbed the little cottage), and he heard of the “perfectly lovely times” Mellicent was having at her finishing school. He dropped in occasionally to talk over the price of beans and potatoes with Mr. Frank Blaisdell in his bustling grocery store, and he often saw Mrs. Jane at Miss Maggie's. It was at Miss Maggie's, indeed, one day, that he heard Mrs. Jane say, as she sank wearily into a chair:—

“Well, I declare! Sometimes I think I'll never give anybody anything again!”

Mr. Smith, at his table, was conscious of a sudden lively interest. So often, in his earlier acquaintance with Mrs. Jane, while he boarded there, had he heard her say to mission-workers, church-solicitors, and door-way beggars, alike, something similar to this: “No, I can give you nothing. I have nothing to give. I'd love to, if I could—really I would. It makes me quite unhappy to hear of all this need and suffering. I'd so love to do something! And if I were rich I would; but as it is, I can only give you my sympathy and my prayers.”

Mr. Smith was thinking of this now. He had wondered several times, since the money came, as to Mrs. Jane's giving. Hence his interest now in what she was about to say.

“Why, Jane, what's the matter?” Miss Maggie was quering.

(Continued in April 19th issue.)

What Calf Club Work Did For Me

By ARTHUR NYLAND, Gobetic Co. Calf Club Champion

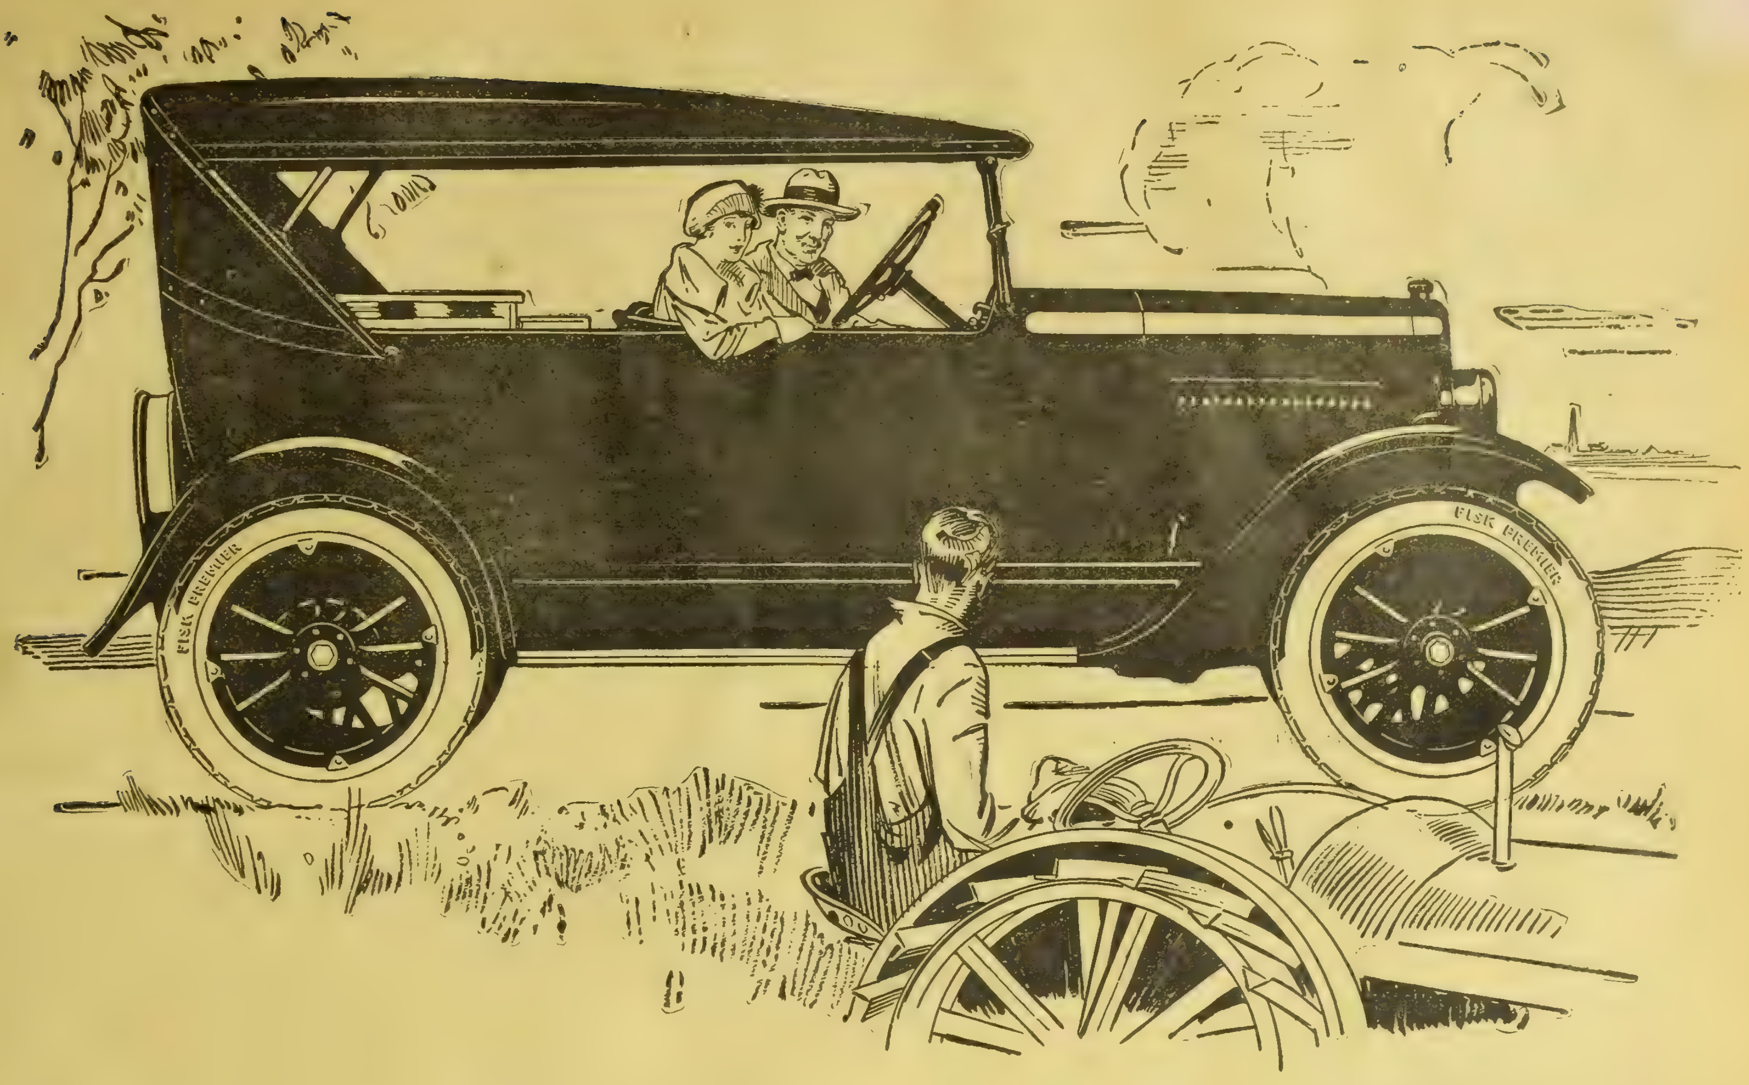
I HAVE been asked to tell of my experience as a calf club member. I first became interested in calf club work during the summer of 1921. My brother Walfred and I became members of the calf club in Erwin township at the same time. As the requirements to become a calf club member are that one must own a highgrade or pure-bred calf of one of the dairy breeds, my brother and I each became an owner of a pure-bred and registered Holstein Heifer. Mine was given me by my father, and Walfred bought his. My calf was 6 months old and Walfred's was about 5 months old. We were both eager to become members of the livestock judging team that our county agricultural agent, Mr. Gunderson was organizing about this time, so we took part in the livestock judging classes that were being held on the farms of the county at that time. The boys from Erwin township who were members of my calf club were Nicholas Puumala, Tom Hendrickson, John Koivisto, my brother Walfred, and myself. Several Ironwood township boys, Axel Kilponen, Carl Johnson, Onnie Kangas, Luther Olson, Leonard Nyland, Wm. Erickson and Conrad Walquist also were members of our judging class. We judged classes of dairy cattle, hogs, and sheep at the farms of C. E. Johnson, Raymond Dick, and K. Gunderson. We had good times riding around together and learned many valuable things in judging livestock.

We were all anxious to be members of the livestock judging team that went to the U. P. Farmers' Round-up at Chatham, August 12 and 13th. J. K. Jackson took all the Erwin township club boys to Chatham in his big 7 passenger studebaker car. It was the first and longest automobile trip we had ever taken, and believe me we had a good time. The weather was beautiful and the roads were fine and we had a big, comfortable car. We made short stops at Iron River, Ishpeming, Negaunee and Marquette and saw many beautiful lakes along the way. We started from Ironwood at 10 o'clock in the morning and had lunch at a little spring just outside of Watersmeet, and had supper on the beautiful Presque Isle at Marquette, where we saw deer running at large and other wild animals in cages.

We got into Chatham about 10 o'clock. We slept in tents while at Chatham, and took part in the setting-up exercises, games and the livestock judging events. There were about 5,000 people there. We saw and learned many new things. I had such a fine time on this trip that I decided that if there was ever a chance to go again, I wanted to go so last summer I again took part in the calf club work and judging classes and was again lucky enough to made the trip.

Here we have some of the members of the Gogebic County Calf Club work. Directly above the cross marked on the picture, is Arthur Nyland, author of this story about club work. On his right stands his calf, while his cow is shown at the extreme right end of the picture (to his left).

My family and me are all very much interested in The Business Farmer and do not want to be without it as we find a great deal of valuable information in it. Wishing you all success.--Chas. A. Hardy, Washtenaw County.



Overland is a Big Car in Everything

When you size up Overland, detail for detail, part for part, it is all very clear why people up and down the country call Overland the most automobile in the world for the money.

Overland is a bigger money's worth and a bigger satisfaction because in many details it is a bigger car.

The bigger Overland engine gives you big-car power that laughs at the hills.

Patented Triplex Springs give you big-car riding ease—a springbase 30 to 60 inches longer than any other car of its size. The bigger Overland axles give you big-car strength and reliability.

Big-car performance with light-car economy! Big-car satisfaction at a light-car price! Low upkeep—slow depreciation! You are both money-wise and automobile-wise when you buy an Overland.

Other Overland Models: Chassis $395; Roadster $495; Red Bird $695; Champion $655; Sedan $795; Spad Commercial Car $523; all prices f. o. b. Toledo. We reserve the right to change prices and specifications without notice.

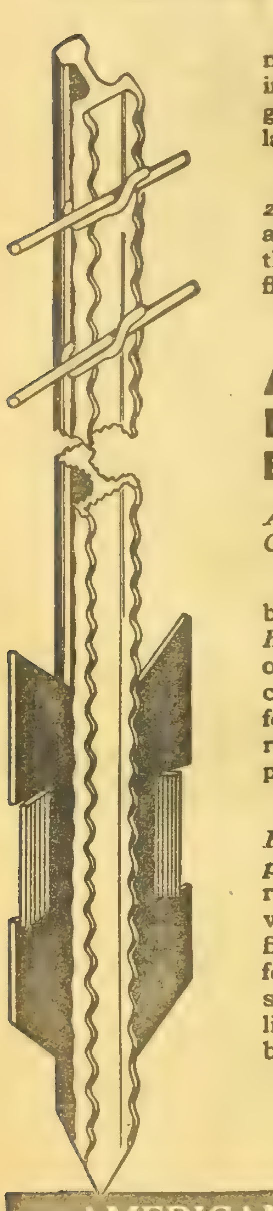
Zinc Insulated
TRADE MARK
Fences
No Extra Charge
40% to 100% More Zinc

Insulated Against Rust

The more zinc on the wire, the longer the wire fence will last.



Wires used in Zinc Insulated Fences receive more than DOUBLE the usual heat treatment in the *zinc bath*—the proper and only way to give a heavier coating of galvanizing with lasting quality.

This better process not only applies *more zinc* to the wire, but makes the coating uniform and inseparably a part of the steel. It insulates the wire with more zinc and with no cracking, flaking or peeling off.

All the following *brands of Farm Fence*

AMERICAN, ANTHONY, ROYAL, NATIONAL, ELLWOOD, U. S.

Are now Zinc Insulated—At No Extra Charge.

We make only one grade of fence, every brand Zinc Insulated—and sell it *at no higher price.* Think of it!—fence that will outlast any fence you have used before—yet costs no more than ordinary grades of farm fence. Only our quantity production, vast resources and equipment make this offer possible.

Hang your fences on Arrow Tee-Steel Posts for greater strength, durability, dependability and long life. Built like a railroad rail—will not bend, twist, buckle or work loose. The large Anchor plate locks firmly into the ground while being driven, forming the most solid anchorage. Closely spaced notches enable you to attach every line wire to post, if desired. Many other big features.

Your local dealer carries Zinc Insulated Fences and Arrow Tee-Steel Posts in stock for quick delivery. We stand back of him for your protection.

AMERICAN STEEL & WIRE COMPANY

Beautify Your Home at Our Expense

BEAUTIFUL BRIDAL WREATH

AND 4 OTHER HARDY ORNAMENTAL SHRUBS

Planting a few shrubs this season will soon make your home a beauty spot and a greater joy to live in. Also, if you should later decide to sell it, you will find it more salable and worth a few hundred dollars more. Our collection consists of the following five most desirable varieties. They are not little, green-house-rooted cuttings, such as are often given in offers of this kind. These shrubs are all field grown, healthy and thrifty, and are sure to give satisfaction. We would recommend that you accept our special offer without delay, as this offer may be withdrawn at any time.

SPIREA VAN HOUTTEI (Bridal Wreath)—A leader among shrubs, and a beautiful ornament at all seasons. A round and graceful bush with arching branches, covered with white flowers in early summer. No doubt the most useful of all shrubs.

ALTHEA (Rose of Sharon)—A beautiful shrub that nearly everyone is familiar with. Flowers profusely in late summer and early fall, when few other shrubs are in bloom.

BUSH HONEYSUCKLE—Handsome bush with pink and white flowers in the early spring, followed by beautiful and showy red berries during summer and fall.

FORSYTHIA (Golden Bell)—The first shrub to bloom in the spring, the golden yellow flowers appearing before the leaves; frequently while the ground is still covered with snow. Branches cut off in winter and put in a vase of water will bloom in the house.

SYRINGA (Mock Orange)—One of the finest of the tall shrubs. Valuable for backgrounds, screens, grouping and specimens. Flowers white and very fragrant. Beautiful for cutting.

These are the five grandest shrubs for all climates, and will be delivered to you, by parcel post, postpaid, as per our special offer below.

OUR SPECIAL OFFER

ALL FIVE SHRUBS, above described, shipped from our Michigan nursery, direct to your mail box, postage paid and safe arrival guaranteed, for ONE DOLLAR, which includes a One Year New or Renewal subscription to THE MICHIGAN BUSINESS FARMER. This may apply on your own renewal or add any new name ONE FULL YEAR.

Order of THE BUSINESS FARMER, Mt. Clemens, Mich.

What the Neighbors Say

EVERY CITIZEN PAY ACCORDING TO ABILITY

DEAR EDITOR: Your editorials don't suit me as well as they used to, but the one on taxation (March 1) is good, and the more I study the problem, the clearer I see a progressive income and inheritance tax as the ultimate solution.

To tax real estate for public improvements that increase its value seems fair enough. So does a sales tax on gasoline for highway repairs. Import duties to protect the home market, and small taxes or license fees to cover expenses of administering certain laws may be expedient. But for general revenue purposes let local, state and national governments cooperate in building a simple, efficient tax collecting machine and let every citizen pay according to ability.

Make no exemptions and no unfair discriminations against the rich. Let every citizen declare his or her net income annually, under pledge of secrecy as now. Let each, whether poor or rich, pay on the first one thousand dollars a light tax, say one-half of one per cent. Make it one per cent on the second thousand. add one-half of one per cent for each succeeding thousand, until the rate reaches fifty per cent, and let all above that point pay that rate. Apply the same taxes except such as noted above. Allow corporations to keep a reasonable undivided surplus, but treat stock dividends as part of the incomes of those to whom they are issued, which they certainly are.

To object that the high rate on big incomes "withdraws capital needed for business expansion" is nonsense. Does the government destroy the money it collects? No, it does just as any private citizen or corporation would—pays its running expenses and debts When it pays running expenses its employees put the money back into circulation just as quickly as if they were working for the steel trust or Standard Oil. When it pays its debts its creditors, mostly American citizens, have so much capital free for re-investment. If the general effect of the system is to somewhat reduce the fortunes of the very rich, the light tax on small incomes will tend to increase the number and the resources of small capitalists, whose capital is just as available for business expansion as if they were rich. And as the rich pay high rates only on their superfluous thousands, they are safe from absolute ruin.

I have not tried to figure out just what the minimum rate should be; one-half of one per cent may be too low for present needs. I do know that the average small farmer could pay ten times that rate and still save money on that deal, and believe that to attempt to exempt small incomes entirely, would be a serious mistake.—Stacy Brown, Lake Odessa, Michigan.

NO MORE TAX EXEMPT BONDS

DEAR Editor:—Your editorial on taxes and write up by Mr. Powell should draw forth considerable comment. The old saying "Two things are sure, death and taxes" is right, only it ought to be worded like this: "Taxes will be sure death to the Farmer if they are not reduced."

It is impossible for the farmer to keep the wolf of taxes from camping on his doorstep and at times he gets right into the house. We have been told repeatedly that this law and that scheme would reduce our taxes but instead they have been going up and up until we are obliged to sell crops at a disadvantage to meet them.

I have been paying taxes in our county (Isabella) for twenty-five years and they have almost been as high as rent for my farm the last four years. It has been impossible for me to make the repairs that are needed let alone build new buildings.

I have seen and read more printed matter about how to reduce taxes in the last year or two than I could carry and none of it has lowered my taxes one cent. Every office holder has promised to lower taxes. Before he was elected he always had some sure fire schemes that would do the trick. "Just elect me and you will soon see how your taxes will go down!" he would tell us. I think that high taxes has been the best campaign material for a lot of office seekers that ever was invented.

Now to my mind we as property owners and farmers should demand that instead of wasting so much good printer's ink, we get some action. Let's dig up the hidden treasure in the state, the tax exempt bonds, and put a tax upon them will help to bear the burden of taxes along with the farmers and property owners.

These bonds and stocks should be classed as personal property and taxed as such just as the farmers stock and tools are taxed. If the tax exempt bonds were made to go on record in the county or state where they were issued and a tax put upon them at that time, they would be paying in preportion to the farmer's mortgage or contract.

The farmer's business is too large for him to hide it. He is too broad minded to do it if he could, so let us get down to business and do something that will take the mill-stone of taxes from his neck and give him a square deal.—W. H., Mt. Pleasant, Mich.

WHY HAVE COUNTY AGENT?

DEAR EDITOR: I have read your valuable paper from the first issue, and think it is the best farm paper. I read so much about reducing taxes, that I cannot keep quite any longer. Why not commence at home to cut taxes? Now what good is a county agent, when 75 per cent of the farmers are opposed to him? I claim we can get along just as well without him. I have attended the county agents' meeting at the Farmers' Institute meeting and Farm Bureau meeting, and have heard their talk for the past four or five years, and all they could talk about was potatoes, potatoes, potatoes, and that was all they could talk about, until now you can hardly give potatoes away. Now all you can hear is dairying, dairying, dairying, and in four or five years they will run that in the ground.

Why don't they let the people vote on whether we want a county agent or not? I will wager that it will be voted down by 75 per cent. The board of supervisors say the state pays a certain per cent for the county agent's salary, but who is the state? It all has to come out of our taxes just the same. We are paying too many white collar fellows, running around at our expense.

Now let us vote on the question, and if they get one vote in favor of the county agent, then I will be in favor of him also. As for me I can't see where he has done us one cent worth of good. In the last 3 months I have received about a half dozen circulars asking if I wanted any dynamite. I don't know of any farmers around that want to buy a half car of dynamite.—H. E. Coblentz, Charlevoix County.

TRADE WHEAT AT $2

DEAR EDITOR:—Foreign made farm machinery, builders' hardware, cloth and clothing, shoes and thousands of farm necessities can be laid at our shores so cheap that in trade the farmer would get twice what he does now.

The high tariff party, G. O. P. (or Gasoline, Oil and Petroleum) says by their actions, "Mr. Farmer, we're behind a great big tariff wall and you'll pay war prices for our stuff, regardless of what your stuff brings, or go without tools, building material, clothes and shoes till you learn who's boss," and because the majority of north center and eastern states great grand fathers were Lincoln Republicans, then these great-grandsons think they must give 2 bushels of wheat for goods worth only 1 bushel and say nothing because the tariff men want cheap food for their factory help and double prices for factory goods.

That leaves plenty of profit to pay ten times as much for a new car as the average farmer can pay to have a car for each one of the rich man's family and one for a hired man to air the dog with.—C. H. Merrifield, Van Buren Co.

Polarine
THE PERFECT MOTOR OIL

Made in Five Grades

Makes Record in Protecting Bearings

"Burned bearings on a crankshaft or elsewhere", says a leading automotive authority, "means that the bearing is cut, caused by friction from lack of oil."

Polarine protects bearings, by maintaining at all times, an unbroken cushion of oil. That it can do this, is due solely to its correct scientific structure.

One Polarine user writes: "In checking back records of the last five years (during which we have used only Polarine Oils and Greases) on the upkeep cost of our tractors and trucks we had only one case of burned out bearings, and this one case was the fault of neglect on the driver's part to supply the necessary amount of oil.

"This, with eleven tractors and trucks running continually, we believe is *some* record."

Numerous other letters tell a similar story.

Polarine minimizes friction because it maintains its body. It maintains its body because (First) it is made from selected crude. (Second) because it is refined and treated by a special process to remove those elements which tend to form gum, carbon and other impurities. (Third) because it undergoes elaborate laboratory and field tests which check up the refiner in his efforts to produce a lubricant which will stand up under all temperature and mechanical conditions.

The chart at the left tells the *right* grade for your tractor to give you perfect protection against friction.

The essence of economy is to drain your crankcase frequently and fill up with the correct grade of Polarine. Your tractor will give you better service and it will last longer.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

BATTERIES—THEIR USES AND CARE IN RADIO

IN radio work there are two types of batteries used and these two types are again divided into three classes according to the use to which they are put.

The two types are—1st. Dry batteries, and 2nd. Storage batteries. The three classes are "A" batteries, "B" batteries and "C" batteries. Be sure and remember these classes as we will constantly refer to A-B-C batteries all thru our work with radio. As far as we now know there will only be these three classes but as radio invention and experimentation progresses we are likely to find use for batteries in another place in our set and then we will have "D" and "E" batteries.

We will first describe the two different types of batteries, as some of you will be using one type and others will use the other type. Remember that both are good and that each type is used for a particular purpose for it's convenience as well as economy.

A dry battery has a voltage of 1.5 when new and this gradually drops as the battery ages or is used. The effective amperage is around 30 on a No. 6 battery and very much lower on the small light type of batteries. All dry batteries are figured as delivering 1.5 volts per cell.

All dry batteries are made for intermittant service, and if used steadily will loose their life very quickly; therefore remember that whenever you are not using your batteries on your radio set they should be disconnected.

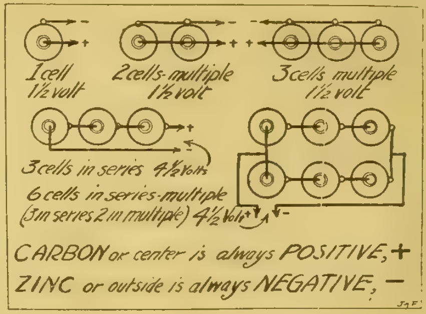
A storage battery, one cell, has an effective voltage of 2 and even when discharged will show a voltage of almost 1.5 tho it cannot deliver any amperage when discharged.

The common example of a storage battery is the lighting or starting battery in an automobile, which for the Ford is composed of 3 cells placed in one case and delivering 6 volts. The Dodge using 6 cells and giving 12 volts. House lighting plants have a group of 16 cells giving 32 volts.

The advantage of each type for radio as we see it from the stand point of the farmer or rural community is all in favor of the dry battery except in a few favored instances. These advantages are as follows:

The dry battery is,—Cheap, considering it's convenience. It is convenient. Easy to secure at most hardware stores, no matter how small the town. Light in weight and easy to carry about. No dangerous acids to spoil rugs, floors or clothes. No expensive charging equipment required. Long life, if given care. In this connection with long life remember that the life of the battery depends upon three things.—1st, the manufacturer, if he is reliable he will make a good battery. 2nd, Using the correct battery for it's particular purpose. 3rd, Care in not abusing the battery, that is only asking the battery to do only as much as it is able to do and not overloading it. Giving it a rest period frequently.

The advantages of the storage battery are —Long life, with care they will last 5 to 7 years and even longer. Noiseless operation over long periods of operation. Rechargability, they can be charged as frequently as necessary to keep them up to working strength. They can handle large volumes of current under a steady load for longer periods than a dry battery. They do not need rests to recouperate. For radio sets using several tubes and where large volume is desired storage batteries seem to give the best results at present. (Manufacturers are now working more and more to improve radio equipment especially for dry battery use.)



1cell 1½ volt
2cells-multiple 1½ volt
3cells multiple 1½ volt
3cells in series 4½ Volts
6 cells in series-multiple (3 in series 2 in multiple) 4½ Volts
CARBON or center is always POSITIVE, +
ZINC or outside is always NEGATIVE, −
J.H.F.

Dry cells for "A" battery.

Classes of Batteries

The three classes, A-B-C, of batteries are made both in the dry battery form or the storage battery.

The A battery is the battery that is used for the purpose of heating the filament of a vacuum tube. Remember that the purpose is not to produce light but heat of a certain temperature. Some tubes do not show any light when the filament is heated and others are very bright, just like an ordinary electric light such as the UV-201 or C-301 tube.

The B battery is the battery that supplies the energy for making the sounds in your telephone receivers. It also supplies the energy for amplifiers that give great volume.

The C battery is only used with certain types of sets, and quite generally in amplifier circuits to give what is called "bais" to the grid element of a vacuum tube a negative value greater than it would have if a C battery were not used. This more effectively controlls the action

OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.

MRS. CECELIA WIRTH, EAGLE, MICHIGAN, OWNS THIS NEW BARN

"Here is a picture of my 'Honor Bilt' barn that was put up during June and July last year," writes Mrs. Cecelia Wirth, of Eagle, Michigan. "It is 28 feet wide by 42 feet long, and cost $1,015. The photo was taken while it was being painted shortly after it was built, as you will observe."

of the tube and adds life to B batteries that are used in amplifier circuits. It also helps to clear up the quality of the sounds received so that they are more life-like. (Prevents what is called distortion).

A batteries may be of the single cell type such as one No. 6 dry battery or a group of cells so arranged that they will give the desired voltage for the tube being used and also give longer life. If batteries are connected in "series" the voltage increases with the addition of each additional cell. If batteries are connected in "mutiple" or "parallel" the effective life is increased, the amperage or volume of current that can be delivered is greater and the voltage remains the same as in a single cell. Batteries may be also connected in "series-parallel" to both increase amperage and voltage. See the diagram showing different methods of connecting batteries for use as A batteries.

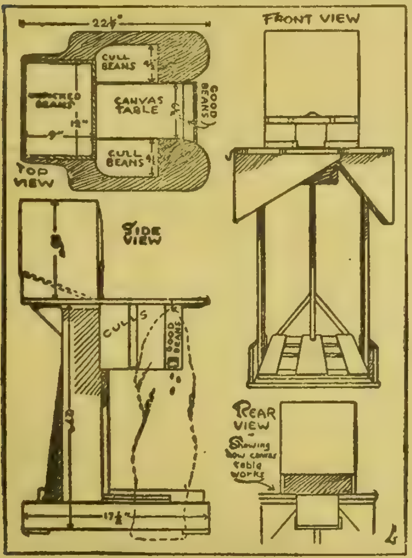
Remember that if you are using a WD-12 tube that requires 1½ volts to heat the filament that if you use 2 cells connected in mutiple that you will get nearly three times the life from 2 cells that 1 cell would give you and in many instances a much longer life than above stated. It is economy to use 2 cells instead of 1 cell every time. If you are also using amplifiers never use less than 3 cells in mutiple.

B batteries are a group of small cells connected in series and mounted all within on case and sealed over with sealing wax. Sometimes called a "block' battery, meaning that the small cells are assembled into a block or one large battery. Quite generally people believe that the B battery is one battery that gives a high voltage, that is correct, as we call a group of cells a battery, also we call a single cell a battery. The 22½ volt B battery is a group of 15 cells each with a voltage of 1½ making a total of 22½ volts. B batteries are also made with voltages of 45 or 90.

FARM MECHANICS

MAKE THIS AND PICK YOUR OWN BEANS AT HOME

HERE is our home-made bean picker. I will describe it and how it operates as best I can. There is a hook on the left arm above the chute to hang a bag on for the clean beans. It hangs over the end of the chute. It does away with a pail or any container that might spill or be a tempetation for little hands. The canvas table revolves. The end of the arm on paddle does not fasten to anything. There is no wheel on end of roller of canvas table to fasten it to. The peddle rests on a rod (groved to fit) in bottom frame. The piece on end of arm acts as a clutch on the canvas. It has a little rod through it so that the piece can turn. When the peddle is up it releases the canvas and when pressed down takes a hold and carries it along. The chute for the clean beans is right in front and under the left arm. The chute is 14¾" by 6" by 16" and is 2" wide. The opening is only 2" square. I will answer any questions.—Mrs. R. O. Reese, Williamston, Mich.



"I hearthey have established a home for telephone operators."
"And what did they name it?"
"Listen Inn."

EXCEPTIONAL RIDING COMFORT

Owners continue to comment on the marked riding comfort of Dodge Brothers Motor Car.

Increased chassis length, low-swung body and generous seat depth have much to do with this

Primarily, however, it must be accredited to the greater buoyancy of the new spring equipment. The rear springs are ten inches longer, and underslung.

The price of the Touring Car is $895 f. o. b. Detroit

RELIABLE ADVERTISERS

We will not knowingly accept the advertising of any person or firm who we do not believe to be thoroughly honest and reliable. Should any reader have any cause for complaint against any advertiser in these columns, the publisher would appreciate an immediate letter bringing all facts to light. In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

TAXATION IS THE LIVE ISSUE

WE questioned a little whether we would insert the figures given in Mr. Powell's article in this issue taken by him from "The Michigan Tradesman," which show that the cost of operation of three state prisons has increased from $91,000 in 1916 to over $2,500,000 in 1923.

Rather, however, than to dull the point of this particular article in the important series which Mr. Powell has been contributing to our columns, we are inserting them with the promise that in the next issue we will have a statement from the governor or someone close to the administration which will clear up this point.

We want our readers to know that we believe in giving both sides of every question as accurately as it is humanly possible. This is in keeping with a fixed policy of THE BUSINESS FARMER that we do not try to do the thinking for our readers, largely because we have no political or other affiliations which force us to draw conclusions which may not be our own. We believe the real mission of a farm paper, or other publication which stands for anything, is to bring to the searchlight of public opinion, the facts which otherwise might be hidden and therefore discovered only after it was too late.

Whether you agree with everything Mr. Powell says or not, you will be as interested in this present article as any which has appeared in the series.

THE MEAT IN THE NUT

> "The real trouble with the farmer, beyond all others combined, is his inability to reduce his output with the fall in demand. No matter in what terms it is put, the sum and substance of the farmers' lack of prosperity during the past three or four years is overproduction."

THE above recent statement by Mr. B. H. Hibbard, a noted economist, puts into the fewest possible words the exact status of agriculture in America, but, of course, it does not answer anything, excepting to point the direction in which the farming business must be kept moving.

If there were as many individual producers in any other line of business as there are in farming they would have identically the same problem which the farmer today faces.

If there were, instead of a half dozen shoe manufacturers in Michigan, ten thousand manufacturers of shoes, it is obvious that the price of shoes would be very hard to control, and that if an overproduction were reached those manufacturers who found their warehouses overloaded and their banks pressing, would sell at prices which would eventually ruin them.

And it is just as obvious that when enough of the ten thousand were forced into other lines of business a slump in the production of shoes would cause a shortage: prices would rise, and those in the shoe manufacturing business would again make a profit.

The only way out of the dilemma to keep the shoe manufacturing business on a normal basis would be for the ten thousand to get together and decide how many shoes they were going to manufacture to take care of the demand.

So as Mr. Hibbard says "the real trouble is the farmers inability to reduce his output with the fall in demand," and certain it is that until the farming business is organized, this condition must continue to exist.

There is a way out. California and its successful growers exchanges have pointed the way. It means: Michigan bean men, potato men, fruitgrowers, beet growers—get togather, stick togather and just as sure as the coming of a bountiful harvest to this state in the season just ahead, will success crown your endeavors.

A man who criticizes the organization of farmers to which he belongs without offering to help right any wrong that may be going on is a traitor to his calling and to his neighbors, and unfortunately the things you can do to him in Michigan without being guilty of "attempt to do great bodily harm" are all too good for him!

SPRING IS HERE

SPRING is here and if you have not felt the tingle of it in your blood you had better start in on a course of sulphur and molasses! But speaking of that well known old despot of childhood, we noticed recently that a very able physician declared such spring remedies were entirely unnecessary and that if people would follow simply the dictates of their appetites and the products of the field and garden as they come with the changing seasons there would be no need for dopes or medicines of any kind.

What can be finer these nice mornings than a dish of rhubarb at breakfast, and even as a dessert for supper, too? The way I like to eat it is with ginger cake made rich with molasses. My, what a combination they make! I presume, however, the cake does away with most of the good effects that otherwise would come from the rhubarb.

Make up your mind you will not take any medicine this spring. If you have the hangover of a cold, eat plenty of onions prepared in any manner but fried, and see if it does not give you relief.

There is a drug store in the backyard of every farm house and a doctor sits with you at every meal—none other than Ole Doc Moderation!

ROBUST BEANS WIN FAVOR

IN Prof. Frank A. Spragg's article in this issue continuing his series on seed development in Michigan, this authority points out that Robust beans which have been largely developed by the Michigan Agricultural College are yielding an average of one-third more than any other Michigan variety.

That the bean growers of Michigan have not been more eager to take up the Robust bean as a staple is largely due to lack of information on the subject and we are pleased to present this article for the benefit of our readers and in continuation of our policy to secure the best known authority on agricultural subjects which we attempt to treat in these columns.

We sincerely believe that it would pay every reader of THE BUSINESS FARMER to carefully read this series by Prof. Spragg and file them away for future reference as this really represents the result of many years of study and application to a subject to which most of us give too little attention in the ordinary conduct of our farming business.

It will behoove you to watch for the continuation of these articles each complete in the issue in which it appears, but all contributing to a general summary of the development of seed in this state.

CENTRAL ELECTRIC POWER

ACCORDING to figures supplied by the Michigan Public Utilities Commission, there are now 9,022 farms receiving central station electric light and power in this state.

The rapid spread of power wires over the rural districts of Michigan means an important step in their development and their improvement.

When you consider that electricity means not only light instantly available, heat for cooking and power for running water in the home but ample power for the heavier farm duties, its importance becomes apparent.

It may not be long before the threshing machine which comes to your farm will have mounted on it an electric motor, the wires from which they will connect to your own circuit and there free from danger of sparks the work of threshing or silo filling will be done in short order.

The Public Utilities Commission has interested itself in the development of rural power lines and is doing everything possible to encourage the companies already in operation in the state to extend these wires and thus make electricity available to the largest possible number of farms. This is indeed an encouraging sign for rural life development.

CONVICT ROAD WORK SUCCESSFUL

THE report of Fred E. Janette, state pardon commissioner for the year 1923 is interesting to farmers in Michigan particularly because it gives an insight into the success of using prison labor to build good roads and maintain them. Those who originally promised nothing but dire results from such an inovation are being won over to the plan as its practicability becomes more and more apparent. After pointing out that during 1923, only 125 prisoners were added to the burden of the state because while 1,971 entered prison gates, 1,846 were paroled. The report has this to say about prison road work:

> "Between July 12 and December 31 of last year, 660 prisoners from two of the three penal and reformatory institutions of Michigan, Jackson and Ionia, working upon construction of highways in this state built 25 miles of concrete surfaced roadway and earned an aggregate pay of $58,000.
>
> "The figures 660 enumerating the prisoners from Jackson and Ionia who were sent out to the road camps constitutes the total number of prison inmates who were given temporary paroles and made 'highway trusties.' They were coming and going all during the period of the work, large numbers of them, more than half of the total being returned to their prison for release on regular parole, to go to their homes, their minimum sentences having expired while they labored. As these were released others were sent to take their places. At no time did the aggregate prison population in all the camps—seven—attain a number in excess of 450. Governor Groesbeck has stated that it is the plan of the administrative board and highway department to employ as a fixed number 800 or more such prisoners in 1924, and to start early and build 100 miles of concrete highway.
>
> "Teach prisoners to work and teach them to like it, and you've started the reformation which all good people hope to see accomplished by prison discipline."

FIGHTING FARM FIRES

"IF farmers only knew it" the secretary of a leading Michigan mutual fire insurance company told us the other day, "they could save themselves millions of dollars in decreased assessments to say nothing of the individual loss and discomfort through fire on the farm. Every farm building ought to be equipped with some sort of a fire extinguishing apparatus so that the fire can be caught at the outset when it is not hard to control, and yet there are hundreds of kitchens and barns in Michigan that have no possible means of fire protection, so if a fire started it would be necessary to run and hunt up a pail of water and then try to extinguish it."

This matter of fire protection is a mighty important one, and if the fire losses in Michigan could be cut down several millions of dollars it would be immediately reflected in the assessments by the mutual companies which largely cover the risks on our farms.

Over at Owosso we understand a fire-truck was purchased recently, the funds for which were provided by the farmers in the vicinity who each contributed a small amount. Enthusiasm for buying this truck was largely aroused by the action of Roy L. Colby, supervisor of Shiawassee township, whose $12,000 farm home was damaged only to the extent of $2,000 because of the prompt and effective work of a chemical fire truck from Owosso which responded to his call and made the seven-mile trip to his farm in fourteen minutes.

This fire truck is kept in the central station in Owosso, and is manned by regular city firemen because it contributes to the city's equipment and yet is for the primary use of the farms in the vicinity.

The modern motor-driven fire wagon makes it possible for the isolated farm to have protection and in a radius of five to ten miles from the farm we would say that no better scheme could be worked out than to ask each farmer to contribute the small sum necessary to purchase such a truck. The amount invested would probably be returned many times over in decreased insurance cost.

But you do not need to wait until a motor driven truck is purchased in your vicinity. There are any number of small fire extinguishers on the market, some costing only a dollar or so each. There should be one conspicuously located in every farm kitchen and in every farm building, where it could be reached quickly in an emergency.

Look around your farm right now and see what protection you have given yourself against the fire which may come at any moment. It will be time well spent!

PUBLISHER'S DESK

HOW THEY WILL LIE!

IT has come to my attention that certain agents of a farm paper have made the statement that the service rendered by every department of THE BUSINESS FARMER, including the Publisher's Desk, was entirely through the columns of the publication.

How they will lie when cornered.

Our readers know, but I want them to tell their friends, that every single request for help or advise addressed to any department of THE BUSINESS FARMER is answered personally by mail, as promptly as possible.

Only those questions which are of general interest are given space in the paper and they do not represent one out of twenty of those answered direct by mail to the subscriber.

So large has the mail become addressed to Farmers' Service, Collection Box, Legal, Woman's and this department, that we have to insist now that the address label from any recent issue, be attached to every request for free service.

Your address label shows the date when your subscription expires and we can only render service without cost to paid-up subscribers. When you do attach this label to your request, no charge of any name or nature will ever be made unless specifically understood by you.—The Publisher.

CHASING BUTTERFLIES

> "WHY NOT spend spring, summer and fall gathering butterflies, insects? I buy hundreds of kinds for collections. Some worth $1 to $7 each. Simple outdoor work with my instructions, pictures, price-list. Send 10 cents (not stamps) for my illustrated prospectus before sending butterflies."

Can you tell me of any firm that buys butterfly cocoons. We have two large ones, and some say you can sell them and they are worth from two to five dollars, but I have never saw anything about butterflies only this ad. I am enclosing. Can you tell me if they are reliable or only a fraud. You notice they want 10 cents and it seems to be butterflies not cocoons they wish.—F. S.

WE are sorry to advise you that we do not know of any firm that buys butterflies, or cocoons. Perhaps there are such firms, but we have been unable to secure the addresses of them.

Along with the butterfly business, one might add the side line of catching will-o-the-wisps, fairies and goblins, which should surely lead once in awhile to the pot-at-the-end-of-the-rainbow!

THE HOUGH FUR CORP. AGAIN

I understand thru your paper—Publisher's Desk—you will intercede in cases of outside swindling. Such is my case. I will state the facts as condensed as possible and then if you are able to help me I will be very grateful to you.

I received a fur list from two fur houses, Abraham Fur Co. and the J. R. Hough Fur Corp., of Miredan, Conn. I had several dollars worth of furs that I trapped in November, and as the J. R. Hough Fur Corp. quoted prices a little higher than the Abraham, I decided to ship to them. I shipped by express the first of December to the J. R. Hough Corp.; shipment consisted of 33 muskrats—eleven of these were extra large, 22 medium—4 skunks, 1 cat, 1 white weasel. Express cost me $1 and I insured same for $70. On their lists they said they would pay all express charges and checks were sent our the day furs were received—also agreed to hold all furs separate if so specified (which I did) until customer received check and accepted same; if not satisfied they would return furs. I waited two weeks and got no word of my furs. Asked agent to look them up.

I wrote them and immediately received a check for $10.75, saying my furs were damaged. I returned the check by return mail and asked for my furs. They sent the check back again with a letter saying the furs were all spoiled and they had to dispose of them immediately to avoid complete loss. I sent the check back again, as I knew they were lieing and demanded my furs. Again received the check back and a duplicate (the exact words) of the letter before. I know my furs were in A-No.-1 shape, thoroughly cured and could not spoil in six months.

I was offered $38.75 by a buyer at the door here just a few days before I shipped. The Grand Rapids market would have brought me about $55.00. Hough's list would bring me close to $70. They sent me $10.45, did not even allow me my express or will not write a word regarding same. I am sure they have my furs. Can you help me to recover my furs or get full value for them. I did not have a damaged fur, have all my furs marked so I can tell if I get my own furs. My neighbor shipped to the Abraham Fur Co., and he got prices as listed, $1.90 a piece for medium rats and Hough's allowed me 25c for my mediums and 35c for my large. There were no prices quoted on their lists. This was too low even for even damaged unprime furs. They gave 5c for weasel and 25c apiece for my skunks.

Think I have given you all the facts but if there is anything more you wish to know will be glad to write.

I have taken the M. B. F. for just one year. We all enjoy it, could not get along without it now.—W. O., Kent City, Mich.

THIS is not the first complaint by any means that we have had against this company and we can do nothing as they are very careful not to get themselves caught in any way. Be sure that you are dealing with an honest company before shipping such a valuable quantity of furs again. There are many reliable ones.

SORRY, BUT TOO LATE!

"I read in THE BUSINESS FARMER not long a go about a lady who wrote you for advice about the Underwood Art Goods Company, Portsmouth, Ohio. You stated you would be pleased to hear from any of your readers who had had experience with the above company. Your paper came just a few days too late for my daughter had just sent in a dollar to this company and when she came home she read the article in THE BUSINESS FARMER. But she has not done any work for them yet as she read the article just in time. They wanted her to do $2 worth of work and send it in, and of course she would never have heard from them again."—Mrs. R. K.

THE MARY JANE APRON

ALTHO early in March we asked the Mary Jane Apron Company of Manitowoc, Wisconsin, to send us the names of several satisfied workers who were making the big money by sewing aprons at home, they evaded our request and sent instead only the printed matter with which they bait the hook. Our readers can draw their own conclusions, as we have already drawn ours.

"NESTLE HOME OUTFIT"

Dear Publisher: Altho I am not a farmer's wife, I am a farmer's daughter, and so enjoy your paper very much.

I wonder if any of your readers have had experience with the "Nestle Home Outfit" for permant waving by "Lanoil Method" so much advertised.

ANOTHER SETTLED

Just a line to let you know that we received the amount, $12.98. I received the money right away when you got after them. Thank you very much.—Mrs. T. M., Midland, Mich.

HE THAT LOVETH SILVER shall not be satisfied with silver; nor he that loveth abundance with increase; this is also vanity. When goods increase, they are increased that eat them; and what good is there to the owners thereof, saving the beholding of them with their eyes?—Ecclesiastes 5:10, 11.

First Mortgage Real Estate Gold Bonds

Many farmers find they have securities they can dispose of and invest the proceeds in Federal Bond & Mortgage Company first mortgage bonds at considerable profit to themselves. Let us analyze your investments for you.

Riverside Oversize Cord Tires

10,000 Mile Guarantee and You Save ⅓

What more can any other tire do for you? Riverside Oversize Cords will run 10,000 miles—guaranteed—often up to 18,000 miles. What is the use of paying one-third more?

One-third on tires is a big saving. And this saving is sure—because Riverside Oversize Cords are guaranteed for 10,000 miles *service* on your car.

And this guarantee is fifty-one years old. It has back of it fifty-one years of straightforward dealing.

Quality Gives the Mileage

The big mileage of Riverside Oversize Cords over rough roads is put into them in the factory. It is the mileage built in by quality. High, thick, strong treads—*firsts* in every particular—built with the largest amount of good live rubber.

This extra Quality of Riverside Cords has made us the largest retailers of tires in this country. One user tells another. Just try Riverside Oversize Cords. You, too, may as well save one-third.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Then, if you don't find them the equal of any first-quality oversize cord made, send them back. We will refund your money.

These prices buy 10,000 miles of service—and more.

"I find your Riverside Cord tires give wonderful service. They have proved to be better than any tire I ever used and I have used some of the most expensive tires on the market. You will find me a strong booster for Riverside tires."
H. J. Armbruster, Urbana, Ohio.

"I have been using Riverside Cord tires for some time and think they are great. I have got more service out of them than any other tires I have ever used. When I need tires again I will buy the Riverside."
Alfred L. McNay, Williamstown, Ky.

"Would say that the Riverside tires are all right. I have been in the Delivery Business for ten years and find that the Riverside Cord tires last longer than other tires, even those costing a great deal more money."
Chas. Cassen, Petersburg, Ill.

THE POWER OF THE RESURRECTION

A SERMON BY REV. DAVID F. WARNER

TEXT: "His power to us-ward *** which he wrought in Christ, when he raised him from the dead, and made him to sit at his right hand in the heavenly places." — Ephesians 1:19, 20.

"WHAT hath God wrought!" This, we are told, is the first message to be send by wire. And the whole world listened. Why? The discovery of a new and wonderful power was being announced. And then other men aside from Franklin and Morse caught widened visions, and the power of electricity has been entering, day by day into the realm of human life and experience in ever increasing measure.

But God is the great broadcaster. And eighteen centuries before men had any organized knowledge of electricity, he announced to the world that a strange and mystical power had been wrought. But few men heard. Yet heaven's radio station is still working. Have you heard the message? How is your adjustment? Have you tried to tune in? But you must have the right wave length to get communicative results.

Well, the message of our text says, this power was wrought in Christ when God raised him from the dead. The resurrected Christ had made men to know that a new life had come into their midst, the power of which they did not understand. But do we yet understand? Ah, that does not matter. Do men understand electricity? But what does it matter? We know it, and feel it, and are using it to give us power and blessing. And tho a strange mystery and one that passes human understanding, we hail the resurrection of Jesus as a triumph for God and the demonstration of a new hope for man.

What strange mystery! O, yes, his disciples had seen their Master still the tempest with a word, had seen him feed the multitude with a handful of bread, and speak life into mortal flesh again; but then, this new resurrection power, this they had not dreamed of. Yes, he said he would rise again; but then, the scene of Calvary, such cruel sufferings, such ignominy, such a decided triumph for his enemies. Now, said Peter, "I go a-fishing." But soon we find this same disciple eclipsing all others in an awestricken zeal for his Christ. Forsooth, "He is risen." And Calvary only makes his reappearance more profound, deepens the disciples' impressions of Christ, and stimulates them to hither-to unknown boldness.

"Who art thou, Lord?" "I am Jesus whom thou persecutest." That was enuf. Paul has his face on the ground. We hear him lamenting, Why did I do it? Why have I gone on in this mad persecution of the Christians? Have I not seen their boundless hope and their undaunted courage? Surely, this Jesus of Nazereth is the risen Messiah. Why did I do it? Lo, he cries out of a disturbed conscience and is given a glorious vision of his Risen Lord, whom he accepts, and whom he, in turn, dies for.

Our text has St. Paul testifying of this power God wrought in raising Christ, and has him praying that we may know of the hope that it brings to us. The apostle taught the supremacy of love and the out workings of this grace so that social justice might prevail. But every Christian knows, too, his other words, "Delivered up for our transgressions and raised for our justification." The materialist has an unhallowed disregard for this teaching but St. Paul makes it the cornerstone of Christianity. Belief in the resurrection power makes that power inhere in us and expresses itself in a new life of love and works. We are spiritual idealists and believe and know that this power is Christ's spirit and influence passing over into the life of man. But faith says, too, that it is the pledge of a ceaseless heaven in the world to come.

But, are we to be but spiritual emanations or disembodied spirits sitting on ethereal clouds and singing celestial halleluiahs? "Dust thou are and to dust thou shalt return." What stark reality! And what apparent hopelessness! And so the disciples were unprepared for the bodily reappearances of Jesus and "were slow of heart to believe." But did he not walk with them by the way, eat with them by the Galilean sea, and say, "Handle me and see?" Ah, "My Lord and my God," says Thomas. We see the disciples associating with Christ's real body, but raised in incorruption and glorified.

We ascended the Transfiguration Mount to behold our Savior in full and glorified blaze. But why was he not then translated even as Moses and Elijah? Why must we follow him from that far celestial height down to the Cross and to the grave? Listen! "They (Moses and Elijah) spake of his decease which he should accomplish at Jerusalem." Not that he must die for his sins, but that he will die for our sins. Here is the mystery of the Cross. But having finished the work that mortal flesh could do, death and the tomb could not hold the body in which was the power of an endless life. Our Lord came forth with his identity unchanged, his voice and his movements the same, but in the body of his ascension; the body that is today and forevermore. So here is where the apostle gets his conception of a spiritual body, "a house not made with hands," with which all believers will be clothed. We are laid away as wasted and corrupt bodies, but Christ shall fashion anew the body of our humiliation that it may be conformed to the body of his glory.

"And made him to sit at his right hand in the heavenly places." This is the ultimate of the resurrection power. The forty days was but a halt in the way that our Lord might show himself alive by many infallible proofs. And how this re-showing did knit the disciples together in faith and heart and thus prepared them to bear his life and Gospel to the world! After this, said he, "I ascend unto my Father and your Father." And now, after sixty generations, we stand looking into the tomb of Christ and say, "He is risen." We look wistfully to the beyond and say, "He is there." There is infinite satisfaction when we shall have come into the majesty and power, the sweetness and comfort of an endless life with our Risen Savior.

Here, we remember, that friends and kinsfolk of both our Lord and the heralds of the Cross, reckoned them to be beside themselves because of the peculiarity of their life and teaching. What are they saying about you? Well, said St. Paul, "We are fools for Christ's sake." And, friends, when we believe that the spirit of the world to come is our very life blood, why need we care about being called fools. "Foolishness with men," says the converted Saul, "is the wisdom of God." Let us have more of this kind of folly.

A minister went home for the night with a rich farmer, husband of one of his members. This man had a good name and was counted one of the best members in the church. As they entered the house thru a rear shed, the minister noticed several bushels of corn hanging to the rafters. He remarked to the farmer about this corn. "Yes," said the farmer, "that is the finest seed corn I ever raised."

"If I were you I would just keep it there. You will never raise such corn again."

"You must think I am a fool," said the old farmer. "I must plant that corn in the ground or I will have no crop."

"The corn is like yourself," said the minister. "I never knew a man who had so many virtues hanging in his head as you. If only something would rattle down that seed corn out of your head into your heart, you would be a wonderful man."

A few weeks later the minister was sent for hurriedly. As he entered the house, the old farmer shouted, "Glory to God, the seed corn has rattled down."

"How did it happen?" said the minister.

"Well," said the farmer, "I was

currying my old mule, Jack, a little while ago, and he crowded me over against the stall. I struck him with the curry comb and yelled, 'get over.' Then he let drive, and do you see that scratch on my face? That is where his sharp-shod foot grazed me. Then I was horrified at being so near death, and I fell to my knees to thank God for my deliverance, and in all the fracas, the seed corn was rattled down, and now I want my life planted for God."

It pays to be a fool for Christ's sake when death is sure to come and the power of an endless life is at stake.

FERTILIZING POTATOES IN A DRY SEASON

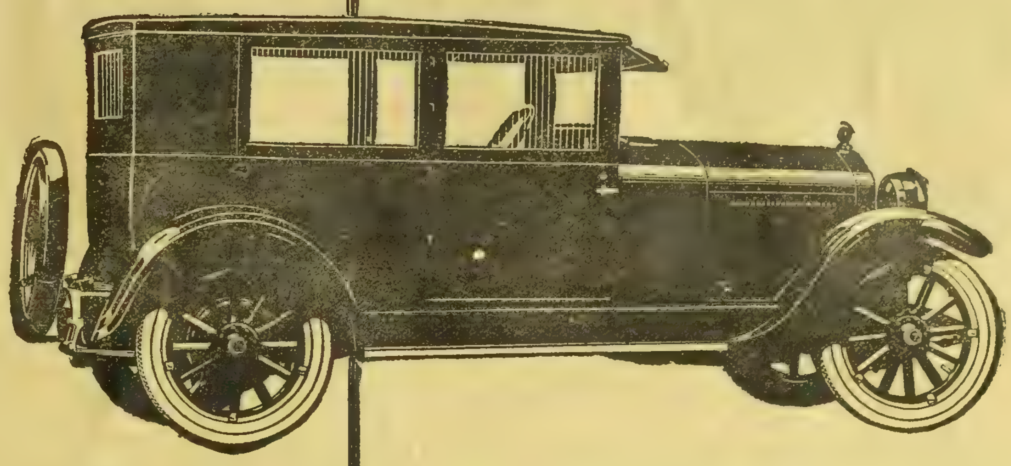
IT is comparatively easy to produce big yields of potatoes in a favorable season, but in such a season everybody gets good yields, and the big crop means low prices. The trick, of course, is to produce a large crop in unfavorable seasons when small crops are the rule. Heavy applications of fertilizer give profitable increases in most seasons, but occasionally an extended drought in July and August nullifies whatever beneficial effect the fertilizer might have had, and the farmer feels he has wasted his money, although the chances are that he will cash in on the added fertility in succeeding crops. The problem of the fertilizer user is how to get a profitable return in an unfavorable season.

Mr. Daniel Dean, a progressive potato grower of Nichols, New York, has a method of fertilizer application that apparently successfully combats the summer droughts that are rather frequent in his section. An evidence of his success is that there has been only one year since 1911 when his yield has been less than 230 bushels per acre. Mr. Dean's soil and climatic conditions are similar to those in many potato producing sections in Michigan. His methods, therefore, are at least worthy of consideration and perhaps a tryout under Michigan conditions.

Mr. Dean's theory is that the deeper you can induce the potato roots to go, the more moisture they will be able to obtain, and the better they will stand hot, dry weather in July and August. His method therefore, is first of all to have plenty of organic matter in the soil to hold moisture, and secondly, to apply the fertilizer in such a way as to encourage deep root development in the soil. He ploughs under a clover sod in the fall. Often in addition to the clover sod he ploughs under a top dressing of straw. In the spring he broadcasts 2,000 pounds of fertilizer to the acre, (eastern growers use larger amounts of fertilizers than do Michigan growers), and discs it into the soil. The fertilizer is usually mainly phosphate and potash. Then he immediately plows deeply and prepares the seedbed. The fertilizer is now well below the surface, inducing a greater root development in this lower layer than in the top layer which drys out in dry weather. The result is that the roots have a more widely developed feeding area from which they can obtain water and plant food even in times of drought.

Fertilizer, of course, is not to be wholly credited with Mr. Dean's success. You can't make U. S. No. 1 potatoes with only a grading machine or the use of fertilizer alone. As I have already pointed out, Mr. Dean takes care to maintain the organic matter supply in the soil. His rotation is potatoes, oats, and clover hay. With the plowing under of a clover sod once in three years, and top dressing with straw, he believes he can take care of the nitrogen problem without purchasing this expensive element. Farmers who are unable to grow clover would not be so fortunate.

Mr. Dean plants in drills 12 to 18 inches apart, which he believes is a factor in eliminating hollow heart. He uses certified seed, disinfects seed with corrosive sublimate, and sprays with a high pressure sprayer for fungous diseases as well as for insects. He believes in shallow cultivation and stirring of the soil after each rain to conserve moisture. He knows that high yields mean low costs per bushel and shapes his cultural methods to this end.—Ove F. Jensen.



The New ESSEX
A SIX—Built by Hudson

We Ask This Simple Test

It is an easy way to tell if the new Essex Coach gives greater value than was ever provided at this price.

Take a ride. It has answered the question for thousands. Priced $170 lower, the new Essex Coach provides a larger, handsomer body, with even greater passenger comfort than the former Coach.

And its 6-cylinder motor, built by Hudson, gives the smoothness of performance for which the Super-Six is famous.

Has Qualities of Both Hudson and the Former Essex

Steering is as easy as guiding a bicycle. Note how comfortably and safely it holds even the roughest roads at all speeds.

Gasoline, oil and tire mileage are exceptional. A further satisfaction is the low cost at which all replacement parts are sold.

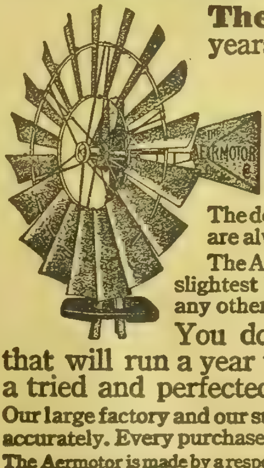
ESSEX MOTORS, DETROIT, MICH.



The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

No Odor—No Wicks *No Noise—No Smoke*

Remarkable oil range converts kerosene into gas

Bakes, roasts and cooks with a clear, blue flame that doesn't smoke, smell nor smart the eyes

The Vapo Oil Range is the stove sensation of the year. Everywhere people are talking about the marvelous oil range that generates its own gas and burns it with a clean, hot flame that is sootless, smokeless and odorless. Thousands saw it undergo almost unbelievable tests at state and county fairs.

We urge *you* to see Vapo before you buy any oil range.

Wickless, chimneyless and amazingly clean

You will be delighted with the convenience and cleanliness of Vapo ranges. There are no wicks to trim and no chimneys to burn out. Nothing to soil the hands, no soot to blacken utensils. Grates stay clean, burner stays clean. Vapo gives a service that other oil stoves cannot give. No more mistakes in cooking or baking due to slow heat or overheating.

You can adjust the Vapo flame with the patented lever valve. A turn of the lever changes the flame from a low simmering heat to an intense, clean, blue flame suitable for fastest cooking.

32 to 36 hours heat from 1 gal. kerosene

Turned up to the correct intense; blue flame the Vapo burner operates 32 to 36 hours on a gallon of oil. Turned to a simmering heat, it burns from 50 to 60 hours. This is real economy. Wherever valve is turned, it is locked by patented valve catch which prevents shifting and safeguards children.

Bolo oven gives wonderful baking results

The built-in Bolo oven, exclusive feature of Vapo cabinet models, allows fast baking if you wish, because the adjustable Bolo plate makes the oven big or little. You can bake *two* things (fast and slow) in the same oven at the same time. Perfect ventilation insures light pastry, bread and cakes.

Vapo Ranges come with right or left hand oven.

Vapo oil ranges are sold by one high grade hardware or furniture dealer in nearly every community. If your dealer has none in stock, send us his name and write for a copy of our latest folder; and we will see that you are supplied.

The Children's Hour

DEAR girls and boys: Are you going to be just like your mothers and fathers when you grow up; are you boys going to farm just like your fathers do, and are you going to try to do better? I do not mean that your father is not a good farmer or that your mother is not a good housekeeper—not by any means—but I hope that you will learn how to do the work in a still better way. For example, maybe your father could not attend the agricultural college when he was young and, as a result, he learned what he could from his father and from the neighbors. Now you can go to the M. A. C. and learn many things about the business of farming that your father never knew, and thus you will have the information to help you become a better farmer than your father. The same may be true in the house. Mother may have never attended college or had the good books about the work she has to do. No doubt mother is a better housekeeper, does things in a more modern way, than grandmother did but you have wonderful opportunities to do still better. And you all owe it to the world to do your best, no matter what your job may be. Whether at work or at play, in school or at home, be honest and upright and put your best efforts into whatever you may be doing.—UNCLE NED.

SPRING

Willow banks a shining,
  Gladening the year.
Pussy willow catkin,
  Tells us spring is here.

Blue bird songs a chiming,
  Happiness and cheer,
Hear the rippling music,
  Telling spring is here.

Marshland frogs a croaking,
  Everywhere, you hear.
We should all be happy,
  In the spring time of the year.
—By Norman O. Sibley, (Age 13),
Hale, R. 2, Michigan.

OUR BOYS AND GIRLS

Dear Uncle Ned:—Well here I am again, this is the second time I have written to the M. F. B. As I was looking over the March 15th issue, I noticed in The Children's Hour section that your readers could write a story, so I am enclosing a story which I have just finished writing. If you think it fit to publish, you may do so, that is if Mr. Waste Basket don't get it. I read many books and find them very interesting, so I am trying to begin story writing. Do you think I will make a very good story writer, Uncle Ned? This is a short story that I am enclosing. It is called "Mother's Day on a New England Farm." I guess this is all for this time. Wishing you good luck, I am, your niece,—Marie Wagner, Memphis, Michigan.

"Mother's Day on a New England Farm"

Once there lived a little girl whose name was Mary, her mother was very poor. At the beginning of this story Mary was nine years of age. Mary's father died when she was two years old. The farm on which Mary and her mother lived was only a small farm, and her mother spun flax and wove cloth for the neighbors, in order to make a living for herself and daughter. They lived in a house built of logs. It contained two rooms which were used as kitchen, living room, and bedroom. The kitchen and living room was a large room, at the end of the room was a fireplace. It was used to cook things in, as we use a stove now, and for heating purposes also. The room also contained a table and three chairs, in front of the fireplace was placed a rag rug made by Mary's mother. The bedroom contained a bed, chairs, and a small stand. This furniture was all made by Mary's father after they moved to New England.

Mary and her mother got up early one morning in May. The sun was shining and the sky was clear. When Mary had eaten her breakfast she asked her mother if she could go to the woods and pick flowers. Her mother said she could go if she was very careful not to lose her way, so Mary went down to the woods.

The next day would be Mother's Day, so Mary thought she would go to town and sell the flowers. When Mary had picked her basket of flowers she started for home. When she got there, she asked her mother if she could go to town, and her mother said she could. That afternoon Mary got ready and put her flowers in a basket and started for town. When she got there she went to a florist and asked the florist if he would buy her flowers. She did not think they would buy them, because the flowers were wild, and there were so many more prettier ones than hers, but to Mary's surprise the florist bought all of her flowers, and gave her money also for picking them.

When Mary arrived home, her mother was looking for her, so she gave her mother the pay which was ten dollars, which seemed very much to her mother. This made Mary's mother have a happy Mother's Day all from little Mary.

Dear Uncle Ned:—Here I am six months in bed, and not able to get up yet. I hope I am the first one to enter that "scramble", and I wish you would mail my letter to some girl that I would be able to correspond with. I have written several letters to girls, but I have received no answers yet, but I wish all the cousins who see this letter would write to me, and I surely will answer every letter, regardless whether it is one or one hundred, so come on cousins, let me hear from you. I am a farmer's girl, 13 years old. Have brown bobbed hair, hazel eyes, am 5 ft. short, and weigh 90 pounds. I have two brothers, and one sister. My sister and one brother go to high school. As you will see by this letter, I live in the wonderful big (?) town of Emmett, and all of its inhabitants think it the best town on the map. I have so much of the Irish that I feel like an Irishman myself. Well, Uncle, I hope to see this letter in print, and that some of the cousins will write to me. Your niece,—Beryl McKenzie, Emmett, R. 2, Michigan.

Dear Uncle Ned:—Well, here I am again! I suppose you think I have the nerve of a "Government Mule", as my last letter was only printed a few weeks ago. Well about two days after the M. B. F. came, the letters began to pour in, and are still coming. I have received eighteen so far. I am answering them as fast as possible, but Oh! what a job. But then I sort enjoy it. Our mailman is a jolly, middle-aged man, and when the letters were coming in such a shower, he said "What's up, someone proposing to you?" But Uncle Ned knows it isn't proposals, don't you Uncle? Well I wonder how the weather suits the cousins? Pretty cold here tonight, but we have been having nice weather considering it is February. Oh Uncle, since I wrote last, I have a little new nephew. Born on January 3rd. His name is Robert Lee. but they call him Bobby. I also have 2 nice little nieces; Betty and Marie. I have lots of fun sliding down hill, although I am getting rather large for that kind of sport, don't you think so Uncle? But I sure enjoy it, and you know "We're young only once." I noticed a letter in the last issue from Mary Zietz. I got a letter from her, and she is a twin of mine. I also got a letter from a girl 16 years old, who has made a complete radio. Now boys, what have you to say to that? You see there are some girls who are as clever as boys. Well Uncle, I guess its time for me to stop my chatter, and go to bed. With love to all.—Ruby E. Fletcher, Pellston, R. 1, Michigan.

Dear Uncle Ned:—I was just reading the Children's Hour, and thought I would try my luck at it, as I have been in bed for three days with the measles. Do you like maple sugar? My father has a woods, and it is just back of our farm. He has rented it for three years now, and he has got it for another year. He says he would not miss making his syrup for anything. Last year my mother canned over one hundred quarts. The woods belong to Mr. Allen, of Alma, Mich. Wish you could be here to enjoy it with us. I am not describing myself, as I do not think it necessary if you do not see me. What is your chief record that you like? I think "Swinging Down the Lane" is very pretty. My sister has a Sonora, and lots of records. Most every night she brings home a new one. I will close with some riddles: What binds two together yet touches only one? What is the bigger? Mr. Bigger, or Mr. Bigger's baby? The baby is a little Bigger. I wish the nephews and nieces would write to me. Your want-to-be niece,—Ada Stone, Ithaca, R. 4, Michigan.

UNCLE RUBE SPINACH SAYS

SOBBIN', ETC.

FOLKS'ES do you like sobbers? By that I mean, fellers 'at sob, whine, complain 'bout their work, 'bout their job, friends, an' almost everythin' else. Oh I've seen 'em, lots of 'em. Fellers 'll run a month to git a job, beg for it, pray for it, demand it, an' everythin' else, to git it, an' then, after they land it, they begin to sob 'cause it ain't a sleepin' job, or a job that has no work 'tached to it. As a feller sed, "more work and less of it" an' to most of our young fellers, the less, the better. Of course I know I was young once, ah, so many years ago it wuz—young as anybody then an' I guess I knew more'n most any young feller in our community—Well I didn't know how little I knew, little as I wuz, 'bout 35 years old—after that I knew less an' learned more'n I ever 'spected to know. But good friends, no matter how much or how little I know, I've never been a sobber—the sun always shines for me. I don't always see it,—a cloud may come between the sun and me—but I know it's there, shining bright, an' the cloud is just like a woman's veil hiding the beauty that lies behind.

Why sob 'bout our job? We don't have to work! You an' I can starve as well as anybody. My dear young fellers, the boys, like the boys that come to work with me, or boys 'at work on the farm—in fact, boys 'at work anywhere, in any place, under any conditions,—don't ever sob 'bout your job. If you don't like it, quit it, let someone come in that might like it. Don't slight your work. Even on the farm its possible to slight your job; you know what I mean, don't you boys? Weeding onions, parsnips, anything 'at requires skill, yes'n eatin' of the things you raise! It sure requires a strong will to keep from eatin' too much, an' yet boys sob 'bout farm life—its too hard, too many hours, too many cows to milk, hogs to feed—Gee Whitaker! Sob? I'll say they sob. If they realized that age would sometime git 'em, I jest kinda think mebbe they'd be less sobbin'.

Dear young fellers, I am thinkin' there's quite a lot of you takin' it here an' there—jest take the advice of a old feller 'ats yet to pass his next birthday, an' don't ever sob, don't be a whiner, don't be anything 'ceptin' what the Lord intended you to be, an' with these few remarks guess I'll close for now. Now you've got it same as I, an' its enough, an' most too much. Cordially yours.—UNCLE RUBE.

WHAT FUNDS ARE SPENT MUST FIRST BE RAISED

(Continued from Page 3.)

1916, 1917 and 1918 could maintain themselves and their institution under efficient management through the prison industries, 300 prisoners in their places now could also do the same thing. It would simply mean an enlargement of the industries, and facilities and labor for larger industrial activities means better advantages in such business, according to the logic of the industry."

What Can We Do?

With taxes unbearably high and public debt increasing at an alarming rate it is high time that we studied these facts. The light of relentless publicity and the purifying effects of informed public opinion upon them cannot help but have a beneficial effect. Let us stand for economy and also for a just and carefully devised system of distributing the burden of the necessary taxes which will remain even after the utmost economy has been applied.

Mr. Brake, we thank you for the excuse given by your inquiry for us to discuss in this detail some of the present financial problems of the state. But problems of local taxation are even greater, and we plan to take them up in our next article.

CEMENT

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS—Easter! Spring! And all things beautiful seems to be the message that the word Easter usually brings to us. A wonderful old world, after all. Our good Lord has so arranged this earth that we may enjoy four beautiful seasons—each one holding a certain charm. Easter and Spring spells new life and new visions for a wonderful prosperous summer and fall. Let us all try and make this a happy and glorious season for our families by doing intelligently those things that will help make our home a place where life will be worth living.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

EASTER WEEK

SEE the land, her Easter keeping,
Rises as her Maker rose.
Seeds, so long in darkness sleeping,
Burst at last from winter snows.
Earth with heaven above rejoices,
Fields and gardens hail the spring.
Sloughs and woodlands ring with voices,
While the wild birds build and sing.

You to whom your Maker granted
Powers to those sweet birds unknown,
Use the craft by God implanted;
Use the reason not your own.
Here, while heaven and earth rejoices,
Each his Easter tribute bring—
Work of fingers, chant of voices,
Like the birds, who build and sing.
—Chas. Kingsley.

DAY DAWN—A QUIET TALK ON EASTER

OUT of the east comes, new light after the darknes of night—and we call it morning. Out of the Easter morning comes a wonderous new light—the light of life—after the darkness of sin's night—and it has been the first gleam of a morning, the morning of a new day, for all men.

Contrasts make things stand out. Black touching white seems blacker, and the white looks whiter. Sorrow makes joy seem gladder. Joy makes sorrow seem sadder. The deeper the sorry, the greater is the uplift of joy following after the first doze is over.

WORTH-WHILE THINGS

ALL adults who lived the year around on farms, in their youth, but who are at the present time incarcerated in cities, find that much of the conversation of their present contemporaries relating to the stage, popular plays, actors and actresses of a decade or two age, has few associations for them. Sometimes they feel keenly the fact that they were deprived of the glamour and fascination of the theatre.

There were, however, two substitutes for the magical amusement they missed. One of the most worth while things of life is the family reading circle. On many a winter evening the writer remembers listening to the father of the family read aloud to the mother who was busily sewing or knitting, and to the children who sat enthralled in the simple farm living room, while Howard Pyle's stories of Robin Hood or Mary Mapes Dodge's Donald and Dorothy kindled imaginations and made the coming of bed time a dreaded event.

The library was a meagre one, but Christmas and birthdays added to its size and the books were so persistently and devotedly read that they were "reduced and worn to the very threads and glues of their binding"; the best of it was that the whole family read and loved the same book.

Then there was the ride in the straw-filled sleigh, generously supplied with old blankets, to the school entertainment in which the older children took part, and the babies who were just learning to walk, ambled around at their own sweet will. The pantomine of Maud Muller read aloud, thrilled the audience. How lustily the children applauded the silent performers!

But it was a family reading cirlcle! A family sleigh ride! And the memory of these events is so vivid that the writer believes this little noted or greatly valued service rendered by farm homes in making it possible for the family to enjoy recreation in common, should be mangnified until its practice become more nearly universal.

MAKING DISHWASHING EASY

IS dishwashing really such a disagreeable task? Or do we think it is so because we work with poor equipment and according to methods that are not really satisfactory?

Before we discuss equipment, let us say a few words about some of the general factors that enter into the dishwashing problem.

Putting pots and pans to soak as soon as they are emptied makes it easier to wash them later on. Also, the scraping and correct stacking of dishes means a much neater job all the way through, as well as a real saving of time and labor. Too often does a woman pick up a random cup from a helterskelter conglomeration of dishes, wash that, then reach for a saucer, then perhaps a plate, and so through the list, until eventually all are washed. Meanwhile she has had to reach for and pick up so many dishes that she has changed her motion a number of times, with the consequent loss of energy and time. Had she stacked her dishes neatly and conveniently near to her dish-pan, she would have greatly expedited her work.

The right-handed worker will find it easier, as a rule, to have her piles of scraped dishes at the right of the dish-pan and her drainer at the left.

While water may not truly be called a part of the equipment, its importance in this connection is easily recognized. No one can exepect to have clean dishes if she attempts dishwashing in the proverbial teaspoon of water. Hot water, and plenty of it, is needed.

If the water is hard, some kind of water-softener is necessary. Borax is one of the milder softeners and is less injurious to the worker's hands than are some others. In the case of very hard water, resort is usually made to some such softener as washing-soda. No more should be used than is needed to "break" the water so that the soap lathers freely.

CAREFUL THOUGHT NEEDED IN CURTAINING WINDOWS

NOTHING impresses a visitor, be it man or women, more on approaching a house than the appearance presented by its windows.

There is nothing else in the furnishing of a house which is so apparent on the exterior as the treatment the windows have received, therefore is behooves us to give them careful thought.

Great expense is not necessary in curtaining windows. Charming effects may be obtained with cheese cloth, with flour sack material joined in decorative ways, or with the lower cost drapery materials. Scrim, marquisette, net and muslin are some of the drapery materials which may be had in inexpensive qualities.

To some people certain grades of scrim look not unlike a good quality of cheese cloth. The test of a really good scrim, however, is the slightly hard or scratchy feel of the material as it is rubbed between the fingers, due to the thread or "yarn" of which the material is woven being tightly twisted. The cheaper grades of scrim do not respond to this test.

Many of these inexpensive curtain materials some with a wide selvedge to be used as a finish instead of a hem. There is no objection to this if great care is taken in laundering, but if ironed carelessly the body of the curtain is apt to stretch, leaving the selvedge tight, thus preventing the curtain from hanging well. It is therefore a good plan to purchase the material with a selvedge or ordinary width, trimming off one selvedge on each curtain and making even hems along these edges. The hems should be placed towards the center of the window. There is no objection to the selvedge being left on the sides of the curtain next to the window frame.—Blanche E. Hyde, Clothing Specialist, Colorado Agricultural College.

FOR THOSE UNEXPECTED GUESTS

A CLEVER woman with a large rambling farmhouse in the country, discovered a convenient way of caring for her guests. It was not unusual to have five or six extra, many of them arriving unexpectedly and being persuaded to stay. There were always plenty of beds, couches and swings which could be pressed into service, but there was only one bath.

So a large shelf was fitted into the bathroom, and on this were six-small baskets—little round market or fruit baskets were used—and around the rim of each was painted a band of a different color. In each basket was placed a tiny cake of soap, a small tooth-brush with a little glass, a tiny tube of tooth-paste, and a wash-cloth with a border corresponding to the color of the basket. On a hook under the shelf—one for each basket—hung a towl, similarly colored, sewed to one side of which was a tape by which to hang it.

These were always ready, and there was never any confusing of toilet articles, for each guest was given a basket in which to keep his things, and kept it as long as he remained.

Since the house was built before days of electricity and had still the old-fashioned coal-oil lamps, some emergency method of lighting the guests to bed also seemed necessary, as the living-room lamps were too large to carry about conveniently. So six old-fashioned sconces, each holding a hand-dipped candle to match the color of the basket, were arrayed conveniently on the shelf so that each guest could find his light at hand. Several small lamps were of course provided for those who chose an hour of reading before retiring for the night.

DID IT EVER OCCUR TO YOU—

THAT an umbrella-stand with a pannel door opening outward may replace the newal-post at the front of the staircase?

That the wood-box for an open fire-place may be replenished by using a premitive elevator or hoisting tackle secured beneath the floor, through which has been cut a trap so that the wood-box may be pulled into place from below?

That a settee can be made from a bedstead by using the headboard as the back and cutting down the side-pieces to sixteen inches in length and attaching the foot posts to them? The space between the frame may be laced with closeline in lieu of a spring upon which a cushion is placed.

To utilize a small cider-keg as a base for a lamp? The frame of the shade may be made of split bamboo or wire and covered with oiled silk or a printed fabric shellacked and varnished.

Personal Column

Easter Suggestions.—Will you please accept this little Easter idea and pass it along as fast and as far as ever you feel it worthy. I have just as late as last Easter used for my children the idea of an eatable nest for the table on Easter noon day meal. Take the long fine strands of macaroni and while dry, have water in a large kettle or boiler, boiling hard, in which has been dissolved a good plenty of butter coloring, or yellow color, known as vegetable non poisonous coloring. Let macaroni boil real hard for 5 minutes, then add salt, and any good seasoning, and when this is put in do not stir any but let all continue to boil for 15 minutes more, then form into a nest on oval or meat platter. Then have salad made from ground hard boiled eggs, and salad dressing, and stuff colored egg shells, and fill in nest with same. This resembles real straw and is a delight to every one viewing the table. It may be found best to build a portion of nests at a time. I mean go all the way around, but build upwards a little by little, as each cools, then a rough outside may be added to all to finish and make like a real straw nest. This is my own idea and I have tried it out with my own ability, and find it a best new way.

Also there was a demand for a name for an Easter program or performance of school children, and I gave the name "Come to Our Easter Glow," and we had everything bright, and glowing, even to tinsel and gilt in the costumes. Let me say the title was just what they wanted. Please thank the legal department of M. B. F. for what they are doing for me.—Louis Lindley.

Too Much Smoke.—If Mrs. J. A. T. of Allegan, Michigan will place slices of the bacon in cold water for a while before frying, I think she will find that some of the smoke has been removed. If the bacon is freshened too much, it can be resalted when put to cook. When we buy bacon at the store it is usually too salty for us, and I treat it as above, to remove excess salt, and find that the smoke is also removed. Hoping this reaches Mrs. T. in time to be of help to her, I am,—Mrs. R. F., Elsie, Michigan.

Making Horse Radish.—Having found so many good things in The Farm Home Department of our paper, I wondered if I might ask if anyone of our department know how to fix horse radish so that it could be kept for winter use. I have tried and failed. Mine turns dark colored.—Subscriber's Wife.

Has Any Reader This Song?—I would like to know if any reader of M. B. F. has the words of the song "There's Always Room at the Top." I don't know if that is the right title of the song or not. We sang it in our school years ago, and it comes to my memory quite often, but I don't remember all the words, and I would like the music with it, if it were possible. I would pay for it.—A Reader.

"The Face Upon the Bar Room Floor"—Will someone send in this poem for one of our readers. I have looked in our local library and cannot find it.—Annie Taylor.

"Borax and Flour Cleaner"—In a shallow two quart vessel put one pint of water and one-half ounce powdered borax. Bring the water to a boil quickly, then while boiling, stir in one pound of flour, the vessel still on the stove. When the paste is done, pour onto a clean board and knead the mass for some minutes, as you would bread. When it is ready for use, try it and if it crumbles too much, it is either lacking in water, or has too much borax. If it is sticky there is too much water in it or not enough flour. Take a piece the size of your two fists and rub on the shade with sufficient pressure to cause the cleanser to crumble away a little rubbing with even strokes downward. Work it in your hands so there will be a fresh part always scraping off the dirt. Be sure and dust gently the worst of the dust off the shades before beginning. Cleaning with old stale bread is another very old method.—R. G.

Rupture Cure—2 ounces Iodine, and 1 ounce of Camphor, mixed. Rub twice a day on rupture. If it blisters, omit one day. Use 3 weeks, then once a day until cured A truss may be worn during this time. When cured, leave truss off occasionally. In case of a bad cough or cold should it return, apply the remedy. This remedy has cured some very bad cases.—A Subscriber.

—if you are well bred!

Street Courtesies.—The place next to the curb for the man walking with a lady on the street is the traditional rule still generally observed. In cities nowadays, it is usually not insisted upon. The inner was the "protected side", and modern urban conditions have done away, more or less, with the need for special protection. The rule of precedence when a man and woman are together in public is simple. The man precedes the woman wherever inconvenience, difficulty or danger may be supposed to exist: in passing along a thorny or marshy path or a broken stretch of road in the country, in forcing a way thru a crowd. A man allows a woman to precede him when entering a doorway, an elevator or a conveyance. He precedes her to aid her when they leave any vehicle.

Menu for April 12

Pea Soup Rice
Mock Goose, Apple Sauce
Stewed Celery
Pineapple Salad
Rhubarb Pie
Coffee

Mock Goose.—Two cup bread crumbs, two cups dropped black walnuts, two cups boiled rice, six hard boiled eggs, three raw eggs, one tablespoon grated onion, salt, pepper and grated nutmeg to taste. Put bread crumbs in saucepan with two cups water; cook for a few minutes; add hard cooked eggs, chopped; take saucepan from fire and add black walnut meats and rice. When this is well mixed, add raw eggs slightly beaten, and seasonings. Mold as near like a goose, making the legs and wings of material pressed over a piece of dry macaroni and stuck in sides where they belong. Brush over with melted fat and bake in oven one hour. Serve with apple sauce.

RECIPES

Bread Pudding.—Two cups of bread crumbs, one quart scalded milk, one-fourth cup sugar, three tablespoons butter, two eggs, one-half teaspoon salt, one teaspoon vanilla, one cup raisins. Soak bread in the milk, cool. Add sugar, butter, beaten egg yolks, salt, vanilla, and raisins. Bake 40 minutes, cover with a meringue made of two stifly beaten egg whites, and two tablespoons sugar. Brown.—Mrs. F. S.

Lemon Cookies.—One ounce carbonate of ammonia, one and one-half drams of lemon oil, one pint of sweet milk, one cup of lard, three cups of granulated sugar, three eggs beaten separately. Soak ammonia over night in the sweet milk, and mix the flour and lard like pie dough, then add other ingredients. Buy the ammonia and lemon oil the day before you plan to bake cookies, as it should be fresh.

Graham Gems.—One egg, one-half cup of sugar, one heaping teaspoon melted butter, one cup sour milk, one teaspoon soda, add enough graham flour to thicken, and drop into gem tins.—G. R.

Eggless Cake.—One cup of brown sugar, one-half cup lard, one cup of sour milk, one teaspoon soda, two tablespoons of molasses, one teaspoon salt, one teaspoon cinnamon, two cups of flour.—G. R.

Banana Pie.—One-half cup milk, one-third cup sugar, two heaping (not too large) tablespoons flour, two yolks of eggs, bring milk to boil, thicken with flour and egg yolks, add sugar, remove from fire and cut two bananas fine, stir in the hot filling, pour in a pie shell, make a meringue of whites of the two eggs, add two tablespoons sugar, and put in oven until nice and brown. Heating in oven makes flavor of bananas go through the whole pie. More sugar may be used if desired.—A Subscribers Wife.

Date Pie.—Line a pie plate with crust, put enough stoned dates to cover bottom, add one cup brown sugar, and one cup water. Bake with upper crust in a moderate oven. Whipped cream to cover when cool enough.—Mrs. H., Bayshore, Michigan.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Thou shalt increase my greatness, and comfort me on every side.—Ps. 71:21.
Behold, now is the accepted time; behold, now is the day of salvation.—2 Cor. 6:2.

Never speak of an opportunity as being lost. There is no such thing. All possibility awaits you now. The law of good, like the law of gravity, operates constantly for everyone, and nothing one can do can change its activity in our behalf with such obstacles as self righteousness, false ride, hatred, and other evils.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor

114.—Exchange Red Amarylls for Peony, Phlox, Iris, or any hardy flower.—Mrs. Chas. Sass, Clayton, R1, Michigan.

FASHION BOOK NOTICE

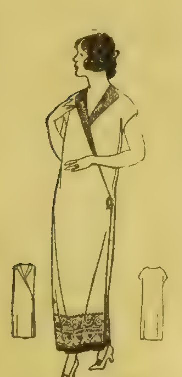
Send 10c in silver or stamps for our UP-TO-DATE SPRING AND SUMMER 1924 BOOK OF FASHIONS, showing color plates, and containing 500 designs of Ladies', Misses' and Children's Patterns, a CONCISE and COMPREHENSIVE ARTICLE ON DRESSMAKING, ALSO SOME POINTS FOR THE NEEDLE (Illustrating 30 of the various, simple stitches) all valuable hints to the home dressmaker.

4688-4418. The Season's Popular Style—For sports wear, for business or street costume here portrayed will be ideal. White flannel with binding of black suede would be very striking and "sporty." Serge with a simple finish of machine stitching and with collar and cuffs of linen or organdy make a neat business suit in this style. The Blouse Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The Skirt is cut in 7 Sizes: 16, 18 and 20 years for Misses, (25, 27 and 29 inches waist measure) and 31, 33, 35 and 37 inches waist measure for Ladies. 2¼ yards at the foot. To make this costume for a medium size requires 4¾ yards of 40 inch material.

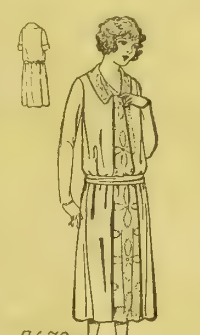
4670. A Popular Style for Slender Figures.—Bordered goods, embroidered crepe, kasha and linen would all be attractive for this model. The dress is in wrap style. The fronts are turned back to form revers. The closing may be from left to right or the reverse. One may have this style with the short sleeve cap, or entirely sleeveless. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 4¾ yards of 36 inch material. The width of the skirt at the foot is 1½ yard.

4679. A Charming Frock for Juniors and Misses.—Silk and crepe could be pleasingly combined in this model which is also nice for linen, figured crepe or printed voile. One may have the sleeves in elbow length, or in wrist length. The Pattern is cut in 4 Sizes: 14, 16, 18 and 20 years. A 16 year size requires 4 yards of 40 inch material. To make as illustrated will require 3¼ yards of plain and ¾ yard of figured material 40 inches wide.

4681. A Comfortable Coat Style.—This is a good model for covert cloth, for heather mixtures as well as for pongee, kasha, twill and velours. The Sleeve is new and very comfortable. This Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. A 12 year size requires 3¼ yards of 40 inch material.



4670



4679

4692. "Peter Rabbit' and His Spring Suit.—Here is a well known nursery friend, ready for the Easter Parade, with a new Jacket and Overalls. One could make the Jacket of satin or velvet, and the Overalls of flannel, jersey or linen. The Pattern includes the "doll" and the garments. It is cut in 3 Sizes: Small 12, Medium 16, Large 20 inches in length. A 12 inch size requires ½ yard for the "doll" and ⅞ yard for the jacket and overalls. To make as illustrated will require ½ yard of 27 inch material for the Jacket, and ⅜ yard for the Overalls.

4691. A Smart "Early Season" Jacket.—Short "coats" are very popular, and lend themselves to attractive developments in silk, satin, kasha, twill, and other wool fabrics. Linen and silk alpaca would be fine for the style here portrayed. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 2⅜ yards of 40 inch material.

4689. A Comfortable Corset Substitute.—Satin, sateen or drill are good materials for this model. It is a style that is suitable for slender and stout figures. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 1 yard of 36 inch material.

4685. A Very Attractive Frock for the Growing Girl.—Wool crepe, pongee, linen or gingham, could be used for this model. The closing is under the plaits in front. The trimming folds may be omitted on sleeves and waist. This Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 10 year size requires 2½ yards of 40 inch material.

JELL-O

JELL-O

America's most famous dessert

—for a treat

The plainest meal becomes festive when there is Jell-O for dessert. The family, particularly the children, will love it. Jell-O looks so pretty—sparkling and clear. And tastes so good—sweet and fruity. All you need to do to prepare Jell-O is "pour water." And it is economical; we don't know what good dessert could be cheaper. Ask for a Jell-O Recipe Book and give the family some treats.

THE GENESEE PURE FOOD COMPANY, Le Roy, New York

NEAPOLITAN JELL-O

Dissolve a package of Lemon Jell-O in a pint of boiling water. Pour two-thirds of it into a mould of proper shape. When it has set, whip the rest, pour it on and let it harden, Dissolve a package of Strawberry Jell-O in a pint of boiling water. When it is cold put two-thirds of it, a spoonful at a time, on the Lemon Jell-O. For the fourth layer, whip the rest of the Strawberry Jell-O and pour it on the hardened plain layer. All layers must be hard before others are added.

Reliable Transport

During almost every winter there comes to Michigan at least one period in which all inter-city transportation fails, except that furnished by the State's 24 steam Railroads. Such a period followed the snowfall of February 19, 1924.

During that period, traffic was suspended on even the most extensively traveled trunk highways. Automobiles, trucks and buses either remained indoors or were deserted and left in the drifts, awaiting aid from the highway authorities.

Yet, throughout this entire period, no community in Michigan suffered for food or fuel. For the railroad trains moved, carrying the freight and passengers entrusted to their care. Railroad men fought day and night against the storms, that this service might be provided.

The railroads consider it a compliment that Michigan always expects good railroad service, even complaining occasionally, it mid-winter trains vary from fair-weather schedules.

The expenses of this service under storm conditions are always excessive—and the state pays no part of the bill as it does for highway snow clearing. Railroad men incur the hardships and railroad capital pays the bill.

Will you recall, next July, that the Railroads hauled in your winter food and fuel despite 6 foot snowdrifts which shut off other means of transportation? Courage and railroad earnings did this—not your tax money.

RIGHT OF PEDESTRIAN ON HIGHWAY

(Continued from Page 6)

and it is impossible to give and definite advise without being presented a definite statement of facts.

I suggest that you consult some local counsel, or if your interest is merely academic, you should secure some text book on highways.—H. Victor Spike, Assistant Attorney General.

INDEPENDENT SUGAR COMPANY

I am writing you in regard to the Independent Sugar Co. of Marine City. Have they reorgnainzed and who is the head of it? Are they reliable? Do you think I would be safe in putting in beets for them? I lost nearly $500.00 in the old company when Handy Bros. were managing it and I feel a little suspicious.—C. L., Marlette, Mich.

—We do not know of any stock of this company being offered for sale, and we are in no way interested in selling any stock. It may be possible that someone is endeavoring to organize a company for the purpose of purchasing the plant. If that is true, we know nothing about it.

The plant of the company is for sale. The Bond Holders would be very glad to sell the property at a price which will reimburse them for their investment and the expense they have been put to in the way of taxes, etc.

The Marine City Sugar Co. under the auspices of the Bond Holders Protective Committee is now writing contracts for acreage in the vicinity of the plant, which will be sold with the plant so that the purchaser may have beets to run the factory during the coming campaign. These are bona fida contracts, and the farmers can be assured that they will be carried out in every particular, and that they will receive cash for their beets in the usual course of business.—Geo. E. Wedthoff, Sec'y-Treas., Bond Holders Protective Committee, present owners.

AVOID EXPENSE OF FORECLOSURE

In case of foreclosure under the Federal Farm Loan Act, who should start action, the Federal Land Bank or the local association? We have a case in our association of a farm, on which there was a loan made, being sold to a party who has allowed it to be returned for taxes. Should the local association take up the tax title by paying the delinquent tax out of its own funds, thus buying the farm in time, or let the federal bank attend to the matter? It would seem that in case of foreclosure the federal Bank is the proper party to start action since they have all necessary papers to do this.—H. C. B., Bellaire, Mich.

—If the owner's equity in the farm is worth enough to justify it, I would suggest that you purchase the farm and pay the taxes and pay off the mortgage, and thereby aviod the expense of foreclosure proceedings, which expense would eventually come out of the owner's equity, in case the bank took this action.—Asst. Legal Editor.

WOULD COMPENSATION GO TO CHILD?

A widow receives compensation for the accidental death of her husband. She has a little girl. If the widow dies without a will, would the compensation go to the child without going through court? Your answer will be greatly appreciated. We could not get along without the M. B. F. any more. Thanking you.—Mrs. L. J. L., Wolverine, Mich.

—Compensation would be payable to the child as a dependent, and without the necessity of any court action, if it were under 16 years of age at the death of the mother. If over 16 years and not physically or mentally incompetent, it would not be entitled to compensation.—Asst. Legal Editor.

Now You Tell One

An Irishman, an Englishman and a Scotsman were all out of work. They traveled together in search of employment, and came to a farmer's house and applied. The farmer said whoever could tell the biggest lie could have a job. The Englishman said he went to the North Pole in a tub. The Scotsman said he swam to the South Pole. The farmer then asked Pat, "Well, Pat what is your lie?"

"Begorra, sir" said Pat, "I believe these lads." Pat got the job.—Winnipeg Tribune.

MICHIGAN CROPS

"SPELTZ" OR WHITE EMMER

I am writing to you in regard to Speltz. Does Speltz do well in this locality and is it good for all kinds of stock? If so, where can I get good seed? Will sweet clover do well on ground that has never had sweet clover or alfalfa on it? Would you recommend sowing sweet clover in corn after the last cultivation? Does spring wheat do well in this locality?—O. McC., Mancelona, Mich.

—Several thousand acres of "Speltz" or white Emmer are grown annually in Michigan. The true Speltz is grown to a very little extent. The White Emmer, commonly called "Speltz" gives comparatively good results on light lands or on soils too poorly drained for good oats, barley or wheat growing. On well drained soil of average fertility, Speltz is outyielded by wheat, rye, oats, or barley.

White Emmer is planted in the spring as early as possible. Two bushels of seed per acre is needed. When threshed the chaff adheres to the kernels. It is fed in a similar manner to the feeding of oats or barley. It furnishes good stock feed and is highly appreciated by poultry men. Dependable seed can be secured from the Farm Bureau Seed Department, 221 N. Cedar St., Lansing, Michigan, or the S. M. Isbell Company of Jackson, Michigan.

In planting sweet clover on ground where it has not been grown previously, the seed should be inoculated with the proper culture, which can be secured from the Department of Bacteriology of the Michigan Agricultural College, East Lansing. The price is 25c per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Directions for application accompany the material.

Best results come from sweet clover seedings made in early spring, using fifteen pounds of scarified seed and not more than a bushel of oats or barley as a companion crop. Occasionally good results come from seedings made in corn after the last cultivation. Such seedings are much more likely, than spring plantings, to be seriously injured by drought.

Spring wheat will give good results on the heavier soils in your locality. On the ordinary loams and lighter soils, spring wheat suffers greatly from summer droughts and will not yield as well as oats or barley. The Marquis variety is the highest yielder.—J. F. Cox, Professor of Farm Crops, M. A. C.

COLORADO'S CHAMPION JERSEY IS FROM MICHIGAN HERD

A. H. DONALDSON of Tyrone township, Livingston county, has been a member in cow testing association work for the past two years. Mr. Donaldson's life work has been to breed and keep high class Jersey cows. He is a firm believer in desiring to know that each animal pays for its feed and returns a profit over the year's time. His good purebred Jersey herd is known beyond the confines of his township and county and even beyond the boundaries of Michigan. Colorado has a champion butterfat producer that originated in Mr. Donaldson's herd. The living grand champion cow of Colorado, a purebred Jersey six years old, Cristine of Elm Place, 395208, has just completed a 365 day record on twice a day milking, making 14722 pounds milk and 778.6 pounds butterfat.

Mr. Donaldson is not leaving all of the good ones go out of his hands. He has a full sister to this cow in his herd that is making a very good record in the cow testing association work. To know the true value of cattle and to be a true breeder of good livestock is a strong asset for any farmer. Mr. Donaldson with his Jersey herd is making a strong record in practicing the best methods to improve his herd in every manner. He uses the best of purebred sires and grows abundant alfalfa hay to feed his well bred cows.—A. C. Baltzer, Ext. Spec., M. A. C., Lansing, Mich.

Chinaman—Tellee me where ra'lroad depot?

Citizen—What's the matter, Kan Lee? Lost?

Chinaman—No. Me here. Depot lost.

McCORMICK-DEERING

EVERY Spring, more farmers are turning to the tractor as the real key to farm profit. The need for more yield, the need for saving precious time, the need for cutting out all surplus expensive labor—for these the logical remedy is *tractor power.*

Tractor owners have increased over 7500 per cent in the United States in the past ten years. The trend of farm power goes onward, never backward. The man who returns to old methods, after tasting the flexibility, the freedom, and the profit in tractor farming, is so rare that he may be looked upon with curiosity.

McCormick-Deering 10-20 and 15-30 Tractors are built for all-around practical farm use. They are designed and equipped to work with many machines—to handle both field and belt work to best advantage. They are simple, easy to handle, and they will serve their owners many years.

Remember that *the crankshaft and the main ball bearings in McCormick-Deering 10-20 and 15-30 are guaranteed for the life of the tractor.*

What Are Standardized Ingredients?

THE standardizing process, through which every Larro ingredient must pass, works just like the hour-glass.

To say, for instance, that Larro bran is standardized means that scores of carloads of highest grade bran, with all their variations, have been combined into one unchanging blend of bran that is just right in every way—in color, texture, analysis and feeding value.

The standardizing process does what Nature and the people who produce feeding stuffs cannot do —it keeps each Larro ingredient exactly the same—it takes out the variations of color, texture, analysis and feeding value that they allow to creep in.

That's why Larro not only looks the same, but *is* the same, year in and year out.

Larro makes cows do their best all the time—they don't go off feed—they make you a bigger profit whether milk is up or down. Let Larro end your feeding problems now. It's the same milk-making, profit-making ration all the year round. Safe, uniform, healthful, profitable.

BREEDS OF BEEF CATTLE

2—Hereford

THE Hereford ranks next to the Shorthorn in numbers in the United States. The first known importations were made in 1817 by Henry Clay and Lewis Sanders. The early development of the Herefords in America was brought about largely through the efforts of William T. Sotham and T. L. Miller. In 1881 the American Hereford Cattle Breeders' Association was formed by Hereford breeders, among whom were T. F. Sotham, T. L. Miller, W. S. Van Natta, J. M. Studebaker, and R. W. Sample. What is now Volume 1 of the American Hereford Record appeared in 1880 as the American Hereford Herd Book, being published by the Breeders' Livestock Association.

From the first Hereford cattle, because of their "rustling" ability, found favor with the western range men. On scant pastures and on the range where waterholes are far apart, the Hereford has shown its merit. Not only do the individuals of this breed thrive under adverse conditions, but they also respond readily to a favorable environment. The bulls are active, vigorous, prepotent, and very sure breeders.

The criticism formerly made of the breed because of a light hind quarter can scarcely be considered just today. The animals are somewhat less rangy, more compact, and more heavily fleshed than formerly. The tendency to patchiness about the root of the tail and "rolls" on the sides is also a criticism frequently heard. While the Hereford cows have been criticised because of scanty milk flow, there are few if any that do not produce enough to raise a good calf. As a breed they have a better heart girth and seem to withstand adverse conditions better than the Shorthorns. They mature early and fatten readily in the feed lot.

The weight of the Hereford cattle is only slightly less than that of the Shorthorn, but the conformation is such that a Hereford looks smaller than a Shorthorn of equal weight. Mature bulls weigh from 1,900 to 2,200 pounds, while the cows weigh from 1,200 to 1,600 pounds. It is not unusual for mature animals of either sex to weigh more.

The Hereford color is distinctive. It may be described as a medium to deep rich red, with white head, breast, belly, crest, switch, and legs below the knee and hock. White occuring back of the crops, high on the flank, or too high on the legs, is objectionable. A pure-white face is preferred, although many purebred animals show spots about the face and especially some red around the eyes. The hair is usually medium to long, soft and silky, with a curly tendency, but short-haired animals may be found. A characteristic of Hereford color is the dominance of the white face over the color markings of other breeds. Calves sired by a purebred Hereford bull, as a rule, show the characteristic white face.

The Hereford possesses a conformation which represents good beef type. The body is low, compact, and blocky, with well-sprung ribs, broad loin, and wide hips without prominent hip bones. The quarter is more rounded and bulging than that of the Shorthorn, although developed to a lesser degree in this respect than the Aberdeen Angus. The forehead is broad and prominent and the face is short, tapering slightly toward the nose. The muzzle is full, with large, open nostrils. The horns are of medium size, even color, and extend from the head at right rangles, level with the crops, curving forward and downward.

The horns of the bull are somewhat coarser, straighter, and heavier. The neck is short, thick, and blends well with the shoulders. Great width, depth, length of chest, and a fullness of the crops give the Herefords the constitution and endurance which breeders have been careful to preserve. The loin is broad and deep and the rump and hind quarters are usually well developed, carrying a large quantity of flesh. This portion of the body has been greatly improved within recent years and the tendency to roughness and patchiness has been reduced until the breed now stands out as one showing extreme beef type, with smoothness of form and

H. CLAY GLOVER, V. S.
129 West 24th St. New York

much quality. For these reasons, combined with their "rustling" ability, the Hereford has become a poplar breed for improving range stock. The results obtained by the use of Hereford bulls for this purpose have been very satisfactory to the cattlemen in the West and Southwest.

The marked increase in the number of Hereford breeders in the Northwest would indicate that the breed is well adapted to a very cold climate as well as to that of the South. Neither the heat in the Corn Belt nor that in the South seems to bother them. They appear to be especially well adapted for use on the larger plantations, where animals are not given extremely good care and where the production of beef alone is desired. Two or three crosses on the native stock of the South produce a good beef animal that matures early and fattens well. On unimproved plantations or on farms with only fairly good pastures the Hereford gives better results than the Shorthorn. The rapid increase in the popularity of Herefords in this country is shown by the number of registrations and transfers in the last two years as reported by the American Hereford Cattle Breeders' Association.

The association mentions the following as some of the bulls which have been most influential in improving the Hereford breed during recent years: Perfection Fairfax 179767, Beau Donald 58996, Beau Brummel 51817, Bonnie Brae 8th 239653, Perfection 92891, Bonnie Lad 20th 555369, Beau Blanchard 362904, Woodford 500000, Beau Mischief 268371, Repeater 289598, Gay Lad 6th 316936, Cuba's Panama 372431, Bocaldo 362186, Gay Lad 9th 386873, Gay Lad 16th 412192, and Point Comfort 14th 337488.

HOW TO PREVENT COW FROM SUCKING SELF

I have a fine Holstein and Jersey three-year-old cow, had her first calf last May and soon after she took to sucking herself. She gives a good mess of milk when kept tied but as soon as lose she sucks herself dry. What would you suggest to break her of the habit?—O. F. H., Bay City, Mich.

—There are several remedies that have been tried, some with more success than others, to prevent a cow from sucking herself. One is to pierce her nose and put a bull ring in the nose and have two or three links of common chain hang from this chain gets in the way and she gets discouraged. A good many people have never failed to stop their cows in this way. Once in a while there are cows that have this habit so fixed that they in some way or other persist in the habit even with the chain in their nose.

Another method that has been used by some is to split the cows' tongue for about two inches. This plan has also stopped this habit in many instances, but we know defintiely of instances where the cow continued the habit.

Others have tried putting heavy bands around the cow's body and then fastening straps from each side of the halter to this girth and thus preventing the cow's reaching back to the udder.

Another scheme is to equip a halter with nails or tacks so that these nails or tacks will pierce the cow's flesh when she attempts to get to the udder.

The one that I particularly recommend is the bull ring method and if this fails I think I would try to substitute another cow for this one. —O. E. Reed, Professor of Dairy Husbandry, M. A. C.

M. A. C. HORSE SHOW SUCCESS ASSURED

WITH entries already made or assured by riding and hunting clubs of Detroit, Grand Rapids, Bay City, Flint and Lansing, the annual R. O. T. C. Horse Show at the Michigan Agricultural College grounds bids fair this year to take rank as the leading event of its type in Central Michigan. The annual show is scheduled for May 30 and 31.

Entertainment features during the Horse Show will include the M. A. C.-University of Wisconsin base ball game on Memorial Day, and concerts both days by the M. A. C.

Want a steady income?

Cows and a New De Laval will give it

With a De Laval Cream Separator you harvest your crop twice a day instead of once a year, giving you a steady cash income. You also make more money from good cows and a De Laval than in any other way. Butter and butter-fat bring good prices. Skim-milk is splendid feed for calves, pigs and chickens, all of which bring in additional money. And a ton of butter-fat removes only 50 cents' worth of soil fertility, while the feed required to produce it, if sold, would remove $400 worth.

The New De Laval. The new De Laval is the best cream separator ever made. It has a self-centering bowl which eliminates vibration and causes it to run smoother, easier, and last longer. Also many other improvements and refinements.

Pays for Itself. A new De Laval will not only bring you in a steady income, but will soon pay for itself. See your De Laval Agent or send coupon for full information.

De Laval Milker. The De Laval Milker is now being used on thousands of farms and is giving wonderful satisfaction—soon pays for itself with ten or more cows.

$100,000 a day for Taxes

THE high cost of government is a burden of which every citizen must bear his share. It is one of the large factors in the high cost of living.

Taxes are a part of the cost of everything we eat, wear or use. Nothing escapes and no consumer can escape paying.

In the freight and passenger rates paid by the public last year were Federal, State and local taxes reaching the record figure of $336,000,000.

New York Central Lines taxes amounted to $37,605,560, or more than $100,000 a day; nearly three times what they were ten years ago.

Every citizen has a vital interest in cutting down the tax burden.

BALDWIN & NOWLIN, Laingsburg, Mich., R4.

VETERINARY DEPARTMENT

HORSE LOSES FLESH AND IS RESTLESS

I have a horse 11 years of age, he used to weigh around 1500, right along and a pretty animal, never sick but now he has began to lose flesh. Now he is mighty thin in spite of good feed. Restless, looks around, at times he gets down and up again and so on. He eats good but does not seem to get any benefit from it. His teeth are good. The local veterinary gave him something but with no help.—E. R. S., Big Rapids, Mich.

—The history of this case would indicate that the horse in all probability is suffering from some chronic organic intestinal trouble. There is no way of telling just what this trouble might be. I am very much afraid that the treatment will be unsatisfactory. If you have a veterinarian in your locality, I would suggest that you have him make a very careful examination of your mare, he may be able to make a diagnosis.

You might try the following prescription as an experiment: Fowler's solution of arsenite, 26 ounces; fluid extract of nux vomica, 2 ounces; fluid extract of quassia, 2 ounces; fluid extract of gentian, 2 ounces; mix and give two tablespoonfuls on the feed night and morning. This prescription can be refilled and repeated a second time if necessary.—John P. Hutton, Assoc. Prof. of Surgery and Medicine, M. A. C.

HEIFER DRINKS ONLY SMALL QUANTITY OF WATER

Would you be so kind as to give me a little advice on my cow? She is a Jersey, young and fat and gives little or no milk at all, drink one-half pail water in about two or three days. I give her salt but it does not seem to cause her to drink more. But worst of all she milks so hard. When I was a boy I remember of hearing of an operation on the teats. Is there any such remedy? If so what would be the result?—J. O. C., Jackson, Mich.

—As long as the heifer is fat and seems to be healthy, you need not be alarmed about her drinking a small amount of water. If she were allowed access to fresh water continually, the probabilities are that she might drink more.

The hard milking you speak of can be remedied if it is due to a contraction of the sphincter muscles at the end of the teats. The operation consists in cutting these muscles with a teat slitter. The operation should be performed by a veterinarian.—John P. Hutton, Assoc. Prof. of Surgery & Medicine, Michigan Agricultural College.

CANKER IN FOOT INCURABLE

Please let me know what to do for a horse that had the thrush and now has the canker in his feet?—J. V., Bay City, Mich.

—True canker affecting the frog, sole, wall, and foot skin is incurable. Better have your veterinarian make an examination of the horse's foot and determine whether it is canker or thrush. If thrush, it can be cured.—John P. Hutton, Assoc. Prof. of Surgery and Medicine, Mich. Agricultural College.

ROBUST BEANS YIELD 25 TO 30 BUSHELS PER ACRE

(Continued from Page 4)

is very well represented by Early Wonder and the other by Robust. The former are earlier but are susceptible to both mosiac and blight which often destroy the leaf system and causes a failure of the crop. Robust on the other hand is immune to mosiac and resistant to blight, holding its leaf system in workable condition until maturity when the leaves drop off as a whole. On point of yield the Robust has averaged a half more beans at M. A. C.

All correspondence regarding seed should be sent directly to the Secretary of the Michigan Crop Improvement Association, East Lansing, Michigan.

(Editor's Note: Do not miss the next article by Mr. Spragg. It will appear in an early issue so be on the look-out.)

Baby Chicks Sick and Dying

If they're weak, wobbly, "pasted up", with no appetite, don't waste a minute!

WHITE DIARRHEA

Easily stopped in 48 hours

White diarrhea kills half of nearly every hatch of chicks. It's strange how many people do nothing either to prevent the trouble or end it, thinking this loss can't be stopped. But it can be stopped, without extra work, without troublesome dosing, and at almost no cost. For years, thousands have saved their sick chicks and raised nearly every chick in every hatch, by merely dropping an Avicol tablet in the drinking water. Successful poultry raisers say there is nothing else like Avicol for this purpose.

Trouble gone in 2 days

Chas. N. Kittinger, Willows, Calif., writes: "Twelve of my chicks had diarrhea by the time I received my Avicol. I immediately gave them some, and by the second day, the trouble disappeared and now they are all as lively as crickets. If I had only known of Avicol sooner, I would have saved lots of chicks."

It is wonderful how sick, droopy chicks, within 48 hours after they get Avicol, become just as lively as Mr. Kittinger says. No matter how rapidly the trouble is spreading, they stop dying almost the very day Avicol is put in their drinking water.

"Stopped dying at once"

"Last spring I bought 25 baby chicks," writes Mrs. John Shaffer, Owen, Wis. "When about a week old, they began dying, would get droopy and in a few hours would die. When I had 15 left, I began giving Avicol and they stopped dying at once. I did not lose another one."

Costs nothing to try

Why should anyone sit back and let baby chicks die? It costs nothing to try Avicol. Readers are urged to write to the Burrell-Dugger Co., 83 Allen Ave., Indianapolis, Ind., sending 50 cents, as a deposit, for a package by mail prepaid (or pin a dollar bill to your letter for the extra large size holding nearly 3 times as much). If you prefer, send no money, but deposit the money with the postman on delivery. Either way, you won't risk a cent. If Avicol doesn't stop your chick losses immediately, if it isn't superior to anything else you ever heard of, if it doesn't satisfy you in every way, every cent of the money you have deposited will be promptly refunded by the manufacturers.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 680, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for a box of Walko, or $1.00 for extra large box—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO.,
Dept. 680 Waterloo, Iowa

READ AND ORDER; CHICKS FROM HIGH producing flocks, culled by M. A. C. expert. April and May, White Wyandottes, $18.00 per 100; Barred Rocks, $16.00; White Leghorns, $14.00. C. W. Heimbach, R5, Big Rapids, Mich.

STURDY CHICKS—BRED-TO-LAY AND exhibition flocks, culled by experts. Reasonable prices. Catalog free. Single Comb White Leghorns, Rocks, Reds, White Wyandottes. Sunnybrook Poultry Farm, Hillsdale, Mich.

* * * * BACK AGAIN ! * * * *

You can run our ad same as last year, starting now and run until we give you a stop order. I have not copy at hand but you have it in any last season issue. We have credit of $4.50 with you. We had splendid results from M. B. F. since the first season we used it. Thanks. Tyrone Poultry Farm, Fenton, Mich.

Poultry Department

FEATHER PULLING

I wish to ask what makes hens pick feathers from about other hens necks.—Mrs. L. B. G., Clifford, Mich.

—I would say that this is a form of canabalism which frequently occurs in closely confined flocks that are fed an insufficient supply of animal protein. It is especially among the lighter and more nervous type of breeds.

Feather pulling from the neck may be caused by irregular feeding of buttermilk or skim milk. Hens frequently splash the feathers especially around the neck, and breast, in the drinking process. When the feathers become pasted with this milk, it is very palatable, and the habit may start.

Dry mash should be available at all times, containing from ten to twenty per cent meat scrap or animal protein substitute. The birds should be fed a scratch feed in deep litter to permit exercise. The daying houses should not be over crowded during the winter months.

Once the practice has been cultivated, the hens' attention should be diverted by suspending a piece of beef liver at a convenient height in the poultry house. This will also supply the necesary protein, and the hens will also forget the habit of feather pulling. At the earliest possible date the hens should be permitted free range as the habit of feather pulling is checked once the birds are out on free range.—E. C. Foreman, Prof. of Poultry Husbandry, M. A. C.

THE poultry raising season is nicely under way now and we suppose you are all having your troubles. We are always at the service of our subscribers and will be pleased to answer your questions. Be sure to sign your complete name and address so that we can send you a personal reply.

RAISE POULTRY

I wish you would kindly tell me which is the easiest to raise; chickens, geese, ducks, turkeys, guinea pigs, rabbits or fur bearing animals. I have had no experience and I do not know how to raise any of these and I have only a little time.—E. L. P., Owosso, Michigan.

—In studying the economic conditions we are under the impression that chickens are possibly a little more profitable than water fowl or pet stock, because the latter are being raised primarily for meat production.

In poultry raising, the broiler, roaster, and market fowl are usually considered as incidental to production and the main source of revenue comes from market eggs. From the standpoint of raising stock with the least difficulty, possibly geese, guinea pigs, ducks, and guinea hens require less attention. From an economical standpoint, however, the rearing of chickens and turkeys is possibly more profitable, even tho they do require closer attention, and a greater amount of care. A careful study should be made on all these subjects before undertaking the raising of stock on a commercial scale.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

THE PROBLEM OF DIRTY EGGS

IN seeking to improve the market quality of eggs, next to the problem of the underweight egg is that of the dirty egg. No matter how fresh and attractive it may be in other respects the dirty egg can never get on a plane with the clean egg. It is in bad repute with the local buyer and the stigma holds fast all along the line. In other words the soiled egg is more or less of an outcast with no hope of ever improving its status. The producer often resorts to washing to save the day and this helps some but the washed egg is easily detected and straightway discounted. It is difficult to estimate the economic waste from this cause but there is no doubt that dirty eggs cut the income of producers several hundred thousand dollar every year.

This considerable loss is regret-

Are You Ruptured?

Learn How to Heal It FREE

Ruptured people all over the country are amazed at the almost miraculous results of a simple Home System for rupture that is being sent free to all who write for it. This remarkable invention is one of the greatest blessings ever offered to ruptured persons, and is being pronounced the most successful Method ever discovered. It brings instant and permanent relief and does away with the wearing of trusses forever.

Thousands of persons who formerly suffered the tortures of old-fashioned steel and spring trusses are now rejoicing in their freedom from the danger and discomfort of rupture after a brief use of this remarkable System. There is nothing like it anywhere and hosts of ruptured persons are astounded at the ease with which their ruptures are controlled.

For a limited time only, free trial treatments of this Muscle Strengthening Preparation are being mailed to all who apply. It is an original painless Method. No operation, no danger, no risk, no absence from daily duties or pleasures. Send no money; simply write your name and address plainly and the free treatment with full information will be mailed you in sealed package.

Send now—today. It may save the wearing of a torturing truss for life.

GEO. H. LEE CO. Omaha, Nebr.

able in that a large part of it can be prevented. Much of the soiling comes from dirty nests and laying quarters. A little fresh clean straw in the nests now and then will do much toward keeping eggs clean and mites and lice down. The roosts and dropping platforms and floors should be cleaned regularly and new litter added frequently.

Often eggs are soiled because too few nests are provided and there is keen compitition for the same nests. In some cases eggs are left in nests all day or several days and each hen in laying does her bit to muss up all eggs previously laid. This suggests the need for regular and frequent gathering.

During the spring months if drainage or soil conditions are poor one often notices mudholes and dirty puddles about the houses and runways of the hens. Such places harbor disease organisms and bemire the feet and feathers of the hens and they in turn smear the nests and eggs. Such wet places should be filled or drained in some way.

Occasionally hens develop bowel trouble and the resulting scours mean dirty eggs. A little medical treatment will correct this condition as a rule. Other heavily feathered birds have feathers about the vent soiled and balled up with droppings and offer another opportunity for soiling of eggs and nests. If these feathers about the vent are clipped away the trouble ceases.

Lastly eggs are often stained by dirty hands of the person gathering them or by dirty receptacles in which they are gathered or stored. Grease and oils are very often responsible for smears which can never be removed. If eggs are held in places where soot or dust collects many of them will lose their fresh attractive appearance. Too much handling, too, will rub off the delicate layers of bloom and cause the egg to take on the shiny appearance of the stale egg.

If all poultry raisers would observe these simple precautions 90 per cent of the cases of soiling of eggs could be prevented and a very substantial saving made for the poultrymen everywhere.

EGG INDUSTRY WIDELY SCATTERED

MORE than 5,000,000 farms in the United States produce eggs annually valued at more than half a billion dollars, says the United States Department of Agriculture. There are many specialized egg farms along the Atlantic and Pacific coasts and scattered to a less extent throughout the country, but the great bulk of market eggs used on the large eastern markets comes from the middle-western states where eggs are produced mainly as a side line on general farms.

In the ordinary course of marketing the eggs pass through a number of hands and must undergo a journey of a thousand miles or so before they pass across the counter from the retailer to the consumer, the department says. More than 47,000 cars of eggs alone are annually transported by rail. New York City is the largest consuming market, followed by Chicago, Boston, Philadelphia, and San Francisco.

Egg production is uneven throughout the year, being heavy in the spring and summer and light in the fall and winter. To fit the supply of eggs to the demand which is much more evenly spread over the year, it is necessary to hold about 12 per cent of the eggs in storage against the months of low production in the fall and winter, the department says.

To serve as a practical guide to producers, shippers and the egg industry generally the Department of Agriculture has recently published a printed bulletin dealing with every phase of the marketing of eggs. The bulletin deals with problems of transportation, the function of cold storage, marketing methods and channels, egg structure and composition, candling, grading, and containers. Copies of Farmers' Bulletin 1378, Marketing Eggs, may be obtained, as long as the supply lasts, upon request to the Department of Agriculture, Washington, D. C.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARKET FLASHES

MARKET SUMMARY

Wheat unchanged to weaker. Corn quiet. Oats firm and unchanged. Rye quiet. Beans easy after decline. Butter and eggs steady after recent decline. Prices on potatoes higher. Poultry in fair supply and quiet. Good demand for dressed calves of good quality. Cattle active and higher. Hogs steady to lower. Sheep higher.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Farm Wages Higher

FARM wages in the United States last year, according to the recent report sent out by the Department of Agriculture, averaged $33.18 per month with board, comparing with $29.17 in 1922. Present indications point to still higher wages this year in the more prosperous farming districts, and it is a certainty that a great many farmers will stop employment of outside help, as they cannot see their way clear to obtain fair profits after paying the wages demanded. As farmers who have been employers of workers know from actual experience, hired workers are apt to be far more exacting than in past years, not only insisting on much higher pay, but working fewer hours and demanding many privileges not thought of ten years or more ago. This is one of reasons why so many farmers are reducing the acreage of various grains and other things, many of them planning on making their acres produce more than in the past by securing only the very best of seeds and manuring and working the ground more. In many parts of the middle west farmer boys have been doing this for several years and winning prizes; and now their dads are going to demonstrate, if possible, that they are not to be outdone. Farmers are already preparing for their usual spring activities, which are belated this year, oats sowing being very late in the southwest. It is hoped that the spring wheat acreage will be substantially lowered, but the prevailing belief in that the area of other farm products will not show very marked changes; and it may be set down at the start that farmers will have no cause for regret for getting prime seed corn and certified potato seed. Live stock feeders are prosperous so far as cattle are concerned, and sheep are unusually profitable, but hog prices have been depressed by the huge supply fattened in the corn belt states. Obviously, less breeding of sows is necessary to bring about higher prices.

What About Wheat?

Prices for wheat have undergone marked changes this year, and at times very fair upturns have encouraged holders, but it was found impossible to maintain values long, with the lack of former speculative support, and within a short time sales have been of May wheat at $1 per bushel. The fact is that traders in wheat have lacked confidence in prices, looking at the matter from supply and demand standpoint, and when the hoped for federal support faded away, the advanced values were lost. Large owners have not given up, however, and in some districts they have signed agreements to act unitedly in marketing their wheat. There is no marked improvement in the demand for breadstuffs to export, as other exporting countries continue to undersell us, and supplies of wheat in sight in the United States are considerably larger than a year ago, the Chicago elevators alone containing a short time ago 15,600,000 bushels, while the visible supply totaled over 59,000,000 bushels, comparing with 45,785,000 bushels a year ago. Spring wheat seeding reports will be read with usual interest, and the one hope for the future lies in much smaller wheat crops. At present prices it does not pay to raise wheat, and it is startling to look back and remember that a little more than two years ago wheat for May delivery sold up to $1.36 while cash wheat sold at this time in 1917 for $3.04. Late sales were made of May wheat on the Chicago Board of Trade at $1.02, comparing with $1.21⅝ a year ago. A sudden revival in the milling demand for wheat helped to strengthen the market, and cash lots sold a little higher a short time ago. Corn for May delivery sells in the Chicago market for 79 cents, comparing with 75½ cents a year ago; oats for May delivery at 46⅛ cents, comparing with 45 cents last year; and May rye at 66½ cents, comparing with 83¼ cents a year ago.

Important Wheat Move.

A special to the Drovers Journal from Evansville, Indiana, says:

"More than 50 per cent of the wheat acreage of the "Pocket," which includes southwestern Indiana, one of the largest wheat growing areas of the state, has been signed for the Indiana Wheat Growers' association, according to announcement made here at district campaign headquarters, nearly 80 per cent of the acreage has been signed up in Gibson county, the officers said, and in Posey, Vanderburg and Knox counties the drive has been successful. The other counties are showing similar interest, as 10,000 acres are reported from Dubois county.

Other counties have a large percentage of the acreage signed up of those men solicited, but the impassable roads in most localities outside the counties named have delayed the work considerably."

High Prices for Cattle

Beef consumption throughout the country is on a considerably larger scale than usual, and choice to fancy offerings of heavy long-fed steers as well as prime yearling steers and heifers have sold on the Chicago market recently at substantial advances in prices, with not enough offered to go around and an especially small supply of yearling steers. Most of the time plenty of common to fairly good cattle are offered on the market, but the prevailing practice is to ship cattle to market after a short feed. Prime heavy steers have sold up to $12.35 per 100 pounds the highest price of the year, while on a recent day there were sales of 40 heifers averaging 667 pounds at $10 and 13 heifers averaging 899 pounds at $10.15. Other sales have been made of choice heifers at $8.50 to $9.25. An important late sale was that of 58 head of 1548-pound choice Hereford steers at $12.35 for shipment to Boston. These cattle were fat when they went into the feed lots and received a five months feed thereafter. The bulk of the beef steers sold recently at $8.25 to $11.50, with sales down to $7 to $8 for common kinds and inferior little steers purchased at $5 to $6.90, and no good steers taken below $10. The best yearlings were wanted at $11 to $12, but very few were offered good enough to bring $11.50. Most heifers sold at $5.40 and over, and stockers and feeders had a moderate sale at $5 to $8.75, selling largely at $6 to $7.75, and plenty of bargains were picked up. Calves sold at $5 to $12 and bulls at $3.50 to $7.50, with canner and cutter cows at $2 to $3.75 and better cows at $4 to $8.50. A year ago common to prime beef steers were selling at $7.60 to $10.40, four years ago at $10 to $14.50 and eight years ago at $7.60 to $10. Combined cattle receipts in twenty markets for the year to late date amount to 3,128,000 head, comparing with 3,182,000 a year ago.

Rigid Cattle Quarantine

Announcement of rigid quarantine regulations against live stock and farm product shipments from California by the state of Nevada was the outstanding development in the foot-and-mouth disease epidemic in California.

Nevada has taken steps to make available a quarter of a million dollars to enforce the quarantine regulations.

The San Francisco stock yards remained under quarantine while work of destroying 5,000 head of cattle in the Los Angeles stock yards was progressing. A large dairy herd of 600 head was found infected in Los Angeles county. The epidenic in that section was still not under control.

Hogs and Provisions

Prevailing prices of hogs, which are the lowest in many years, work against the consumption of pork chops, and this has weakened prices for fresh and cured hog products and affected prices for hogs as well although decidedly fewer swine reached the Chicago market than a short time ago. Large marketing of hogs has resulted in acccumulations of provisions, and stocks of lard in western packing points on April 1 aggregated 48,446,000 pounds, comparing with 34,029,000 pounds a month earlier and 27,201,000 pounds a year ago. Stocks of pork amounted to 46,649 barrels, comparing with 46,227 barrels a month earlier and 44,081 barrels a year ago. Stocks of cured meats aggregated 355,665,000 pounds, comparing with 336,221,000 pounds a month earlier and 324,619,000 pounds a year ago. While hog receipts have fallen off materially, there has been a corresponding reduction in the purchases of eastern shippers in the Chicago market. Combined receipts in twenty markets for the year to date amount to 13,038,000 hogs, comparing with 12,056,000 for the same period last year and 9,0811,000 two years ago. Hogs average well in quality and there is a narrow range of prices. Chicago's receipts of hogs last week fell off to 164,500 head, comparing with 204,490 a week earlier and 176,133 a year ago, and only a small decline took place in prices, sales being made at $6.70 to $7.60. A year ago hogs sold at $7.15 to $8.65 and nine years ago, at $6.85 to $7.60. If the receipts do not increase, better prices may be looked for.

High Prices for Lambs

Not enough lambs are offered to satisfy the demand, and extremely high prices are paid for all fattened flocks, even heavy weights selling high and much wanted, although handy weights sell highest. Lambs with the wool on have been selling in the Chicago market for $13.50 to $16.85, mostly at $16.35 and over for Colorado fed lots, while shearing and feeding lambs are taken at $14.50 to $15.90. A year ago prime lambs brought $14.90, four years ago $21.50 and eight years ago $12. Ewes sell at $9 to $12, wethers at $10.25 to $13.25, yearlings at $13 to $15 and bucks at $7 to $8.75. These are great times for the farmers owning sheep. Lamps are at the highest prices of the year.

WHEAT

The wheat market at Detroit showed a little more strength last week, although there was a tone of easiness most of the time. Demand from the millers, while not pressing, was enough to take care of all receipts, and prices advanced 3 cents during the week.

CORN

Small receipts caused corn prices to advance at Detroit last week. Demand was only fair. Receipts are showing a steady decline while demand remains about the same.

OATS

The Detroit oat market is firm with receipts small. Prices are somewhat higher than they were two weeks ago.

RYE

Millers have been in the Detroit market trying to purchase rye but with very little success. Here too, higher prices are noted.

BEANS

Trade in general was dull in the bean market during the fortnight ending April 5th. Some dealers claim that the price at Detroit will decline to $4.50 and then remain around that figure, while others are fighting to keep the price up to around $5. A few farmers in Michigan are holding their beans for higher prices but the greater portion of them have sold. Reports show about the same condition in nearly every bean growing state in the Union.

POTATOES

A steady tone prevails in the potato market at Detroit, with the supply sufficient to take care of the demand. A fair demand for new potatoes and old potatoes quiet, is the condition of the New York market at present. Chicago has a liberal supply with demand and trading slow. Receipts would no doubt be greater if it were not for the bad condition of the country roads as farmers are reported anxious to sell. Michigan shippers state they have good wire inquiry.

HAY

Markets have shown more strength this week particularly in the west, due to light receipts and a good demand. Bad roads are restricting country loadings and the movement is light. Best grades alfalfa and prairie are in good demand. In the east the receipts are moderate and markets are steady for the top grades.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 2 white, $1.09½; No. 2 mixed, $1.09.

Chicago—Cash No. 2 hard, $1.03½@1.12.

Prices one year ago—Detroit, Cash No. 2 red, $1.36½; No. 2 white, $1.36½; No. 2 mixed, $1.36½.

Detroit—Cash No. 3 yellow, 84c; No. 4, 81c.

Chicago—Cash No. 3 yellow, 79¾c.

Prices one year ago—Detroit, Cash No. 3 yellow, 83½c; No. 4, 81½c.

Oats

Detroit—Cash No. 2 white, 54c; No. 3, 52c.

Chicago—Cash No. 2 white, 48¾@50c; No. 3, 47¼@48½c.

Prices one year ago—Detroit, Cash No. 2 white, 51½c; No. 3, 50c.

Rye

Detroit—Cash No. 2, 71c.

Chicago—Cash No. 2, 65½c.

Prices one year ago—Detroit, Cash No. 2, 81½c.

Beans

Detroit—C. H. P., $4.60@4.65 per cwt.

Prices one year ago—Detroit, C. H. P., $7.15 per cwt.

Potatoes

Detroit—$1.60@1.70 per cwt.

Chicago—$1.20@1.40 per cwt.

Prices one year ago—Detroit, $1.41@1.50 per cwt.

Hay

Detroit—No. 2 timothy, $21@22; No. 1 clover, $21@22; standard & light mixed, $22.50@23 per ton.

Chicago—No. 2 timothy, $23.50@25; No. 1 clover, $21@23; standard & light mixed, $24@26 per ton.

Prices one year ago—Detroit, No. 1 timothy, $20@21; No. 2 timothy, $17@19; No. 1 clover, $19@20; standard & light mixed, $19@20 per ton.

POTATOES STILL ON FARMS

The recent inquiry relative to merchantable stocks of potatoes held on March 1st resulted in showing that there were 35 per cent less potatoes in the country on that date available for shipment out of the countries where grown than one year ago.. While there is a larger quantity than last year in Maine, New York and Pennsylvania, the western states have only one-third to one-half as many.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS
COPYRIGHT 1924

Week of April 13

TEMPERATURES during most of this week will average close to or slightly below normal in Michigan. Temperatures in this state will not show any radical changes for the next week or ten days but from that time until middle of May weather and temperature changes will be more decided.

During early part of this week east winds and cold rains are to be expected. Generally fair weather is to be expected over the middle part of the week but conditions will again become unsettled and threatening about Saturday.

At the end of this week temperatures will rise considerably above normal for the season, wind forces will increase decidedly and general precipitation with some local heavy falls will be making themselves conspicious. These conditions will run over into next week.

Week of April 20

The stormy periods of this week in Michigan will occur at very beginning, again about Wednesday and Thursday and then about Saturday. Of these three periods, the last is expected to be the most pronounced. There will be more than the average amount of windy weather during most all the week but these conditions will come to more of a head at the close.

Gales on the Great Lakes, high winds inland, heavy rains and electrical storms are characteristics to expect at end of this or beginning of next week. These conditions may be followed by dashes of late spring snow in parts of the state.

Summer Warmer Than Usual

During summer months of July, August and September we are expecting the weather in Michigan to be warmer than usual. Rainfall, however will be more plentiful over the northern half than southern half of lower peninsula.

RADIO PROGRAMS

Station KYW, Chicago.—Central time 8:20 P. M., Wave length 536 meters.

April 8—"What Crop Reports Really Mean to the Farmer," by B. H. Critchfield, executive secretary, Midwest Agricultural Economics, Research Council. "The Function of the Union Stock Yards," by B. H. Heide, secretary, International Live Stock Exposition.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

Electricity for the Farm.—By Frederick Irving Anderson. This book is designed primarily to give the farmer a practical working knowledge of electricity for use as light, heat, and power on the farm. The electric generator, the dynamo, is explained in detail; and there are chapters on electric transmission and house-wiring, by which the farm mechanic is enabled to install his own plant without the aid and expense of an expert. Published by Macmillan Co.

Farm Mechanics.—By Byron Burnett Robb, M. S. A., and Frederick Gardner Behrends, B. S. This book is Volume 1 of "Farm Engineering" of the Wiley Farm Series. It is for every worker on the farm and tells exactly how to do 185 necessary mechanical jobs, containing 435 pages. Subjects discussed are: Harness repairing; knots, hitches and splices; belts, pulleys and shafting; soldering; painting; leveling; farm drainage; concrete work; farm water system; sewage disposal. Published by John Wiley and Sons, Inc. Price $2.50.

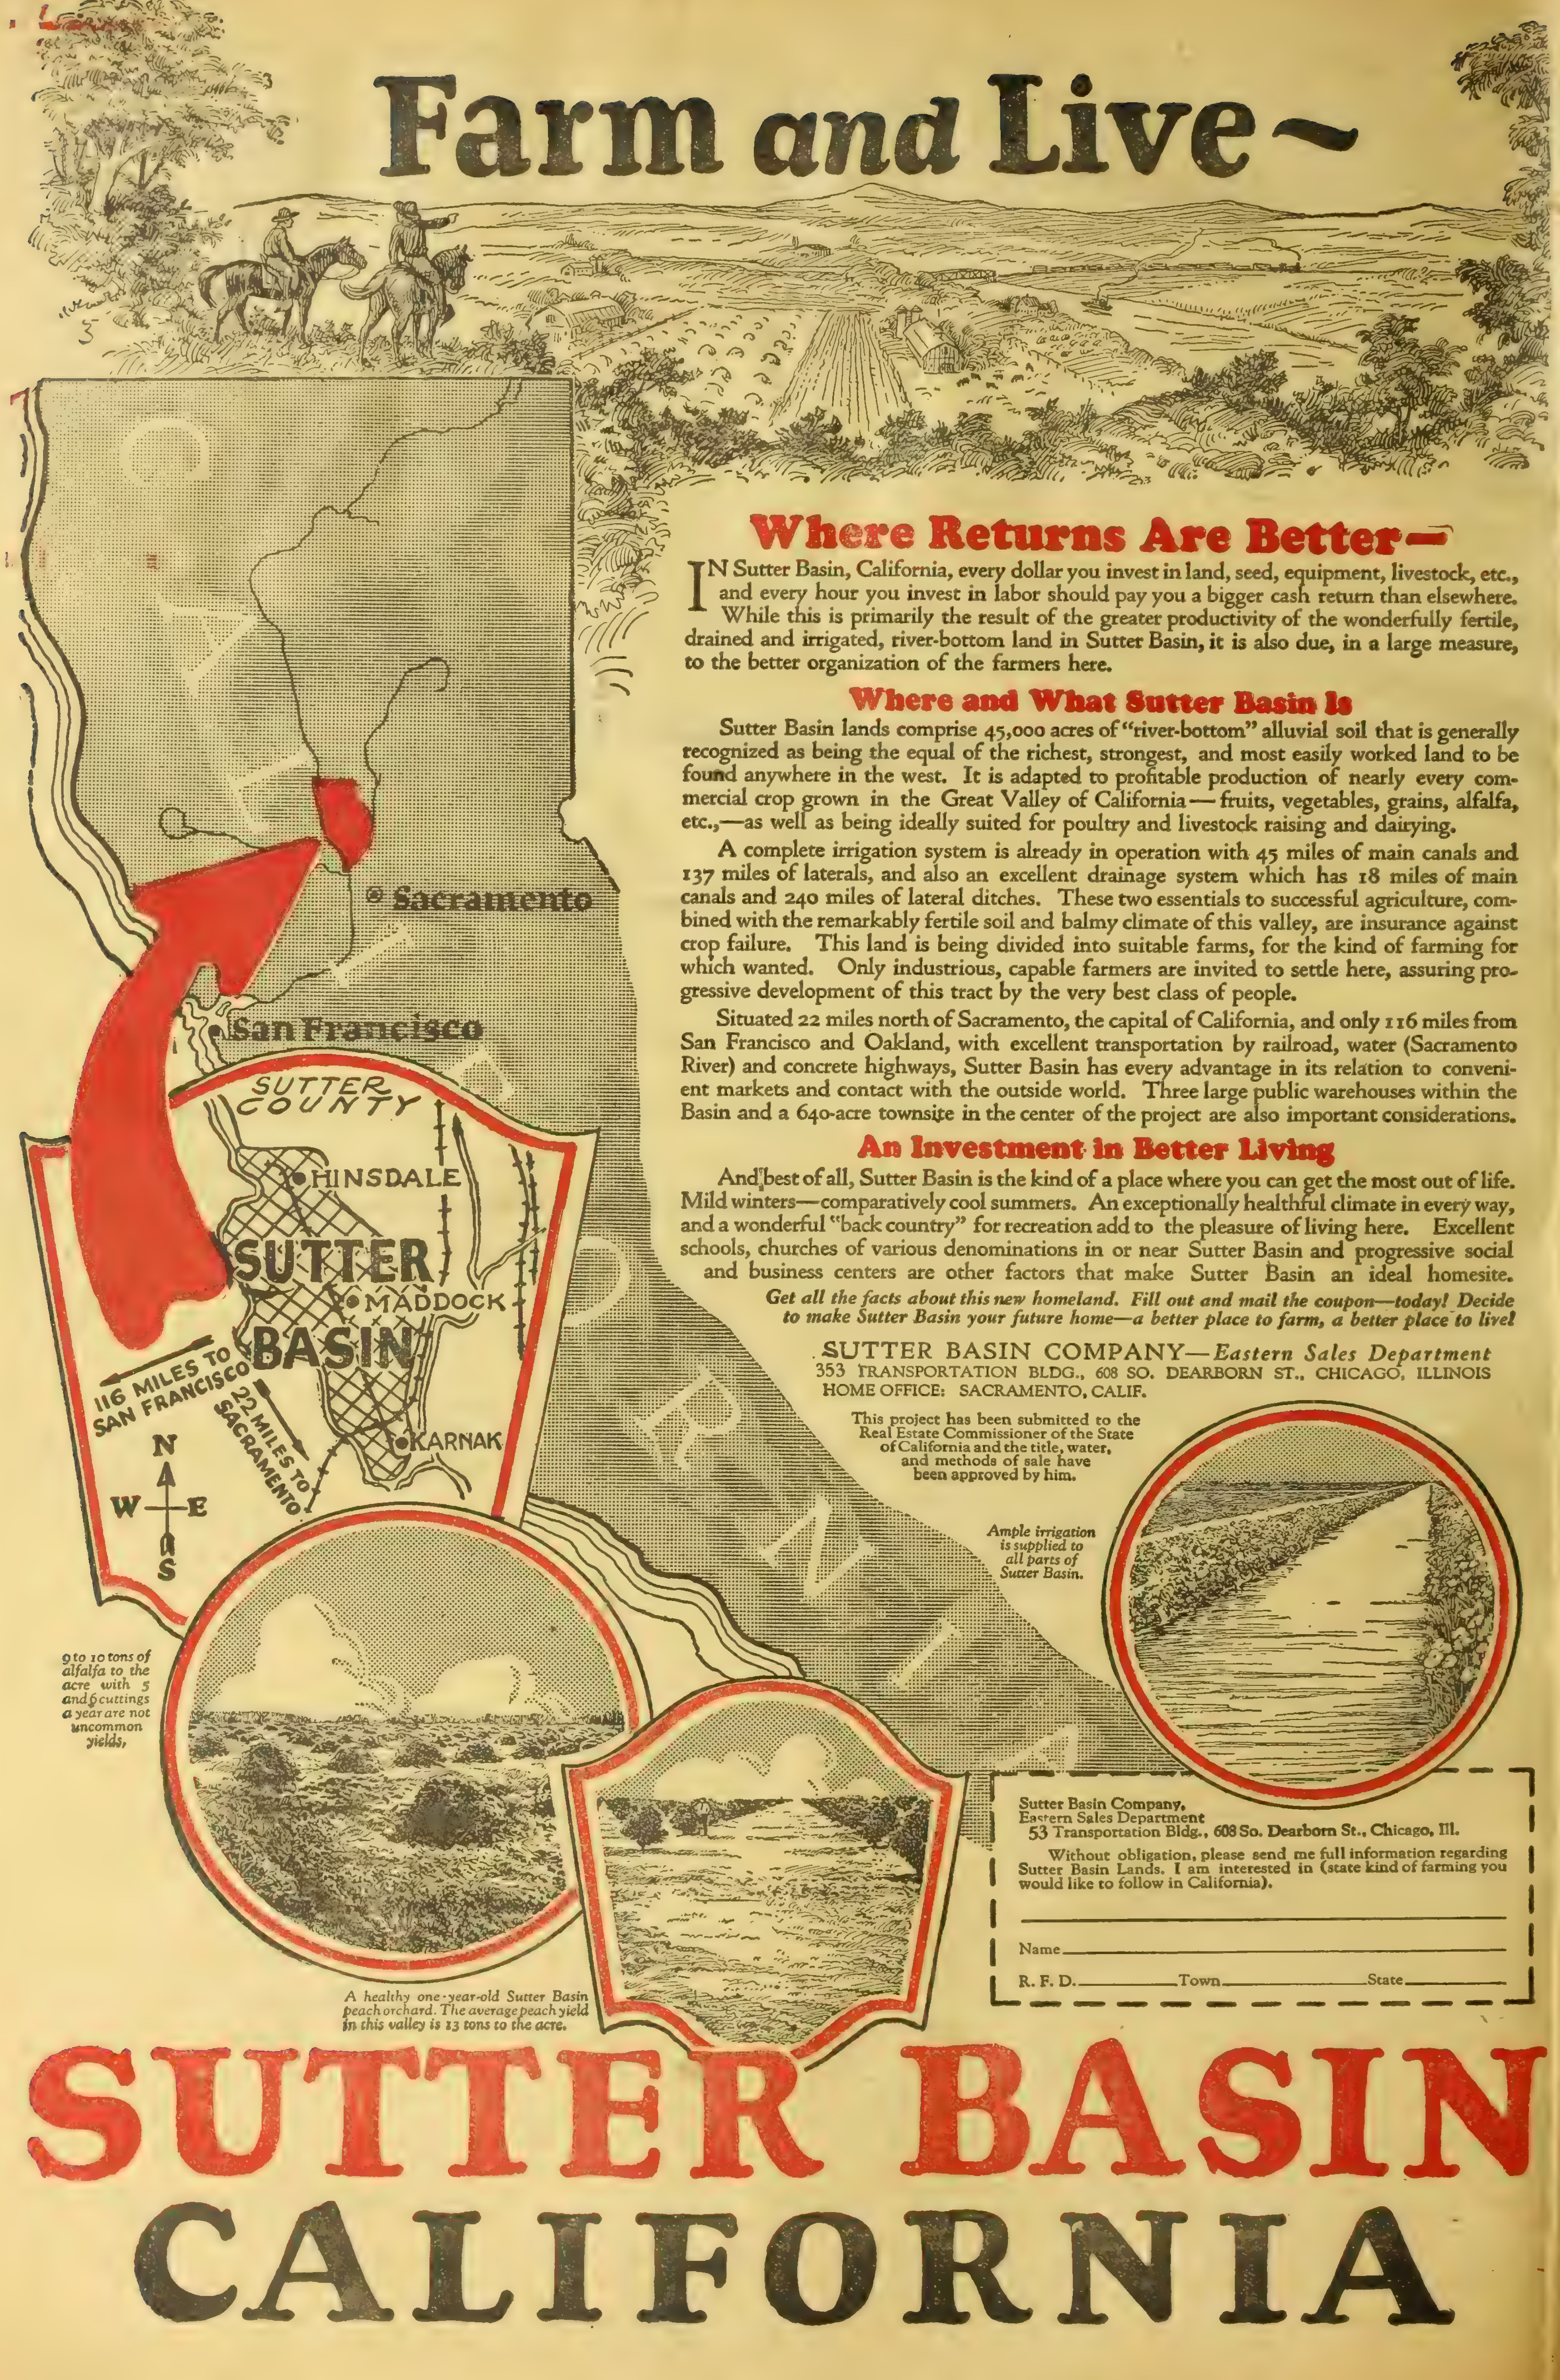
Farm *and* Live ~



Where Returns Are Better —

In Sutter Basin, California, every dollar you invest in land, seed, equipment, livestock, etc., and every hour you invest in labor should pay you a bigger cash return than elsewhere. While this is primarily the result of the greater productivity of the wonderfully fertile, drained and irrigated, river-bottom land in Sutter Basin, it is also due, in a large measure, to the better organization of the farmers here.

Where and What Sutter Basin Is

Sutter Basin lands comprise 45,000 acres of "river-bottom" alluvial soil that is generally recognized as being the equal of the richest, strongest, and most easily worked land to be found anywhere in the west. It is adapted to profitable production of nearly every commercial crop grown in the Great Valley of California — fruits, vegetables, grains, alfalfa, etc.,—as well as being ideally suited for poultry and livestock raising and dairying.

A complete irrigation system is already in operation with 45 miles of main canals and 137 miles of laterals, and also an excellent drainage system which has 18 miles of main canals and 240 miles of lateral ditches. These two essentials to successful agriculture, combined with the remarkably fertile soil and balmy climate of this valley, are insurance against crop failure. This land is being divided into suitable farms, for the kind of farming for which wanted. Only industrious, capable farmers are invited to settle here, assuring progressive development of this tract by the very best class of people.

Situated 22 miles north of Sacramento, the capital of California, and only 116 miles from San Francisco and Oakland, with excellent transportation by railroad, water (Sacramento River) and concrete highways, Sutter Basin has every advantage in its relation to convenient markets and contact with the outside world. Three large public warehouses within the Basin and a 640-acre townsite in the center of the project are also important considerations.

An Investment in Better Living

And best of all, Sutter Basin is the kind of a place where you can get the most out of life. Mild winters—comparatively cool summers. An exceptionally healthful climate in every way, and a wonderful "back country" for recreation add to the pleasure of living here. Excellent schools, churches of various denominations in or near Sutter Basin and progressive social and business centers are other factors that make Sutter Basin an ideal homesite.

Get all the facts about this new homeland. Fill out and mail the coupon—today! Decide to make Sutter Basin your future home—a better place to farm, a better place to live!

SUTTER BASIN COMPANY—*Eastern Sales Department*
353 TRANSPORTATION BLDG., 608 SO. DEARBORN ST., CHICAGO, ILLINOIS
HOME OFFICE: SACRAMENTO, CALIF.

This project has been submitted to the Real Estate Commissioner of the State of California and the title, water, and methods of sale have been approved by him.

Ample irrigation is supplied to all parts of Sutter Basin.

9 to 10 tons of alfalfa to the acre with 5 and 6 cuttings a year are not uncommon yields.

A healthy one-year-old Sutter Basin peach orchard. The average peach yield in this valley is 13 tons to the acre.

Sutter Basin Company,
Eastern Sales Department
53 Transportation Bldg., 608 So. Dearborn St., Chicago, Ill.

Without obligation, please send me full information regarding Sutter Basin Lands. I am interested in (state kind of farming you would like to follow in California).

Are You Using Our Service and Protective Bureau?

Have you any perplexing farm or business problems? Then call on our Service Bureau.

Thousands of THE BUSINESS FARMER readers have learned that THE BUSINESS FARMER is more than a high class farm paper. It is a friend as well, one who serves—and never fails in time of need.

As a subscriber to THE BUSINESS FARMER, you are entitled to all the rights and benefits of our Service Bureau. We want you to use this service—call on us freely.

RESULTS

Dear Sir: We are writing you regarding ——————. Claim No. 1257. We are very pleased to say it has been settled satisfactorily. We received the check in less than two weeks after writing to you. We are very thankful for the assistance you have given us and will endeavor to boost the M. B. F.—J. D., Jr., Ubly, Michigan.

Claim No. 1257.
Amount of claim, $40.00.

Gentlmen: We have today received the radiator we ordered from ——————— & Co. I thank you for conducting a department in which we farmers can come to.—F. P. K., Belding, Michigan.

Claim No. 1234.
Amount of claim, $12.25.

Dear Sir: We received the knickers from ——————— today. Thanking you very much for the same. They certainly got busy when they heard from you. Wishing you success in your good paper, I am,—V. A., Mt. Pleasant, Michigan.

Claim No. 1368.
Amount of claim, $3.77.

Dear Sirs: In todays mail I received my money from the ——————— & Co. I asked for your help only ten days ago. I must say I am more than thankful to you.—Mrs. F. M., St. Clair, Michigan.

Claim No. 1355.
Amount of claim, $3.03.

JUST A FEW THINGS IT WILL DO FOR YOU

Will furnish you protection from swindlers, fake peddlers, and promoters.

Tell you about any investment, or stock selling scheme. Invest no money in any scheme before you have asked THE BUSINESS FARMER Protective Service about it.

Aid you in collecting any claim you may have against any insurance, railroad, express or other company.

Aid in the collection of obligations.

Help you in the adjustment of claims.

Give you prompt information and advice about any crop, soil, livestock, dairy, or poultry problem.

Furnish expert market information whenever you have something to sell.

Help you with any building construction or farm machinery problems you may have.

Tell you the law and custom on all questions of rents.

Answer any question with regard to home or community life, schools, canning, cooking, preserving, or housework in general.

Give you correct information on any farm subject and will help you in trying to settle and farm, health, or legal trouble of any sort.

Protective Sign and Certificate

We want every reader of The Business Farmer to have one of our beautiful certificates of membership and a Protective Service Sign. The certificate is suitable for framing and will be mailed free of charge.

The Protective Service Sign acts as a warning to swindlers and fakers and informs all that you are a member of an organization of power and influence that will stand with you in support of your rights. We are asking a small charge of 25 cents to cover cost of sign and mailing.

THE BUSINESS FARMER,
Mt. Clemens, Michigan.
Gentlemen:—

Check for either or both the certificate and sign.

☐ Please mail me a membership certificate free of charge.

☐ I would also like one of the Protective Service signs and am enclosing 25 cents to cover cost of sign and mailing.

PLANTING BERRIES IN OLD ORCHARD

Would or would not an old orchard be a good place to plant blackberries and raspberries? If so how far apart should they be placed? The soil is sandy; could have it fertilized every year if need or what kind would be best?—T. H., Mesick, Mich.

—Whether blackberries and raspberries can be grown with success in an old orchard depends to a considerable extent upon the condition of the trees and the distance between them, if, as I understand, the land is still planted with trees.

Sandy loam soil, especially if it can be fertilized, would answer well for the growing of these fruits, but they should be planted in rows about 8 feet apart, with the plants four feet apart in the rows. If the trees are close together, it would not be possible to get very good results, since the roots of the trees take the food and moisture from the berries. Having berry plants in the orchard would also increase the difficulty of properly cultivating, spraying and caring for the trees.

However, if the trees are small and quite scattering and not other land is available for raspberries and blackberries, it would perhaps be well to plant them in the orchard. In order to get good results, however, it will be necessary to have them growing where they can be cultivated about once in ten or twelve days up to the time the crop is harvested, and then after the old canes have been removed, they should have two or three additional cultivations.

The plants may be set either in the spring or fall, and it may be helpful if a forkful or two of decomposure manure is placed about each plant after the soil has been firmly packed about them.

For red raspberries, Cuthbert and Early King are giving best results, as are Cumberland and Plum Farmer among blackcaps. Eldorado is the most desirable variety of blackberry although Snyder is a little hardier.—L. R. Taft, State Dept. of Agriculture.

USING FERTILIZER ON GARDEN TRUCK FARM

Can you give me information on the use of nitrate of soda, sulphate of ammonia and other fertilizers for use on a garden truck farm?—E. E. L., Essexville, Mich.

—The application of fertilizers to vegetable crops depends on several factors. In general nitrates tend to produce vegetable growth and delay maturity while phosphorous tends to hasten maturity. Short season salads and greens such as lettuce, early cabbage and spinach requires quick acting nitrogenous fertilizers. Nitrate of soda is most readily available while sulphate of amonia and dried blood are more slowly available. Sodium nitrate would then be applied in smaller and more frequent applications while the other two would be applied at one time. Very often nitrates are the only fertilizers applied to these crops.

For crops as tomatoes and melons where early maturity of fruits is essential, phosphorous would be important. Smaller amounts of nitrates is important, to stimulate early vigorous growth but this must be applied early and in moderate amounts. Thus for tomatoes, melons, and similar crops a complete fertilizer analyzing something like 3-12-6 would give good results on a fairly poor type of soil. On a more fertile soil, the application of 500 pounds of acid phosphate alone would be satisfactory.

As a general rule applications over 500 pounds are broadcasted while smaller amounts are applied in the row. With the exception of nitrate of soda all should be applied at planting time. Very often for crops such as early cabbage and head lettuce it is better to make two applications of nitrate, the second three weeks later.—E. P. Lewis, Assoc. Prof. of Horticulture, M. A. C.

He Could Do It, Too

Brown: I see that Perkins has got a job in Smith's livery stable.

Jones: What's he doing?

Brown: Smith has some horses that won't take the bit, so Perkins talks to them till they yawn.

An Over-Production of Crops and Advice

Many Ideas Advanced to Help the Farmer Solve His Problems but All Contain Flaws

Musings of FRANK W. BENNETT

County Agricultural Agent of Barry County.

HARDLY a day passes but what we read of some new plan to help out the farmer, by some "Moses" who has kindly consented to lead the farmers out of the darkness. many of the plans are impossible, many sound good on the surface, and a few contain real sound sense. Mr. Bennett has picked out a few samples of the over-production of advice offered the farmer and then proceeded, after much thought, to answer each one with facts. You all have your opinions of this advice given so freely, now compare what you think with Mr. Bennett's ideas.

WHILE we have been informed that we have a surplus of wheat, potatoes, pork, beef and hides, in fact everything for which the farmer is unable to receive the cost of production when he sells it, he is told that there is an over-production and he is advised to diversify, or in other words, produce something else.

In speaking of surplus we are inclined to think that there may be a surplus of advice. Anyway, it is becoming cheap. In other words, it is not accepted as whole-heartedly as it was. Now. I do not wish to discourage anyone from trying to solve our economic problem, in fact the more people think along this line, the sooner a possible solution may be found. But I am inclined to offer a word of warning to those thinking persons who no doubt are honestly trying to solve the farmers' problems. If you have a plan, think it clear through. What would the result be if any large number of persons would do as you suggest? Let's analyse a few remedies for agriculture given by many as advice.

Advice No. 1. If the farmers would go home and go to work instead of riding around in their automobiles, they would solve their own problems.

Answer. The farmers' job is to produce. Now extend a little more of your advice and inform them what to produce. Perhaps they might produce wheat, pork, beef and hides, or potatoes, all of which we are told are already over-abundant. Perhaps it might be possible for you to hit upon some special product that might pay the cost of production, plus a profit. But then if this great army of automobile riders would go to producing this specialty, they would only add another item to those already listed in the surplus column.

Farmers Deserve Good Things

Advice No. 2. The cost of high living. The farmers don't live as they used to. They buy automobiles, go to moving pictures and wear good clothes. You can hardly tell a farmer from a successful business man.

Answer. Agriculture is the source of 85% of the wealth of our country. Now if there is something inherent about farming or agriculture that places it below any other business, or industry, or in any way makes it degrading, then our would-be advisers had better center their energies in trying to adjust our economic structure so as to let agriculture assume its rightful place along side of our other industries.

Advice No. 3. The auto is a curse to the country and is killing agriculture.

Answer. The internal conditions of our country have gone a long way toward relieving a serious condition which was inevitable following the great war. With many of the countries of the world nearly banckrupt and unable to buy or pay for our surplus products what would have happened if our automobile factories had not been running full time and employing thousands of men at a good wage? This has made it possible for laboring men not only to buy and pay for the largest amount of farm produce in history, but also to purchase furniture and other similiar commodities, the manufacture of which in turn gave other men employment so they might buy farm produce.

The congregating of so many men and women in the cities made it necessary to build new homes which not only make a market for lumber brick, tile and cement but gave employment to other thousands of workers who in turn bought farm produce. So I am inclined to think that the auto craze has saved our country from a great economic disaster.

Advice to the Wheat Grower

Advice No. 4. To the wheat farmers who have 140,000,000 bushels surplus comes the advice to diversify and feed wheat.

Answer. Diversification means to produce other products. The wheat grower might raise potatoes, but we remember that during the last two years there have been more potatoes grown than ever before and the price, considering the cost of production, plainly shows too great a production. He might produce meat, but I have before me a government report which shows that meat has increased one billion and one-half pounds over last year. The result at this time of diversifying, would only tend to lower the general price level of all commodities or bring all products to a point of surplus.

Self appointed and well meaning advisors also urge us to feed wheat, as wheat has nearly the same feeding value as rye, corn, oats or barley. This suggestion has some value, but we must remember that by feeding wheat, we would place this product in competition with these other grains and, of course, this would tend to low their price, so you see as a general means of helping agriculture these proposed remedies fail to accomplish what is claimed for them.

The difficulties of our present situation are very real. The situation is admittedly dark. Our national leaders realize it. Following is an extract from the Secretary of Agriculture's speech before a body of economists: "In times such as these good farm management on most farms is reduced to the simplest terms and can be stated very briefly. For example: Produce as much as you can as cheaply as you can of what you can produce best; spend as little as you can; work as hard as you can, make your wife and children work as hard as they can. Having done this, take what comfort you can in the thought that if you succeed in doing what you set out to do, and if most other farmers also succeed, you will have produced larger crops than can be sold at a profit and still be under the harrow. Nevertheless, the average farmer is forced by unhappy circumstances to adopt exactly that policy. It is not good for the farmer, not good for his wife and children, not good for the Nation."

Was the Farmer to Blame?

Some say that during the depression of the last three years, the farmer found himself exactly where he ought to have known he would find himself; that such periods always follow wars, and the farmer should have known this and set his house in order; that those farmers whose foresight was not as good as their hindsight must take the consequences—work hard, keep cheerful and if they survive take comfort in the thought that the next time they will know in advance what is going to happen.

Advice No. 5. Co-operative marketing will solve our problems.

Answer. Co-operative marketing is good business practice and should be encouraged. Thirty-seven cents is not a just share of the consumers' dollar to be returned to the person who takes the chances of the elements such as rain, wind, hail, drought, etc., and we have proved that by marketing co-operatively a larger per cent of the price paid by the consumer for products is returned to the producer.

We do believe that it is good business to eliminate just as much expense as possible in transferring produce from the producer to the consumer in the way of freight, handling, profits, etc. But, in general, could the co-operators sell our surplus at a profit? Or with an unlimited supply of any or all products, could they market it so as to return as a price which would cover the cost of production?

Or if the economic relations between this and other countries should make it possible for foreign countries with cheap money, cheap labor, and cheap transportation to produce and sell in our markets for less than the cost of production here, could the co-operative marketing save us? You may say that isn't possible, but the Government reports that our agricultural exports were less last year than our imports, and how do we know that it will stop there? We have no assurance that the agricultural imports into this country may not keep on increasing.

Is Efficiency the Remedy?

Advice No. 6. Better farming, namely, better seed, better soil, better stock and better methods.

Answer. In reply to these suggestions that increased efficiency of production is the real remedy we would say that these things are all essential and by all means should be the aim of every farmer. We admit freely that it is the adoption of better business practices that makes it possible for one individual or corporation to compete successfully with others in the same business, especially if others do not apply good practices. For instance, if all auto manufacturers built and sold as many cars as the Ford Company, the entire industry would be ruined in a short time.

The natural incentive of every farmer is not only to do well, but to do better. He, like every one else would not be satisfied just to make a living and pay his over-head expense. So if by better farming, he could make a small profit, he would try to expand this business until he could have on hand a comfortable bank account laid by for a rainy day. Then again if a great number of farmers adopted the advice given and still retained that great natural desire to do better, we might not only have a surplus but a super-surplus. So again generally speaking, agriculture as an industry might not be any better off.

After carefully thinking over and analyzing the effect that would result by the application of these programs, given as advice, especially if such programs were followed by any great number of farmers, we are convinced that the serious condition in which agriculture has found itself in the last three years was not brought about by any individual action of the farmer himself, nor can any individual effort on the part of the farmer correct the condition.

A Look at the Real Problem

Question No. 1. In an attempt to analyze our present situation, one of the first questions that we might well ask ourselves would be, "Is there anything the matter with agriculture? If so, when did it happen, what were the circumstances at the time and what remedy should be applied?" In answer to the first question, I would say that farm values have decreased $13,000,000,000 from Jan. 1, 1920 to March 1, 1922. Also in some of the agricultural states from 42 to 62 per cent of the farmers are bankrupt, and these bankruptcies in agricultural districts have caused more bank failures in the year 1922 than in any other year since the panic of 1893. For further information, ask any farmer who is trying to meet his overhead expense and at the same time keep his farm buildings, fences and machinery up in order.

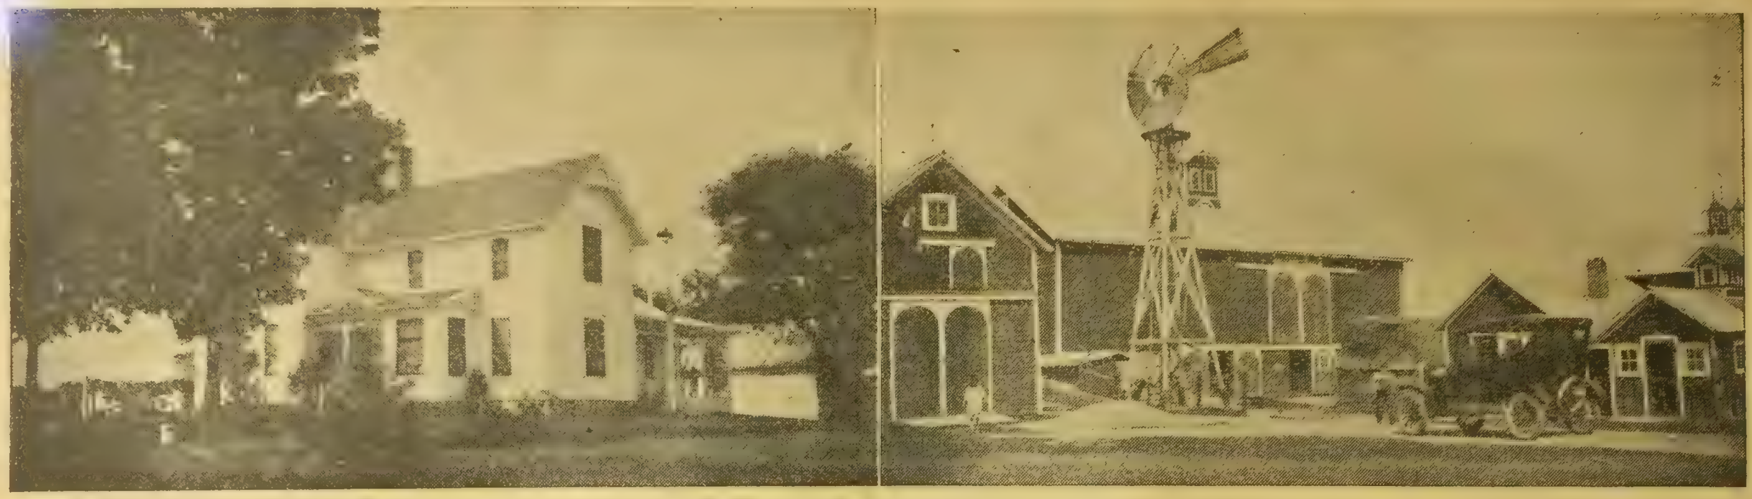
Question No. 2. When did it happen? In order to establish the time we, of necessity, have to consider the relative condition of agriculture to other industries over a period of years. After agriculture had recuperated from the crisis of 1893 to 1896, caused by an inflated currency, there was an increased circulation of from $28.00 per capita in 1896 to $35.00 per capita in 1900, so in the year 1900 agriculture found itself in a normal growing and thriving period which continued on with a few minor exceptions until 1920—when something happened. The bankers of the Federal reserve system in order to stop this crazy investing in not only things containing real wealth but in questionable stocks and bonds resorted to a deflation of the currency as a means, by ceasing to loan on what they termed speculative enterprise. This move accomplished its original purpose, but it did not stop there. In doing so it has nearly ruined our great essential industry—agriculture.

The Farmer's Little Dollar

In 1920 the purchasing power of farm products was 86, in 1921, 67, and 1922 as low as 64. It gradually began to revive until in October, 1923, it had reached 75, but in November it started downward and reached 73. Where will it go from here? During these times the farmer suffered from every element of increase in cost of production including wages, interest, taxes and freight rates.

Now I am going to ask any honest thinking man if it was anything that the farmer did or did not do that brought about this crisis in ag-

(Continued on Page 17)



If all farm houses, barns, and yards looked like this the country wouldn't be such a bad place to live, would it? It's surprising what a little work and paint can do if mixed with determination. This is Sunny Lawn Farm, at Rockford, Michigan.

Dress Up Your Home and Surroundings

A Few Dollars Invested in Paint and Lumber Plus a Few Hours Work Will Make You Feel, Look and Work Better

By L. FOWLER

THE psychologists tell us that we are greatly influenced by our dress and surroundings, and all who have had experience along these lines seem to agree with this deduction.

Have you ever been feeling as blue as the best tinted indigo, and just as you seemed to be sinking still deeper into the blue clay, you found that you must skip into town for repairs to some balky machinery. Then you decided that the limit had surely been reached, did you not?

But by the time you had changed and combed a little of the clay and grass out of your hair you were feeling fully ten per cent better, and as you whizzed along the road behind old Molly or in the wheezing old "Lizzie," you seemed to feel just a little better every minute.

That was because you were dressed neatly and thinking about something different. Neighbors crops, or new buildings were before you instead of the same old yard and dirty barn.

If old clothes have such an effect upon you don't you think that the old things your buildings wear might affect your farm and crops.

Did you ever see a farmer who let his buildings tumble down and his fences sprawl across the field and still rejoiced in good luck? If his tools go unpainted and find shelter in odd corners you usually find that his crops are full of weeds and every thing seems to be going wrong for him. His neighbors say "He never seems to get along."

Did you ever look at a neat place such as the "Sunny Lawn Farm" and not think, "Well, that fellow is surely getting along fine?"

Mr. Stewart, the owner, will surely testify to the fact that neat, well-kept buildings build up the morale of the people who work around them. They mean better crops and better results in every way.

But even the best buildings soon become an eyesore if their surroundings are not kept in an orderly condition, while very old buildings often look well, because they are kept in good repair with well-kept yards.

If you cannot at first afford such good buildings, you can clean up the yards, pile unsightly rubbish out of sight and make everything clean and neat.

You can clean up the dooryard and fence out the stock so the goodwife can plant some shrubs and flowers which will do more toward brightening up the old place than a great house with untidy yards.

You can put the hog house out behind the barn, and plant a beautiful hedge of some quick-growing, wild plant or tree to hide unsightly buildings. The common thorn-apple makes a good hedge and is a "Queen of Shrubs" when it is in bloom. It's fragrance and beauty is almost unequaled.

A few trees will make a desert-like place look like home. A coat of fresh paint will change an old house into a new one to the passing eye. A few field stones, laid with cement for the corner posts of the porch and also for the gate posts, will make an unbelieveable change.

There are so many things that cost only work, that it sounds decidedly lazy when we hear some farmer saying that he cannot afford to fix the old place up. It is not money but care that a home needs. Just some one to love it and fuss it up and it will repay a hundred-fold not only in increased profits but in multiplied pleasure and higher moraly for all who live with it or see it.

The children will take a greater interest in home if they have a pleasant home atmosphere and the work of caring for and improving the place will usually be shouldered by them if they are giving a free hand in the planning and planting. They like to try their talents in such ways and it helps them develope.

A cherry or plum tree at the back door. A few apples and nut trees for shade and a cozy grove of evergreens cost but little if very small trees are purchased for setting out, and they are usually as large in ten years as those that are much older when planted.

And don't forget a few trees for the chicken lot, the pasture and along the drive. They can usually be had for the trouble of taking them up and resetting, or by planting seeds, and they are valuable for future wood, as well as beauty.

Why not get busy and see who can make their old farms the prettiest with the least cost. Pilfer the woods for trees, shrubs and flowers. Many of them are beautiful. No spring is more sweet-scented than the wild cherry or plum. No shrub more beautiful than the wild rose. The vines are well represented by the woodbine and sweet briar.

There are flowers in abundance and the roots are free for the gathering. Always be careful to get a large lump of earth when taking them up or they may not live.

Make your home a bower of green beauty and you will feel better, look better and work better.

New England Dairymen To Have Central Milk Marketing Agency

By GEORGE HERBERT

THE most important move in the New England milk industry in many months was made at Bellows Falls, Vt., on March 13, when the initial steps were taken to unite all New England milk cooperatives in a single central cooperative sales agency.

The step was taken under the pressure of the recent "price war" on the Boston Market, which is still on, and working heavy damage to the producers. The Boston market is the natural price regulator for all New England, milk prices being set monthly there by the city dealers and the New England Milk Producers' Association, the famous "NEMPA," which is the most powerful cooperative east of New York. Each of the other larger cities has a similar bargaining body, which follows NEMPA's lead. Milk is sold in two classes, fluid and surplus, with a wide margin between the two in favor of fluid, and the "war" is the logical result of several factors, all operating on the perfectly natural and justifiable desire of the more distant independent cooperative creameries, especially in Vermont where no large city markets exist, to get their share of Boston's high fluid price.

One of these factors is the device of certain city retailers, selling mostly fluid milk, who pass by NEMPA with an offer to an independent creamery to take all its milk at one "flat price;" a price which cuts the NEMPA fluid figure, but still boosts the creamery's profits by cutting out the low priced surplus. The price cut is operated also by various other well worn contrivances such as rebates, bonuses, etc.

The immediate cause of the "war," however, seems to have been the aggressive action of the John T. Connor Co., a Boston chain store system, to work up a cash and carry trade in fluid milk. To insure its supply, the Connor Co. brought heavily into the Bellows Falls Cooperative Creamery, and improved the plant; the more readily that this concern had vainly tried, as it claims, to sell through NEMPA in the Boston market. Entrenched thus at the country end, the Connor Co. cut its cash and carry figure to 4 cents below the regular retailer's for residence delivery. These retailers, and NEMPA of whom they buy, considered so heavy a cut unfair; they could grant 3 cents, but 4 cents threw too big a fraction of their milk out of the fluid into the surplus class. The Connor Co. made it so hot for the retailers (and for NEMPA also, since much of their loss on surplus they pass at once to NEMPA) that NEMPA felt finally compelled to get into the game by cutting its own rates also, to hold its fluid market. The Connor Co. cut again, and the "war" was on.

It made so great an outcry among dairymen over their losses, and held on so long with little sign of let up, that the New England Homestead, through its editor, Glenn C. Sevey, issued a call for all hands to get together in the cause of peace, and the meeting at Bellows Falls was the result. It was largely attended, 200 and more being present, the call having included all the New England farmers' organizations and representatives who would naturally be interested. The selection of Bellows Falls, the chief country center of disturbance, and near many of the smaller creameries hit hardest by the "war," gave evidence of fairplay, as did the general conduct of the meeting, and a spirit of harmony pervaded the affair which was remarkable in the circumstance.

A broad picture of the situation was called for first by Chairman Sevey, many speakers, representing all the interests, contributing. President Geo. R. Little of NEMPA began it, explaining the difficulties of NEMPA in maintaining living prices, with surplus prices (based on butter) held so low by competition of the west. Critics had said NEMPA set its fluid figure too high, but how else could a living average be secured? The endeavor was to set it at the highest notch supply and demand would allow. He pointed out the rebate, bonus and flat price difficulties, but alluded to the chain store controversy only by saying that NEMPA had been forced to cut by competition. He ended by proposing as a solution a cooperative marketing sales agency, New England wide, with quality and distance the only differentials.

President Chas. F. Adams of the Connor Co., who followed, was the only speaker who brought a war spirit into the meeting. His tone was fight throughout, which hurt his case, and contributed materially to the ultimate harmonious outcome. He stood, he said, for the right of the consumer to the lowest possible price compatible with fair profits to an efficient organization. The basic trouble was over-production, and his cash and carry plan aimed to cure it by boosting consumption. His alliance had a right to the 4 cent margin, and they intended to get it.

Roy D. Hunter, ex-president of the Eastern States Farmers' Exchange, denied over-production in New England; the millions paid in Boston for western butter proved it. But he admitted the merit of a cash and carry plan, and believed a fair margin could and would be made. He believed in the farmer getting the retail price for his product, just as many manufacturers set it. NEMPA has kept out of retailing, but the time has come to consider it. The law does not permit dealers to combine to set a retail price; it does permit farmers to do so.

State Agricultural Commissioner Gilbert of Massachusetts believed

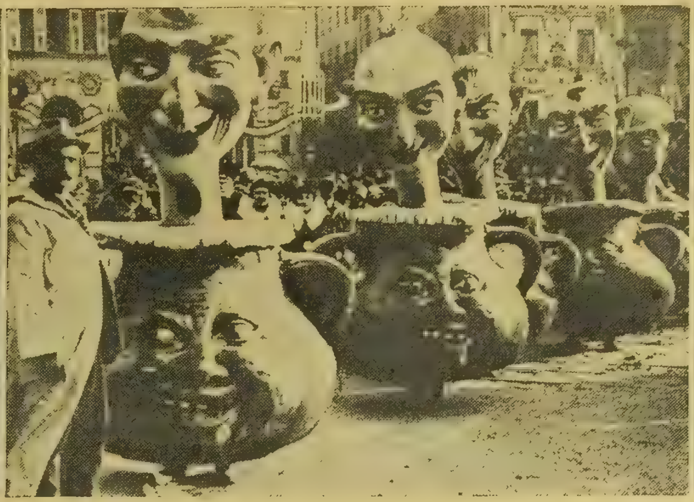
PICTURES FROM FAR AND NEAR

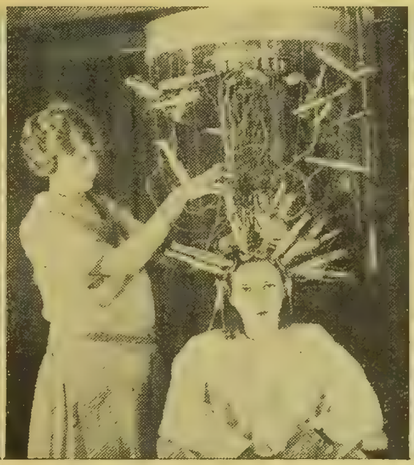
WORLD'S SMALLEST BOOK AND INVOICE.—The hand here shown is holding two unique objects in the form of a tiny Morocco bound book, one-half inch by three-quarter inch, with 29 pages. The other is an invoice for three lambs, and dated in the year known as 2350 BC.



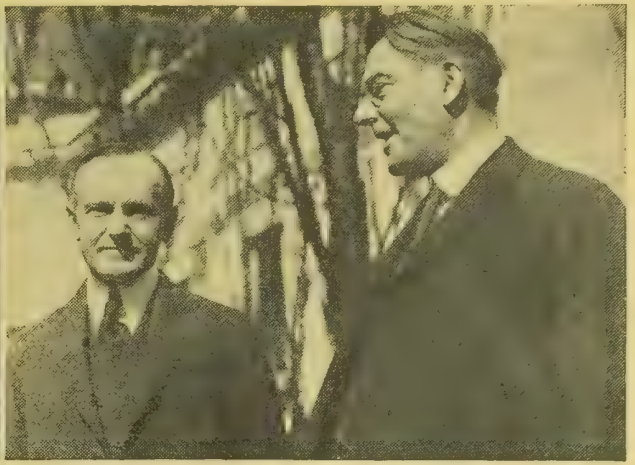
WHAT'S THIS?—No, this is not a scene from "Alice in Wonderland" or a picture taken in some land of horribles. Each year the people of Nice, France, hold a carnival, and this picture shows part of the long procession of revelers at the last carnival held recently. The French plan far in advance for this annual event and they have great times. Can you keep a straight face as you look at these grotesque figures?

VICE-PRESIDENTIAL POSSIBILITY.—Major George L. Berry, of the American Legion, and president of International Printing Pressmen's and Assistants' Union of North America, who is the labor and ex-service men's candidate on the Democratic ticket for the Vice Presidency.

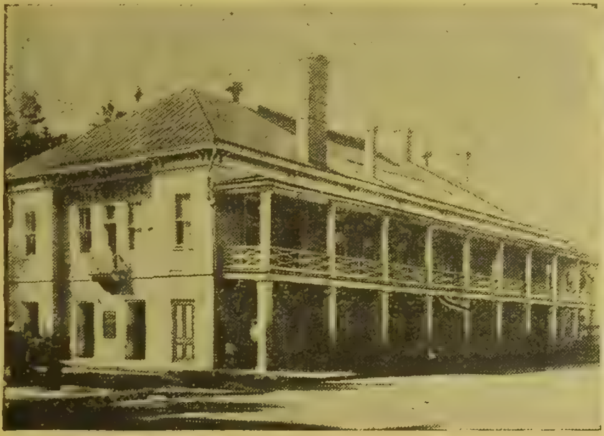
GOOD FOR THE TEETH.—Miss Helen Sube, late European diving champion, and star of the New York Hippodrome, is here showing a Los Angeles crowd how easy it is to pull an automobile with 8 men aboard.



NO, THIS LADY IS NOT BEING ELECTROCUTED.—She has not been sentenced to death, but is just getting a permanent wave.



GOOD LUCK TO YOU.—Curtis D. Wilbur, new Secretary of the Navy, is shown with President Coolidge. Upon his arrival at Washington to take up his duties he was met by the President who wished him all possible success.

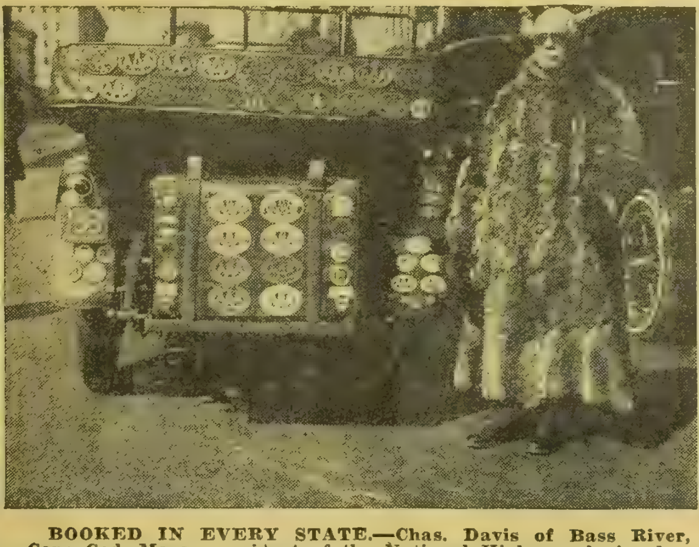


OLDEST BUILDING IN U. S.—The present U. S. Post Office at St. Augustine, Fla., which is said to be the oldest building in the United States. Originally it was the Spanish General's palace built of logs. The present structure was built in 1597-1603, and sold for $3000 to the Spanish King.

A VOCABULARY WIZARD.—Little Adele Aarons, 2 years old, of Philadelphia, Penn., has astounded learned men with her knowledge of the English language. She can converse fluently, and she uses words of 2, 3 and 4 syllables.

FARM LABOR STRIKE IN ENGLAND.—Farm hands in England all belong to the English Farm Hand Union, the only union of its kind in the world, and they recently went on a strike. The English "Bobbies" guarded the strikebreakers, or "blacklegs" as they are known in that country, so they could work.

THOUGHTFUL CONSTANCE.—A charming study of Miss Constance Talmadge, noted screen star, caught as she was in a thoughtful mood, probably wondering about asking the producer for an increase of $1,000 a week in salary.



BOOKED IN EVERY STATE.—Chas. Davis of Bass River, Cape Cod, Mass., president of the National Highway Ass'n., has license plates from every state in the Union. He belongs to 46 different automobile associations and has an emblem of each on this car. The photo was snapped during a recent tour of the states.

GREATEST RUNNER OF THE YEAR.—Loren Murchison, who should be awarded the victory wreath if it is figured on victories. He won in every meet except one and is now preparing himself to go to France this summer with Uncle Sam's athletes.

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

TRAVEL, say the wise ones, is an education in itself. That's just what Pete Dexter, faker de luxe, discovered soon after he joined a troup of medicine show grafters. By staying one jump ahead of the cops, Pete never worried, altho the one jump caused him a lot of quick moving at various stages in his travels.

From a canvasser who had no thoughts of playing fair with his customers, Pete tackled the stock selling game at various times. He wasn't very lucky till he happened onto a land selling scheme in Texas, and then he made a killing.

He thought he knew enough about promoting a company of his own to start a railroad that would run where others would not. He did a good job of promoting, but failed to reckon with people who wanted a show for their money, and last week he told how he almost landed in jail because some folks became curious. But by handing over his profits to attorneys and bondsmen, Pete managed to slip thru the net, and, altho the railroad went up in smoke, Pete was left to pursue his game of getting dollars. However, his brush with the long arm of the law has made him cautious, and so he believes it pays to gain fame by a slower process. This week he gives further facts of his life chase after easy money.

SO I moved to New York, where I could hide for a while, as several of the stockholders in our railroad had promised me a first-class beating if they ever caught me, and from the looks of some of them, I suspect they could have carried out their threats.

One day I admired a pretty white stone my landlady was wearing on a small chain. She said I ought to have one—it was a lucky stone. When I inquired where she got it, she produced an old booklet which described in detail how a famous explorer had found some stones in India. These stones were used by the natives to ward off all evil, and whenever a person carried one in their pocket, they had good health and good fortune.

Altho the booklet had been printed many years ago, it stood up till I had copied out the wording. I changed the names a little and decided that this was something every one wanted. A small print shop came to my aid again. More books were printed, and the marvels of the East Indian Lucky Stones were set forth. In order to make these things sound good, I put a lot of unusual testimonials at the bottom of the pages, which I wrote myself. I told of how many had these stones set in rings and others had them made up into watch-charms.

Not only were the stones carriers of wonderous magic, but they were really valuable as gems. I further described them—how they were gotten and how the importers had arranged with a Bombay dealer to furnish a supply of them.

These stones were sold at the small price of one dollar each or three for two dollars. The usual literature with order blanks was sent out and a nearby stream furnished a goodly supply of stones. I never knew how many people believed in such charms and long after I had stopped filling orders, letters would come addressed to me, asking for the stones. That deal kept me in spending money one winter, and I have often thought I missed a good business opportunity by not sticking to it regularly. But I ran out of booklets, and didn't want to spend time waiting for a reprint.

Having a little time and some money, I decided that a trip to Europe would be good for me, as I needed a rest, and my experience with the law was such that I didn't want to take any chances.

The old saying that "birds of a feather flock together" holds good as far as I am concerned. I got back from my European tour pretty hard up, but on the boat coming back I met another fellow who was interested in promotion work. He had an office in New York, and wanted me to work for him. As I said before, being broke is no joke, so I hired out at a fancy price. Harrison T. Henry was the fellow's name I was working for, and we dealt in stocks. Henry dealt in all kinds of stocks, but catered to the smaller trade; that is, we would get a line on people who had a little money to invest and who did not know much about stocks. Not knowing much, it was easy for us to sell them most anything.

Frequently we would find people that had a few share of good securities that had been left them by a departed relative. Of course, they wanted to make a killing, and were always looking for a chance, and the Harrison T. Henry Company was out to give them that chance.

We had a list of people we had gathered who had such investments, and my job was to call them on the phone. The line we used was as follows:

"Is this Mrs. Smith?" I would ask when the phone was answered, and of course it was, and I would proceed to tell her who I was and lay emphasis on the name of the firm.

"I believe you are the owner of five hundred shares of Nutty Chips, the new breakfast food," I would say.

"No, there's some mistake," replies Mrs. Smith.

"I beg your pardon," I would say. "I was going to give you some good news."

"What is it?" was the question that invariably followed, and all I had to tell her was that "Nutty Chips" had started to soar in value and that fortunes would probably be made in that stock in a week or so. Naturally, in a short time the victim would follow this tip and call at our office and it didn't take long to get her to trade in her good stocks for shares in the company that were soaring in value. Frequently, money came in, too, and we were going fine till one irate woman found out she had been stung. Of course Henry was arrested, but I had taken my departure and gone west. At least my earnings gave me a start, and I decided to try a better field.

While I was working in New York, I met a fellow who had a soft game. He didn't get a lot at once, but it came easy. I had the literature, and so I opened an office in St. Paul and turned my attention to the fortune telling game, or astrology. I had a lot of literature printed that looked as if it was typewritten, and started a lot of ads in some of the various weekly papers thruout the country. The ads read about as follows:

"Can you stand the truth? Let me tell your fortune free. Somewhere in your past, present or future you have had some startling experiences which if taken at the right time might be a fortune to you. Astrology, the oldest of sciences, will help you in your business. Write your name, date of birth, and enclose ten cents in stamps for a confidential reply."

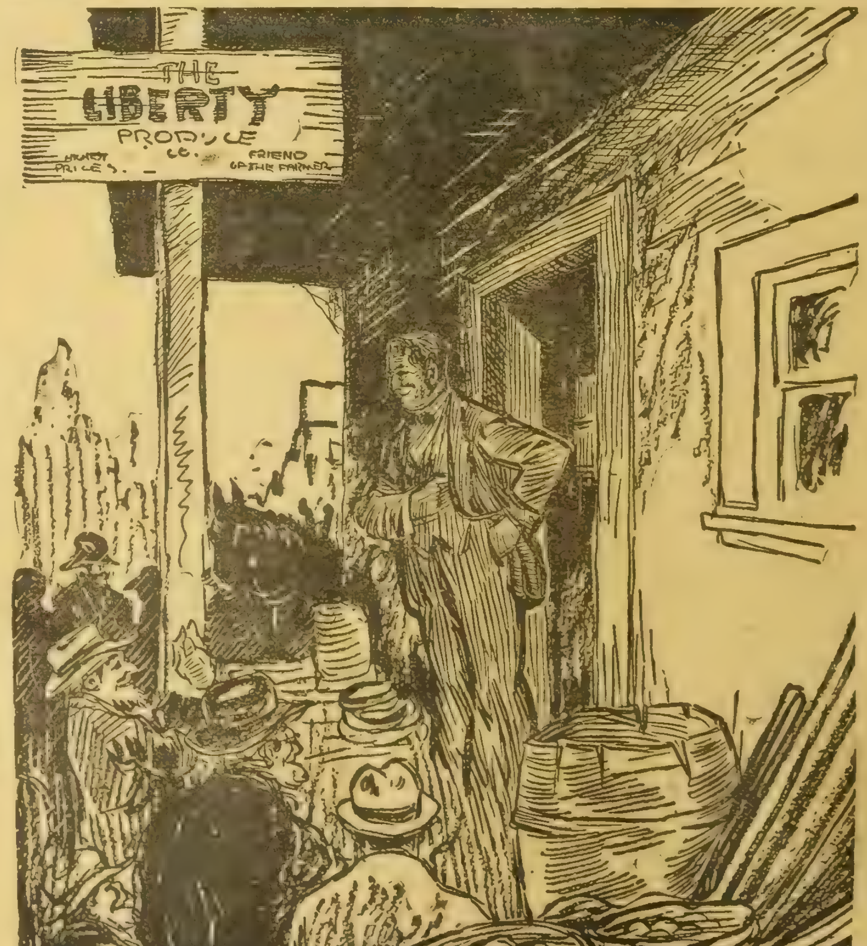
It wasn't long till a lot of people began to send in the dimes. I therefore sent them a chart that looked very mystical and which had a lot of the signs of the vodiac on it. On the back they would find a lot of stuff that would arouse their curiosity, and toward the end a chance to get real stuff on their future was offered for the price of two dollars.

Needless to say, I got a lot of money on this scheme. All I had to do was to keep it going out, and the way folks bit was good. It was while I was working this scheme that a fellow named Reilly, whom I had known in Californa in the gold mining stock deal, met me.

He had the lists of all the stockholders in the old Cripple Creek company, and when I told him what I was doing, he made this suggestion. He was to go to Denver and wait till I had sent out circulars to his mailing list. I was to be the astrologer, and was to say something like this:

"The stars which control your destiny show that you have made investments in the past which so far have proved unprofitable. However, I find that these same stars have good tidings for you, and if you will send a dollar the information will be sent." The people who answered, and a lot of them did, were advised that their investments would start to pay very soon, and they had better look them up. Of course a lot of other stuff was put in, but they saw that investment stuff first.

It was then that Reilly, of the Cripple Creek company, started to work. He would send out a pamphlet telling the stockholders of the recent success of some of the old holdings of the Cripple Creek company, and that by the use of modern machinery, which was to be installed at once, their former investment was going to pay out big. It was necessary, of course, that more money be had, and if each stockholder would send in five dollars for each share he held, the new company, under Reilly's direction, would soon be the talk of the age.



I Opened the Liberty Produce Company

Say, when the holder of that stock thought of what the fortuneteller had just written him recently, he wasted no time in sending his check to Reilly. In two months we cleaned up $25,000, as there had been about 10,000 shares of Cripple Creek stock out at the time.

We probably would have gotten more, too, but a postal inspector got suspicious of Reilly's getting so much mail and one day he appeared at the Denver office and grabbed Reilly. I was in Denver at the time and when the evening paper told of his arrest and how the postal authorities were looking for the rest of the gang, I left town without collecting my baggage. Reilly was sent up for three years and I was glad for he had played me dirty in California.

I went to North Dakota after that deal. I wanted to hide and rest up till things quieted down.

While I was there I noticed the big business in the potato industry. It appealed to me and I tried to figure how a fellow could get in on the business and still make money. My earnings as an astrologer had been pretty good but I was afraid to start out again as Reilly's arrest brought home the fact that the postal department was a dangerous gang to have on a fellew's trail.

It wasn't long after I had located in the small town of Benner that I discovered the farmers were discusted with the manner in which they sold their crops. After all the work they turned it over to some company for sale and took just what they handed them in payment. I decided here was a good chance to get easy money. So early in the following summer I opened the Liberty Produce Company. The Liberty was announced as the friend of the farmer. I put a little of my money in the local banks which gave me a standing with them and started out among the farmers and bargained for their crop of potatoes. I would cut down the cost of the middleman in selling them and they fell for my line in a hurry.

A few trips to Minneapolis and Chicago on my part impressed them a lot and I arranged for selling the potatoes. When the first few cars were sold to me I paid a good price for them at once and made a lot of moise about how that was the real price they should receive for the crop. Of course I sweetened the checks a bit out of my account but that sugar drew the business. I had so many calls to buy potatoes, that I couldn't get around to check them all as they were loaded. Ordinarily I paid by check when the car was loaded but due to the busy season on my part and my many trips to market, I fell behind in paying at once. But these farmers never worried. They were so sure of my offers that they said it was all right and I could leave their checks at the banks and that would save them trips to town.

However, I worked it pretty good. I managed to check out all but a few dollars of my deposit in the local banks but they didn't care as my returns should be coming in shortly and the banks figured I would leave a nice sum with them to use during the winter.

The Liberty Produce Company sure had a big business and along toward the close of the season I had thirty cars of spuds lined up. I announced that I was going to take them to market personally, and away we went. I did take them "personally" and when the commission firm I was dealing with in Chicago paid me I decided that the killing was good and instead of going back to Benner, N. D., I shaved off my moustache and decided to visit in New York for a while. That was about the easiest money I picked up and of course there was not a thing to worry over as I had never incorporated and the few books I had left in the offices of the Liberty company showed nothing.

RADIO DEPARTMENT

By J. Herbert Ferris, B. E.

TO RECEIVE TIME SIGNALS

I wish to receive time signals from the Arlington Station. Can I do this by adding loading coils to a broadcast receiver, or do I have to get a honeycomb coil?—A. B., North Branch, Mich.

—Yes, you can add loading coils in your present set to get Arlington time signals. Look up honeycomb coils of equal wave length and place one in the aerial lead and one in the secondary and one in the tickler circuit (if your set uses one). I can not tell the size to advise as I do not know what your set now consists of. You must bring up your present wave length to 2650 meters which is the wave that Arlington transmits upon.

The tickler coil can be of about ⅔ the value of the ones that you place in the primary and secondary circuits.

You can wrap cardboard tubing with No. 24 Cotton covered wire and make your own loading coils, tho the honeycomb coils are more efficient and take up less room in your set.

FOUR TUBE REFLEX CIRCUIT

Will you put the diagram of a three or four tube receiving set that will receive any place on the face of the earth, runs from dry cells, and operates a loud speaker.—B. D., Ionia, Mich.

—In a future issue we are going to publish a diagram of a 4 tube reflex circuit that will come as near filling your requirements as is possible. It is out of the question to build a set, no matter what the price that will reach any place on earth. There is not any set that can do it, or has done it. The most expensive sets, and complicated will only reach regularly about 2000 miles, and then there are days that some nearer stations cannot be heard. Other times 5000 miles can be covered. The set that we are going to describe will not require an outside aerial and will work a loud speaker. The parts alone will cost about $75.00.

WANTS TO RECEIVE DISTANT STATIONS

Could you tell me where I can find out how to build a radio receiving set that will receive from broadcasting stations 1500 to 2000 miles away and less? Can the one in your Feb. 2 BUSINESS FARMER be added to so it will do it? Thanks in advance.—E. W., Benton, Mich.

—The set described in our issue of Feb. 2nd, will enable you to hear from over 1000 miles and at times from greater distances. A set as described has brought in music for me from Springfield, Mass., to Dallas, Texas, and Denver.

There is no advantage in trying to listen to the stations that are so far away, they come in weak and the near stations are so much better and clearer and you can get them easily. In our future issues we will in turn describe how to build different types of sets and how to operate them.

It will be much better to start on a simple set and learn how to operate it than to try with the much more complicated sets and find that you do not get any results, or not as good results as expected.

TO GET LONG LIFE FROM BATTERIES

Don't short circuit your battery to test it, that will use more current than over hours listening in will use.

Don't forget to turn off the battery switch as soon as you are thru listening in, or if you leave your set idle even for a few minutes. The longer the rest that dry batteries get the better the service they give. If you have no switch, disconnect your battery wires.

Don't turn the rheostat up as far as it will go, but use only as little current as is necessary to make your tube detect the incoming signals. The less current you use the longer your supply will last.

Don't expect one battery to do the work of two or three, always use enough cells to easily and properly do what is required.

TEN YEARS' PROGRESS

for Economical Transportation

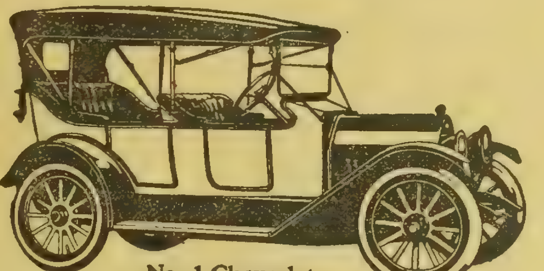
CHEVROLET

1914
SPECIFICATIONS

Horsepower, S. A. E.	21.7
Weight	2500 lbs.
Tires, 32 x 3½, fabric	(about 4000 miles)
Top	Two-man, with side supports
Gas Feed	Air pressure
Windshield	Folding
Rims	Detachable
Cooling	Thermo system
Rear axle gears	Straight teeth
Oiling system	Splash
Chassis lubrication	Grease cups
Back curtain light	Celluloid
Side curtains	Stationary
Finish	Paint, air dried
Gasoline mileage	About 18
Service brake	Clutch combination
Wiring harness	Open
Insurance rating	B
Terms	Cash
Service stations	About 1000

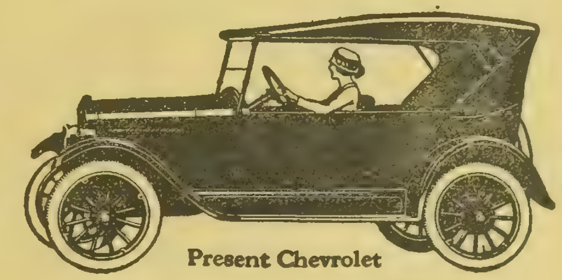
1924
SPECIFICATIONS

Horsepower, S. A. E.	21.7
Weight	1880 lbs.
Tires, 30 x 3½, fabric *(Cord tires on all closed models)*	(about 8000 miles)
Top	One man
Gas feed	Suction
Windshield	Double ventilating
Rims	Demountable
Cooling	Pump circulation
Rear axle gears	Spiral bevel
Oiling system	Pump, forced feed
Chassis lubrication	Alemite
Back curtain light	Glass
Side curtains	Open with doors
Finish	Baked enamel
Gasoline mileage	About 24
Service brake	Separate brake pedal
Wiring harness	In conduits
Insurance rating	A
Terms	As desired
Service stations	About 20,000



No. 1 Chevrolet

Price, 1914, $1000



Present Chevrolet

Price, 1924, $495

THE pronounced leadership of the automobile business in restoring the old-time purchasing power of the dollar is best illustrated in the increased quality and decreased price of a Chevrolet.

These reductions in prices have more than doubled the purchasing power of the consumer's dollar when buying a Chevrolet, although the specifications and design show marked increase in quality.

Big volume production made these economies possible. Note the ten years' record of Chevrolet sales:

Ten Years' Record of Chevrolet Sales

1914— 5,005
1915— 13,500
1916— 69,682
1917—125,399
1919— 93,814
1919—151,019
1920—155,647
1921— 77,627
1922—242,373
1923—483,310

We are the world's largest manufacturers of quality cars, having attained this leadership through offering the utmost possible per dollar value in modern quality automobiles.

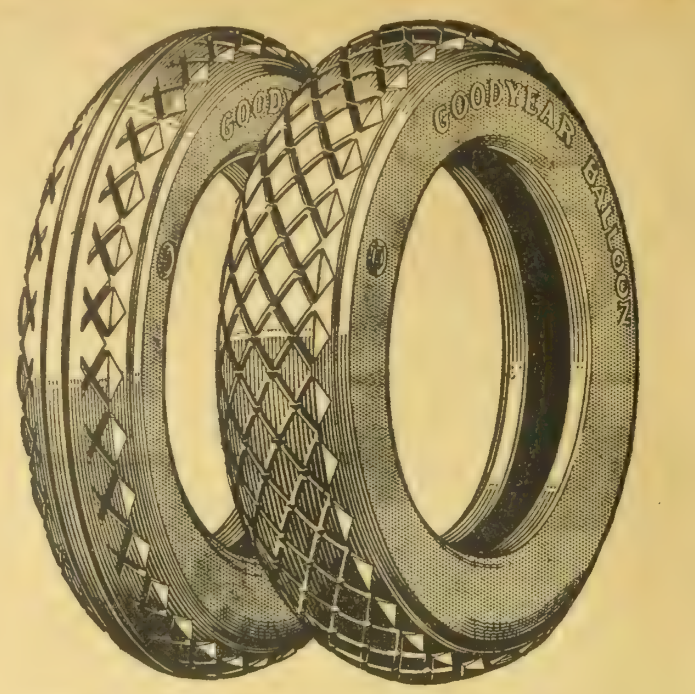
Fisher Bodies on all Closed Models

Five United States manufacturing plants, seven assembly plants and two Canadian plants give us the largest production capacity in the world for high-grade cars and make possible our low prices. Dealers and service stations everywhere. Applications will be considered from high grade men only, for territory not adequately covered.



Wondering if you can afford balloon tires? Of course you can, if they're Goodyears! We're making them to fit rims on most cars now in use, as well as in the smaller diameter 20-, 21- and 22-inch rim sizes. That means a big saving for the average motorist. It lets you have great comfort for little money.

What the Neighbors Say

DAY OF BUSINESS FARMER AT HAND

DEAR EDITOR:—The old order has changed. The day of the business farmer is at hand. There is no room for the slip-shod farmer. He is playing a losing game, and is forced to leave the farm, and seek the city. He is a failure. You can hear him almost any Saturday afternoon, standing in the sun in front of a grocery store, complaining of the hard lot of the farmer. In a few years he will be extinct. You will find him mingling with the great mass of factory workers.

There are those of the old farmers who have made a success of farming. These people are not moving to the city. You will see their nicely painted barns and houses as you pass by. These farmers are the first business farmers. Their success was due to their ability to organize their labors on a paying basis. Then there are the young graduates from college who have studied the best business methods of farming. These will be the farmers of the future who will put farming on the basis it belongs.

A county agricultural agent is the best thing that has happened to the business farmer. He can be compared to the efficiency expert of big business. He is better educated than the average farmer of today, and the national and state departments of agriculture keep in touch with him.

If your farm isn't more than paying for itself, consult your agent, his advice is valuable. The business farmers appreciate this man just as big business goes by the advice of its expert.

Don't listen to people who tell you farming doesn't pay. Make it pay. Be a business farmer.—Dorothy Dill.

USE DOOR BELL TO CATCH THIEVES

DEAR EDITOR:—In the March 29th issue of the M. B. F. we notice where several of our brother farmers are losing chickens by thieves. I have been studying along this same line, and am willing to give my ideas if they are worth while. I expect to place a common door bell in my bed room running from this wire to two dry cells at hen house. Never lock your coop door, as a lock will only keep out an honest man. Arrange a push button back of door so door will come directly in contact with same, and if rightly adjusted and wired properly, it will ring bell at house. If anybody wishes to try this, and does not quite understand, I will draw a blue print for same on request.

Place push button on arm secured to something by a hinge, that it may be hooked up when not in use. Hoping this may save dollars for some of our farmers, I remain, L. C. S., Williamston, Mich.

INCREASE DUTY ON SUGAR

DEAR EDITOR: The United States Tariff Commission has just completed an exhaustive investigation of the cost of producing sugar in continental United States, in our insular possessions and in Cuba. The preliminary report of the Commission, recently issued, leaves no doubt about the duty on sugar being an agricultural and not an industrial tariff.

This report shows that in 1922 Cuban farmers received an average of $1.16 for each 100 lbs. of extractable sugar in their cane, whereas American farmers received an average of $3.37 for each 100 lbs. of extractable sugar from their beets. In other words American farmers received as much for 100 pounds as Cuban farmers received for 290 pounds of sugar. In addition to receiving as much for 100 lbs. of sugar as did Cuban farmers ($3.16) American sugar beet farmers received the full amount of the import duty ($1.76), plus 45 cents.

If American sugar beet farmers received no more for heir sugar than Cuban farmers received for theirs, their beets would have brought them only $3.16 per ton, an amount far below their cost of production.

In Cuba the farmers' and laborers' cost of living is a mere bagatelle. Habitations are flimsy shacks costing only a few dollars to erect and furnish, there's no expense for fuel, clothing is meager and of the cheapest kind and the food is plain and inexpensive. In addition to that, Cuba has a supply of cheap black labor right at hand in nearby islands. All the sugar planters have to do is to secure a special decree from the President and labor flocks in in droves.

As long as Cuban sugar producers are able to keep a one crop country, thus compelling the farmers to accept the producers price for cane or starve, Cuba will continue to be the lowest-cost sugar-producing country in the world and to expect to maintain the American wage and American standard of living and compete with Cuba will continue to be an utter impossibility.

American farmers grow beets for profit, not from patriotic motives and unless they can make a profit on beets they will devote their fields to the production of other crops, such as wheat, oats, barley, beans, etc., where as the Cuban farmer, producing nothing but cane would go hungry if he did not accept the price offered by the mill owner.

A slight lowering of the duty on sugar would close American beet sugar factories and thus deprive 100,000 American farmers of a market for $63,000,000 worth of beets annually, while a slight increase in the duty soon would mean the erection of enough new factories to supply us with all the sugar we consume and of the $380,000,000 we thus would keep at home, over $200,000,000 would be paid to farmers annually for beets.—Truman G. Palmer, Sugar Statistician, Washington, D. C.

HUNTING WITH FERRETS

DEAR EDITOR:—Some years ago it was lawful to hunt with ferrets, but the sportsmen of the city have been successful enough to have the law passed that it is unlawful to hunt with ferrets and now rabbits are becoming such nuisance that it is impossible to grow an apple tree longer than 4 years, and that for the benefit of the sportsmen. You hear so much now days about raise more, but let me tell you it is very discouraging to plant trees and then have rabbits come and kill them. If you ask for a permit to hunt with a ferret, you will get none, but they will tell you to fence the rabbits out. Just think of fencing rabbits out with snow banks 10 feet deep. Some job, I would say.

Can this law be recalled, or at least adjusted so the farmer boys can hunt these pests, say from November 15th until the season closes in February? Then there wouldn't be so many, at least, to do damage, or must it come to the compulsory violation of the law to protect your own property? But at present it seems the state has the right to dictate to the individual owner what he can, or what he cannot do to protect his own property.

I am not the only one that feels this way, but I think at least 99 per cent of the people in the country feel the same way about it. Someone might say, shoot them. I would like to ask who is the person after he works all day, likes to stand guard in the cold at night to protect his orchard from these pests. I would like to see those sportsmen be those guards, or be compelled to pay the damage the rabbits do. I think they would soon say, "Hunt with ferrets."

I would suggest have the hunting season open November 15th and allow to hunt with ferrets until season closes in February.—J. V., Falmouth, Mich.

There are 200,000 applications for patents on inventions now pending in the United States Patent Office, according to a statement of the United States Civil Service Commission.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

COLLECTING TOWNSHIP TAXES

Can you give me the law governing collection of township taxes? Can a township treasure lawfully collect for one per cent after January 10th or is the four per cent compulsory?—S. W., Melvin, Mich.

—The statute provides that a collection fee of one per cent shall be charged up to January 10th and thereafter a collection fee of four per cent shall be charged. In our opinion, this provision is mandatory and the treasurer has no legal right to charge a one per cent fee after January 10th.—Clare Retan, Deputy Attorney General.

BOY SHARES EQUALLY WITH OTHER CHILDREN

We, being subscribers to your valuable paper would like to ask you a few questions which have been on my mind for some time. A man having one boy by his first wife, divorced, and marrying again, with three children by his present wife, what share of property would the first boy get, if any? Also the other three and wife at the father's death? And would the property, farm and personal, have to be sold in order to pay the first boy his share? He is not now, nor has, excepting during school vacations, lived with his father. He is nearly 16. And what share of all property is a wife entitled to if a division is made while both are living? This property having a legacy of $500.00 paid with the first payment from the father's father.—Mrs. M. A. H., Otisville, Mich.

—The boy by the former wife would share equally with the other three children. Two thirds of his property would be divided equally among the four children and the widow would receive the other one third. Their share of the farm could be divided equally among the four, or it could be sold and the proceeds be so divided, according to the wish of the majority. There is no provision for the division of property by a husband and wife who are still living together. Such a division would depend upon agreement of the amount of property each owned separately. In no case can the wife be deprived of her right of dower.—Asst. Legal Editor.

8x8 FLUE IS LARGEST

Will you please give me the facts on how to get chimney flue 4x12, taking the same amount of brick, that is 6 for one layer of brick in course, while one 8x8 flue takes the same amount of brick? Which is the larger and in what way as both are 32 inches inside?—J. McG., Sterling, Michigan.

—Apparently you are desirous of securing the greatest amount of flue area for a perimeter dimension of 32 inches. If that is the case an 8x8 flue will have one and one-half times the area of a 4x12 flue. The area of a 4x12 flue is 48 inches and the 8x8 flue 64 inches.—A. H. Lavers, Supt. of Bldgs. & Grounds, M. A. C.

NURSERYMAN MUST HAVE LICENSE

Is it necessary to secure a license to sell native forest trees in this state?—N. S., Battle Creek, Mich.

—It is necessary for any nurseryman to make an application to the Michigan State Board of Agriculture to have his stock of trees, etc., inspected and secure a license to sell the same under Section 7413 of the Compiled Laws of 1915, as amended by Act 241 of the Public Acts of 1921. By the provisions of Section 7411, as amended by the act above mentioned, a nurseryman is defined as,

"The owner or manager of a nursery who issues a catalogue, advertises or in other ways makes a business of selling nursery stock."

The term "Nursery stock" is defined in the same amendment as including trees, shrubs, vines, fruit plants, etc. You will note that the definition includes forest trees as well as fruit trees. It would therefore be necessary for a person to secure a license to sell forest trees, unless the stock you mention falls within the proviso of Section 7413 providing that it shall not be necessary for a person to secure a license to sell shade trees from his own wood lot.—Clare Retan, Deputy Attorney General.

HUSBAND'S LEGAL RESIDENCE WOULD DETERMINE

Seven years ago, at my father's death, I came here with my family of six children, bought the old homestead and my husband remained at Harrisville, 18 miles away. He lives at the hotel and has no property, maintains no home. Last year I was elected on the school board and at a recent meeting we voted to retire the Superintendent we have for inefficiency. Now some say I have no legal right to vote or hold office here. I am a tax payer on a large farm, have graduated two children from our school here and have one attending.—Mrs. H. M. K., Oscoda, Mich.

—The legal residence of the husband determines the legal residence of the wife for the purpose of voting at school elections or holding school offices.

If the legal residence of your husband is where you live even though he may be away, you are a legal resident of the district and might hold a school office if otherwise qualified.—W. L. Coffey, Deputy Supt. of Public Instruction.

DITCHES ALONG ROAD FILL UP

Could you advise me what I could do in regards to the township not wanting to help me to an outlet to take the water off my Farm? I live on a public highway and the roads are all sinking in due to the ditches not being tended to. The ditches are all filling in as it is all black muck and they are full of willows and I have ten acres of ground that was impossible to be worked last year which I had to let lay idle on account of water. Now what I want to know can I make the township fix this ditch or pay damages? I am a tax payer and I think it would be no more than fair they help me.—P. S., Ossineke, Michigan.

—If the matter of drainage is necessary for the proper maintenance of the highway, the matter is within the discretion of the Highway Commissioner and the Township Board; but if the drainage is only desired for the benefit of the adjoining lands, then the matter should be taken up with the County Drain Commissioner, with a view to establishing a county or district drain. Otherwise the land owner is required to provide his own drain.—H. Victor Spike, Assistant Attorney General.

Why, Sure

"Pa sent me for a piece of rope like this."

"How much does he want?"

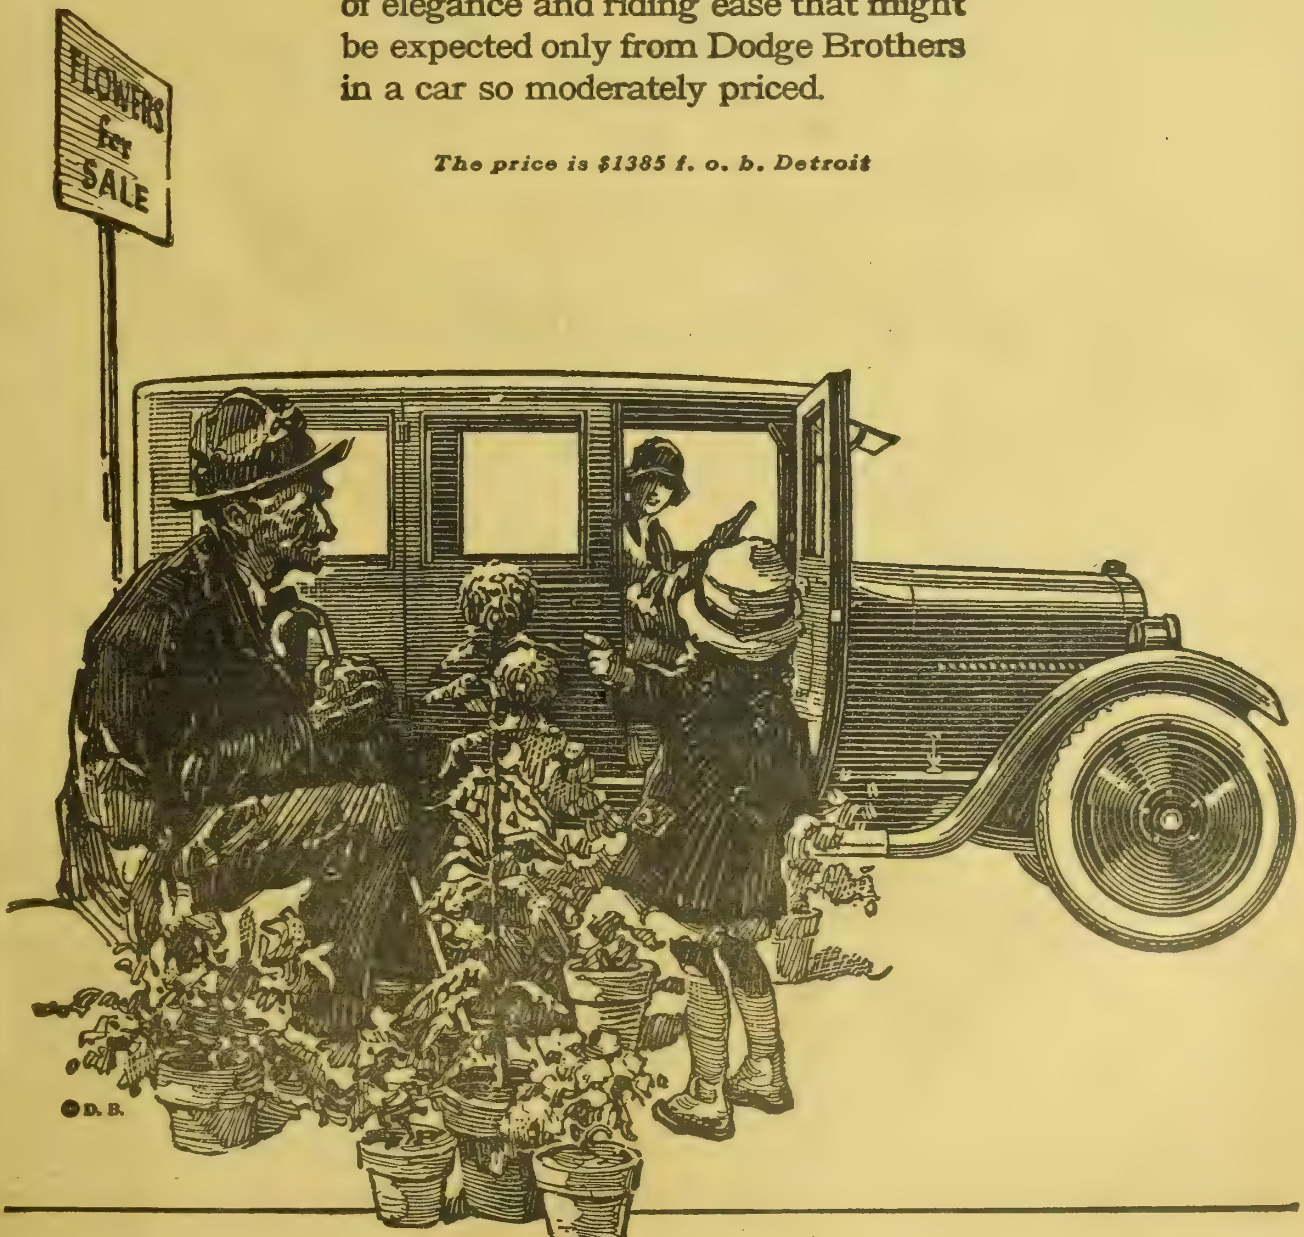
"Just enough to reach from the calf to the fence."

DODGE BROTHERS
TYPE-A SEDAN

Aristocrat of a sturdy line, the Type-A Sedan represents the finest craftsmanship of an organization perfectly equipped for quality production.

Recent improvements give it a degree of elegance and riding ease that might be expected only from Dodge Brothers in a car so moderately priced.

The price is $1385 f. o. b. Detroit



Men who know values quickly appreciate quality. They realize that

Oh Money! Money!

by ELEANOR H. PORTER

Copyright by Houghton Mifflin Company

(Continued from April 12th issue.)

"EVERYTHING'S the matter," snapped Jane. "And positively a more ungrateful set of people all around I never saw. To begin with, take the church. You know I've never been able to do anything. We couldn't afford it. And now I was so happy that I could do something, and I told them so; and they seemed real pleased at first. I gave two dollars apiece to the Ladies' Aid, the Home Missionary Society, and the Foreign Missionary Society—and, do you know, they hardly even thanked me! They acted for all the world as if they expected more—the grasping things! And, listen! On the way home, just as I passed the Gale girls, I heard Sue say: 'What's two dollars to her? She'll never miss it.' They meant me, of course. So you see it wasn't appreciated. Now, was it?"

"Perhaps not."

"What's the good of giving, if you aren't going to get any credit, or thanks, just because you're rich, I should like to know? And they aren't the only ones. Nothing has been appreciated," went on Mrs. Jane discontentedly. "Look at Cousin Mary Davis—you know how poor they've always been, and how hard it's been for them to get along. Her Carrie—Mellicent's age, you know—has had to go to work in Hooper's store. Well I sent Mellicent's old white lace party dress to Mary. 'Twas some soiled, of course, and a little torn; but I thought she could clean it and make it over beautifully for Carrie. But, what do you think?—back it came the next day with a note from Mary saying very crisply that Carrie had no place to wear white lace dresses, and they had no time to make it over if she did. No place to wear it, indeed! Didn't I invite her to my housewarming? And didn't Hattie, too? But how are you going to help a person like that?"

"But, Jane, there must be ways—some ways." Miss Maggie's forehead was wrinkled into a troubled frown. "They need help, I know. Mr. Davis has been sick a long time, you remember."

"Yes, I know he has; and that's all the more reason, to my way of thinking, why they should be grateful for anything—anything! The trouble is, she wants to be helped in ways of her own choosing. They wanted Frank to take Sam, the boy,—he's eighteen now,—into the store, and they wanted me to get embroidery for Nellie to do at home—she's lame, you know, but she does do beautiful work. But I couldn't do either. Frank hates relatives in the store; he says they cause all sorts of trouble with the other help; and I certainly wasn't going to ask him to take any relatives of mine. As for Nellie—I did ask Hattie if she could'nt give her some napkins to do, or something, and she gave me a dozen for her—she said Nellie'd probably do them as cheap as anybody, and maybe cheaper. But she told me not to go to the Gaylords or the Pennocks, or any of that crowd, for she wouldn't have them know for the world that we had a relative right here in town that had to take in sewing. I told her they weren't her relations nor the Blaisdells'; they were mine, and they were just as good as her folks any day, and that it was no disgrace to be poor. But, dear me! You know Hattie. What could I do? Besides, she got mad then, and took back the dozen napkins she'd given me. So I didn't have anything for poor Nellie. Wasn't that a shame?"

"I think it was." Miss Maggie's lips shut in a thin straight line.

"Well, what could I do?" bridled Jane defiantly. "Besides, if I'd taken them to her, they wouldn't have appreciated it, I know. They never appreciate anything. Why, last November, when the money came. I sent nearly all of Mellicent's and my summer things—and if little Tottie didn't go and say afterwards that her mamma did wish Cousin Jane wouldn't send muslins in December when they hadn't room enough to store a safety pin. Oh, of course, Mary didn't say that to me, but she must have said it somewhere, else Tottie wouldn't have got hold of it. 'Children and fools,' you know," she finished meaningly, as she rose to go.

Mr. Smith noticed that Miss Maggie seemed troubled that evening, and that she started off early the next morning and was gone nearly all day, coming only for a hurried luncheon. It being Saturday, the Martin girls were both there to care for Father Duff and the house. Not until some days later did Mr. Smith suspect that he had learned the reason for all this. Then a thin-faced young girl with tired eyes came to tea one evening and was introduced to him as Miss Carrie Davis. Later, when Miss Maggie had gone upstairs to put Father Duff to bed, Mr. Smith heard Carrie Davis telling Annabelle Martin all about how kind Miss Maggie had been to Nellie, finding her all that embroidery to do for that rich Mrs. Gaylord, and how wonderful it was that she had been able to get such a splendid job for Sam right in Hooper's store where she was.

Mr. Smith thought he understood then Miss Maggie's long absence on Saturday.

Mr. Smith was often running across several cases that she had not helped. Then he did not know exactly what to think.

His first experience of this kind was when he met an unmistakably "down-and-out" on the street one day begging clothing, food, anything, and telling a sorry tale of his unjust discharge from a local factory. Mr. Smith gave the man a dollar, and sent him to Miss Maggie. He happened to know that Father Duff had discarded an old suit that morning—and Father Duff and the beggar might have been taken for twins as to size. On the way home a little later he met the beggar returning, just as forlorn, and even more hungry-looking.

"Well, my good fellow, couldn't she fix you up?" questioned Mr. Smith in some surprise.

"Fix me up!" glowered the man disdainfully. "Not much she did! She didn't fix me up ter nothin'—but chin music!"

And Mr. Smith had thought Miss Maggie was so charitable!

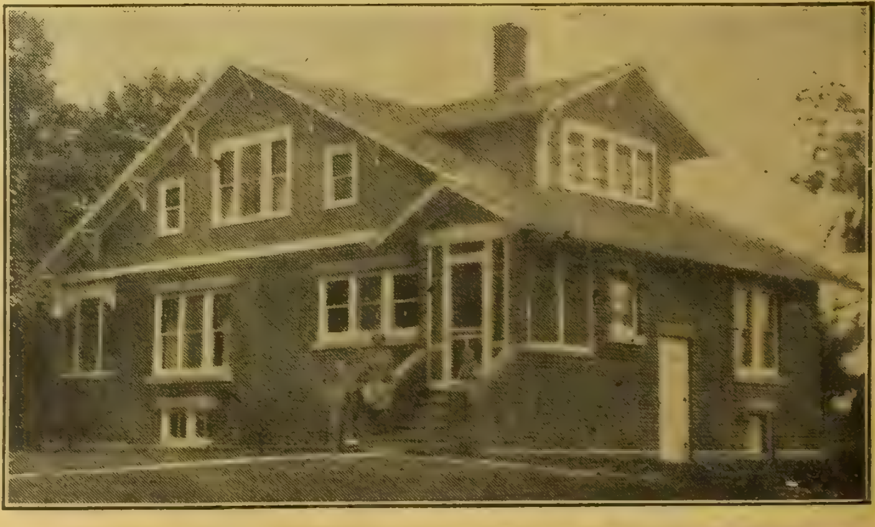
A few days later he heard an eager-eyed young woman begging Miss Maggie for a contribution to the Pension Fund in Behalf of the underpaid shop girl's in Daly's. Daly's was a Hillerton department store, notorious for its unfair treatment of its employees.

Miss Maggie seemed interested, and asked many questions. The eager-eyed young woman became even more eager-eyed, and told Miss Maggie all about the long hours, the nerve-wearing labor,

(Continued on Page 17.)

OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.



HOME OF W. D. PARMELEE AND FAMILY, OF HOPKINS, MICH.

We hear so much and read so much about the farmer being broke and that there is no money in farming, until we are half lead to believe that the country is "going to the dogs." Then just in time, along comes a picture like the one above, and the sun again creeps forth from behind the dark clouds. Such a home as this cannot be built on promises or air. We have a picture of the barn which we will print later.

THE LONELINESS OF JESUS

A SERMON BY MRS. DAVID F. WARNER.

TEXTS: "And when even was come, he was there alone." Matt. 14:23b. He "withdrew again into the mountain himself alone." Jno. 6:15.

NEVER has there been a man, in all ages of the past, who wandered over this earth and was so much alone as was the man Jesus. What, you ask, did Jesus, one who was so great and good, so kind and loving, so pleasant, so winsome, and so self-sacrificing, not have friends without number? Yes, Jesus had friends, but his friends and associates, his comrades and helpers, were so far beneath him, that, after all, he was alone. Then too, those who lived nearest him, those who had the best opportunity to know him and endear themselves to him, absolutely rejected him.

When the babe Jesus was born, no friendly door was opened to receive him. People from all over the country were pouring into the town of Bethlehem. They were hurrying back and forth attending to business. Amidst this hustle and bustle, in a lonely corner of a stable the child Jesus was born in sorrow, poverty, and humility.

"Jesus came into a dead world. He, the one living man, alive in body, soul and spirit, alive to God in the world." "The world into which he entered, by his human birth, was veritably dying, dead indeed unto God. We realize very imperfectly the distress, the conflict of disgust and pity which the fact of being in such a world as this, and belonging to it, caused in the nature of Jesus Christ, in a soul that was in perfect sympathy with God. Never was there loneliness such as his."

Jesus was a Jew. He was a product of his age and nation; and yet he was so far above his own people that we can scarcely think of him as a Jew. Jesus had no one who could sympathize with him in his life and thought. He stood head and shoulders above those around him. They could come to him for advice and sympathy, but where could he go for counsel? To God and to Him alone was he driven for strength in his trying hour.

True, we can find no one who is more willing to carry our burdens; but how many of us go to God first when trouble and trials come? We are all human, we all have our confidental friends, those who are our equals or superiors, and it is to them that we flee. Many an aching brow and weary soul has been soothed by the gentle hand and sympathizing word of a true Christian friend. Still closer than any of our friends is another to whom we always go first? That, you say, is mother.

Was Jesus able to receive counsel and sympathy from his mother after he grew to manhood? As we search our Bible we find at different places the statement, "And Mary kept these things and pondered them in her heart." Mary certainly did not understand the greatness of her child. She did not understand his mission, and therefore was not able to help him in his work as one who was his equal—one who lived, thought, and believed as he did.

As we look back over later history, we find the names of great men. These lived in advance of their age. Luther was a great man, and yet was he alone? No, Melancthon was his helper, his sympathizer, his staff. Upon him he could lean when the clouds rolled dark before him and the storm raged thick and fast. Calvin too, should be noted. But he had Zwingli as a companion in his labors—one who thought and worked as he did. Jesus had no such companion. He lived, thought, and acted in a realm above that of his fellows.

Jesus might have established an earthly kingdom and he might have had all the world to worship him as a political ruler, but he did not. This humble Nazarene was aiming at some thing greater; and even tho he was obliged to stand alone, he stood firm.

At different times Jesus was rejected. Even his home people refused to hear him. Many times, after preaching at a place, he was driven out and left at the mercy of strangers, or was obliged to depart secretly because his life was in danger. In all these struggles he was obliged to fight alone. No one understood, as did he, the conditions in which he was placed. We sometimes want to question the idea that Jesus longed for companionship. But we should remember the fact that Jesus did lament his condition when he said, "The foxes have holes, the birds of the air have nests; but the Son of man hath not where to lay His head."

Can anything be more sad to the human mind than the fact that some child has been cast out of its home and is obliged to wander from place to place, with no one to love it and no one to give it a home. Jesus' mother did not forsake him, but his own brethren did. His apostles, even, had such a faint conception of who Jesus was, and what he was trying to do, that they did not know at times whether they wanted to follow him or not. Jesus lived with them, travelled with them, and taught them. He tried to explain to them his mission, but it seemed they could not understand. Time and again they left him alone when difficulties stared him in the face.

During the last week of Jesus' life the very best of his nature was brought out. He held up boldly the sorrowing disciples, but was in the depths himself. Do you know what it is to comfort hearts while your own is breaking? This was true with Jesus many times, but now, that we come down to the last week, the last evening of his life, we can not help but feel that the heart of this humble Nazerene was breaking. On that evening of the great crisis Jesus and his disciples walked quietly along the Jerusalem streets, out of the gate leading towards the brook Kedron. Then they went over the brook towards the enclosed spot in the garden. The night was dark. It continued to grow darker and darker. He left the disciples alone and went farther into the garden, to his favorite praying place. He longed for fellowship, for a warm hand-touch, but none could help. If they followed they would hinder. How black the night! The weight of sinful humanity was upon him. Death stared him in the face. But alone! No human heart in all the world could help him. Jesus hardly thought the cup would be so bitter. He was tempted to shrink from it. It seemed as if the moon and stars, even, shrank from looking upon this scene of agony. To the "Only One" that was left, Jesus lifted his heart in prayer, and "he prayed until the sweat like drops of blood stood upon his brow."

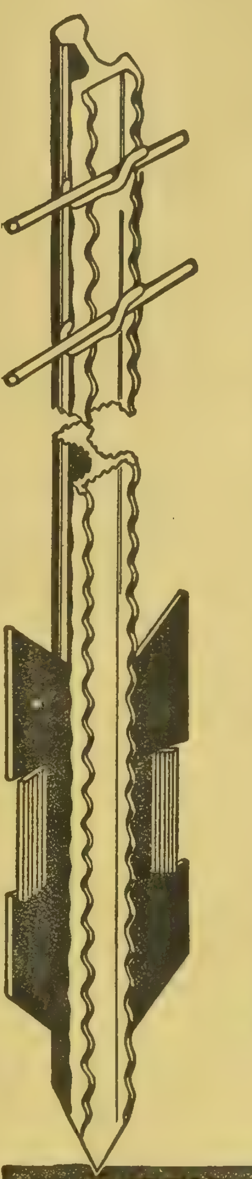
Could it be possible that Christ is lonely today? Do we, at times, wander so far from him that he is in agonizing intercession for us today as during the night in the garden. He has been admitted to some doors but we take no time to visit with him, we have no time for communion with the one whom we have invited into our houses. I fear that Christ gets very lonely and longs for fellowship.

Jesus wants us to come to him all alone and tell him all. He is ever ready to give us the very best that he has. May we then, invite Jesus in and take him into our confidence, make him a personal friend, and spend much time in his presence, that it may not be said of us that we pierced those tender hands, broke that loving heart, and finally hung upon the cross the one who truly loved us.

(NOTE: The editor of this department being otherwise engaged, his good wife and assistant local pastor, humbly consented to write the sermon for this number or the BUSINESS FARMER. He hopes you will be helped by it.)

THE KINGDOM OF GOD cometh not with observation; Neither shall they say, Lo here! or, lo there! for, behold, the kingdom of God is within you.—Luke 17:20,21.

OH THAT MEN would praise the Lord for his goodness, and for his wonderful works to the children of men.—Psalm 107:21.



Zinc Insulated
TRADE MARK
Fences
No Extra Charge
40% to 100% More Zinc

Insulated Against Rust

The more zinc on the wire, the longer the wire fence will last.

Wires used in Zinc Insulated Fences receive more than DOUBLE the usual heat treatment in the *zinc bath*—the proper and only way to give a heavier coating of galvanizing with lasting quality.

This better process not only applies *more zinc* to the wire, but makes the coating uniform and inseparably a part of the steel. It insulates the wire with more zinc and with no cracking, flaking or peeling off.

All the following *brands of Farm Fence*

AMERICAN, ANTHONY, ROYAL, NATIONAL, ELLWOOD, U. S.

Are now Zinc Insulated—At No Extra Charge.

We make only one grade of fence, every brand Zinc Insulated—and sell it *at no higher price*. Think of it!—fence that will outlast any fence you have used before—yet costs no more than ordinary grades of farm fence. Only our quantity production, vast resources and equipment make this offer possible.

Hang your fences on Arrow Tee-Steel Posts for greater strength, durability, dependability and long life. Built like a railroad rail—will not bend, twist, buckle or work loose. The large Anchor plate locks firmly into the ground while being driven, forming the most solid anchorage. Closely spaced notches enable you to attach every line wire to post, if desired. Many other big features.

Your local dealer carries Zinc Insulated Fences and Arrow Tee-Steel Posts in stock for quick delivery. We stand back of him for your protection.

"The Farm Paper of Service"

STRAIGHT TALK

HOW often after you have read an article do you sit back and wish that the author might have stated clearly and directly what he was trying to get at.

This has probably been particularly true during the past year or so when so much advice has been passed out gratuitously to the farmer, and the thought from Mr. Bennett, who expresses himself fully on page 3 of this issue, will, we believe, ring true with a great many farmers in Michigan who have many times had the same thoughts that he has put on paper in this article.

We have contended right along from this page that the farmer was getting too much advice and not enough real help, that there were too many politicians in the field who were living off the farmer, and that matters would have to adjust themselves in the natural course of events rather than by any radical move which could be made to relieve the present situation.

This may not sound as you would like to have it sound, but it is at least the plain, unvarnished truth as we see it. There is plenty of room on the farms for every good farmer and his son in the United States, and with the aid of machinery they can supply the food products of this country in competition with the cheaper labor from any part of the world. They can live and with their families enjoy life, surrounded by the same comforts which men in the American cities enjoy and with luxuries which the farmers of no other country in the world enjoy.

There is no question but what the advent of modern machinery has lessened the number of men needed to work the farms of America, and with the curtailment of foreign export the present adjustment had to come, yet we firmly believe the conditions which forced the present situation are rapidly passing and those farmers who have held to their trade are going to be the winners in the end.

MICHIGAN THIRD IN SUGAR BEETS

FINAL reports of the 1923 United States sugar crop, received late in March by the United States Department of Agriculture from the sugar beet factories, show that 7,006,000 short tons of beets were harvested and that 6,565,000 tons were sliced for sugar. This is the third largest crop on record, being exceeded only by the unusually large crops of 8,538,000 tons in 1920 and 7,782,000 tons in 1921. More beets were produced per acre in 1923 than in any other year since 1915, the yield per acre being 10.66 tons in 1913, compared with 9.77 tons in 1922 and 9.55 tons in 1921. The 657,000 acres harvested in 1923 were less than the acreage harvested in five of the preceding ten years, but larger than the average of 655,000 acres for that 10-year period.

The 1923 sugar beet crop was worth at least $58,800,000 to growers, the department says. Some factories reported that additional payments under the contracts may be made to the growers later, if warranted by sales of the sugar made. In the 1922-1923 campaign these late payments amounted approximately to 9 per cent of the total amount finally paid.

The 881,000 short tons of refined sugar made from the 1923 beet crop also is the third largest production of beet sugar in any campaign in the United States. The relatively high yield of the beets per acre was sufficient more than to offset the moderate acreage and sugar content. Only 675,000 short tons of sugar were produced from the beet crop of 1922, compared with 1,020,000 short tons in 1921 and 1,089,000 short tons in 1920.

Colorado factories used 1,890,000 tons of beets in 1923, followed by Utah with 1,008,000 tons, and Michigan 815,000 tons. Utah led in yield per acre with 12.91 tons, followed in order by Colorado 12.15 tons, Idaho 11.68 tons, and Nebraska 11.04 tons.

About 240,000 short tons of sugar were made in Colorado factories. Factories in Utah made 137,000 short tons of sugar, in Michigan 110,000 short tons, and in California 100,000 short tons.

BOOSTS FOREIGN MARKETS

A BILL introduced by Representative Ketcham of Michigan, authorizing innovations in the department of agriculture designed to increase the market for American farm products has passed the house and is now ready for the senate, where it is assured of a favorable hearing. The bill would direct the secretary of that department to gather and disseminate more information that would be of value to the farmer in planting and selling his crops.

The outstanding feature of the bill is the authorization of agricultural attaches to the legations and embassies of the United States in foreign lands, charged with the duty of collecting this information. These officials would have the same standing as other diplomatic agents, and Secretary of State Hughes has already indorsed the proposition.

The bill was indorsed also by Secretary of Agriculture Wallace and practically all the farm organizations.

The bill would promote American agriculture by making more markets available and expanding the service now rendered by the department in gathering information regarding agriculture in foreign fields. The additional information would include all data pertaining to the agricultural production, competition and demand for American farm products that would assist in promoting the sale of such products abroad. The secretary of agriculture would thus be able to get information for the American farmer that would better enable him to adjust his operations to world conditions.

PAINTING UP

AN investment in fresh paint for the farm buildings is not altogether a matter of personal pride or a desire to show off to the neighbors.

"Save the surface and you save all" is the slogan chosen in the present paint campaign in the country and yet that is literally a fact, for well painted wood is protected from the weather and may last indefinitely.

The very sight of clean, well painted buildings helps build up a community, keeps the farm family in better spirit, encourages the boys and girls to stay on the farm, and, incidentally, makes it a lot easier to borrow money at the banks when it is necessary.

We remember an old farmer friend of ours who would himself have made a good promoter because in an emergency once he was practically "busted" from an unfortunate investment and needed the help of his local banker. The banker told him he must come out to look over his farm before making any additional loan so he and the boys in the next two days, working into the evenings, painted up all the farm buildings, so that when Mr. Banker came out there was little question in his mind as to whether or not this farmer was a success in his calling.

It is true that the paint job has been neglected on a good many thousand farms in Michigan during recent years and this ought to be a good season to look over the buildings and plan to do the necessary work.

Good paint is considerably cheaper than it was two years ago and rightly applied we consider it one of the best investments any farmer can make.

We have discovered this too, that where one farmer in a community starts to paint up his buildings, the neighbors follow like sheep and in a few weeks the whole locality looks and feels prosperous and contented. Why not utilize the time in between planting and cultivating for this job? You do not need to hire professional painters if you and the boys are handy with the brush and not afraid to look at the ground from the top of a ladder.

THE BUTTER SITUATION

NOT a little concern is being expressed by the dairy interests, not only in Michigan but in Wisconsin, Minnesota, and the other butter fat producing states, in the present situation.

When it is considered that the imports for the past three months of this year are equal to those of the first seven of last year, it is apparent that this concern is not unwarrantedly taken. The heavy increase began last November when shipments to the American market from abroad jumped to 3,830,657 pounds, as compared with 1,202,304 pounds imported in October. In January of this year the total imports were 4,417,326 pounds, and there was an addition of nearly 1,000,000 pounds in February, when the imports amounted to 5,392,593 pounds.

In New York since the middle of February the price of 92 score butter has declined from 50 cents to 38 cents per pound. This market is, of course, a reflection of the butter market in all sections of the United States.

Unquestionably one of the causes which has brought about this condition in the American market is a fall in the Danish exchange rate, which is now 16.64 compared with the par of 26.80; in other words, the Danish butter if sold for American dollars will bring 50 per cent more than if sold for Danish money at home. Denmark, it must be remembered, is one of the greatest dairy producing countries in the world, and, by the way, one of the best organized from a cooperative standpoint.

The dairy producers of Denmark are not to be blamed for the present situation. Commodities naturally find their way to the best markets. The only way the the dairy interests of America can protect themselves is a higher duty on imported butter. The present rate is 8 cents per pound and it is proposed that an emergency measure be passed at once, raising the duty to 15 cents per pound, which would at least raise the price that much to the American consumer whether the American producer got the benefit of it or not! (Depending on whether you believe in the beneficial results of a protective tariff or not.)

It is our opinion that the present situation is short lived. This represents only a temporary set-back to the dairy market which will soon recover. In the meantime there ought to be some way to stem the tide of dairy imports which are competing with our own products.

THE BABY CHICK INDUSTRY

SECOND only to the automobile industry, at least in its record of phenomenal growth, is that of the baby chick industry in Michigan.

No state has a better reputation or is producing more baby chicks for shipment outside of its own territory than is the State of Michigan. This spring the hatcheries have been working day and night, literally turning out millions of baby chicks, which are placed in parcel-post boxes tagged for all parts of the United States. Shipments are made as far as Texas, Florida, eastern coast points, and as far west as the Rockies, and amateur and professional poultry raisers alike are depending on these mammoth hatcheries for their chicks.

The incubator and old mother hen herself are having a hard battle in the face of this modern and efficient motherless system.

We are glad to say that a strong baby chick organization in the western part of Michigan has made it possible for the legitimate and honest hatchers to help clean out the fakirs who always get into a new business of this kind, which promises extraordinary returns. One of their schemes was to advertise baby chicks which they did not hatch; then go out and make arrangements with individual operators of large hatcheries to make their shipments for them. Of course, this placed responsibility nowhere and the customer was very often dissatisfied because the shipment was poorly selected or not made on time. This practice has been largely cleaned out, due to the efforts of the baby-chick associations and the good farm papers which have refused to carry advertising of this type.

THE BUSINESS FARMER has, from the beginning, done everything in its power to encourage the baby chick industry in Michigan because we believed in it, and we are just as anxious to continue our campaign to keep it a clean industry. We congratulate the hatcheries of Michigan on the splendid progress they have made during the short period in which they have been in operation, to stabilize their industry.

HE WHO LAUGHS, LAUGHS!

DOWN in Monroe County they have worked out a clever scheme, one which will meet with favor with most of those who hear of it. They are sentencing all automobile speeders, drivers of trucks too heavily loaded, and bootleggers to work on roads of the county which they have helped to destroy. A period of ten days working on concrete roads ought to give a man a wholesome respect for the labor and expense involved in building them. Perhaps one would not be tempted to "burn-up" the roads at quite so lively a clip if he had spent many weary days in helping to build it.

PUBLISHER'S DESK

AN OLD SCHEME WORDED IN A NEW WAY

FARMERS in various parts of the country are receiving through the mails an invitation to part with $2.00 in a novel manner. A small advertisement appearing in local papers reads somewhat as follows:

"Wanting to hear from owner having farm for sale."

Persons responding to this ad received a letter from the New Land Sellers Guide Publishing Company, 721 Olive Street, St. Louis, Mo., in which is enclosed a printed notice attached to a self-addressed sealed and stamped envelope. The notice contains this announcement:

DO NOT OPEN!

"This sealed enveloped contains the Revised New Land Sellers' Guide, in which are the names and addresses of 260 new farm land buyers. Should you wish to keep the Revised Guide, remit according to the terms of the enclosed Special Acceptance Offer. If you do not wish to sell your farm, or take advantage of this offer, remove this slip, and drop the letter in the U. S. Mails, without being opened. We have a complete record of this envelope, which has U. S. Postage attached, and must not be tampered with unless you wish to keep it, as per the terms of the enclosed offer. Fill out the enclosed offer blank, remitting only Two Dollars, and this valuable index of 260 farm buyers belongs to you."

Thus the impression is created that there is a liability attached to the opening of this sealed envelope, unless $2.00 is remitted. A complaint has reached us to the effect that a number of letters addressed to some of the "260 guaranteed land buyers" have been returned to the sender.

OUT OF THE FRYING PAN!

Dear Mr. Slocum—I own quite a large block of stock in the Detroit Packing Company and agents keep coming to me asking me to exchange it for one thing or another. Right now there is an agent in this vicinity asking Detroit Packing stock-holders to exchange their stock for stock in a mining company in Montana that seems to have excellent prospects. He is offering $12 a share in exchange which seems pretty low, don't you think so?—Mecosta Co.

WE have expressed our opinion of the Detroit Packing Company many times in this department. We believe the building of this modern packing plant will be of great permanent value to the live-stock industry in this state. The fourth city in America should certainly be able to support a gigantic packing plant many times the size of the present one.

The same men who organized the packing company are still at the helm, which proves that they believe in its future. It has not been an easy task to steer the course, nor is it ever for a new company tackling a great undertaking which must be perfected in the multitudinous departments employed.

Naturally the old line packers, particularly in Detroit, do not relish the coming of this competitor and inasmuch as the stock is so largely held by farmers in Michigan, it is not hard to weaken its position among its stock-holders by inference, gossip and propaganda of a sinister sort.

We would not attempt to decide for any man whether he should hold or sell at a sacrifice the stock for which he paid upwards of $60 a share in the Detroit Packing Company. Our opinion of this company, its field and the men behind it are entirely personal and therefore not by any manner of means, infallible. But when a reader asks us if we would exchange stock in the Detroit Packing Company for as low a price as $12 per share, for mining stock, we do not hesitate to unqualifiedly advise against any such move.

If there is any farmer among my readers so flush with money that he can afford to gamble on the contents of the bottom of a mine, I would suggest that he come into Detroit and apply to the police department for the address of any of the many gambling establishments, where at least he will have a 50-50 chance of the red or black showing and some excitement for the money he is just about as certain to be parted from.

THE SHOW CARD FRAUD

WHAT Government officers say is one of the greatest mail fraud cases in the history of Detroit was revealed April 12th when a squal of United States marshals, headed by Francis E. Shea, Postoffice inspector from Washington, raided the offices of the Detroit Show Card School, at 405 Gratiot Avenue.

According to Shea, who has been in Detroit for a month investigating the case, the "school" operated on a wholesale basis, collecting $50 each from several hundred victims, and without making any effort to fulfill its many promises.

Advertisements, he said, were placed in publications, written as follows:

> Anyone can make $15 to $50 a week at home in spare time by our new lettergraph method. No canvassing, experience unnecessary. We show you how, furnish work, and pay you cash each week, no matter where you live. Write for illustrated booklet.

Also that fictitious letters of recommendation appear in the booklet, and that reproduced checks, purported to have been paid to satisfied correspondents, also were fictitious.

Shea, in investigating the case, wrote to the school, and asked for a list of customers and also a list of students and graduates. The lists, excepting the graduates, were received by him, and he immediately got in touch with the companies listed as having had work done by the Detroit Show Card School.

Many of the names on this list are thought to be fictitious, he said, and many companies answered that they knew nothing of the "school." Approximately one per cent, Shea said, of the companies referred to admitted any connection and in these cases, they replied they never placed orders with the "school" for more than $5 or $10.

The list of students was also found to be irregular, including employees of the company had fictitious names, Shea said.

The school's guaranty, signed by Miss Master, promised to supply the necessary outfit free to enable communicants to start to work at once; to furnish steady work when applicants became proficient; to advance students, with proper application and practice, far enough in 10 weeks to enable them to start to work for themselves, and to furnish engraved diplomas to graduates. None of these guarantees were fulfilled, Shea said.

The defendants are also charged with maintaining an office at the same address and advertising under the name of "The United States Health and Strength Institute," and representing that by means of their method they could cure nearly all kinds of illness. The fee in the institute was $28.

Another charge is that the same group of defendants used the mails to promote the "United Detective Training Institute," which had the same group of instructors as the "Health Institute" and the "Show Card School." The tuition in the detective school was $20, recently reduced from $120.

The offices at 405 Gratiot avenue, scene of the raid, showed about 30 girls industriously answering mail. These girls, according to Shea, answered communications with printed slips of paper. The "school" has been in operation more than two years.

* * * *

Thus endeth another lesson! Come early next week and we will have a surprise for you!

Your paper is the best in the state. Thank you for past favors.—Chris. A. Larsen, Montcalm County.

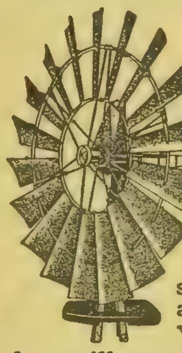
The WINDMILL with a RECORD



The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—With the help of my good readers I am making this issue a special house-cleaning number. The letters from my readers gave me much helpful information and I hope that we, together, save you some time, or make at least one bit of work, a little easier, this spring.

It was just lovely of you to answer the request for "Ammonia Cookie" recipe and I want to thank you all. When you want any help just call on me. Do not forget the garden this year. Right now I am receiving so many beantiful seed catalogs that it just makes me want to sit down and figure out my list. Let us have plenty of vegetables this year for canning and table use. It is the best medicine we can take.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THAT MAN'O'MINE

Mrs. Charlotte Byers

As the years are gently passing,
And my steps get stiff and slow
I look upon a white-haired head
In the garden plot below.
He straightens out the kink in his back
Then he turns to me with his eyes a shine
And I'll tell you this, My little Miss,
I'm still in love with that Man'O'Mine.

As the twilight shadows deepen
And I sit by his dear old side;
I think of the days of long ago
When he brought me here, a bride.
He's a man who thinks before he speaks
And a love in his heart that is fine
And it's one great joy, My dear big boy
To know I love yet that Man'O'Mine.

When the days are dark and dreary
And everything seems wrong,
He chases the blues with a twinkling eye
And a happy rollicking song.
He's been a father, yes, more than that
He's a DADDY to all of nine,
And I'll tell you this, it still is bliss
To be loved by that Man'O'Mine.

And if in this day of struggle and grief
The young folks would only be true
To the vows they take at the altar side
Their skies, like mine could be blue.
For the man is just boy to be held and cajoled.
To be told he is all things divine.
And I'll tell you this, My pretty Miss
I'll love forever that Man'O'Mine.

—Written especially for the BUISENSS FARMER.

SHORT CUTS TO SPRING CLEANING

(Prize Winning Letter)

AS I enjoy reading letters from people telling how' they do their work thus getting new ideas and suggestions, I hope someone may find a helpful hint in mine.

In regard to short cuts in spring cleaning, I think the shortest cut of all is to have as many odd jobs as possible done beforehand. For instance: the window drapes, cushion covers, table runners, etc., may be laundered now, and if new ones are needed have them made. I like to add a few such articles to each weekly washing rather than to do them all in one. Last week we had extra: three pairs of lace curtains, and the draping from the baby's bed and screen.

To avoid bareness which the removal of such things may cause, hang up some plain draw curtains at the living room windows and arrange upon the library table, buffet and dresser, some of those pretty paper doilies you buy at the ten cent store.

Some nice bright day let us go to the store room and empty all the trunks, bags, and boxes,—air, brush, and pack all winter clothing that we do not need any longer, sort out all cast-off clothing and cut into desirable sizes, and have handy for cleaning purposes. Also those old stockings should be put into a covered can with a few drops of oil, so that they will be saturated and ready to use to dust with. Look over the summer clothing that has been packed away and some evening supply the missing buttons, draw strings, etc.

There is that "catch all" under the sink that might be renovated most any time, and the medicine chest, the sewing machine, and kitchen cabinet,—so many drawers and so many corners to clean out. If I clean the bookcase before long, I may have time to look up that half forgotten poem and show sonny the wonderful pictures in the big book.

Ammonia in hot water applied by clean clothes in the mop stick will clean and brighten that velvet rug amazingly.

When at last the warm day comes when doors and windows can be opened prepare a boiled dinner, as a time saver, or a baked one. Try cooking potatoes and parsnips right in with that beef roast, and don't you like slices of ham baked in the scalloped potatoes? My husband discovered steel wool to be the best agent to make a "short cut" on that dish the potatoes were scalloped in —as it is for all aluminum ware and the zinc table top.

Then move everything possible from the room to be cleaned, giving all glass a coat of Bon Ami, then it is time to clean the room. Go over the furniture with soap suds followed by a polish; it will be a pleasure to have all the trimmings clean and ready with which to dress up the room and one will have such a respectable feeling to know that the bottom drawer or the right hand pigeon hole has not been slighted.

When your sleeping room is finished and there are yet no spring flowers to bud their fragrance to its cleanliness, spray a few drops of perfume on the pillows and watch the head next to you bob up and look out the window to see if the lilac bush has bloomed.—E. M. C., Oakley, Mich.

A FEW HINTS ON CLEANING

I DON'T know of any short cuts to housecleaning, but am trying not to have it all come at once. I wipe down the walls of the downstairs rooms, wash all the woodwork, clean the built-in dish cupboard, and all the dishes, pictures on wall, and last the congoleum rug in dining room is cleaned and polished. When weather is warm enough to permit, I can air bedding, rugs, and clothing, clean the upstairs rooms in a few days work.

Whitening on a damp cloth rubbed over the windows and mirrors, and allowed to dry before wiping off will clean and polish the glass so much nicer and more clear, than kerosene, which always leaves an oily or shiny look. It also cleans white paint easily and without damage to the paint. A rather stiff dough mixed from water and bread flour will clean wall paper very nicely. When dough gets soiled, mix it over and use again. Rub it gently on paper in downward strokes.

A large paint brush is the nicest thing to use in dusting the woodwork, also in cleaning it, as it will clean the crevices and carvings which are so hard to get at with a cloth or a floor brush. If you have 2 brushes you can oil one and use as a dustless duster. Make a bag to fit over the broom of old cotton socks. You will need 1 pair. Then sew 2 pairs on the bottom of the bag. It makes a good dust-away mop, easily cleaned. Use it on walls, on floors, windows, etc.—"Molly B."

SPRING CLEANING MADE EASIER

I AM a farmer's wife, having lived on a farm for eighteen years, and these helps are for the farm sisters.

The first thing I do toward cleaning is to get my oil stove in good working order, as it has been idle through the winter, having the range in use. If that is done, so many times the supper or the rest of the meals can be prepared in quick order.

Next I clean all drawers in every room, put clean papers, and contents back in good order. This saves time and patience. The clothes press comes next. Air all the clothes, and clean. To keep the woolens and things from the moths, and dust, make a large bag of newspapers, glue the top, and the moths will not bother where there is printers' ink.

The first room I clean is my kitchen, so as to get that done before it gets too warm. It seems as though there never was a room so hard to clean when it is hot, as a kitchen.

Next I clean all rooms upstairs, then the living room, dining room, and the cellar is my last. If it is hot, I have a good cool place to work. Of course all vegetables that have decayed are removed right away, so that there is nothing in the cellar to smell.—Mrs. A. H. S., Tipton, Mich.

VALUABLE HINTS FOR THE HOUSEWIFE

TO clean rusty knives, drop them into thick sour milk and let remain overnight. In the morning they can be cleaned very easily.

The secret of removing a grease spot from silk, without any ring or shadow remaining, is to rub French chalk on the wrong side of the goods. Put away for a few hours, then brush off the chalk and apply it again on the back of the spot if necessary. The powder absorbs the grease and leaves the surface of the fabric as good as new.

When you wish to mend a slightly worn table-cloth, use an embroidery hoop. In this way it can be nicely darned by using threads drawn from the linen itself.

To mend hot-water bottles, clean the torn place with gasoline. Place a piece of vulcanizing rubber over the hole with glue on it. Then put a hot iron on the rubber and let remain overnight. This will make your bottle like new.

Never pick up tiny pieces of glass with the fingers. Wet a woolen cloth and pat it over the glass particles which will then cling to the cloth. Burn the cloth.

When making lemon pies, let the filling get cool before putting in the pastry shell and you will find that it will not run as it does when it is put in hot.

Never leave a metal spoon in anything you wish to heat quickly as the heat runs up the spoon, thus requiring a longer time to heat the food.

To remove fresh shellac from a brush, rub a small quantity of borax well into the bristles. Then wash in soap and water. The same treatment will remove shellac from the hands.

To loosen rusty screws, hold a red-hot poker on the head of the screw for two or three minutes. It can then be easily removed with a screw-driver.

When a caster becomes loose fill the hole with putty, then insert the stem of the caster in the soft putty. When the putty becomes hard it will hold firmly.

The common nut-cracker makes a splendid household wrench to remove the tops from cans and bottles with screw tops. Even glass stoppers will yield to it.

When hanging small curtains over doors and windows and you haven't any rod, use narrow elastic. It prevents sagging.

PLANT A TREE ARBOR DAY, MAY SECOND

GOVERNOR GROESBECK has issued a proclamation designating Friday, May 2nd, as "Arbor and Bird Day" throughout the state of Michigan. He urges that the people of this state make Arbor Day of 1924 the beginning of an effort to plant a million trees in Michigan before the spring is over. He says: "If every school would plant not only one shade tree but many, if every home owner would plant both fruit and shade trees, if county highway officials would place along the roads young trees, and if the various committees would make the day one of general tree planting, Michigan could easily have one million more trees growing when the spring gives way to summer sun." He also urges that the birds be protected.

Can you plant at least one tree on May 2nd?

MUSIC WEEK INVADES RURAL COMMUNITIES

FOR the first time, we are to have this year a national music week. It will be observed throughout the country from May 2 to 10. Rural districts, especially rural schools, are expected by the promoters of the plan to form one of the strongest links in the chain of music week. National farm organizations, such as the American Country Life Association, the American Farm Bureau Federation, and the Granges, are cooperating and helping to stimulate rural participation. The committee in charge is distributing a guide for the organization of local music week which contains special suggestions for the participation of rural schools and rural communities. It may be obtained without charge from C. M. Tremaine, Secretary, National Music Week Committee, 105 West 40th Street, New York City. Community song books with music or word leaflets may be had also from the committee.

They are suggesting a music hour in every home, community songs in schoolhouse, church, or a farm home, which may be the center of communal life and in which a piano, organ, or other musical instrument is available. In some cases families that have a radio receiving set may invite their neighbors to join in listening to the special music week programs which will be provided over the radio.

Since music week comes so near the end of the school term in many rural communities the preparation of special programs may proceed in connection with the preparation for the regular closing exercises and provide a natural climax for the year's musical work. Indeed it is hoped by the committee that music week in 1924 will be but the beginning of the observance of a recurring anniversary which will be celebrated as naturally as Thanksgiving, Christmas, and other holidays. Music week should be merely an intensifying during one week of the habitual use of music throughout the year. In the school, as well as in the home, every day should be music day.

Personal Column

Earning Money at Home.—I see many inquiries as to how a woman can earn money at home, and wonder if my experience would help someone. When we moved in the country four years ago, I got a loom intending to weave for myself and family only, but after a few months on the farm decided we could use any extra money it was possible to make, so I started to weave for others. Had a chance to sell some rugs by having them made up of rags I had on hand, and finally started buying goods purposely to make into rugs. Have a good business now in both rugs and quilt making. I bought new cuttings from factory by the hundred pounds, and as so many were too small for strips of any length, started piecing flocks of different patterns and there is very little waste on them. Also sewed and made up rugs on shares when one had worn out clothing and no time to sew the carpet rags themselves. I do these things beside raising turkeys, geese, and chickens, and still find time for some good reading.—Mrs. J. V., Mayville, Mich.

To Clean Window Blinds.—I would like to ask you through the columns of the Business Farmer if you know how to clean window blinds, which have become soiled with use, dust and other ways?

Cleaning a Perculator.—Can anyone tell how to clean and open the fine holes in a coffee percolator? With the best of care they seem to clog, but as I am obliged to use water with quite a bit of iron in it, it might possibly be that. Do any of the readers have this trouble?—Mrs. T. S. Athens

Menu for April 26

Cream of Turnip Soup
Bean Croquettes Tomato Sauce
Savory Rice
Lettuce Salad French Dressing
Stewed Prunes Coffee

Bean Croquettes.—One pint white beans, one-half cup cream, yolks of two eggs, one tablespoon fat, one tablespoon flour, one tablespoon chopped parsley, one teaspoon onion juice, one teaspoon salt, and pepper to taste. Soak beans over night, drain, cover them with fresh water; boil an hour, drain, throw away water, cover with fresh water and boil until tender; drain and press through colander. Rub fat and flour together, add cream, stir until almost boiling, then add yolks of eggs. Stir again for a minute over fire, add bean pulp and all seasonings; mix and turn out to cool. When cool, form into cylinders, dip in egg, roll in bread crumbs and fry in hot fat. Serve with tomato sauce.

RECIPES

Ammonia Used in Cookies.—A number of years ago I quite often made ammonia cookies. I bought 5 cents worth of carbonate of ammonia or baker's ammonia as they are the same. I think 5 cents worth was an ounce, and I used one-half of this for a recipe, the size given by "a subscriber". The remainder can be kept until another baking, by putting in a glass can with tight cover. Dissolve in the milk after grating. Try using the grated rind of a lemon instead of oil of lemon.

Molasses Cookies.—Will send my recipe for molasses cookies, made the day before baking. They are very good: One cup shortening, one cup granulated sugar, cream together. Three whole eggs, one cup molasses, one rounding teaspoonful soda, stirred in molasses. Rinse out cup with about three tablespoons warm water, one-half teaspoonful salt, one teaspoon cinnamon, one teaspoonful ginger, and one-half teaspoon cloves. I stir in flour with large spoon. Let in cool place until morning. Use good grade cooking molasses.—A Subscriber.

—if you are well bred!

Gentlemen in the company of ladies do not smoke.

One need not let his manner toward a young woman on the street advertise the fact that she is his fiancee. The presumption is that the engagement has been announced, to all entitled to know of it, and brazoning the fact by a proprietary manner or an ostentatious show of affection is very vulgar.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

These are the things that ye shall do: Speak ye every man the truth to his neighbor; execute the judgment of truth and peace in your gates. Zach. 8:16.

That which is gone out of thy lips thou shalt keep and perform. Deut. 23:23.

The world is watching you. Give it no cause to say that you do not live according to your profession. Prove your faith by your works. Mean what you say. (Matt. 5:37.) Keep your word—your promise. (Col. 3:9-10.)

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor.

AIDS TO GOOD DRESSING

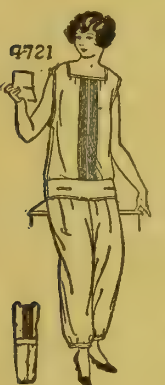
BE SURE AND SEND IN YOUR SIZE

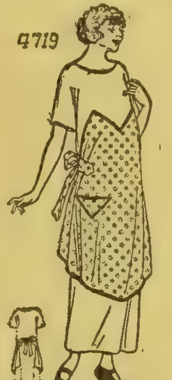
4703-4641. An Up To Date Costume.—This Costume comprises Ladies' One Piece Dress 4641, and Sleeveless Jacket, 4703. Tan and brown checked suiting was used for the Dress, and tan flannel for the Jacket. The Dress has a convertible collar. The Jacket may be finished with a straight or shaped closing. The Pattern for the Dress is cut in 7 Sizes: 36, 38, 40, 42, 44 46 and 48 inches bust measure. It repuires 4¼ yards of 40 inch material for a 38 inch size. The Jacket is cut in 6 Sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. A 38 inch size requires 1¾ yard of 40 inch material. The width of the dress at the foot is 2⅛ yard.

4722. A Dainty Morning Frock.—Housework seems lighter when one can attend to its various duties, arranged in a dress made from Pattern 4722. Percale in blue and white plaid gingham would be an attractive development. This style is also good for linen, linene and sateen. The Pattern is cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38 inch size requires 5¾ yards of 32 inch material. The width at the foot is 2 yards.

4713. A New "Bobbie Blouse" Dress.—This jaunty style is fine for school wear. It may be made of checked or plaid woolen or gingham, and is excellent for linen and jersey. The sleeve may be in wrist or elbow length. The skirt is a wrap around model. This Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3¼ yards of 36 inch material. For collar, cuffs, belt and packet facing of contrasting material ⅜ yard is required.

4721. "Pajamas Up To Date"—Here is a splendid model for albatross, crepe, silk or crepe de chine. The tucks are a new feature. This style is cool and comfortable and especially becoming to slender figurea. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 3⅞ yards of 36 inch material.





4707. A Popular Suite Style for a Small Boy.—One could use jersey cloth, linen, repp and flannel for this design. The smock is made in slipon style. The Pattern is cut in 4 Sizes: 2, 3, 4 and 5 years. A 4 year size requires 2¼ yards of 36 inch material.

4710. A Jaunty Model.—This "costume" is quite up-to-date, and attractive for any of the material now in vogue. The jacket may be omitted, or it may be made of contrasting material. The Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 2⅛ yards for the dress, and 1 yard for the jacket of 40 inch material. Mustard color linen with stitching in brown floss would be nice for this model or pongee in a natural shade with pipings or bindings of white or green.

4719. A Dainty Tea Apron.—Embroidered voile or Swiss, organdy, lawn or percale could be used for this model. It will also be attractive in sateen or alpaca with binding of contrasting material, or in organdy with a plaited frill at the free edges. The Pattern is cut in one Size: Medium. It will require 1¼ yard of 36 inch material, cut lengthwise. If crosswise 1⅜ yard is required.

4715. A Pretty "Dance or Evening" Frock.—Tulle, organdy, chiffon and crepe de chine are desirable materials for this design. Changeable taffeta would also be attractive. As illustrated the dress was made of peach color crepe de chine, with corded pipings of satin, and embroidered chiffon for the yoke portions. A rosette or chiffon and narrow braided girdle finish the waistline. The Pattern is cut in 4 Sizes: 14, 16, 18 and 20 years. A 16 year size requires 3½ yards of 32 inch material.

Stays Soft in Any Weather
A 1000-Mile Shoe— From Tanners to You

Every man knows what it is to dry out wet shoes. The leather drys out stiff as a board, hard and uncomfortable.

Now this discomfort is ended. For, thanks to our exclusive, secret, double-tanning process, the Rouge Rex shoe dries out after any soaking as soft as new buckskin. This amazing shoe stays soft. No other shoe made like it!

We tan the leather in our own tannery. We take selected horsehide of the superfine quality, formerly used for expensive Cordovan shoes and Cossack saddles—the toughest, longest-wearing leather known. Yet by our secret tanning process we give this wear-resisting leather the softness and pliability of buckskin.

The Planter model shown assures dry, warm feet in blizzard weather. The ever-soft leather in every model assures perfect comfort always. This new-day shoe is the one all men want. If your dealer cannot supply you write us and we will see that you are supplied from our nearest dealer.

Automobile Fire

Buildings of Elmer Phelps near Stockbridge Burned

The tool-house and garage of Elmer Phelps, a farmer living near Stockbridge, burned on April 4, and a new Flint Sedan was completely destroyed. The car, which Mr. Phelps had only had a few weeks, was insured in the Citizens' Mutual Automobile Insurance Company of Howell for $2,000. An adjustment was made on April 5 in which the full amount of the policy, $2,000, was paid to Mr. Phelps.

The Children's Hour

HERE'S TO MICHIGAN

MANY laud their praises,
In bits of fancy rhyme,
But I" just put my poorer strength,
To match it for this time.

I think it is the grandest state,
For its beauty and its worth,
Salt and coal and gypsum,
Are taken from its earth.

Lansing is the capital
Its beauty is quite a part,
Of the capitol building with its hosts
Of old and painted art.

Detroit is also growing fast,
It ranks the first in size.
And Belle Isle with its pretty views,
Is first and second for a prize.

The state it is surrounded
By a wondrous chain of lakes,
To say nothing of the thousand others,
Which in all its total makes.

The upper part of Michigan,
Has wealth not used as yet.
But when it gets into the game;
You'll know it you just bet.

Will just mention a few of the cities,
Where education is advanced,
I mean the college and normal schools,
Which we may well enhance.

The normal schools at Marquette,
Mt. Pleasant and Kalamazoo,
Ann Arbor has the U. of M.
M. A. C. at Lansing, too.

Marquette and Jackson has the pens,
Owned and used by the state.
The school for boys at Lansing,
At Adrian for girls of fate.

I fear my poem is over long,
But still there's more to tell,
Three cheers! for good old Michigan.
And may you love her well.

—By Ruby N. Slack, Ellsworth, Mich.

OUR BOYS AND GIRLS

Dear Uncle Ned:—Just a note this time. I have been sick this past week and while sick thought of this story for The Children's Hour, as you said we could send in poems, stories or drawings. (One thing sure, I'll never send in a drawing fit for anything, as I can't draw descent). Today is the first day I am able to be up around and write. Tomorrow I am going to start making up my school work, so I'll be up with my class when I return to school. Hoping you receive enough letters from readers of The Children's Hour to convince you that we want a "Correspondence Scramble", I am, sincerely,—Muriel Fray, Caledonia, Michigan.

Our Feathered Friends

There was once a little girl named Madge, who lived on a big farm with a beautiful wood lot. On one side of the woods was a pleasant grove of maples, where she sometimes took her little schoolmates for picnics in the summer time.

There were birds of many kinds that lived in these woods—blue birds, woodpeckers, robins, quails, and wrens. She had made friends with the birds, especially the quails and wrens. The quails would answer her when she called "Bob White" and she had bought a little wren house and hung it in the woods to protect a mother wren from the birds that preyed on her.

One day a little neighbor boy named Roy, was given a gun for a birthday present. After he had his gun for a while, he began to brag about how few shots it took to bring down a bird. Madge was sad because he killed birds, and one time when they were playing together, she told him how she wished he wouldn't kill birds because it was wicked. He told her it was fun, and that she had "girl's ideas" and boys were brave like men. She said it wasn't brave to kill innocent birds, and almost convinced him that she was right.

Just the same he went to the woods hunting that afternoon, and trudged around until he was tired looking for a bird in a position where he could hit it sure. He had seen birds many times that afternoon that he could have killed, but he would say to himself "I'll wait until I find one real close to me."

It was a hot, sultry, afternoon, and finally Roy sat down under a big elm tree to rest. He was thinking about Madge's silly girl views, (as he called them). Finally he saw a bird close by. He pulled his gun, aimed carefully, and fired. He saw he hadn't killed the bird, but had wounded it, so it just sort of fluttered along. He followed it, and saw it drop to the ground. He picked it up and found it was now dead. He heard a noise and looked around, and there was a nest full of little birds. They were sticking out their little heads and opening their mouths for food, because their mother had been on a return trip to them from hunting food. When Roy realized this, it made him real sad. He knew the poor little thing would starve, now that their mother was dead, and couldn't bring them food. He wondered if he could carry them home and fix a place for them, and try to raise them, because he felt real wicked and miserable.

Just then a big drop of rain splashed on his forehead followed by another, and another. He started up quickly, looked around for the birds, and then realized that he had dreamed this while asleep under the big elm. He was so relieved that it was a dream. He jumped up quickly, and ran home because it was raining quite hard now. On the way home he vowed to never kill any more of our little feathered friends, but to try his skill on real pests or targets.

Dear Uncle Ned:—Well this is Sunday evening, and I am by my sweet self. I happened to think of my dear Uncle Ned, so I took my pen in hand and am now writing you a nice little letter. Jack Frost is outside, and I don't like him. I don't think anyone does. The month of June is my beloved month, when the beautiful roses are seen in the gardens, and in full bloom. I certainly do love flowers. I am a lonesome little pal, for where I am working at now, I don't go out very often. Will some of the young folks between the age of 14 and 23 years, write me? I will try and answer every letter I get. As my letter is sort of long, I must close, hoping to get a lot of correspondence.—Miss M. A. Miller, 700 W. Ohio St., Bay City, Michigan.

Dear Uncle Ned:—May we enter into your merry circle? We have been silent readers of the Children's Hour and enjoy it very much. We see that everyone that joins this circle describes themselves, so will we. We both are eleven years of age, live on farms, and like it better than in the city. We have brown hair and blue eyes and are of the same height. We go to school together and we are in the eighth grade, like to study and like our teacher very much. We hope to see this letter in print, but we know that Mr. Waste Basket is waiting for a letter like this one. Isn't he Uncle Ned? Hoping some of the girls and boys will write to us. We will answer all letters we receive.—Martha Szalo and Agatha Centalo, Metz, Michigan.

Dear Uncle Ned:—Would you like to have a new niece? I am nine years old and in the fourth grade. I have dark hair, gray eyes and I am four feet six inches tall. I have two pets, a dog named Browney and a lamb named Janey. We have other sheep. We have four horses and eight cows. I live on a farm of 160 acres. I hope my letter does not reach the waste basket as I think it will. Your niece,—Wilma Roberts, Ithaca, R. 7, Michigan.

Dear Uncle Ned:—I am a girl in the fourth grade. I weigh sixty-five pounds. I am four feet four inches tall. My hair is a light brown and my eyes are blue. I live on a twenty acre farm. We have ninety chickens, three ducks, five cows, two cats, two pigs, and two horses. I have two sisters and one brother. There are twenty-four children in our school. Your niece,—Martha Wilson, R. 1, Alma, Michigan.

Dear Uncle Ned:—May I join your merry circle? I hope this letter does not reach the waste basket. I live on a 160 acre farm, eight miles from Grayling. My father has been taking the M. B. F. for quite a while. I read the Children's Hour and enjoy it very much. I have 4 brothers and 1 sister. I will describe myself. I am 13 years old, 5 feet 1½ inches tall and have brown hair. My birthday is the 6th of November. I go 4 miles to school and am in the seventh grade. I wish some of the boys and girls would write to me. Your nephew,—Ernst Corwin, Roscommon, Mich., R. R. No. 1.

Dear Uncle Ned:—Hello! May I become a member of the Children's Hour? My father has taken the paper for a long time and thinks it is a very good paper. So do I. I live on a 60-acre farm and like the farm very much. I have light brown bobbed hair, blue eyes, and I am very pretty. I am twelve years old and am in the eighth grade. I am writing this letter in school. Your want-to-be niece,—Beatrice Everson, Auburn, Mich., Route 2.

An Over-Production of Crops and Advice

(Continued from Page 3)

riculture. Did he fail to produce sufficiently? No, he even produced a surplus. Did he fail to produce economically? No, he produced this surplus with less help than ever, namely, by his own ingenuity and afforts.

So much for conditions with which we are all more or less familiar. Now what about the remedy? It is common knowledge that it is comparatively easy to criticize almost any program presented by another. But to outline a remedy as a program to be carried out, is entirely another problem. The complex condition of our economic relationship between industries and governments of the world makes the problem so great that to date we have been able to discover no one person who is able to outline a course of action that would solve it. I firmly believe that the task will require the best efforts of many men, honestly and earnestly inclined, without the handicap of selfishness or prejudice, seeking just and fair means for an equitable distribution of wealth. Therefore I submit the following for consideration.

Taxes Must Come Down

Many things have happened in the last few years. Therefore many adjustments will have to be made, among which I will mention only a few which I think most important. First, taxes. The cost of Government should be equitably spread upon real property, including live stock and machinery, intangibles such as money, bonds, mortgages, etc., also upon all citizens, because all enjoy the benefits and protection of Government without which they could not exist. Due consideration of course should be given their ability to pay, for any tax that becomes confiscatory is little short of robbery.

And in the second place freight rates should be established with more consideration given to the actual value of the commodity shipped. For instance, most farm commodities are heavy and bulky. In many cases the freight bill nearly equals the entire cash value of the shipment. This situation should be promptly and effectively remedied.

In our opinion no solution of the problem would be complete which did not give an important point to the subject of co-operative marketing. The chief reasons why the farmers are trying to develop cooperative marketing are economic in nature and have to do with the problem of lowering the cost of distribution of food, which, of course, is good business for our entire social structure. Our Federal and State Governments should do everything possible to assist by pointing the way and by other means when necessary.

Good farming is good business applied to farming, meaning good soil, good seed, good stock and good business methods, and I am glad to say that our Governments, both state and federal, are doing everything that they can do to help along this line.

Inflation and Deflation

The writer remembers when a boy, if he was to enjoy coasting down the hill he must by some means get back up the hill again. Now if agriculture is to enjoy its former relationship with other industries it must get back to the position it occupied in 1919. During this time when money was easy to get, debts were contracted to the largest extent ever recorded in history and we all expected to pay these obligations with our commodities representing a cash value of nearly, if not quite, double what they now represent.

For example, it took 100 bushels of wheat in 1919 to pay interest on $3750.00 at 6 per cent. Today, 100 bushels of wheat would pay the interest on only $1428.57 at 7 per cent. This rate of depreciation is shown, not only in wheat, but in hay, beef, cattle, potatoes and many other items. It is also shown in exchange value, for example, 102 bushels of wheat in 1919 would buy a wagon. Today, it would take 166 bushels to buy the same wagon. Therefore, you see it is unjust to contract a debt under one measure of value and be obliged to pay it under another.

Some one will hasten to say that we have the same money unit today that we had in 1919. I will reply by saying that value only means so much of one thing is given for so much of another. So the value of any given thing, including money, depends upon the amount available and the demand for it. So when money is plenty and cheap everyone is trying to exchange money for things, and when money is scarce, the conditions change and every one is trying to exchange things for money. Therefore money becomes dear.

Tax Exempt Bonds and Securities

The crazy desire to go in debt was not confined to indiviuals, they only follow the example set by our governments and our municipalities. Some of the astounding figures are given below. The debts carried by governments, National, State, County, cities, etc., in 1912 was $6,814,955,000. This had grown in 1922 to $32,786,715,000. The increase represents 381 per cent. The per capita debt in that period rose from $70.20 to $301.56. That the reader may see what is meant by the unparalleled increase of public debts, the division of responsibility is given as follows:

National Debt	$22,525,775.000
State Debt	1,162,648,000
County Debt	1,366,636,000
Cities and others	7.731,658,000

The interest is more than one and one-quarter billion dollars a year.

This great indebtedness was largely augmented by tax exempt bonds and securities, a condition made possible by legislation and capable of being corrected only through legislation.

Therefore I am convinced that the only means by which agriculture can relieve the serious conditions which it is in, is by thorough and complete organization, and with its numerical strength, support such men as have a knowledge of the real conditions affecting agriculture, and who are earnestly trying to effect a cure. Possibly the greatest results may be obtained by organized support of beneficial laws or rulings and a careful analysis of all measures, so that we may be able to combat harmful measures.

OH, MONEY! MONEY!

(Continued from Page 10)

the low wages—wages upon which it was impossible for any girl to live decently—wages whose meagerness sent many a girl to her ruin.

Miss Maggie listened attentively, and said, "Yes, yes. I see," several times. But in the end the eager-eyed young woman went away empty-handed and Mr. Smith frowned again.

He had thought Miss Maggie was so kind-hearted! She gave to some fairs—why not to this one? As soon as possible Mr. Smith hunted up the eager-eyed young woman and gave her ten dollars. He would have given her more, but he learned from unpleasant experience that large gifts from unpretentious Mr. John Smith brought comments and curiosity not always agreeable.

It was not until many weeks later that Mr. Smith chanced to hear of the complete change of policy of Daly's department store. Hours were shortened, labor lightened, and wages raised. Incidently he learned that it had all started from a crusade of women's clubs and church committees who had "got after old Daly" and threatened all sorts of publicity and unpleasantness if the wrongs were not righted at once. He learned that the leader in the forefront of this movement had been—Maggie Duff.

As it chanced, it was on that same day that a strange man accosted him on the street.

"Say, she was all right, she was, old man. I been hopin' I'd see ye some day ter tell ye."

"To tell me?" echoed Mr. Smith."

The man grinned.

"Ye don't know me, do ye? Well, I do look diff'rent, I'll own. Ye give me a dollar once, an' sent me to a lady down the street thar. Now do ye remember?"

"Oh! Oh! Are you that man?"

"Sure I am! Well, she was all right. 'Member? I thought 'twas only chin-music she was givin' me. But let me tell ye. She hunted up the wife an' kids, an' what's more, she went an' faced my boss, an' she got my job back, too. What do ye think of that, now?"

"Why, I'm—I'm glad, of course!" Mr. Smith spoke as one in deep thought.

And all the way home Mr. Smith walked as one in deep thought.

Two one-year old, one 18 mos. old. Price $50-60.
H. W. Garman & Sons, Route 3, Mendon, Mich.

FOR SALE—MALE FOX HOUND 17 MO. OLD. A good one, will sell cheap.
RALPH ELMER, Harrisville, Michigan.

Cured His Rupture

I was badly ruptured while lifting a trunk several years ago. Doctors said my only hope of cure was an operation. Trusses did me no good. Finally I got hold of something that quickly and completely cured me. Years have passed and the rupture has never returned, although I am doing hard work as a carpenter. There was no operation, no lost time, no trouble. I have nothing to sell, but will give full information about how you may find a complete cure without operation, if you write to me, Eugene M. Pullen, Carpenter, 59-K Marcellus Avenue, Manasquan, N. J. Better cut out this notice and show it to any others who are ruptured—you may save a life or at least stop the misery of rupture and the worry and danger of an operation.

PERMANENT

DAIRY and LIVESTOCK

M. A. C. WILL LIST SUPERIOR COWS

RECOGNITION of superior animals in Michigan cow testing associations will be given with the establishment of an animal "blue book" for the highest producing cows, beginning with this year, according to an announcement by the Dairy Husbandry Department of Michigan Agricultural College.

More than 2,000 cow testing association records were examined in order to arrive at a standard of production, in accordance with the top 12 or 15 per cent of the association cows will be allowed to qualify. All cows in regularly organized associations will be eligible for entry in the new record of performance upon meeting the required standards.

The new plan will establish a system of permanently recording the State's best cows and will stimulate interest in better feeding, better breeding and better "weeding," according to Department officials. It also will aid in enhancing the value of superior cows and their offspring, and will emphasize the value of a bull according to the production records of his daughters.

Certificates of production will be granted for all animals that qualify for the record of performance, besides their inclusion in the annual year book.

Requirements for certification in the record of performance year book will be as follows for the various classes during the association year:

1. Heifers starting record under three years old must produce 280 pounds or more of butter fat.
2. Cows starting record under four years old must produce 310 pounds or more of butter fat.
3. Cows starting record under five years old must produce 350 pounds or more of butter fat.
4. Cows starting record when five years old or over must produce 400 pounds or more of butter fat.
5. When age is not known, cow is to be classed as mature, and must produce 400 pounds or more of butter fat.

TAKING SHEEP ON SHARES

What share should I have to give for sheep furnished me to raise on shares? I would like to get about 50 head. I have 120 acres of cut-over land with briers and brush. Do you think that to work up to 100 head in three years would be more than I could pasture in good shape? I am sowing mixed grass seed as fast as pastured off.—C. G., Karlin, Mich.

—There are many different systems used in letting sheep out on shares to Michigan farmers. However, the oldest and most common one is for the sheep to double to the owner in three years; that is, the man taking the sheep stands all the death loss and returns to the owner twice as many sheep of about the same average age and breeding value as the ones he received at the beginning of the three-year period.

Whether or not you could carry one hundred head of sheep on your one-hundred and twenty acres of cut-over land would depend first upon the productiveness of your soil and second upon the amount of open grass not thickly covered with briars and brush and the kind of grass to which it is seeded. The sheep will not do well if confined closely enough to make them clear off very great quantities of the briars and brush, and you will have better results if you start with a smaller number than your pasture will carry and increase the flock as you see that you have plenty of pasture.

A smaller number of sheep well fed and taken care of are much more profitable than a larger number poorly fed and cared for, particularly on the share plan, because the death risk is usually entirely assumed by the man who takes the sheep.—V. A. Freeman, Extension Specialist in Animal Husbandry, M. A. C.

VETERINARY DEPARTMENT

HYDROPHOBIA OR RABIES

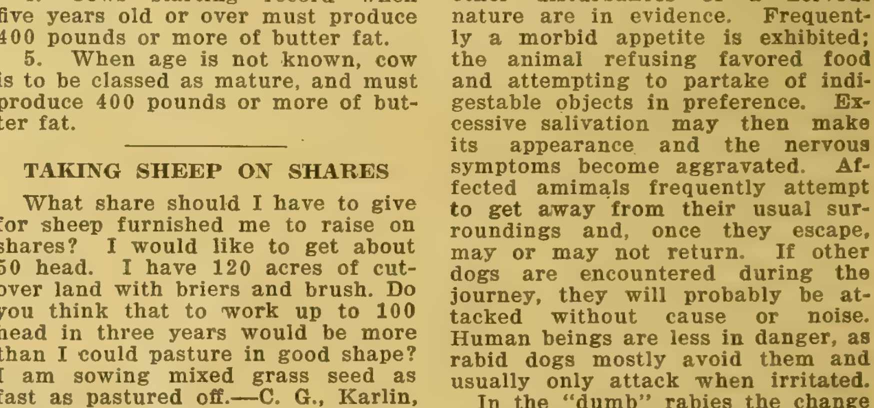
Could you tell me how a dog acts when he has hydrophobia and the cause? Would any other animal get it without the dog biting them? Had a two year old dog in good health and suddenly went mad and would very much like to know the cause.—E. E. R., Wixom, Michigan.

—There are two commonly described types of hydrophobia, or rabies; the "Furious" and the "Dumb."

The "furious" type is the type which attracts the most attention and represents the greatest danger to animals or persons. Probably the first represents the greatest danger to animals or persons. Probably the first noticeable symptom is a change in behavior. The animal later becomes very excitable and other disturbances of a nervous nature are in evidence. Frequently a morbid appetite is exhibited; the animal refusing favored food and attempting to partake of indigestable objects in preference. Excessive salivation may then make its appearance and the nervous symptoms become aggravated. Affected amimals frequently attempt to get away from their usual surroundings and, once they escape, may or may not return. If other dogs are encountered during the journey, they will probably be attacked without cause or noise. Human beings are less in danger, as rabid dogs mostly avoid them and usually only attack when irritated.

In the "dumb" rabies the change in behavior may pass unnoted. The period of excitability will be very short, to be followed almost immediately by paralytic symptoms; particularly paralysis of the muscles of the jaw and throat, followed by paralysis of the hind parts of the body. In this form of the disease the patients are usually weak from the beginning, neither bark nor bite, and succumb in three or four days.

The disease cannot be produced in a person or animal except through the bite of a rabid animal or the inoculation of the virus by other means.—B. J. Killham, State Veterinarian.



ASK—— ——AND YE SHALL RECEIVE

Mr. Hiram J. Stevens, of Luzerne, Mich., sent this picture to us, and he says that Ezra (meaning the cat) takes quite an interest in dairying.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 687, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used your money will be instantly refunded.

WALKER REMEDY CO., Dept. 687,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

SELL CLEAN EGGS BUT DON'T WASH THEM

If eggs are dirty don't wash them, is the advice offered egg producers by the United States Department of Agriculture. Washed eggs deteriorate more rapidly than unwashed, and detection of a few washed eggs may cause buyers to penalize the entire lot.

Unusually large quantities of washed eggs are reported this spring, the department says. Although dirty eggs are discounted in price, washing eggs will generally cause producers a greater loss.

Only clean, unwashed, high-quality eggs bring top prices. Production of clean eggs is accomplished by keeping hen house floors and nests clean, gathering eggs daily and keeping the laying hens during muddy weather in dry quarters until afternoon when most of the eggs will have been laid. Producers will find it more profitable to use the soiled eggs on the farm, and to market only the best quality product, the department says.

FEEDING HENS SKIM MILK

Does skim milk take the place of meat entirely for chickens? We have about 50 hens and I feed them one and one-half peck daily of one-half barley and one half buckwheat. They have all shells they want and nearly all the skim milk they want. I have one window 2 feet by 3 feet covered with burlap and three ventalators of one and one-half inch pipe which comes about 2½ inches from the floor and 18 inches out of the roof. They all look healthy. What do you think is lacking to make them lay?—W. R., Elkton, Mich.

—A very satisfactory production can be secured when the hens have skim milk available at all times. Ordinarily, however, a slightly higher production will follow the addition of meat scrap in the dry mash, at the rate of ten per cent, as a supplement to the skim milk. A 312 egg record was made by a Barred Rock at the Ontario Station that was fed a ration consisting of skim milk always available, ground oats in the dry mash hopper and a scratch feed twice daily consisting of two parts corn and one of wheat, in addition to oyster shell, grit, and sprouted oats.

More complex rations are being recommended at this time. The most popular ration used in practically all laying contests, would include a scratch feed containing cracked corn, and wheat, and a dry mash available at all times composed of the following ingredients: 20 per cent bran, 20 per cent corn meal, 20 per cent ground oats, 20 per cent middlings, 10 per cent meat scrap. The protein content can be increased by giving skim milk, buttermilk, semi-solid, or powdered milk.

The laying hen will ordinarily consume four ounces of feed daily. During the winter months a slightly higher percentage of scratch feed should be supplied and after May first the day's ration should consist of two ounces of scratch and two of mash.

It seems to me that you would find your hens in a more responsive mood if the laying house was remodelled, including more window space, and a more effective ventilation system. The outlet flue should be at least twelve inches in diameter, preferably fifteen or eighteen, and should come within eighteen inches of the floor, and extend beyond the highest point of the roof.

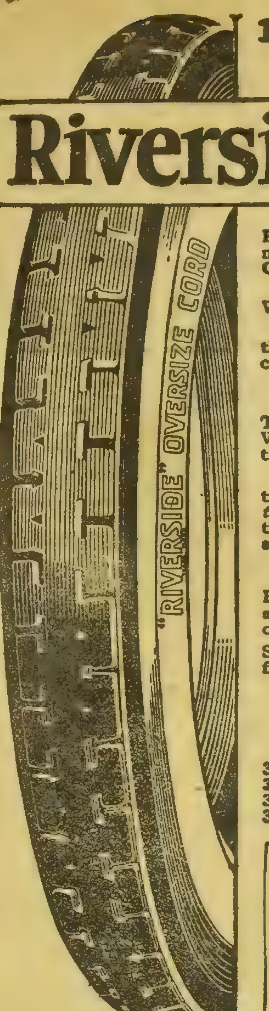
Approximately one third of the south side should be lighted.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

Speckled Tea

Freckled-faced Mickey plays in Hal Roach's "Our Gang" comedies. His mother says he never steps out of the character he portrays on the screen. The other evening she asked him to pour her a cup of tea. Mickey hied himself to the kitchen and returned in due time with the tea.

"It's full of specks, Mickey," remarked his mother, sipping the streaming liquid. "Was the strainer clean?"

"Couldn't find it, Ma," was the rejoinder, "so I just put it through the fly swatter."



10,000 miles guaranteed and yet you save 1/3

Riverside Oversize Cord Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.

I have tried several different highly advertised makes alongside of Riversides and have not found a superior."

Walter M. Schworm,
Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

Free to Asthma and Hay Fever Sufferers

Free Trial of Method That Anyone Can Use Without Discomfort or Loss of Time.

We have a method for the control of Asthma, and we want you to try it at our expense. No matter whether your case is of long standing or recent development, whether it is present as Chronic Asthma or Hay Fever, you should send for a free trial of our method. No matter in what climate you live, no matter what your age or occupation, if you are troubled with Asthma or Hay Fever, our method should relieve you promptly.

We especially want to send it to those apparently hopeless cases, where all forms of inhalers, douches, opium preparations, fumes, "patent smokes," etc., have failed. We want to show everyone at our expense, that our method is designed to end all difficult breathing, all wheezing, and all those terrible paroxysms.

This free offer is too important to neglect a single day. Write now and begin the method at once. Send no money. Simply mail coupon below. Do it Today —you even do not pay postage.

Chicks Dying

How to stop it in 48 hours

White diarrhea kills half of all the chicks hatched, yet this loss is easily prevented, easily stopped. For years, thousands of poultry raisers have stamped out the trouble almost entirely, by putting Avicol in the drinking water. Within 48 hours, the sick ones are lively as crickets. Mrs. Wm. May, Rego, Ind., says: "I was losing 15 chicks a day before I received the Avicol. I haven't lost one since."

Avicol costs nothing to try. Readers are urged to write to Burrell-Dugger Co., 31 Allen Ave., Indianapolis, Ind., sending 50c as a deposit for a package by mail prepaid (or $1 for large size holding nearly 3 times as much). If you prefer, send no money but deposit the money with the postman on delivery. If Avicol doesn't stop your chick losses immediately, if you're not fully satisfied, the money deposited will be promptly refunded by the manufacturers.

LEE'S LICE KILLER

The Old Reliable Has proven itself year after year the one **sure** way to rid poultry of lice, mites, bedbugs, body lice and such vermin. Paint or spray on roosts, etc. No dusting, dipping, greasing, handling. Get it at your drug or seed store, or write us for particulars and valuable free book. **GEO. H. LEE CO. Omaha, Nebr.**

DONT LOSE BABY CHICKS

GERMOZONE, for 25 years the **reliable** remedy, will rid them of Roup, Colds, Bowel Trouble, etc., and **keep** them healthy. "A wonder worker." Used by hundreds of thousands. Get it at drug or seed store, or order of us by card—75c and $1.50 sizes, delivered. Postman will collect. No extra charge. Order today.

GEO. H. LEE CO. Omaha, Nebr.

DO NOT FEED BUTTERMILK IN GALVANIZED CANS

I am going to buy buttermilk to feed my baby chicks this spring and would like to know if there is any danger of poisoning them by leaving the buttermilk stand in milk cans, if so how long can it be left standing in the cans before there is danger? What kind of dishes are best to feed buttermilk in?—H. D. M., Jackson, Mich.

—Disastrous results sometimes attend the feeding of liquid milk products in galvanized dishes. The lactic acid of the milk reacts chemically on the galvanized metal, releasing lead impurities which poison the chicks. Ordinarily this reaction can be noted by the change of color of the galvanized dish which will have a dark area wherever the milk came in contact with it. The buttermilk could be retained in kegs or stave barrels for a long period without seriously interfering with its feeding value. There should be no danger attending the holding of buttermilk in the ordinary milk can for several consecutive days, but when fed to chicks, glass, earthenware, or wooden receptacles should be used.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

DAIRYMEN TO HAVE CENTRAL MILK MARKETING AGENCY

(Continued from Page 4)

that the central sales agency proposed would be able to hold single distributers in check, and negotiate fair margins for cash and carry, with uniform prices for each service.

Some form of pooling plan for equitable harmonious distribution of returns to producers, was clearly in the minds of various speakers. The sharp division in the ranks of New York dairymen, due to their pooling plan, was referred to repeatedly, but there seemed to be general belief that such troubles could be avoided. Manager Clifford Hough of the Connecticut Milk Producers' Association offered his organization as an instance. It is going forward under a somewhat similar pool with increasing efficiency, prosperously and harmoniously, fair play bringing fair play and uniform prices.

Manager Bradford of the famous Turner Center system favored the central sales proposal, but cautioned against over-ambition and too wide a "spread" between fluid and surplus prices; "first aid" now is to keep that spread narrow enough to avoid over-temptation to milk manufacturers.

President Little finally put his idea in the form of a resolution, calling for "action toward the establishment of a common marketing agency covering New England, on a basis of equalizing returns to all;"—a broad wording intended to allow wide latitude in formulating the ultimate plan. This resolution, after full debate, was adopted by an overwhelming majority, everybody present being allowed to vote. To study the question and carry the plan forward a committee was elected.

To the writer the outstanding phenomenon of the meeting was the speech of Manager Richard Pattee of NEMPA, now become, since the lamented death of Secretary Manning of New York, the senior and dean of eastern cooperative dairy leaders. Considering the size of the brain producing it, this speech was out of all comparison the briefest, the simplest and the quietest of the meeting—as unruffled as a Mediterranean calm. It voiced the deep and undisturbed conviction of the speaker that the cooperative movement is certain to go on, whatever temporary obstacles it may encounter, until its service to producer and consumer has been fully rendered. Mr. Pattee has an unshakeable faith, he said, in the foundation common sense of the farmer, and in his ability to work out his own problems as they confront him. "We are up against a calamity," he concluded, "which that common sense cannot solve. When we have determined what we ought to do, we shall go forward together and do it."

Simple Enough

Teacher: Can any one tell me how a stovepipe is made?

Johnny: First you take a big long hole, and then wrap some tin around it.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

MARKET FLASHES

MARKET SUMMARY

Wheat and oats steady. Corn and rye unchanged. Demand for beans slow. Butter and eggs active and firm. Potatoes steady. Supply of dressed calves exceeds demand and market is easy. Cattle steady to lower. Hogs and sheep decline.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Spring Has Arrived

SPRING is usually pretty late in arriving in Michigan and the surrounding states, where returns temporarily to cold days and nights are likely to happen at any time, but we have now reached the period of the year when farmers are out in the fields in preparation for the coming months of growing and reaping. They have learned the lesson of the danger of putting all their eggs in one basket furnished by the last year's wheat crop, and there is no probability that the many tillers of the soil who have made sharp reductions in wheat acreage will have cause to regret doing so. In a short time the pastures will be green once more and ready for cattle grazing, but there is danger of turning in stock before the grass has had a fair start and thereby injuring its growth. This year there has been a slow movement in stocking farms with thin cattle for grazing and feeding, but it is getting late, and at any time a starting up in the demand for stockers and feeders is likely to take place. These cattle have been selling below their real values in many instances, and they are bound to go higher before long. It is not an easy matter to ascertain approximately the number of brood sows on farms in the corn belt this spring, but from all that can be learned it appears that the number is much less than a year ago, and there are reasons for believing that the Department of Agriculture falls short of the facts in estimating that there are but 13 per cent fewer sows this spring than a year ago. Probably enough hogs will be raised to satisfy requirements, but there promises to be a marked falling off from the enormous over supply of 1923-24. It is diffcult to predict the future course of prices, but conditions point to higher prices for hogs, an advance of at least $1 per 100 pounds over last winter appearing not unreasonable. In some states there is a movement to raise alfalfa and soy beans, and it is understood that the Wisconsin farmers are going to double their alfalfa and soy bean acreage. In most farming districts efforts are being made to intensify production to the acre, and many farmers are giving their land a good dressing of lime.

Light Trade In Wheat

Judging from the trend of prices in the wheat market for several weeks, there is little in the surroundings which is encouraging to holders, and many owners have closed out their lines either in part or wholly. It is noticed that speculators are much less in evidence than in former years, and this is true also of corn and oats. Unfortunately, prices for the several grains are no longer made by the export trade, which is much smaller than in other years, and so long as other exporting countries continue to undersell us, there can be no marked change in our exports. Rye appears to be an exception to the rule, as it sells at far lower prices than formerly and recent purchases have been made, it is stated, for export to Norway. Rye bread is mainly used in northern Europe, and rye for May delivery is extremely low priced, selling about 22 cents a bushel lower than a year ago. Stocks of rye decrease slowly, and the visible supply in this country is up to 21,500,000 bushels, comparing with 18,415,000 bushels a year ago. The visible wheat supply is decreasing at a moderate pace, and aggregates around 56,000,000 bushels, which compares with 45,476,000 bushels a year ago. For some time the price of wheat in the Chicago market has averaged a little over $1 a bushel while a little over two years ago wheat for May delivery sold on the Chicago Board of Trade as high as $1.43. Most of the time the wheat exported from North America is furnished by Canada, an a short time ago it was stated that there were 175,000,000 bushels left over there for shipment. A reduction is reported in the area devoted to spring wheat in the United States, but the winter wheat acreage is regarded as too large for these times. In fact, some well-informed authorities believe there is danger that the aggregate wheat crop of this country will be larger than that of 1923 if the crops turn out all right. A short time ago wheat for May delivery sold at $1.03, comparing with $1.26 a year ago.

Less Demand for Corn

Conditions have changed materially in recent months, and prices for corn have gone much lower under larger sales by owners and a slower demand from various quarters. Recent sales have been made a few cents lower than at this time in 1923, but around two years ago May corn sold on the Chicago Board of Trade as low as 59 cents. The prevailing belief is that the corn acreage planted this spring will be as large as usual. Fewer cattle and hogs are being fed than a year ago, and it is predicted by close observers that less corn will be fed to swine for the coming half year than a year ago. The demand in the Chicago and other markets for corn to ship to eastern points has fallen off materially, but very fair amounts have gone to western and southwestern districts. Sales in the aggregate of cash lots of corn have fallen off a good deal, while farmers west of the Missouri river sold freely, but Illinois farmers were light sellers. Oats seeding has been in progress and a good acreage is claimed. Oats have been selling at about the same prices as a year ago, but about two years ago May oats sold as low as 37 cents a bushel. The visible supply in the United States is about 14,000,000 bushels, comparing with 26,900,000 bushels last year. May corn sold a short time ago on the Chicago Board of Trade at 79 cents, or about the same as a year ago. May oats sold on the same day at 47½ cents, comparing with 45¾ cents last year; and May rye at 65½ cents, comparing with 86½ cents a year ago. Recent selling of September corn was based on expectation of an increased acreage and on reports of reduced consumption on farms.

Prime Beef Cattle Advance

Most of the time there are sufficient beef cattle offered on the Chicago market to meet trade requirements, although fewer cattle are reported in feeding districts of the corn belt than a year ago. But there are not many strictly prime long fed heavy steers in the country and the percentage of choice to fancy steers and heifers offered on the market is very small most of the time. Now and then there are larger supplies of prime fat weighty steers than usual, and several days ago Nebraska was handsomely represented with about 375 head of fat steers weighing from 1325 to 1500 pounds, which sold at $12.25 to $12.35, with a sale of 28 of the lot which averaged 1549 pounds at $12.60, the highest sale in a long time. On Monday when these sales were made the cattle receipts aggregated 22,618 head, and the general market was at least 25 cents lower. Last week's cattle receipts were much larger than a week earlier, but the local and shipping demand was surprisingly large for Holy Week, and prices advanced after earlier declines. The bulk of the beef steers sold at $8.50 to $11.50, with the choicer lots of heavy steers at $11.60 to $12.60 and no good steer sellings under $10.25 and sales down to $7.25 to $8.50 for the commoner to fair light weights. Inferior little steers sold at $4.50 to $7.20, and the best yearlings offered sold at $11.50. Butcher cows and heifers found buyers at $4 to $10, canner and cutter cows at $2.25 to $3.75 and bulls $3.75 to $7.50. Calves were sold at $5 to $11.50. There is only a moderate demand for stockers and feeders at $4.50 to $9, sales being largely at $6.25 to $7.50. Combined cattle receipts in twenty markets for the year to late date amount to 3,565,000 head, comparing with 3,644,000 a year ago. A year ago common to prime beef steers sold at $6.65 to $10.35 and two years ago at $6.25 to $9.25. Late sales last week averaged 25 to 40 cents lower than a week earlier.

Hogs Still Plentiful

Now and then there is a marked falling off in the marketing of hogs in Chicago, but most of the times there is no scarcity, although smaller numbers showed up last week. Weakness in prices developed at times last week, and eastern shippers bought much less freely than a few weeks ago, while local packers held back, claiming a loss at prevailing prices for hog products. The general quality of the hogs offered showed a marked falling off, and inferior lots sold badly. The bulk of the hogs sold within a range of 20 cents, with heavy butchers at the top and selling 10 cents above the best light bacon weights. Recent receipts of hogs averaged 234 pounds, being five pounds lighter than a year ago and the same as the ten-year average for corresponding weeks. 14,517,000 hogs, comparing with 13,755,000 for the corresponding period last year and with 10,202,000 two years ago. Hogs are selling much lower than in recent years. A year ago they sold at $6.60 to $8.50 and two years ago at $9 to $10.70. Recent smaller receipts in the Chicago market checked the downward course of prices, and late sales were made of hogs at $6.65 to $7.65.

Chicago Lamb Market

Despite continued meager receipts recently, there was a big tumble from the previous time, prices having reached almost a prohibitory level when prime handy weight lambs sold for $17.10 per 100 pounds. However, there is no kick coming from sheepmen, their profits being extremely large. Hang on to the flocks and market only prime lots. Unshorn lambs have been selling at $13 to $16.50 and feeding lambs at $14.25 to $15.75. A year ago top lambs brought $14.60 and weight years ago $11.65.

Early Lamb Situation

Because of the embargo on eastern shipments of California lambs and the continuation of the very unfavorable conditions during March in Kentucky and Tennesee the market supply of early spring lambs before June 1 will be very much smaller than usual according to a report made by the United States Department of Agriculture. These three states furnish most of the spring lambs marketed before June first.

While the indications are that the market supply of sheep and lambs during April and May will be the smallest in some years, with fed stock making up an unusual percentage of the total, the market supply in June and July may be somewhat larger than that of last year because of the delayed movement from the earlier areas, the large early crop in the north west and the indicated increased production in the corn belt.

WHEAT

Prices in the Detroit wheat market made several small advances during the fortnight ending April 19. Trading is not active as dealers are holding off to await congressional action. They seem to be doing as little as possible and making no effort to extend trade. On the supply and demand outlook the market is weak as there is an abundance of wheat and foreign demand is small. Reports of the growing crop indicate a small crop this season.

CORN

Reports that the corn exchange this year will be bigger than last weakened the market last week and buying is not active. One of the large corn products companies has gone into the production of corn sugar on a large scale, it is said. This is a new thing in the corn trade. Detroit is firm at unchanged prices.

OATS

Oats are very scarce at Detroit and a firm tone prevails in the market. An advance in price of one cent last week failed to bring out any offerings.

RYE

The Detroit rye market is quiet and easy and the price is 1 cent under two weeks ago.

BEANS

Prices in the Detroit bean market during the last two weeks have worked a little nearer to the $4.50 level predicted by some of the buyers and there is a quiet tone to the trading. The New York market is inactive. Trading is not enough to cause the price to advance and dealers are not willing to sell at lower prices so the price remains unchanged. In event the $10,000,000 appropriation for relief of German children passes at Washington, it is believed that this huge fund released for the purchase of food stuffs will have a tremendous bearing on the Michigan Bean market and upon the acreage for this year. Several well known men interested in Michigan beans are working to see that Michigan beans will be considered as one of the first foods to be purchased.

POTATOES

The Detroit market has been steady with demand moderate. There is a fair supply of old stock on the market at present. The Chicago market is weak on whites but firm on reds with demand and trading very slow. A steady demand is noted at eastern points.

HAY

The hay markets show some effect of the seasons dullness but the very small offerings of the better sorts keep these prices very firm and therefore buoy up the situation as a whole.

There is also the seasonal influence of bad country roads which are restricting shipments to some extent this week. On the other hand the large proportion of low grade and unsound stock keep this end of the market dull and weak.

MARKET QUOTATIONS

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of April 27

THE tail end of a storm area will be leaving Michigan as this week begins with the result that the winds will be in the west to northwest and north with moderately cool temperatures.

By Tuesday temperatures will rise to much higher readings which will be the warning of the storm of high winds and rains to follow. These conditions will moderate shortly after the middle of the week and the sky clear off.

However, although we believe the barometer will have a tendency to retain more or less high at this time, there will be a renewal of wind and rain storms at the close of the week. Temperatures during last half of week will remain quite steady but with a general tendency to rise.

Week of May 4

Over the greater part of the United States during this week rain fall is not expected to be heavy. With the exceptions of the very first part and the very last part of this week, Michigan will be practically free from any heavy general falls of rain.

During opening days of this week temperatures will be low for the season but on or before Friday will have risen considerably above the seasonal normal.

May to be Warm Month

There will be numerous electrical storms during May in Michigan. Thunder and local rains will be plentiful but we do not figure that the rainfall will come up to the usual state readings. From about Friday of this week to the beginning of the last week of this month temperatures will show a rising tendency. From the last week of May to the first days of June the reverse will take place and temperatures will average a downward trend.

$250 IN PRIZES FOR BEST LETTERS ON CROW

Just sit down and write all about how he is regarded by farm folks—is he helpful or harmful—should he be encouraged or protected. We want this opinion of yours for scientific purposes, and for that reason, offer prizes as follows:

First Prize	$50.00
Second Prize	25.00
Third Prize	15.00
Fourth Prize	10.00
5th to 14th Prizes	$5.00 each
15th to 39th Prizes	2.00 each
40th to 99th Prizes	1.00 each

There will be 99 prizes in all. Surely you should stand a good chance of getting one of them.

Make your letter reasonably short. Write on one side of paper only. Contest closes June 10th, and letters must be postmarked not later than that date. Winners will be announced in our August 16th issue.

Address your letter to Mr. George V. McCarthy, Yama Farms, Napanoch, Ulster County, New York.

Why She Wept

"Let me kiss those tears away, sweetheart," he begged tenderly.

She fell into his arms and he was very busy for a few minutes. But the tears flowed on.

"Can nothing stop them?" he asked breathlessly.

"No," she murmured, "it's hay fever; but go on with the treatment."

WHAT WILL
YOUR HARVEST BE?

Do you want your entire income to depend upon crop and market conditions? Or would you like to have every month an income month, your harvest of dollars sure and safe?

Consumers Power Company
Preferred Shares

combining safety, freedom from taxes and high rate of interest, 6.6%, assure you a certain harvest every month. Your investment is backed by a vital service to Michigan people.

Write to our Jackson office for all the facts or ask our employees.

FARMERS! BREEDERS!! BANKERS!!!

The Seal of Quality and Service

PONTIAC
STRAIN

Let's Bring the Buyers to Michigan

There is no doubt of their eagerness to come or of the splendid prices they are ready to pay for Fine Pelts.

The Black Fox Magazine for January says editorially: During December, particularly the latter part, the Charlottetown newspapers were full of advertisments soliciting furs. Numerous buyers from the United States visited the province, including representatives from the big fur houses of Alfred Eisenback, Jaeckel & Sons and Roy Pines, of New York, and several buyers from Quebec, while the consignment houses of Frederick Huth & Co., C. M. Lampson & Co., and the Canadian Fur Auction were actively soliciting consignments for their auctions.

Mr. Geo. B. Herzig, of New York, well known to Silver Fox breeders, particularly since the National Live Fox Exhibition at Milwaukee, where he was one of the judges, spent two weeks with Mr. W. Chester S. McClure buying Silver Fox skins. Mr. McClure's office on those days would certainly cure any pessimist or anyone who doubts the possibilities of Silver Fox farming. It was positively thronged with Fox farmers carrying large and small bundles of Silver Fox Furs. And in the two weeks it was estimated that over $270,000 was paid out in cold cash. This included the purchases in Summerside, Prince Ed. Isles.

It is estimated that the industry will bring into the province this year a total of $1,500,000, of which over a million will be for skins. As the agricultural products had to be sold this year at a comparatively low level, the activity in the Silver Fox market has been a distinct boon to the island.

We Need More Foxes

Only Pontiac Strain Will Produce Pontiac Strain

THE demand for Pontiac Strain Silvers—has already passed away beyond our producing capacity!

This year's Sales of Pontiac Strain Foxes will exceed our production—by **Several Hundred Pairs.**

Then—what of next Season!

Remember the demand is growing!

We must have more Pontiac Strain—Production units—at once!

Our Plan and Organization—eliminates all Risk! We operate upon a positive—safe and proven plan—that is bound to make—such men as we select—to operate Pontiac Strain Production Units— (————————) Thousand Dollars per year—we have left the number blank—purposely because our proposition is such that you can fill this in yourself—for the number of thousands you make—depends wholly upon your qualification for producing Pontiac Quality Foxes.

However—we will not be satisfied with anyone—who themselves would be satisfied with less than Ten Thousand Dollars profit—annually after the first year.

Only men—or groups of men of rigid honesty—respected and honored by their fellowmen—for the success which they have already achieved will be considered.

You will find upon investigation—that the men behind the Pontiac Strain Institution—meet the above requirements themselves—and want to associate themselves only with such men as will reflect credit upon the Silver Fox industry—as a whole.

So here you have an unusual opportunity for Service—you know—"Helping the other fellow to help himself will bring you all you want."

We know that the Farmers and Breeeders of Michigan can make Millions of Dollars every year—in fur production—and so this institution is investing thousands upon thousands of dollars—in advertising and in laying the foundation to the result that—

Pontiac Strain Foxes—And the Pontiac Plan
Means Millions of Furs—Brought into Michigan.

From March 29 Issue of Forbes we Clipped the Following:

> ***"Most men have convictions—Some have courage—but the names of those who have both illuminate the pages of history".—O. Byron Cooper.***

We have a firm conviction upon the wonderful future in store for Fur Farming—and have demonstrated this conviction with the courage to put nearly a quarter of a million dollars—into fur farming to back up our conviction.

We are making history in the Fur Industry!

We need more Pontiac Strain Foxes!

Do you want to produce them?

Then—get in touch with us at once—either write or come to our office in Detroit for particulars.

Let's make Michigan the fur producing center of the World!

Natural conditions favor us!

Fair and Uniform Assessment Is the Way Out

Put All Michigan Property on the Tax Rolls and Then Distribute the Tax Burden Equally

By STANLEY M. POWELL
(Lansing Correspondent of The Business Farmer.)

THE interest created by this series of taxation articles has been a distinct surprise and yet it should not be so. Is it any wonder that people generally, and farmers especially, should be deeply concerned regarding this important subject in these times when our taxes are amounting to so large a proportion of the standing overhead cost of operating our farms?

Before the World War, according to the latest and most reliable figures, federal, state and local governments required about six or seven per cent of the total gross income of all of the people of the United States. In 1922 they required more than 12 per cent, or nearly one-eighth of the national gross income. Our per capita tax burden has increased nearly four fold in the last 20 years and about three fold in the last 10 years. The result is that today the average person who works either with his hands or his brains, now spends more than six weeks of every year earning this gross sum, and has to support himself meanwhile.

Work a Year to Pay Taxes

This then is a serious situation in which Mr. Average Man finds himself. But what about Mr. Farmer? His condition is much worse. While Mr. Average Man in 1922 could pay his taxes with six weeks' wages, Mr. Farmer worked 52 weeks and still found himself in the hole, for we must remember the undisputed fact that the total taxes paid by American farmers in 1922 exceeded their net income for that year.

We have had a great deal to say in these articles about the increase in tax totals in Michigan, but we must remember that the unequal distribution of the burden makes the increase in recent years much worse for certain classes, the farmers for instance, than for the average citizen. Then, too, farmers are usually unable to include the cost of taxes in the prices of their products. Owners of city real estate can, as a rule, pass the taxes on to their tenants in the form of high rental charges, but no such opportunity is afforded to the farmer.

Farm Property Hard Hit

Justice and equity are foundation principles of our national life, but in many cases it seems that there is a wide descrepancy between principle and practice. As has been pointed out repeatedly in this series of articles on Michigan taxation conditions, our present system of general property tax throws the heavy burden of governmental support onto the shoulders of the real estate owners to an altogether disproportionate degree. A state income tax and the gasoline tax have been advocated as measures tending to a more equitable distribution of state taxes. But as yet no such remedies are being proposed to reduce local revenues.

There is every indication that for the next few years at least, the $154,000,000 of local taxes will be spread largely upon general property, mainly real estate. It is apparent, therefore, that the matter of assessment becomes one of the utmost importance. If one class of property is assessed at 100 cents on the dollar, that same rule should also apply to all other types of property.

It is probably more true than is commonly realized that the unequal distribution of the tax burden makes the increase in recent years worse for some people and some classes of the population than it is for the average person.

Even with the large public expenditures which seem to be the order of the day, we could raise these funds with much less hardship, misery and confiscation of property if all wealth were placed on the tax rolls and assessed equally and fairly. But we all realize that such is not the case in Michigan today. Large amounts of property and wealth either escape taxation by legal exemption or illegally evade it, in whole or in part, by concealment. We realize the truth of this statement when we read the official figures published by the United States Department of Commerce which show that Michigan's wealth more than doubled in the ten year period from Dec. 31, 1912, to Dec. 31, 1922, increasing from $5,233,760,000 to $11,340,150,000. This was a growth of 116.7 per cent, but we all know that this increase has not been reflected in the amount of property on our assessment rolls.

However, our farm property is tangible and cannot be concealed and so it is all placed on the tax rolls and today we find that it is being assessed at practically its sales value in most parts of Michigan. Rural assessments have not been reduced noticeably during these past few years and the fences, buildings, machinery and equipment on our Michigan farms are all getting sadly out of repair and are worth far less today than they were about four years ago. This does not take into account the serious depletion in soil fertility which has accompanied these lean years in Michigan agriculture.

It is conservatively estimated that the American farms and equipment have suffered a loss of at least one billion dollars during this trying period through which we have just been passing. All of these factors are reflected in decreased sales value of our Michigan farms. Dr. Richard T. Ely, director of the Institute for Research in Land Economics and Public Utilities at the University of Wisconsin makes the conservative statement that while taxes show a tendency to increase, land values have fallen more than 20 per cent since 1920 and quotes estimates of the U. S. Bureau of Arricultural Economics as an authority.

Assessed Value vs. Sale Value

There may be places in Michigan today where farms are not assessed at their full cash value, but there are also places, and plenty of them, where the farmers would be indeed glad to sell their homesteads for their assessed valuation. In some places it is even worse than that. I have before me a copy of the Mesick Sun-Pioneer of February 21, 1924, where on page 1 we find a list of 115 parcels of land lying in the northwestern part of Wexford county. This list gives the asking price of each parcel and the assessed valuation of each as fixed by the local assessing officers and by the State Tax Commission for the year 1923. Adding up these figures we find that for the 115 parcels of land the aggregate valuation as fixed by the assessing officers for 1923 is $89,380, while the total of the prices asked is only $23,880, making the total assessed valuation of this land 275 per cent higher than the price asked for it. In only 6 of the 115 parcels is the price asked more than one-half of the assessed valuation and in two parcels the assessed valuation is ten times the price asked.

Mr. W. E. Southwick of Sherman, Michigan, writing in the Public Pulse column of the Grand Rapids Press regarding this situation says:

"These prices are practically the same as fixed by the State Tax Commissioner's representative seven or eight years ago when land was high. The same may be said of farms in this locality. They are assessed about as high now as they were seven or eight years ago when we all know that their true cash value is not more than one-half as great now as then.

"When farmers pay as high as 4½ per cent, as some of us do on these inflated valuations, it is equivalent to paying 9 per cent on the true cash value of their land. It seems to me if the State Tax Commission has not the time or inclination to adjust these unjust valuations, it could put it in the power of local assessing officers to do so. The farmer is forced to bear more than his just share of tax."

Some Relief Secured

Slight readjustments along this line have already been made. Following the testimony of supervisors from rural sections of Michigan, including that of M. B. McPherson, supervisor from Kent county, member of the State Farm Bureau Board of Directors, prominent leader in Grange circles and an acknowledged authority on rural taxation conditions, the State Board of Equalization August 23rd increased the State's valuation $1,540,000,000, practically all of which fell onto Detroit and the industrial cities of Michigan.

The net result is that farmers' state taxes were reduced from about $3 to $2.32 per thousand when the state tax levy was figured last year. During this process the equalized assessed valuation of Wayne county was given a healthy boost, being raised to $2,666,500,000, an increase of nearly $600,000,000 over the equalized value of a year ago. Now that the farmer is organized he is having his day in court and is being heard in the councils where his interests are involved.

Mr. McPherson in his testimony declared that farm property is either assessed too high or the utilities of the state and city property are assessed too low and he gave figures to show that while the tax commission and increased the general property valuation of the state 78 per cent since 1816, mining properties from 1915 to 1922 were increased only 25 per cent and for the same period the railroads and other corporations paying the primary school interest fund specific tax were increased only 19 per cent.

How Is Wayne Assessed?

Our poor down-trodden friends in Detroit feel aggrieved that they are paying such a large proportion of our state taxes and yet what are the real facts? It appears after a careful study of the situation that at the present time Wayne county is equalized for taxation purposes at about what its automobile and allied interests alone are worth. That would leave out of consideration all other kinds of property, and of course it is probably true that the automobile industry does not represent more than 20 per cent of the real wealth of Detroit.

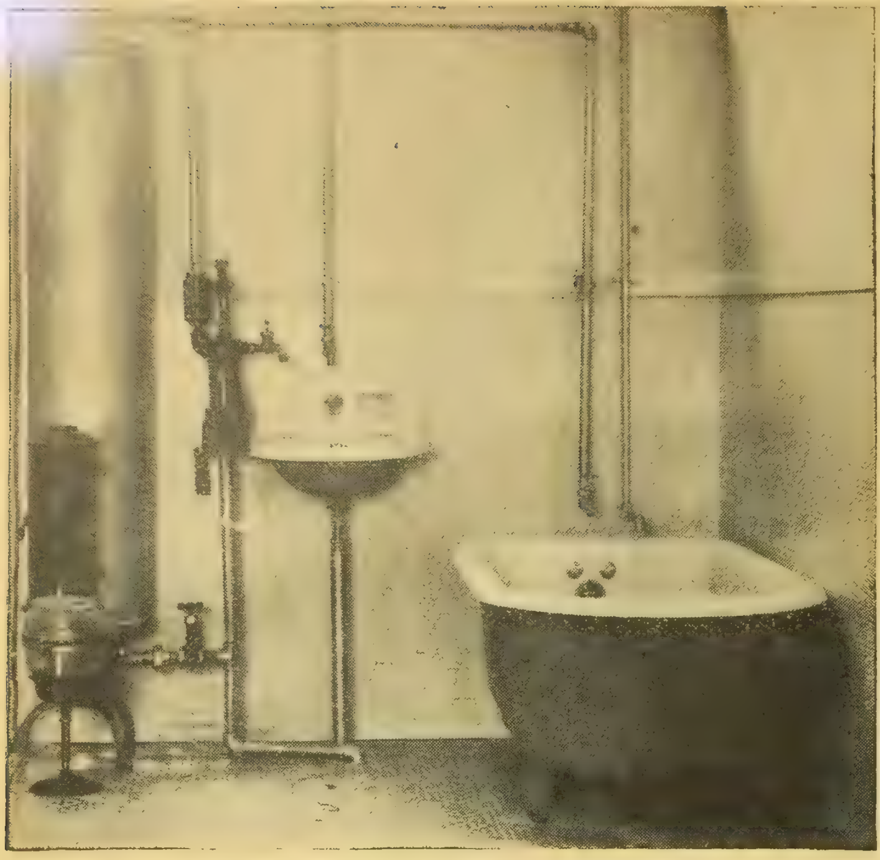
Time To Lower 'Em



A comfortable bathroom without furnace heat.

Bathing Without Bother

The Home Without a Furnace Can Now Have a Bathroom At Low Cost

By O. E. ROBEY

Drainage Specialist, Department of Agricultural Engineering, M. A. C.

THE home without furnace heat has usually been denied the privilege of a bath room because of the liability of freezing of pipes. There is an outfit, however, which can be installed in such a house and provides hot and cold water for the bath, as well as a means for disposing of the waste water. Everyone who has taken a bath in the time honored wash tub knows its disadvantages and the inconvenience of disposing of the waste water.

The system illustrated is cheap and easy to install. As well as supplying both hot and cold water and a simple way of disposing of the waste water, it also provides a means for heating the bath room.

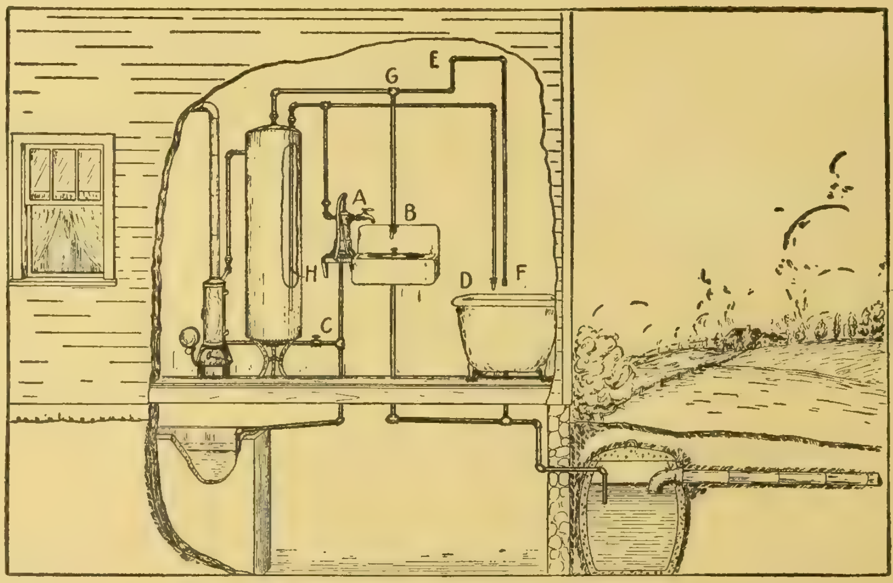
This outfit may be installed in a small room in the present home or an addition can be built on to accommodate it. A room 6x6 feet will be large enough to install all of the fixtures.

One advantage of this outfit is that it is a complete unit in itself; other parts of the house need not be torn up in order to make connections. Also the fixtures are all standard, nothing special is required. At some future time when the furnace is installed the system may be converted into a more elaborate system and all the fixtures can be worked into the new outfit. In the mean time, the pleasure derived from its use has cost practically nothing.

The Outfit

The outfit consists of a bath tub, a lavatory, a range boiler, a kerosene heater, a cistern force pump and the necessary piping. In buying the fixtures it might be well to consider their future use. If the outfit is only to serve for a few years until the house is remodelled, it might be more economical to buy good fixtures; ones that will be suitable for future use. If however, it is necessary to economize at the present time, serviceable fixtures can be bought at very moderate prices. For instance a steel bath tub enameled will give very good service. It does not have the appearance of some of the more expensive ones but it does have some other advantages, especially for an outfit of this kind. Where the outfit is located in a cold room, it will not require as much hot water to warm up a steel tub as a heavy one made of cast iron.

There is also considerable range of prices in buying the lavatory. Size, and depth of apron, as well as quality of material determine the price. One about 18 inches wide with merely a roll rim makes a very cheap and serviceable fixture. In the range boiler there is little choice; one of 30 gallons capacity, capable of standing a pressure of 85 pounds should be selected. The cistern force pump should have a brass cylinder either 2½ or 3 inches in diameter. The kerosene heater should be of good quality, one that is efficient in operation and perfectly safe. The types having wicks similar to an oil stove seem to be the most desirable.



The piping is simple. It can be installed without damage to the woodwork or walls.

Operation

The operation is very simple. The drawing shows the arrangement of the fixtures and piping. The cistern pump is used to draw the water from the cistern or from a shallow well. In houses where freezing is likely, the system stands empty when not in use. To fill the system close all valves and pump until water flows out of F, this indicates that the system is full. Now light the kerosene heater and in forty minutes to one hour there will be sufficient hot water for bath purposes stored in the range boiler.

If hot water is desired in the bath tub, leave all valves closed and continue to pump and hot water will flow out of F. If cold water is needed in the tub open D and pump.

If hot water is wanted at the lavatory close all valves and open B and pump. For cold water at the lavatory close B and open A and pump. After the system has once been filled and the water in the tank heated, sufficient hot water for two baths can be had by simply opening D and letting the hot water siphon from the boiler.

In freezing weather, to drain the system, open C; then when the range boiler has drained out, open A and raise the handle of the pump so as to drain the cylinder and pipes attached to it.

Construction

Black pipe can be used in the construction of this outfit, since the piping is exposed it can be painted with aluminum paint. One and one-fourth inch pipe should be used for the suction pipe. The rest of the piping should be ¾ inch except the three pieces extending from G to F which should be ½ inch.

C is a ¾ inch gate valve. At H (a point slightly above the coil in the heater) a ⅛ inch hole should be drilled in the cold water supply pipe extending into the range boiler. This hole prevents siphoning the water from the tank below the coil.

The lavatory or bath tub need not be provided with supply pipes or cocks. An over-flow and waste pipe is necessary for the tub but the lavatory need only be fitted with a short spud. The 1¼ inch iron pipe used to carry the waste water to the

(Continued on Page 26)

Michigan's Rosen Rye Yields As High As Forty-five Bushels Per Acre

By FRANK A. SPRAGG

Associate Professor of Farm Crops, Michigan Agricultural College.

PREVIOUS to the introduction of Rosen rye, twelve years ago, fifteen bushels of rye per acre was considered a good yield, and if by chance twenty bushels were obtained, that was exceptional. No one thought of forty-five bushels per acre, which has often been reported for Rosen rye. The common rye of that time had small dark colored grains, while the true Rosen rye has large grains that are more generally bluish in color.

In Pre-Rosen days, rye was valuable mainly as a catch crop, and to sow on land that was not suited to wheat. Few people thought of planting rye as a regular crop, especially on heavy soils. Rosen rye can be considered a regular crop to be studied and treated as such. It has crowded out the wheat in some sections where farmers say that is more profitable than wheat as a general crop. Each farmer needs to settle this problem for himself, but he should not grow wheat and rye on the same farm, because the rye gets into the manure and becomes generally mixed in the clover seedings and in the wheat field. This fact requires much pulling to rid the wheat fields of it. Rye is particularly adapted to large areas of light sandy soil. These soils wash and leach, and should not be allowed to pass the fall and winter without growing a crop of some kind. Under such conditions as this, rye can be used to advantage to follow corn and beans on hundreds of Michigan farms. For this purpose it should be sown as early as possible as high yields are obtained from September planting.

The time of seeding rye has been carefully studied at M. A. C. where the different dates of seeding were planted side by side for a number of years. The results are as follows:

A plat that would yield at the rate of 46 bushels per acre if planted September 25th, would yield 45 bushels if planted September 30th; 39 bushels if planted October 15th; 20 bushels if planted October 25th; 10 bushels if planted November 5th; and 4 bushels if planted November 20th.

This plainly shows the importance of planting rye as early as possible. Rosen rye is strictly a winter rye and if planted in the spring will not head out during the summer.

If we are going to grow rye let us realize that Rosen rye is a real crop that will respond to good growing conditions. It is true that rye can be planted later and under poorer conditions than wheat can and still make some kind of a crop. But only a glance over the influence of date of planting will surely convince most farmers that it pays to plant Rosen rye about the same time as other farmers plant their wheat. It is assumed that no farmer will plant both of these crops on his farm. Thus, if he is going to grow rye, let him plant it as early as he would if he were growing wheat. Rye should occupy the same place in the rotation as wheat, and should receive the same kind of fertilizers. Acid phosphate is especially good. The seed bed needs to be as well prepared for good rye crop as for a good wheat crop. All this pays when the farmer has planted pedigreed or high grade Rosen rye. It is no longer a catch crop, but should be planted under the most favorable conditions, unless prevented by conditions beyond the farmer's control.

Mr. J. A. Rosen, a Russian student, who was graduated from the Michigan Agricultural College in 1908, became a collector of American seeds for his native country, and in the summer of 1909 brought us a sample of pedigreed rye from Russia. This sample was planted one small patch about a rod long and five feet wide, away from all other rye, in the fall of 1909. As soon as this rye could be increased it was tested along side of the common ryes then growing in Michigan. As the Rosen rye yielded about twice as much as those ryes did, its superiority was evident. It needed only to be increased and distributed.

At that time there was no Crop Improvement Association or similar organization of farmers that could take a pedigreed crop, keep it pure and increase it for distribution. Rye is naturally wind pollinated. The pollen is often blown long distances. Thus, it happened that most of the early distributions were lost to pedigree by being planted near and often alongside of the common varieties. It seems too bad in reviewing the situation at this time that Rosen rye ever became crossed with the common varieties, as the mongrel sorts can never be more than grade rye, intermediate in production between that of the old fashioned common and the truly pedigreed Rosen rye. These mongrel ryes have replaced the old black rye altogether. It is much

(Copyright, Keystone View Co.)

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

BIG deals bring big returns, even in the deals of a grafter. The big deals also bring out the big policeman, and Pete Dexter, grafter supreme, who has been telling us the story of his life, found that a big deal now and then was a-plenty, if he wanted to stay out of jail. So Pete took to the rural districts, and kept quiet and worked some old grafts, and to his surprise he found that some of the older forms of faking paid as well as the newer ones.

Last week, Pete worked a few small time gags to rejuvenate his purse, and then ran aground of the postal laws. But Pete escaped and went to North Dakota. While he was hiding out, he just could not resist the opportunity he discovered to start a commission house and be a friend to the farmer. Pete made money, as usual, even though the potato business was somewhat different than selling stock in a railroad. And one day, or between two days, Pete just closed up the Liberty Produce Company and left for better lands. But he took his profits with him.

Working with local folks and being their friend when their money is easy to get was Pete's best stunt, and this week he tells of one of his easiest schemes and how he made money with no one to bother him.

WHILE I was in Chicago one time, I met a fellow in the hotel cafe who was a salesman. He told me how he was selling hog remedies in Iowa and of what success he had. It started me to thinking, and I spent a little time looking up such remedies.

Next spring found me in Des Moines, Iowa. I talked with several veterinarians about remedies, and they sure said a lot of mean things about them. I soon found the laws permitted the sale of most anything in that line, and one day I called on a company that sold such stuff. I inquired for a job as salesman, and about all they asked me was to the effect that if I could talk I could sell. The man I interviewed unfolded a swell layout and offered me a big commission. However, I decided if he could make all that money I could, too, so I took his literature and promised to call after I had thought it over.

An advertisement in a paper which was wrapped around my shoes when they came from the repair shop called my attention to a correspondence school that prepared a fellow for anything. Another bright idea. I sat down and wrote them a letter and found that a veterinary degree could be had in a short time. I went to Missouri, where the school was located, and after talking with the man in charge, he agreed to write me a diploma for $25 cash, if I would stay at his "college" a month. I needed that diploma, so I stayed. While there, I talked to a lot of other fellows, and when I moved back to Iowa I had a title, and it was Dr. Fred Renton who opened up a shop in Frisky Valley, Iowa. A visit to the local weekly paper resulted in the announcement that Dr. Renton, a retired veterinary from New Jersey, was going to open up a factory in Frisky Valley to manufacture his famous remedies for swine diseases. Of course all the stuff about how welcome I was, was what followed my subscription to the "Bugle," which cost me $2.

I located an old building that had been a creamery at one time, put up my diploma, and had a painter put a sign out in front, announcing this the home of Dr. Renton's remedies.

Hog cholera had been pretty bad in that vicinity the last two or three years, and so I figured it was time to made hay. I announced that hog cholera was the direct result of hogs eating new corn, and that the new corn had a fungous material on it that later developed into worms. These worms took all the hogs' strength and as a result they got cholera, which was everywhere in the air. My new remedy which I had prepared acted on the liver and produced a change in the hog's stomach which killed these worms before they were hardly half grown. A visit to a nearby college procured for me a few bottles of speciments for display purposes, and soon I had an exhibit that all the boys stopped to see.

The next thing I did was to make up my remedy. I had learned from a book that the Missouri Medical College furnished me that cheap castor oil, a little oil of wintergreen and plenty of labels and bottles made a fine hog remedy.

A trip to Des Moines insured the supply of ingredients, and soon I had a stock of my first remedy. Well, a few visits among the farmers, and I had plenty of orders. Five dollars a bottle I asked for the stuff. All they had to do was to put six teaspoons of the remedy in a barrel of slop and the hogs would be immune. Two bottles would last a season, and it was a preventative for Asiatic cholera, good for worms and most everything else I could think of. Many of the local people wanted to help in this great work, so I let them have agencies. I only made one mistake in that deal. I should have told them to put a whole bottle in each barrel, as that would have moved the remedy faster and more profit would have been mine.

I soon collected hundreds of testimonials from people who had purchased my remedies. They never waited for the stuff to work, and I generally was able to show them the swell results of the remedies before the hogs had a chance to show up anything. I had these testimonials printed and spread them broadcast. Then a few ads were run in the weekly "Bugle" and success was assured.

About this time I decided that a powder to keep the hogs in condition after the cholera remedy was used might help. So one day I mixed up some salt, charcoal and senna leaves and bought some good-looking boxes that held five pounds. The senna leaves made the stuff smell good, and after I explained the use of this wonderful stuff, the gang couldn't buy it fast enough. The hogs ate it, of course—all hogs like salt and charcoal; and because they ate it, the farmers were sure it was the tonic they needed.

The Condition Powders brought 50 cents a pound, and if bought in 100-pound lots I made a price of $40 per sack. The result was good, and charcoal and salt never brought better prices. I soon had agents in about twenty counties and it made the two men and myself wiggle to get the orders out. I personally mixed the stuff, and it was funny to see those people stand with their mouths open as I used a few chemical words I had picked up when I described the ingredients I was putting in the powders. Why, salt never had so many different names as I put on the bottles I had on display to show people who came in to talk about their hogs.

I paid my agents 50 per cent commission, and the sky was the limit as to what they could tell about the stuff, and if the fellow couldn't pay cash we took his note and immediately sold it to the bank. Of course we had to discount the notes, but the banks figured that was an easy way to make money on the side, and grabbed them up.

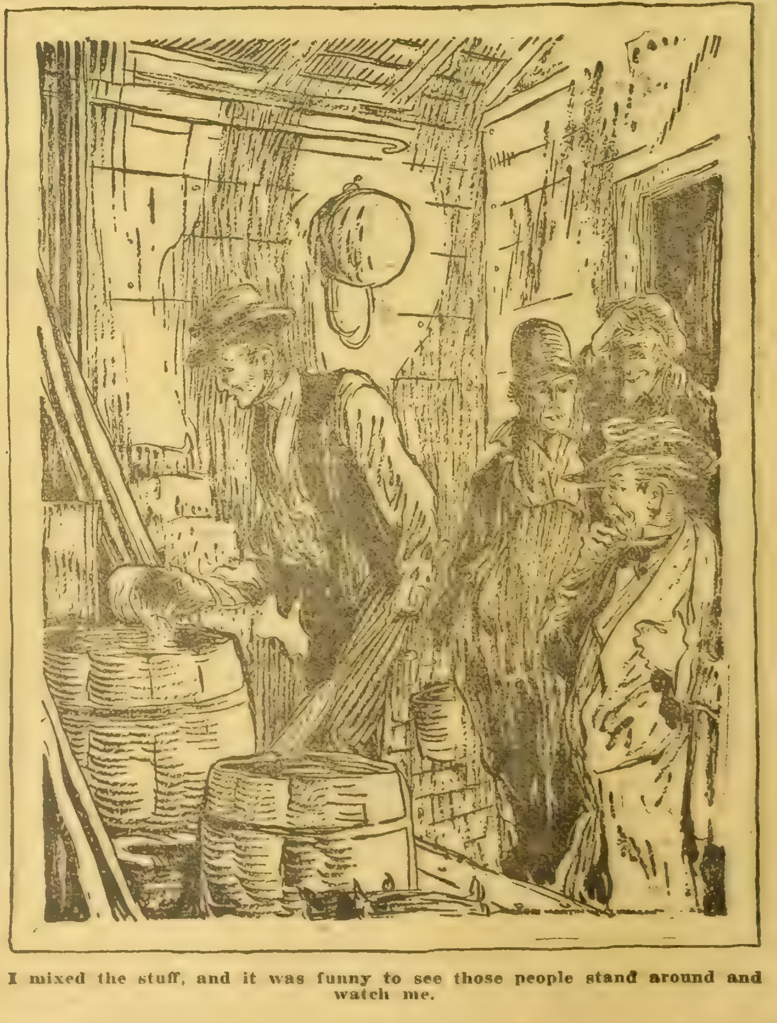
Every time a new disease came up, Dr. Renton had a new remedy. We even put salt on bran and sold that as a "Wonder Calf Feed and Conditioner." Bran could be sold at double the price in this manner.

A few checks to local enterprises, as the Ladies' Aid Society, and a few donations to the various churches when they were hard up, kept our reputation good in the community.

Those two years I worked that game were about as prosperous as any I have ever had, and I sure was a big man in the community. Well, one day a fellow came into the office and offered to buy me out. He offered a good price, and as I had had some trouble with fellows who threatened to sue me if I didn't refund their money, because they claimed the stuff was no good, I decided it was pretty near time to move. So I sold out.

While I was working the state, selling my tonics and powders, I met some fellows who were selling stock in a new packing house. It seemed that the farmers were sore at the Chicago packers, and an outfit at Des Moines had organized the Overland Packing Company. Stock was selling good, and all the farmers were interested. Now I was itching to get back into the promoting business, and after several of these boys with the packing stock had talked to me, I decided I ought to hook up with them. One of them took me to Des Moines one day and introduced me to the head man. My reputation was vouched for by the salesman whom I had met, so we soon were talking business. It was a good game. Commissions were fine, and I very soon had my bank account in pretty good shape. I took a block of stock and went back to my county. I fixed it up with the local bank, and they were given a few shares to start with. I made a side offer with them that every time they influenced a fellow to take a little stock in my deal, they were to get a little rake-off from me. Of course this was all on the side, but it helped. Every time a fellow kind of hesitated on buying from me. I referred him to the banker, who would show the fellow his stock and tell him it "looked good to Dad." I sure made a cleaning; but it didn't last so long. It seems that some of the people in Des Moines "got hep" to our game and one day I got a wire from the office to beat it. I caught a train so quick that I didn't even go to the hotel for my other clothes, but I had all the money safe.

(Continued in May 24th Issue)



I mixed the stuff, and it was funny to see those people stand around and watch me.

FRUIT and ORCHARD

EDITED BY FRANK D. WELLS

BARK RUBBED OFF APPLE TREES

Would you please inform me if there is any way to treat apple trees in an orchard where hogs have rubbed the bark.—R. H., Alma, Mich.

—Whether or not it is possible to save the life of trees when the bark has been rubbed off by hogs depends of course, on the extent of the injury, and also upon the time of the year when the rubbing is done. In the spring after the sap has started, although the bark itself may not be broken, serious harm may be done by the rubbing of the bark since it will thus be loosened upon the trees. Often times the bark may be entirely destroyed by the rubbing or gnawing of the hogs upon a portion, at least, of the trunk.

When the injury extends practically around the trunk and especially if the injured area is of considerable width it will not be worth while to save the trees. However, in such cases, it would perhaps prolong the life for a year or more if the exposed wood received a coat of lead and oil paint, and if possible cover with a mound of earth.

When the bark, not to exceed one-half of the diameter of the trunk has been destroyed, it would be possible to bridge the injury by means of cions, even though the injured portion is a foot or more in width. Cions a little longer that the interval should have the ends cut in a wedge shape and inserted under the bark. The small brads may be used for holding them in place, and the point where the cions are inserted should be covered with grafting wax to keep them from drying out. It will also be helpful if the edges of the bark both above and below the injury are trimmed back to where they are still joined to the trunk. Of course, these grafts would be very easily disturbed and barriers which will keep the hogs from getting at them should be placed about the trees.

I regret to state, however, that there is little chance in most cases of saving trees injured by hogs, although their life may be prolonged for some years.—L. R. Taft, Chief Horticulturist, Dept. of Agriculture.

COUNTY AGENT HEAD RESIGNS

HALE TENNANT who has been leader of the county farm agents of the state has resigned to devote all of his attention to the Department of Markets of the Michigan Agricultural College. He has been director of the department at the same time he was at the head of the county agents, and he stated that the markets department takes so much of his time that he felt another should head the county agents.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

GIVE TENANT ONE-THIRD

I would like to get a little of your advice if I may regarding renting my farm. I intend to devote my time to poultry, my married brother wants to work my farm. He has a family of seven children, I am single, my father is with me, and my sister will be with me also I think. Now my brother has no stock, nor machinery. He will use my machinery and horses. He intends to start renting in the fall. Now what I want to know is on what shares will we work the farm? Would 50-50 be fair to both of us? It wouldn't the first year as I will have to furnish all the grain and seed for feed and sowing. He thinks we ought to sow less grain and have more cows, hogs and chickens. Do you think it would be best for him to have a flock of chickens all his own or would it be alright to have chickens on shares also? I think it would be best for both of us to write out an agreement and sign it, then there couldn't be any arguments. What do you think about it? We will all live in the same house together and how would we stand the grocery bills?—M. S. S., Minden City, Mich.

—Under ordinary conditions where the landlord furnishes everything except the labor the tenant receives one-third of the income and the landlord two-thirds. Such expenses as seed and feed purchased, twine and fertilizer and machine hire is divided in the same proportion as income.

Again the proportioning of the income will depend somewhat on the size of the business. The business should be big enough so the tenant can make a living wage at least.

If the tenant takes over the farm business in the fall he undoubtedly will have to procure a share of the feed necessary to feed the livestock through the winter. This can be procured by cash payment of deferred payments, backed by some form of security or agree to leave an equal amount of feed on the farm, or equal in value, at the termination of the lease, providing said feed is procured from the landlord.

The tenant, at least, should have sufficient poultry products to care for the family's needs. To keep a separate flock might cause a hardship. However, if arrangements can be made to that effect satisfactorily it should be done. On the other hand arrangements could be made whereby the tenant could add to the landlord's flock sufficient birds to care for his family's needs and also furnish sufficient feed for same.

By all means have a written agreement between the two parties drawn up in legal form. It will save trouble in the end.—F. T. Riddell, Research Asst. in Farm Management, M. A. C.

ARREST FOR DESERTION

A man who has been arrested for bigamy and convicted and sentenced for from 5 to 15 years, serves 4 years, and gets out on parole, and gets married right away, and lives with this woman 2 weeks and deserts her. Can she have him arrested on that same charge or on a statutory charge? He has been married 6 times.—Mrs. T., Sparta, Mich.

—The man could be arrested for desertion.—Asst. Legal Editor.

SCHOOL BONDS DEPOSITED AS COLLATERAL FOR BANK NOTES

In a recent issue of the Dearborn Independent is an Editorial, "Who Builds the School?" The article says in part: "A school district votes bonds for $100,000, a banking syndicate buys the bonds, and this same syndicate can deposit these bonds with the treasurer of the United States as security for an equal amount of currency, thus leaving the interest from the bonds, and the money to loan for another school or public building." Is this statement true?—G. R., Capac, Mich.

—It is entirely true that municipal bonds may be deposited as collateral for the issue of national bank notes. As a matter of fact however, scarcely any of the bonds are so absorbed as the national banks use very largely federal bonds for that purpose. The average school bond goes into the hands of the investors.

Syndicates are formed only for large issues. Many issues of $3,000,000 are handled by syndicates and practically all issues of over $5,000,000 are so handled obviously these are not school bonds. It is true of course, that all these firms work together closely and exchange business among themselves.—F. E. Johnson, Supt. of Public Instruction.

INSURANCE AGENT MISREPRESENTS

I would like some information in regards to fire insurance. December, 1920, The Patrons Mutual Fire Insurance agent came to me and induced me to leave the State Mutual Rodded Fire Insurance Co. of Flint, Michigan, and take out a three year paid up policy with them. At the end of three years the policy was to be cancelled unless I wanted to renew it. I had asked him if it would cost me anything to have the policy cancelled and if there would be any more assessments, and he said not, that was all it would cost me.

One of my houses was destroyed by fire, July 9, 1923, which was valued at one thousand dollars. They had five hundred dollars insurance on it. The house was a total loss. They only want to allow me two hundred and fifty dollars. Now they want an extra assessment of fifty-two dollars which is two dollars less than I paid in the first place. They want that for a reserve fund. The three years expired the first of this month. Would I be compelled to pay this extra assessment? I took the matter up with the prosecuting attorney and he thought not.

How can I get by insurance? The prosecuting attorney said I couldn't sue them. Is this three-year paid up policy a lawfull insurance?—Mrs. N., Oscoda County, Mich.

—We would advise that this member of the Patrons Company is in the same position as are many other members. This Company is organized under the mutual laws of the state and their policy contract is fully assessable their being no limitations in the entire articles of association, the application or the policy itself.

During the last session of the legislature this Department attempted to have enacted a law requiring the licensing of all insurance agents, including those of mutual companies, but this act was not passed. We have no control over mutual insurance company agents and, as you know, this department's control of mutual insurance companies is very limited. Court decisions have invariably been that the application, together with the articles of association and by-laws, constitutes the entire contract in a mutual insurance organization.

We have had nemerous complaints that the agents for this Patrons Company have sold these Class 3 policies on the representation that the amount paid would carry the contracts for the 3 or 5 year terms, but neither the application, by-laws nor the policy provide anything to this effect.

Two years ago this Department ordered companies operating on an advance assessment basis to create and maintain reserves for the protection of their members. In this same order was included a requirement that such companies should provide in their policy contracts a provision for the return of the unearned portion of advance assessments. The Patrons Mutual has not complied with this order and their attorney has stated that he did not believe the Commissioner had authority to enforce such order.

We are of the opinion that, instead of your publication desiring to refrain from giving such matters as this publicity, you should make public the entire matter, as it is only thru the press that the general public can be informed.

The present status of your case is that you must pay the assessment, that if you desire to cancel out to avoid further assessment you will not receive any return, as they are now operating on the basis that no portion of these advance assessments are unearned.

It is the intention of this Department to make public, thru the newspapers of the state, examinations of companies and any criticism which we may feel is to the best interests of the public, and an examination of the Patrons will be made within the next three months.—H. B. Corell, Second Deputy Commissioner, State Dept. of Insurance.

CAN WILL TO SON

Will you please tell me through your paper if owner of farm or other real estate can will it to a son to use as long as he lives, and then to his heirs other than son's wife, at son's death?—J. J S., Mt. Pleasant, Mich.

—The farm may be devised to the testator's son for his life with remainder to his children.—Asst. Legal Editor.

FIGHTING SANDBURS

I have about an acre of land which is covered with sandburs every year. Could you give me any advice concerning their riddance?—H. H. J., Old Mission, Mich.

There is no chemical means of killing out sandburs that will not kill out all other vegetation. There are only two methods of fighting them, as follows:

(1) Constant hoeing out of the plants just as soon as their nature is recognizable. These plants should be thrown upon a wheelbarrow and taken to some place where they can be burned as soon as dried. If they are hoed up and left lying on the field they will be able to mature a number of their burs which will be left to start a new crop next year. The same result, of course, can be obtained by frequent cultivation of the field but a sandy field like that if frequently cultivated is apt to blow away or wash away during the season.

(2) Sow some thick growing cover crop that will make a tall growth and shade out the sandburs. This must be rather a tall plant that will make a dense growth and lots of shade. A thin sowing of buckwheat which, on sandy soil, may make only a thin growth will be worthless for this purpose. If that will grow, perhaps a thick sowing of Sudan grass or of some of the sorghums would accomplish the purpose.—E. A. Bessey, Professor of Botany, M. A. C.

ENTITLED TO PROPERTY IN OWN NAME ONLY

Am having a little dispute of right to property, and am asking your advice. Came to Michigan in 1898. Bought 40 acres, cut-over land on contract. Was 13 years old, after 8 years father and mother gave mortgage and got deed. I helped pay mortgage and bought another 40 acres. Was in wild state. We paid for it, they gave me deed for same. Been farming both same as one farm not dividing crops or money, buying machinery and stock valued at near $4,000. Always gave all money and time at home in 38 years, and am single. Am I entitled to anything besides 40 acres, for which I have deed. I have always went ahead with work buying and paying bills as if my own. Am taking crops and pasture valued at $500 to $1,000 yearly from my 40 acres.—Reader.

—You would be entitled to only so much of the property as you have title to in your own name. I am of the opinion you would not be entitled to anything for your services, unless there was some agreement to that effect between you and your parents.—Asst. Legal Editor.

MICHIGAN CROPS

TO GET GOOD STAND OF ALFALFA

Would you please tell me how I can get a good stand of Alfalfa (Grimm) started on a field which is now sown to wheat? It is a sloping field with patches of clay ground. Would it be best to seed this to June clover and then plow it under?—R. C. P., Metamora, Mich.

—Michigan farmers are quite generally meeting with success in planting Grimm alfalfa on wheat in the Spring. Best results are secured by drilling ten pounds of Grimm seed as early in the spring as the ground is in condition to receive the drill.

Alfalfa seed should be inoculated with culture secured from the Department of Bacteriology of the Michigan Agricultural College, East Iansing. The price is 25 per bottle and one bottle contains sufficient material to inoculate a bushel of seed. Directions for application accompany the material.

In case your field is in need of lime, I would suggest that a proper application be made. If clover has failed consistently in the past, two tons of finely ground limestone will be needed. If clover succeeds, the alfalfa should give good results.

Planting June clover, to be plowed under the second year, is a practice which would be advisable if your land is not in an acid, rundown condition, otherwise I think you will get better results by seeding to alfalfa.

Bulletin No. 23 gives full information in regard to alfalfa growing. This bulletin can be secured on request from the Michigan Agricultural College, East Lansing.—J. F. Cox, Professor of Farm Crops.

CLOVER AND TIMOTHY MAKE EXCELLENT HAY

Would you please tell me whether clover, sweet clover, and timothy harvested in one field whether that makes a good feed for horses and cows? When is the best time to sow sweet clover, fall or spring?—G. M.

—Clover and timothy when grown together makes excellent hay. If the hay is to be used for milk production, the more clover and the less timothy the better, while if it is to be used for horses, a number of farmers think it desirable that the hay should contain considerable timothy but little clover.

Sweet clover is much earlier in growth than June clover and timothy consequently does not lend itself so well to the mixture. It is likely that if sweet clover was included in the mixture the first cutting would be almost entirely sweet clover due to its early growth.

Sweet clover makes a good hay crop if cut just before the blossom buds appear. If cut much later than this, the stems become woody and the leaves drop off.—C. R. Megee, Assoc. Prof. of Farm Crops, M. A. C.

GOOD PERMANENT PASTURE

I would like to know what seed to use for a good pasture and can I sow it in my corn field at the last cultivation in July? I want to get a good permanent pasture.—A. F., Birmingham, Mich.

—You do not state the nature of the soil, nor do you advise us concerning drainage. The following mixture, however, contains grasses and legumes adapted to both well drained conditions and also conditions that are somewhat wet.

Kentucky blue grass	4 to 6 pounds
Timothy	2 to 3 pounds
Red top	3 to 4 pounds
Red clover	2 to 3 pounds
Alsike clover	2 to 3 pounds
Alfalfa	2 to 4 pounds

Unless conditions are unusually favorable, seedings made in corn at the last cultivation are not likely to prove successful. The legumes do not usually start growth until the corn is harvested and this is usually so late in the fall that only a small amount of growth is made and consequently winter killing is very great. Much better success is usually secured by seeding with oats or barley in the spring or by seeding during the early spring or fall sown wheat. When wheat is used as a nurse crop, the grasses may be seeded when the wheat is sown and the legumes seeded in the early spring.—C. R. Megee, Asso. Prof. of Farm Crops, M. A. C.

Oh Money! Money!

CHAPTER XV

In Search of Rest

JUNE brought all the young people home again. It brought, also, a great deal of talk concerning plans for vacation. Bessie—Elizabeth—said they must all go away.

From James Blaisdell this brought a sudden vigorous remonstrance.

"Nonsense, you've just got home!" he exclaimed "Hillerton'll be a vacation to you all right. Besides, I want my family together again. I haven't seen a thing of my children for six months."

Elizabeth gave a silvery laugh. (Elizabeth had learned to give silvery laughs.) She shrugged her shoulders daintily and looked at her rings.

"Hillerton? Ho! You wouldn't really doom us to Hillerton all summer, daddy."

"What's the matter with Hillerton?"

"What isn't the matter with Hillerton?" laughed the daughter again.

"But I thought we—we would have lovely auto trips," stammered her mother apologetically. "Take them from here, you know, and stay overnight at hotels around. I've always wanted to do that; and we can now, dear."

"Auto trips! Pooh!" shrugged Elizabeth. "Why, mumsey, we're going to the shore for July, and to the mountains for August. You and daddy and I. And Fred's going, too, only he'll be at the Gaylord camp in the Adirondacks, part of the time."

"Is that true Fred?" James Blaisdell's eyes fixed on his son, were half wistful, half accusing.

Fred stirred restlessly.

"Well I sort of had to, governor," he apologized. "Honest I did. There are some things a man has to do! Gaylord asked me, and—Hang it all, I don't see why you have to look at me as if I were committing a crime, dad!"

"You aren't, dear, you aren't," fluttered Fred's mother hurriedly; "and I'm sure it's lovely you've got the chance to go to the Gaylords' camp. And it's right, quite right, that we should travel this summer, as Bessie — er — Elizabeth suggests. I never thought; but, of course, you young people don't want to be hived up in Hillerton all summer!"

"Bet your life we don't, mater," shrugged Fred, carefully avoiding his father's eyes, "after all that grind."

"Grind, Fred?"

But Fred had turned away, and did not, apparently, hear his father's grieved question.

Mr. Smith learned all about the vacation plans a day or two later from Benny.

"Yep, we're all goin' away for the summer," he repeated, after he had told the destination of most of the family. "I don't think ma wants to, much, but everybody who is anybody always goes away on vacation, of course. So we've got to. They're goin' to the beach first, and I'm goin' to a boys' camp up in Vermont. Mellicent, she's goin' to a girls' camp. Did you know that?"

Mr. Smith shook his head.

" Well, she is," nodded Benny. "She's tried to get Bess to go—Gussie Pennock's goin'. But Bess!—my, you should see her nose go up in the air! She said she wa'n't goin' where she had to wear great course shoes an' horrid middy-blouses all day, an' build fires an' walk miles an' eat bugs an' grasshoppers."

"Is Miss Mellicent going to do all that?" smiled Mr. Smith.

"Bess says she is—I mean, Elizabeth. Did you know? We have to call her that now, when we don't forget it. I forget it, mostly. Have you seen her since she came back?"

"No."

She's swingin' an awful lot of style—Bess is. She makes dad dress up in his swallow-tail every night for dinner. An' she makes him and Fred an me stand up the minute she comes into the room, no matter if there's forty chairs in sight; an' we have to stay standin' till she sits down—an' sometimes she stands up a-purpose, just to keep us standing. I know she does. She says a gentleman never sits when a lady is standin' up in his presence. An' she's lecturin' us all the time on the way to eat an' talk an' act. Why, we can't walk natural any longer. An' she says the way Katy serves our meals is a disgrace to any civilized family."

"How does Katy like that?"

"Like it! She got mad an' gave notice on the spot. An' that made ma 'most have hysterics—she did have one of her headaches—'cause good hired girls are awful scarce, she says. But Bess says, Pooh! we'll get some from the city next time that know their business, an' were' goin' away all summer, anyway, an' won't ma and pa please call them 'maids,' as she ought to, an' not that plebian 'hired girl.' Bess loves that word. Everythings 'plebeian' with Bess now. Oh, we're havin' great times at our house since Bess—Elizabeth—came!" grinned Benny, tossing his cap in the air, and dancing down the walk much as he had danced the first night Mr. Smith saw him a year before.

The James Baisdells were hardly off to shore and camp when Miss Flora started on her travels. Mr. Smith learned all about her plans, too, for she came down one day to talk them over with Miss Maggie.

Miss Flora was looking very well in a soft gray and white summer silk. Her forehead had lost its lines of care, and her eyes were no longer peering for wrinkles. Miss Flora was actually almost pretty.

"How nice you look!" exclaimed Miss Maggie.

"Do I?" panted Miss Flora, as she fluttered up the steps and sank into one of the porch chairs.

"Indeed, you do!" exclaimed Mr. Smith admiringly. Mr. Smith was putting up a trellis for Miss Maggie's new rosebush. He was working faithfully, but not with the skill of accustomedness.

"I'm so glad you like it!" Miss Flora settled back into her chair and smoothed out the ruffles across her lap. "It isn't too gay, is it? You know the six months are more than up now."

"Not a bit!" exclaimed Mr. Smith.

"No, indeed!" cried Miss Maggie.

"I hoped it wasn't," sighed Miss Flora happily." "Well, I'm all packed but my dresses."

"Why, I thought you weren't going till Monday," said Miss Maggie.

"Oh, I'm not."

"But—it's only Friday now!"

"Yes, I know. I suppose I am a little ahead of time. But you see, I ain't used to packing—not a big trunk, so—and I was so awful afraid I wouldn't get it done in time. I was only going to put my dresses in; but Mis' Moore said they'd wrinkle awfully; if I did, and, of course, they would, when you come to think of it. So I shan't put those in till Sunday night. I'm so glad Mis' Moore's going. It'll be nice to have somebody along that I know."

"Yes, indeed," smiled Miss Maggie.

"And she knows everything—all about tickets and checking the baggage, and all that. You know we're only going to be personally conducted to Niagara. After that we're going to New York and stay two weeks at some nice hotel. I want to see Grant's Tomb and the Aquarium, and Mis' Moore wants to go to Coney Island. She says she's always wanted to go to Coney Island just as I have to Niagara."

"I'm glad you can take her," said Miss Maggie heartily.

"Yes, and she's so pleased. You know, even if she's such a nice family, and all she hasn't much money, and she's been awful nice to me lately. I used to think she didn't like me, too. But I must have been mistaken, of course. And 'twas so with Mis' Benson and Mis' Pennock, too. But now they've invited me there and have come to see me, and are so interested in my trip and all. Why, I never knew I had so many friends, Maggie. Truly I didn't!"

Miss Maggie said nothing, but there was an odd expression on her face. Mr. Smith pounded a small nail with an extra blow of his hammer.

"And they're all so kind and interested about the money, too," went on Miss Flora, gently rocking to and fro. "Bert Benson sells stocks and invests money for folks, you know, and Mis' Benson said he'd got some splendid-payin' ones, and he'd let me have some, and—"

"Flo, you didn't take any of that Benson gold-mine stock!" interrupted Miss Maggie sharply.

Mr. Smith's hammer stopped, suspended in mid-air.

"No; oh, no! I asked Mr. Chalmers and he said better not. So I didn't." Miss Maggie relaxed in her chair, and Mr. Smith's hammer fell with a gentle tap on the nail-head. "But I felt real bad about it—when Mis' Benson had been so kind as to offer it, you know. It looked sort of—of ungrateful, so."

"Ungrateful!" Miss Maggie's voice vibrated with indignant scorn. "Flora, you won't—you won't invest your money without asking Mr. Chalmer's advice first, will you?"

"But I tell you I didn't," retorted Miss Flora, with unusual sharpness, for her. "But it was good stock, and it pays splendidly. Jane took some. She took a lot."

"Jane!—but I thought Frank wouldn't let her."

"Oh, Frank said all right, if she wanted to, she might. I suspect he got tired of her teasing, and it did pay splendidly. Why, 'twill pay twenty-five per cent, probably this year, Mis' Benson says. So Frank give in. You see, he felt he'd got to pacify Jane some way, I s'pose, she's so cut up about his selling out."

"Selling out!" exclaimed Miss Maggie.

"Oh, didn't you know that? Well, then I have got some news!" Miss Flora gave the satisfied little wriggle with which a born news-lover always prefaces her choicest bit of information. "Frank has sold out his grocery stores—both of 'em."

"Why, I can't believe it!" Miss Maggie fell back with a puzzled frown.

"Sold them! Why, I should as soon think of his—his selling himself,' 'cried Mr. Smith. "I thought they were inseparable."

"Well, they ain't—because he's separated 'em." Miss Flora was rocking a little faster now.

"But why?" demanded Miss Maggie.

"He says he wants a rest. That he's worked hard all his life, and it's time he took some comfort now 'cause Jane's hounding him all the time to get more money, to get more money. She's crazy to see interest mount up, you know—Jane is. But he says he don't want any more money. He wants to spend money for a while. And he's going to spend it. He's going to retire from business and enjoy himself."

'Well," ejaculated Mr. Smith, "this is a piece of news, indeed!"

"I should say it was," cried Miss Maggie, still almost incredulous. "How does Jane take it?"

"Oh, she's turribly fussed up over it, as you'd know she would be. Such a good chance wasted, she thinks, when he might be making all that money earn more. You know Jane wants to turn everything into money now. Honestly, Maggie, I don't believe Jane can look at the moon nowadays without wishing it was really gold, and she had it put out to interest!"

Oh, Flora!" remonstrated Miss Maggie faintly.

"Well, it's so," maintained Miss Flora. "So 't ain't any wonder, of course, that she's upset over this. That's why Frank give in to her, I think, and let her buy that Benson stock. Besides, he's feeling especially flush, because he's got the cash the stores brought, too. So he told her to go ahead."

"I'm sorry about that stock," frowned Miss Maggie.

"Oh, it's perfectly safe. Mis' Benson said t'was," comforted Miss Flora. "You needn't worry about that. And 'twill pay splendid."

"When did this happen—the sale of the store, I mean?" asked Mr. Smith. Mr. Smith was not even pretending to work now.

"Yesterday—the finish of it. I'm waiting to see Hattie. She'll be tickled to death. She's always hated it that Frank had a grocery store, you know; and since the money's come, and she's going with the Gaylords and the Pennocks, and all that crowd, she's felt worse than ever. She was saying to me only last week how ashamed she was to think that her friends might see her own brother-in-law any day wearing that horrid white coat, and selling molasses over the counter. My, but Hattie'll be tickled all right—or 'Harriet,' I suppose I should say, but I never can remember it."

"But what is Frank going to—to do with himself?" demanded Miss Maggie. "Why, Flora he'll be lost without that grocery store!"

"Oh, he's going to travel, first. He says he always wanted to, and he's got a chance now, and he's going to. They're going to the Yellowstone Park and the Garden of the Gods and to California. And that's another thing that worries Jane—spending all that money for them just to ride in the cars."

"Is she going, too?" queried Mr. Smith.

"Oh, yes, she's going, too. She says she's got to go to keep Frank from spending every cent he's got," laughed Miss Flora. "I was over there last night, and they told me all about it.

"When do they go?"

"Just as soon as they can get ready. Frank's got to help Donovan, the man that's bought the store, a week till he gets the run of things, he says. Then he's going. You wait till you see him." Miss Flora got to her feet, and smoothed out the folds of her skirt. "He's as tickled as a boy with a new jack-knife. and I'm glad. Frank has been a turrible hard worker all his life. I'm glad he's going to take some comfort, same as I am."

When Miss Flora had gone, Miss Maggie turned to Mr. Smith with eyes that still carried dazed unbelief.

"Did Flora say that Frank Blaisdell had sold his grocery store?"

"She certainly did! You seem surprised."

"I'm more than surprised. I'm dumbfounded."

"Why? You don't think, like Mrs. Jane, that he ought not to enjoy his money, certainly?"

"Oh, no. He's got money enough to retire, if he wants to and he's certainly worked hard enough to earn a rest."

"Then what is it?"

Miss Maggie laughed a little.

"I'm not sure I can explain. But to me, it's just this: while he's got plenty to retire upon, he hasn't got anything to—to retire to."

"And, pray, what do you mean by that?

"Why, Mr. Smith, I've known that man from the time he was trading jack-knives and marbles and selling paper boxes for five pins. I remember the whipping he got, too, for filching sugar and coffee and beans from the pantry and opening a grocery store in our barn. From that time to this, that boy has always been trading something. He's been absolutely uninterested in anything else. I don't believe he's read a book or a magazine since his school days, unless it had something to do with business or groceries. He hasn't a sign of a fad—music, photography, collecting things—nothing. And he hates society. Jane has to fairly drag him out anywhere. Now, what I want to know is, what is the man going to do?"

"Oh, he'll find something," laughed Mr. Smith. "He's going to travel, first anyhow."

"Yes, he's going to travel first. And then—we'll see," smiled Miss Maggie enigmatically, as Mr. Smith picked up his hammer again.

By the middle of July the Blaisdells were all gone from Hillerton, and there remained only their letters for Miss Maggie—and for Mr. Smith. Miss Maggie was very generous with her letters. Perceiving Mr. Smith's genuine interest, she read him extracts from almost every one that came. And the letters were always interesting—and usually characteristic.

Benny wrote of swimming and tennis matches, and of "hikes" and the "bully eats." Hattie wrote of balls and gowns and the attention "dear Elizabeth" was receiving from some really very nice families who were said to be fabulously rich. Neither James nor Bessie wrote at all. Fred, too, remained unheard from.

Mellicent wrote frequently—gay, breezy letters full to the brim of the joy of living. She wrote of tennis, swimming, camp-fire stories, and mountain trails: they were like Benny's letters in petticoats, Miss Maggie said.

Long and frequent epistles came from Miss Flora. Miss Flora was having a beautiful time. Niagara was perfectly lovely—only what a terrible noise it made! She was glad she did not have to stay and hear it always. She liked New York, only that was noisy, too, though Mrs. Moore did not seem to mind it. Mrs. Moore liked Coney Island, too, but Miss Flora much preferred Grant's Tomb, she said. It was so much more quiet and ladylike. She thought some things at Coney Island were really not nice at all, and she was surprised that Mrs. Moore should enjoy them so much.

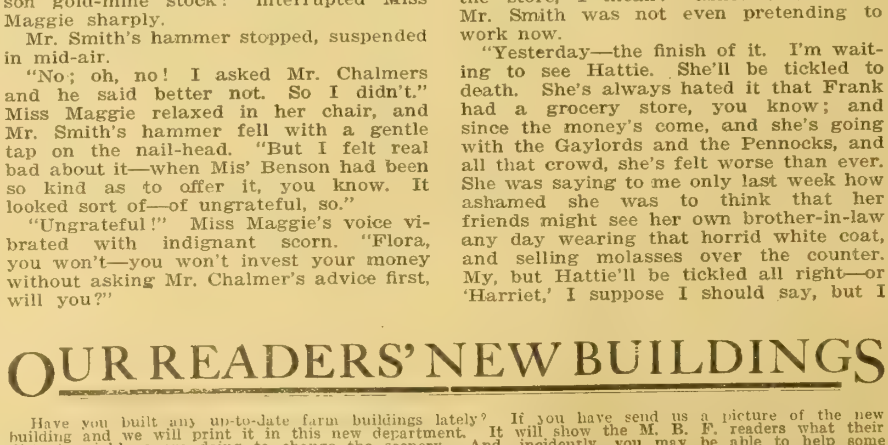
Between the lines it could be seen that in spite of all the good times, Miss Flora was becoming just the least bit homesick. She wrote Miss Maggie that it did seem queer to go everywhere, and not see a soul to bow to. It gave her such a lonesome feeling—such a lot of faces, and not one familiar one! She had tried to make the acquaintance of several people—real nice people; she knew they were by the way they looked. But they wouldn't say hardly anything to her, nor answer her questions; and they always got up and moved away very soon.

To be sure, there was one nice young man. He was lovely to them, Miss Flora said. He spoke to them first, too. It was when they were down to Coney Island. He helped them through the crowds, and told them about lots of nice things they didn't want to miss seeing.

(Continued on Page 26.)

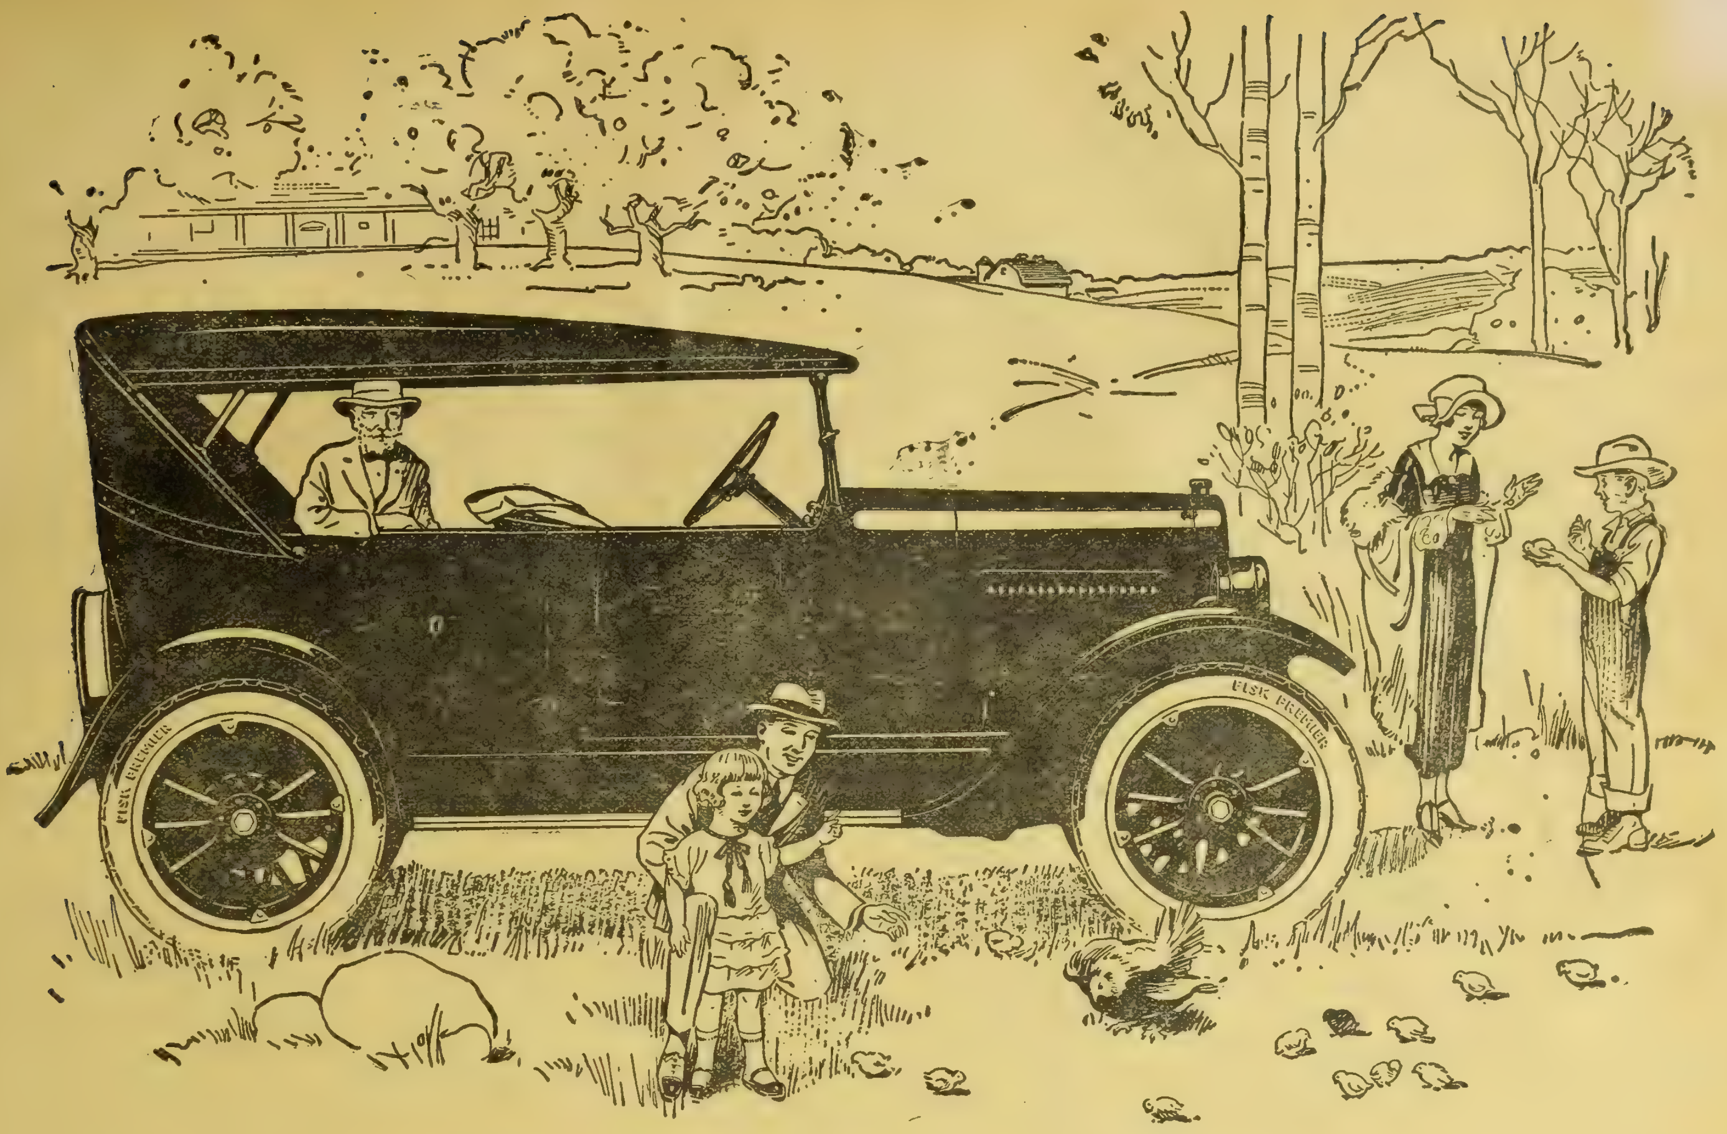
OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.



HOME OF MR. AND MRS. GEO. MIDDLETON, WHEELER, MICH.

This new, modern home belongs to Mr. and Mrs. George Middleton, Wheeler, Route 2. It is nicely located on their 120-acre dairy and grain farm. It cost about $6,000 not including the electric system. They state for years they have been "the most enthusiastic subscribers to The Michigan Business Farmer."



What Do You Do Sundays?

Overland makes Sunday a day of restful enjoyment.

Church in the morning. Visiting in the afternoon. Lots of places to go. Every week-end a vacation. Every minute a delightful variation from the daily routine on the farm.

Snuggle down behind the wheel of this big new Overland. See how naturally your fingers close on the convenient gear shift lever. Step on the gas. Get the thrill of this hill-conquering power as you speed up, up and on, over the hills. Feel the deep, luxurious comfort of those well upholstered seats. The big car riding ease of *patented* Triplex Springs.

Know the confidence this sturdy rear axle inspires in every Overland driver. Enjoy the amazing Overland economy in oil and gasoline. More miles to the gallon. More service from tires.

Your nearest Overland dealer will gladly demonstrate to you the many features that make folks call Overland the most automobile in the world for the money.

Other Overland Models: Chassis $395; Roadster $495; Spad Commercial Car $523; Coupe Sedan $655; Sedan $795; all prices f. o. b. Toledo. We reserve the right to change prices and specifications without notice.

A Remarkable Mower

You will never know real mower satisfaction until you get up on the seat of the John Deere High-Lift Mower, put it in gear, and start it cutting.

Its 21-point clutch puts action into the knife instantly. The special arrangement of the simple three-piece driving gears supplies an abundance of even, smooth power to the accurately-fitted knife—its great cutting power and the ease with which the horses take it through the heaviest hay will appeal to you.

John Deere High-Lift Mower

But you'll not fully appreciate the John Deere until you lift the bar with the foot lift to pass over boulders, stumps, etc., and to turn at the corners. It's really boy's play to operate the John Deere.

When unusual obstructions require an extra high lift, the foot and hand lift combined gives you this with practically the same ease of handling as the foot lift only.

When repairing or adjusting time comes after hard service, just ordinary tools are required. No need for a blacksmith shop.

Don't buy a mower until you see the John Deere with the high easy lift at your John Deere dealer's.

What the Neighbors Say

HURRAH FOR COUNTY AGENT

DEAR ERITOR:—I have read your paper, THE BUSINESS FARMER, for two years and like it the best of them all. In your issue of April 12th I read the letter "Why Have County Agent?".

We have a county agent here in Ontonagon county and he is a crackajack. He started out and formed a farmers association and the members of the association got together and agreed they would get a grain dealer in town to buy the farmers' grain. In a couple of months they had a place to buy feed and sell any grain and hay they produced. The agent saw that the farmers were paying $24 a hundred pounds for powder or dynamite, so he got his brains to working and the farmers bought powder for $12 per hundredweight, and this spring he got powder for $7 per hundred pounds. He sold 3 or 4 carloads this spring.

He held orchard and dairy campaigns and has taught the farmers the care of the orchards and live stock. And he is after the boarder cow and scrub bull, and has the farmers getting better stock.

He has started a cooperative creamery idea here and the farmers are going to build next month. He has been doing some good work, because even the banks here got too small and they had to build a new one, one of the finest in the county.

Three cheers for our county agricultural agent.—A Reader, Bruce Crossing, Mich.

GIVE LAW BREAKERS STIFF SENTENCE

MR. EDITOR:—I read your editorial "Prohibition On Trial" and was very sorry to see the statement printed in the paper that prohibition can never be enforced. These little county courts give just as easy a sentence as possible, or $50 fine, and let the bootlegger go on probation to report every month for a year, and they made enough to pay all expenses and a good boodle besides. If the United States would passed a heavier sentence on such cases and see that the county courts enforce them there would be less trouble. But when a man can get free board and be used like a king for three or four months, the town keep his family and the prosecuting attorney goes good for him and lets him out to make more booze to pay up, it shows the judge and county officers haven't any higher power over them. Once pass a law that every county judge has to report such cases to the state or higher authorities, and a good stiff punishment put on the bootleggers, there would be less of it. Let's all try and get more sentence and no bail, and send more state officers in the counties where the stills are kept.—P. E. T., Michigan.

AN OPEN LETTER

FARM Organization Legislative Committee, Lansing, Michigan.

Gentlemen:—Your favor of the 18th came to my desk this morning just as I was going to write you urging the committee on farm Organizations to send a wire to our members in Congress to do just the opposite of what they appearently have done namely: Shut immigration out for five years. I agree with Senator Magnus Johnson of Minnesota in one thing at least namely: that a death blow is being given American agriculture when agricultural immigrants are excluded. Surely your committee must have taken account of the recent statement in THE MICHIGAN BUSINESS FARMER that in this state particularly we must have a fresh supply of labor because the factories have absorbed whatever had been available for farming.

If instead of relief from intolerable labor conditions that we now have in the rural districts we are to have an even worse state of affairs, we might as well shut up shop and abandon all co-operative efforts and give up farming as a hopeless task.

May I ask what earthly reason the Michigan farm organizations committee had in view for asking that immigration be prohibited. Even if it is largely true as you say that the immigrants land in the cities, yet has it not occurred to a single member of the committee that one of the most serious hinderances to agricultural recovery is the high prices of manufactured goods and the transportation costs from eight hour labor. More labor is needed for industry.

I hope against hope that the farm organizations with whom I have agreed on the gasoline and state income taxes, on the extravagence of our present administrative board and on most all questions, affecting our common welfare will see the point before it is too late and the immigration exclusion measure enacted into law, and will take different action. There may yet be a chance to recall a mistaken decision as I trust, the President will veto the immigration act and some time will be given for Congress to hear from the people.—F. W. Newton, Saginaw county.

LET PEOPLE HAVE SAY ABOUT WAR

DEAR Editor:—As a reader of THE BUSINESS FARMER, while reading the sermon of David F. Warner, it started me thinking of this war question. Now this government has taken the disarmament as a preventative of war, also League of Nations as a preventative of war. Now as things at Washington look, we should take the war making power away from them and put it in the hands of the people. Every country on the globe should adopt the same rule. The people have the killing to do and to get killed and suffer. We should have a constitutional amendment to that effect. This question of declaration of war would have to be submitted to a popular vote of the people. Now in case the vote carried for war, your vote would have to be recorded opposite your name and address, either for or against. In case it carried those voting for war would be called out first and sent to the firing line, and the others next. Now I believe there would be less wars if the people decide, than if the profiteers decide. Let us get busy and push this question.

These countries put me in mind of prize fighters. They prepare and then fight, and so it is with the different countries.—C. K., Muskegon, Mich.

TWO PRINCIPAL SOURCES OF DANGERS TO OUR REPUBLIC

DEAR EDITOR: As a nation, unequaled prosperity has attended our American Republic. In material progress no nation, either in ancient or modern times, has made like gains and this is a blessing, if rightly made use of, yet it may become the source of greatest harm, if wrongly applied, and herein lies one of the two greatest dangers to the people of our Republic.

The too intense struggle for material possessions, resulting in the neglect of that which is of far greater value, may cause the weakening of those most essential underlying principles without which no nation can continue to prosper. So prosperous have we become in material gain, that our necessities are fully met and luxuries are being indulged in to a very large extent, and the man, now in possession of the most wealth is today, a citizen of our Republic.

While it is commendable that many worthy causes are being cared for generally, yet the impelling motive of self gain, it is to be feared, has far too prominent a place in our thoughts and well will it be for us to "take and inventory of stock" in our real motives and learn truly "where we are at."

One other source of danger is the general disregard for, and neglect of the provisions of Established Law, we Americans having a desire to be our own personal law-maker and while this may be commendable, insoffar as to our becoming self controlled, yet the safety of our fellowmen requires the establishing of a system of laws, which shall conserve and protect the welfare of the masses and every citizen should deem it to be one of his imperative duties to obey, promptly and fully, the requirements of established law and to aid in securing, from his fellowmen, like observance of the law, for "He who will not obey the law is unworthy of the protection of the law," and "No man should be above the penalties nor beyond the protection of the law."

Perhaps no provisions of the law are so generally disregarded as are the terms of the law, relating to the sale and use of intoxicating liquors, as a beverage and herein we need much, to correct our ways and safety demands that we do this promptly and effectively.—J. T. Daniels, Clinton County.

REDUCING FIRE TAXES

DEAR EDITOR:—I have been a long time admirer of THE BUSINESS FARMER and its staunch stand for freedom of speech. I have read with great interest on page 14, your issue of April 12th, your practical editorial "Fighting Farm Fires." This is a step in the right direction and your paper and the press generally ought to help us carry on with this noble work. Do you think it would be practical for us to adopt a similar course here? For many days last winter the roads were drifted so full of snow the school busses couldn't navigate and we wondered if a fire truck could get thru. It took several days to shovel the snow even on the improved roads and the cross roads were weeks getting cleared. Even when spring came the mud was so deep a fire truck would get stuck like they did down at Ferndale in Detroit where two houses burned up with total loss of over $9500. We depend here on our chemical fire extinguishers and so far have put out two in our house and helped our neighbor extinguish a bad chimney fire and last week a big loss was saved. A month or so ago another neighbor together with our local fire company of volunteers at Hickory Ridge saved a heavy loss from an overheated chimney by the timely use of extinguishers. A truck couldn't have got here on account of the snow so we had to depend on our chemical hand extinguishers, you see.

Your article mentions a lower rate of insurance assessments for buildings equipped with dependable extinguishers. Our mutual company allows a 10 per cent lower rate for extinguishers approved by them and I was wondering if all the other mutuals encouraged fire prevention in a similar practical way. If your paper printed a series of good instructive articles on fire protection on the farm and boosted our common fight against our common enemy, the Red Plague, it certainly would help us to reduce our annual billion dollar fire tax.—Burchard R. Hair, Oakland County, Mich.

MICHIGAN LEADS ALL STATES IN MARKETING

MORE money is being spent in Michigan during the 1923-24 fiscal year for the development of marketing projects for the farmers of the state than is expanded for this purpose in any other state according to statistics contained in a circular of the United States Department of Agriculture recently received by R. J. Baldwin, director of extension work at Michigan Agricultural College.

The sum of $17,700 was devoted to this work in Michigan, which is an amount greater than the aggregate sum expanded by the four states surrounding Michigan—Illinois, Indiana, Ohio and Wisconsin—in spite of the fact that for the present year Ohio has doubled her allotment for this purpose over the 1922-23 budget, and Wisconsin is expending $6,895 this year after making no allotment for 1922-23.

Whose Advice Are You Going to Take?

Choosing a motor oil is a matter of following advice. Unless you are technically trained and have complete laboratory facilities, you cannot safely choose for yourself, because lubrication is as technical as is medicine or law.

You cannot see the quality in oil. Only the petroleum chemist can say which oil is right. There is one right oil for your tractor. How are you going to know? By following the advice of the Standard Oil Company (Indiana) highly trained experts. Thousands of tractor owners in the Middle West have done this and are using

Polarine

THE PERFECT MOTOR OIL

Made in Five Grades

They are convinced that the Standard Oil Company (Indiana) knows how to make good motor oil and experience has proved that their confidence is well-grounded.

Buying lubrication from the Standard Oil Company (Indiana) is like buying expert legal talent or medical advice. You are buying the best scientific knowledge of its kind.

Even refiners use Polarine—one of them writes he finds it cheapest and best. He says, "and I formerly refined petroleum for seven years; I know good gasoline and good oil."

Polarine will keep your tractor in first-class condition — give longer life to your motor—more power from your fuel—reduce carbon deposit and repair bills.

Polarine retains its body under varying working conditions and distributes freely to all moving parts.

Follow the chart at the left. It is scientific. It assures you the right oil for maximum efficiency from your particular tractor or truck.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

CARE AND USE OF VACUUM TUBES

THERE are two general types of vacuum tubes; those that are used for the purpose of detecting and amplifying incoming radio signals and those that are used for the transmitting and sending of radio signals; this latter class we are not interested in at present.

The vacuum tube is a very delicate piece of mechanism; it consists of a glass container in which a very high vacuum is produced (from which it gets it's name "vacuum tube") and in which there are three elements, the filament, grid and plate.

The filament is to produce heat so that the electrons (small particles of electricity) can leave the filament and pass to the plate thus creating an electric current that will be completed thru your telephone receivers and the B battery.

The plate is the element that receives these electrons that actuate your telephone receivers so that you can hear the radio signals.

The grid is placed around the filament or between the filament and the plate and acts as a valve that is made to work by the small amount of electric energy received from your antenna or aerial. A very small amount of change in the amount of energy placed upon the grid will so affect the grid that it will, acting as a valve let more or less of the B battery current flow from the filament to the plate. A very small change making a very big difference in the amount of B battery current flowing.

Each type of receiving tube requires a different value of grid leak or resistance so that the grid will be in it's best working condition. It is very surprising what a difference there will be in the volume of signals received by using the right or wrong resistance to work at their very best; it will always pay to try leaks of different values until you have the one that brings in the signals the clearest and loudest.

Many people blame their tubes for not working properly when the grid leak is the real trouble maker. Try it and see for yourselves what a difference there is.

As we said before, these are very delicate instruments. They should never be used on any voltage except that which the makers specify. A slip is always enclosed with each tube so that you cannot make an error.

Do not burn the filament too bright; it shortens the life and gives poorer results.

Do not use too high an A battery voltage, this will also shorten the life and may instantly burn out your tube.

Do not drop or jar the tubes; you may break them or make the elements move slightly out of place so that they will fail to work properly.

Never connect your B battery to your set till you are sure that all your connections are right or you may burn out the tube by accidently letting the B battery pass thru the filament.

In using an amplifier, try changing your tubes from one socket to the other; there is a big difference in the volume received from some tubes by changing them around. Some tubes work much better in the first stage than they do in the second or third stage. For best results try them out.

Too high a plate (B) voltage will sometimes make a tube go dead and it can be brought back to working condition by heating the filament for 15 to 20 minutes without the B battery connected.

As detectors most of the tubes work their best on about 22½ volts for the B battery and up to 100 volts as amplifiers.

Your vacuum tube is the most delicate part of your receiving set, treat it carefully and it will in return give you long life, good service bring in loud signals, improve your reception and give you more than it's value in pleasure and profit.

WANTS SET AT REASONABLE PRICE

In the March 15th number of THE BUSINESS FARMER, I read with interest about the moderate priced radio set that you use and which you said gave you places as far as Chicago. Like many other young farmers we would like so much to have a radio because of the interest and entertainment from the outside world to a hardworking, more or less shut-in farmers' family. Had rather have a radio than a Victrola, but the cost prohibits either. By the way we are not handy at making anything of that sort even if we had the time to do so.

Can you tell me the kind, price, and place to buy such an instrument as you described, or several moderate priced instruemnts? Would want a horn so that whole family could enjoy the programs.

Enclosed is stamped envelope for information and shall be grateful for such information as you can give and hope it will be in scope of our pocketbook. Several of our neighbors have home made crystal sets that cost about $25 and at times they can not get Detroit. If we have one at all it must be more satisfactory than that.—Mrs. E. C., Lenawee County.

—You are right, I believe, when you say that you would rather have a radio than a victrola. Each is different, yet the radio keeps you in better touch with the latest world happenings and entertainment.

The set that we described cost a little less than $25 for all parts including the battery and aerial wire and connections. This of course did not include a box to hold it nor a good panel for mounting. Such a set though it would work with two sets of telephones on it so that two

We know you have been wondering about our radio laboratory, where Mr. Ferris makes up different sets and tests them out before describing them in his department, so we are showing you one corner, just to give you an idea of what it looks like. What real radiophan wouldn't like to spend an hour or two here?

people could listen, would not work a loud horn so that all in a room could listen. This would mean the addition of an amplifier costing for parts alone another $25 which with a loud speaking unit at $10 (and that would be a fair one that would give satisfaction without being fancy in finish) would make the cost of building a set at least $60.

The Crosley set for 65 dollars comes nearest to it, but that does not include tubes or batteries or loud speaker which will make the set cost you at least $100.

There are really no sets on the market complete in ever detail for much less than $90 to $100 and they all do not give satisfaction by any means. Most people are deceived by low priced sets and when they buy they find that they have to spend a lot more to get the extras that make the set work.

The best way is to take time and go to Detroit, Lansing, Jackson or Ann Arbor and look over the sets and get what you want. Get a standard make as Radio Corporation, DeForest, Clapp - Eastham, Crosley, Grebe, Haseltine etc. You can depend upon the standard ones, but in asking prices ask for the set complete with all batteries, aerial, lightning arrester vacuum tubes and loud speaker so that you will not have to buy anything extra.

The crystal sets do not bring in the distant stations except once in a while, whereas the set we described will bring in to you, Detroit, Chicago all day long, and Pittsburgh, Springfield Mass., Omaha, Dallas, Atlanta and other distant pionts nearly every night.

WEST VIRGINIA READER INTERESTED

Please send me a copy of Feb. 2, 1924, Business Farmer telling how to build a radio, and would be glad to have any other information you can give me about radio, and how to build one. Thanking you very much I am, H. B., Union, W. Va.

—A copy of the Feb. 2nd Business Farmer has been sent to you, which no doubt you have received before this. We hope that you will have success in building a set that will give you satisfaction.

You ask about further radio information; we are always glad to answer any letters received asking definite question on radio. If you have any, send them along.

Beginning with the issue sent you we have been carrying on a series of articles which will tell how to add amplifiers, etc., to the present set. We will tell how to make and operate other types from time to time. Our readers will of course have the benefit of all this, and as we aim to only tell about things that we have built and tried out we know that our suggestions will work.

FARMER PUTNAM'S PHILOSOPHY

WIMMIN is so unreasonable. I reckon most every man, after he's been married several year, thinks his wife is the most unreasonable pusson that ever was. Anyhow so it seem to 'em. I don't know as Josephine is worse then other wimmin, but she's just as bad. Now the other day we was havin' hot biscuits fur dinner, and if anybody kin bake 'em fluffy and fine it's Josephine. She's as good a biscuit baker as she is at bein' unreasonable and contrary. In fact most everything she is she's just that way—100 per cent one way or the other.

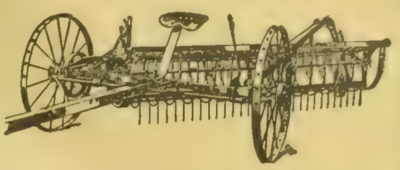
I had ett one of them biscuits, with butter on it, and was ready fur several more. Josephine was talkin' fur dear life, just chatterin' a blue streak about the—well I can't say who it was about, as it wouldn't be polite fur me to get pussonel. The biscuits was settin' right near her plate. I was tryin' my best to ask fur 'em but I couldn't think of the right word to say or git the word biscuits in edgeways, because of her talkin'. Finally she noticed my hand pointin' towards the biscuits and my lips makin' signs like a black bass that's gittin' ready to swaller a frog, and she sez:

"What on airth's the matter Tom, makin' signs like that, cain't you use the English language?'

"Not while your usin' it all," sez I. My gosh! you should-a seen them biscuits come flyin' acrost the table.
—Thos. Jefferson Putnam, Specialist in Rural Devilment.

How About Your Hay Tools?

IT is surprising how much better hay you can make, how much labor you can save, and how much pleasanter the haying season can be when you use the modern dependable hay tools found in the McCormick-Deering Line. Regardless of where you are farming, if you grow some hay, you should know all about these machines. You can get this profitable information from the local McCormick-Deering dealer or by writing to us.



McCORMICK-DEERING SIDE RAKE & TEDDER

With a McCormick-Deering side rake and tedder and a McCormick-Deering hay loader you can air-cure your hay quickly and load it without shattering the leaves. Also, the hay loader saves the back-breaking labor that is necessary when loading by hand. Modern methods and machines mean better hay, lower labor costs, and hay in the barn or stack in shorter time.

"The Farm Paper of Service"

FAIR ASSESSMENTS THE ANSWER

YOU who have been reading Mr. Stanley Powell's series of articles on taxation in Michigan will be particularly impressed with the one in this issue and you will get a smile or two out of the contrast in statements which wiseacres from Detroit make when they are in Lansing with those they make when they are back among their home folks in the big city.

Fair and uniform assessment is, of course, the final solution to the whole taxation subject here in Michigan, and yet our city friends will tell you that they are already carrying more than their share of taxes and that because we have a "farmer-controlled-legislature" the great Michigan metropolis is being slowly crushed between the millstone of state taxation!

Mr. Powell brings out clearly the fact that there has been an actual decrease in land values in some parts of Michigan. We cannot believe that this is serious in the best farming counties of Michigan nor where the best farms are concerned. Not that we believe these farms would bring their full value on a forced sale today but the value is there and any banker will agree to it.

It ought to be an encouraging sign to some of you to know that there are farmers coming into Michigan from Indiana, Illinois, Iowa, and other states which are cursed with fabulously priced land and who are buying better Michigan soil, with better access to the great consuming markets, at one-half the loan values of farm lands in their old locations.

Only a week or so ago we heard of a large Eastern corporation which is buying Michigan farm land which it plans on leasing out to tenants. This is not a healthy condition and we do not welcome it in a state which at the last census had 86 per cent of its farms owned and operated by their owners, but it nevertheless can give some satisfaction to those who are sticking by the farm knowing that normal conditions must return and normal farm prices again become in evidence.

SLOWIN' DOWN

THERE is no use trying to disguise the fact that there is a slowing down of business generally which has been extending westward from the eastern seaboard it first hit some sixty days ago.

Detroit has felt it somewhat in the slower movement of their automobiles to the trading centers. Automobile manufacturers explain this by the fact that we have had a late spring in all parts of the country and that automobile factories produced at full capacity through November, December, and January, during which period under normal conditions, and in former years, they have always operated under reduced production.

It is a fact that each spring has found the automobile manufacturer with a shortage in cars on hand to meet the sales waiting for his product, last year Ford alone claimed a shortage of three hundred thousand automobiles and trucks! This winter, with almost unanimous consent, cars have been built with this in mind, and as dealers and distributors are pretty well stocked throughout the country there has been a temporary slow-down in shipments from Detroit.

This same condition is evidenced more or less in many sections of the United States and in various industries. Naturally we who are so close to the agricultural field have been wondering for a long time whether economics were turned topsy turvy and the United States about to enter into a new era when the great mass of its citizens engaged in agriculture might be in poor financial condition and yet the cities remain prosperous, well employed and at high wages. No one can yet say whether or not this condition can remain a fact, but all of us have to admit that it has been a fact during the past three years, during which time there has been an active demand for labor in all parts of the United States at high wages; the cities have shown every indication of an increasing prosperity and yet the change of conditions for the better on farms has been increasing at a snail's gait. This farm price repression has applied not only to the major crops, but to fruit, livestock, and dairy products, it has not been sectional or confined to one state, altho naturally it has more seriously effected some sections than others, but it has been felt by the potato growers of Maine, the grape-fruit growers of Florida, the sheep-growers of Montana and the raisin-growers of California.

Now, as we see it, a so-called "slowing-down" of business conditions in the cities which is only another way of saying a slowing down of manufacturing, will only mean a decrease in the demand for labor and thus, obviously follows, a lower wage-scale. When $14-a-day-plasterers eat 30c per dozen eggs something is wrong in Denmark!

If the farmer and the laboring man were receiving their just dues in remuneration for their labor, we would have no kick whether the wage scale was one or ten and we would prefer to have it ten, but when there is the desparity which exists to-day, we say "som-thins a-goin' to happen" and we predict that it is not very far away around the corner.

ANYTHING FOR VOTES

FOR a vivid example of political expediency we would like to point out the proposed raise in postal employees salaries, which at the present writing stands a fair chance of becoming a law well in advance of the fall election.

To understand the situation fully one must go back in their minds a little way and remember that last year (1923) Congress appropriated $500,000 for an investigation of the entire postal system, which was to place the responsibility for any loss on the proper classification of mail. In other words, an investigation which would determine exactly what portion of the total expense each class of mail: letter, newspaper, or parcel post should carry. Anyone who is at all familiar with postal affairs will recognize that this was a very wise move, because every attempt to raise postal rates to care for the increasing deficiency was met by the most virulent opposition from those whom it hit, with the natural result that nothing was ever done about it.

It so happens, however, that this is election year and unfortunately that it will be some months before the half-million-dollar job of investigating the postal department can be completed. So there will be an election before these figures can be ascertained and in the meantime there is a country-wide demand not only from postal employees but from many other well-meaning people that the present salaries paid postal employees are entirely inadequate, particularly in the larger cities, that the department is losing its best men, and thus the efficiency of the whole system is in jeopardy.

Naturally it did not take the politicians in Washington long to see that they could make political capital of increasing postal employees' salaries, and that is now proposed in a measure which would increase the salary of every postal employee irrespective of present salary, $400 per annum! The gigantic deficiency which this would make, would be met by an increase in parcel-post rates, which are supposed to be, under present circumstances, entirely too low. It has been hinted that perhaps the express companies are interested in seeing parcel-post rates increased, but, however that may be, there is considerable danger that for political expendiecy alone the salary increases proposed and the increase in parcel-post rates necessitated thereby, will go swimming through Washington and be saddled largely on the rural population of the United States who use this service most.

No sincere person questions but what there are spots in the United States where the present postal salaries are entirely inadequate. We refer particularly to cities like Detroit where living expense is continually on the up-grade and postal salaries have been stationary over a period of years, but it would seem that there could be an emergency fund easily created which allow the local postmaster in these extreme cases to meet the situation, the same as any other business house or corporation would have to. The farm bureau and other farm oranizations are bitterly opposed to this measure, as are most of the good farm papers in this country. You have a representative in Washington, a man who is serving you, and you could not do a better service than to write a letter asking him to defer action on any postal increase until the results of the half-million-dollar investigation are made public.

* * *

Thus do we courageously lift our humble voice in protest against this political flagwaving, altho knowing fullwell, how useless are our entreaties with election so few months off!

THE EAGLE WITH CLIPPED WINGS

WHAT is the matter with the United States? We pride ourselves on our progressiveness. We prate about our inventive skill and the courage of our pioneers in manufacture and commerce. What has happened to all of these national attributes when it comes to taking wings and following the simple lesson taught by the birds that the air, as well as the sea, has for its chief purpose, to serve Man for transportation?

The Wright Brothers on their crude little-kite-like affair, hardly lifting itself above the Virginia sands proved that man could fly. They were Americans. Glen Curtiss, with the deep-set eyes of a Ford, built man-carrying birds by the thousands when the demand of the great war asked for all he could produce.

Then after the war, came a halt in the manufacture of aeroplanes in the United States. England, France, even crippled Germany and caotic Russia, went forward building planes for commerce, for postal service, for military uses, but wealthy, contented old Uncle Sam leaned back in his soft-chair and swore that all the flying he would do would be with one foot on the ground and he has stuck pretty close to this promise!

Flying may seem a long ways from farming and yet the problems of transportation are most directly reflected in the conditions on the farm. The air is the great open space where neither mountain nor valley delay the traveler on his way. Where the fastest express train leaves off at sixty miles an hour its race with time, the slowest aeroplane takes it up!

In England, we learn, the government encourages commercial lines of aerial communication, by a postal subsidy which guarantees not less than six per cent on the invested capital. How much better able is Uncle Sam to foster this step in the advance of civilization. The eagle is our national emblem, lets make it a fitting one!

NEIGHBORS SELL WOOL

THE Michigan State Farm Bureau has decided to pool its 1924 wool with the Ohio Wool Growers Association which we understand is one of the most successful of its kind in America.

This company which owns a large warehouse at Columbus, and has additional storage space in Wheeling, West Virginia, and other locations, has built up a very successful trade in a period which extends over six years of satisfactory results to the farmers of Ohio.

The handling charge we understand to be as low, if not lower than any other organization in the United States performing the same kind of service. The Michigan organization has a guarantee that the handling charges will not exceed 2¾ cents per pound, which is to include tax, storage, insurance, grading, all labor, sales commission and guarantee of sales account. Individual grading reports are furnished each growed and remittances are made direct through the association to the grower.

It has appeared to us on the basis of former Michigan experience, that this is a very commendable experiment and we trust it may work out satisfactorily to all concerned.

JAPANESE JINGOS CRY "WAR"

PRESS dispatches tell us that when the news was broadcasted in Japan that the United States had formally excluded Japanese immigration to this country, the jingo newspapers immediately took up the cry of "War."

Great wars that cost the lives of thousands of innocent boys have been started with less provocation than the Japanese think they have today. They are being appealed to on the strength of national honor and all of the old artifices of war are being paraded before them.

The United States with its millions of gold and unlimited wealth is indeed a picture for invading hosts to conjure with.

Caesars armies were fed on promises of the gold that laid beyond the Alps and Napoleon beguiled his men with the lure of gold, costly wines and their pick of the maidenhood of their conquered nations!

The importance of a strong hand at the wheel of our nation was never more apparent than it is today. Men and women who love these United States must vote and vote as they think——after they have thought!

PUBLISHER'S DESK

A FRIEND IN NEED

DEAR SIRS: "A friend in need is a friend indeed" and I am going to answer your card at once. Yes I received a check from ———, only a few weeks ago and I sent you a letter as soon as I received it. I was surprised when I received the card stating you had not heard from me and I want to thank you for it and if we had not been taking your paper we never would of gotten it and any time I can get a new subscriber for your paper I will do so. Thanking you many times for your help and I sure will help others to see what a good paper you are putting out for the farmers. Trusting you will receive my letter O. K., I remain yours truly, Mrs. F. C., Alba, Mich.

AMERICAN BOND AND MORTGAGE CO.

THIS party inquires about first mortgage bonds as sponsered by the American Bond and Mortgage Company of Detroit. It should be observed that each particular bond issue depends upon the security bond with proper issue i.e., the property. This company is of course merely an agent and general trustee for its issues and it has a fair reputation for having handled successful issue, but it must be remembered that the building industry of the last few years and business conditions generally have flucuated to such a degree that the element of stability, which, in normal times could be attributed to first mortgage bonds, is somewhat lacking.

METRO PUBLISHING COMPANY

A READER sends in a certificate given by the Metro Publishing Company, 96 Monroe Avenue, Grand Rapids, with a printed number, filled in with lead pencil and with other earmarks of a questionable proposition.

The certificate says that after 98 single copies have been taken at 12 cents per copy, any premium mentioned may be selected and there are a lot of premiums listed, while the magazine for which 12 cents per copy is paid is of little or no value.

We often wonder why some people think they can buy articles from an agent who comes around with cheap catch-penny schemes cheaper than they can go to a good store and buy it at retail price, but that it should be hooked up with a cheap irresponsible magazine seems to give it some semblance of a worthy scheme.

If any of our readers have had any experience with the Metro Publishing Company and know whether or not they ship the premiums as promised, I would be very glad to have it.

"BLUE SKY" LAW HAS LIMITS

"In regard to this matter, there is nothing this Commission or the State of Michigan can do as long as the solicitation was made through the U. S. Mail. The only recourse any person would have would be under the fraud section of the Postal Laws, and as we understand these laws, it would be necessary to prove absolute fraud. About the only thing that could be done in this case would be to report the matter to the Post Office Inspector. Inasmuch as there has been no personal solicitation in Michigan we are powerless, although if it should turn up that some person has personally solicited these sales in Michigan, we will proceed promptly. —Hezekiah N. Duff, Chairman, Michigan Securities Commission."

THERE is a lesson in the above statement by Mr. Duff which I hope every reader of this page will take to heart ere he has cause for regret.

The "blue-sky" laws, so called, which under the control of the above commission, attempt to guard the investors of Michigan against the sale of unworthy stocks and bonds in this state and to control the action and statements of the men who are selling these investments.

The "blue-sky" laws are now operated in most of the states and have been found to be highly valuable although far from infallable in controlling the situation. From the above statement, however, it is plain to see that they have no control whatsoever over the solicitation and sale of stocks or bonds where the solicitation is made through the United States mail. It is our understanding, however, that no stocks or bonds can be advertised in the State of Michigan which have not been passed by the Commission.

As Mr. Duff points out, it is not easy to secure redress through the United States postal authorities as absolute fraud must be proven before any action is taken and then there is no promise of damages to the injured.

The above ought to help our readers to decide what to do with the mining, motor-car, and other stock circulars that they get through the mail. They make excellent kindling for the morning fire but we would not risk wrapping them around the children's lunch for fear of contamination!

UNITED STATES EXPORT AND IMPORT COMPANY

THIS organization is founded around a Mr. Sellers who has had some experience in exporting, but a review of his financing does not reflect particulary good management. The business in which he is engaged from its very nature requires strong financial backing so as to be able to carry credits and exchanges, and although this company has paid dividends and has prided itself upon the fact that it does a cash business, there is no ready market for the stock of this company, and the management of the company will not disclose sufficient financial information to form an opinion of its actual value.

A very unusual thing happened with this company when they succeeded many of their stockholders to escrow their stock so as to take it off the market and thus enable them to sell more new stock. This was a method of protecting their own market which should not ordinarily have been necessary.

ALUMINUM WARE EXPERIENCE

"I AM writing to ask if any of the readers of this paper have been attracted by the wonderful big 25 piece aluminum set offer sent out by the Aluminum Works of Chicago. I have had a little experience with them and will say to others, "don't bite." I would like to secure a post card just like the one I signed my name to. If anyone has one please give name and address in this paper and I will send stamped envelope.

The 25 pieces were pictured and itemixed on the card. Would like to hear if others have been defrauded and I will tell more of my experience later if any one is interested—A Farmers' Wife.

MUTUAL AUTOMOBILE INSURANCE

BECAUSE of the failure of the United States Mutual Insurance Company, at Grand Rapids last year, there has been considerable discussion regarding the safety of the Mutual Automobile Insurance Companies and this department has been asked many times for our opinion as to the safety of this or that company operating in the state.

In the first place, all state mutuals are under the direct control of the Department of Insurance, to which they must make regular reports and by which they are annually audited.

In a mutual company each member is equally responsible with every other member for the full liabilities of the company, so in the case of the one that failed at Grand Rapids when the insurance commissioner has finally settled up this company there will be no outstanding liabilities and each member who is collectable will have had to pay his pro-

Clean Threshing

You work hard to raise a crop and you cannot afford to put a *part* of your grain into a straw stack. You can save *all* your grain and have it perfectly clean if your threshing is done with a

Red River Special

It's different because it *beats out* the grain—instead of waiting for it to *drop out* as other machines do.

Its big cylinder throws the intermingled straw and grain with terrific force against the "Man Behind the Gun." 90% of the grain is separated right there at the cylinder. Beating shakers then beat the straw until all of the grain is saved.

No other threshing machine has these features.

The Small Red River Special

The small 12-bar cylinder Red River Special will operate successfully with any tractor developing 18 to 26 belt horse power.

Free catalog and literature tells all about the Red River Special and what users say about it. You will be interested whether you have your threshing done for you or want to do it yourself. Write today for your copy.

THE PLEADING OF NOW

A SERMON BY REV. DAVID F. WARNER

> TEXT: "Return ye now every man from his evil way,****** yet ye have not hearkened unto me, that ye may provoke me to anger with the work of your hands to your own hurt." Jer. 25:5,7.

THE death struggles of the Jewish nation are over. Judah has come to an end. She refused to be sobered by warning facts. Her unbelief crushed out her life. Some of her rulers were wise. More of them were otherwise. The throne of David is empty. Her land is desolate. Most of her inhabitants have been exiled. A heathen monarch is running things. What a long, doleful story has the prophet! How pleadingly he foretells the coming storm! Then the crash came. And why? Because, "Jehovah hath sent unto you all his servants, the prophets, rising up early and late, but ye have not hearkened nor inclined your ear to hear."

But nations are yet deluded with false hopes. And God is yet sending his prophets, rising up early and late, saying, "Return ye now everyone from his evil way." I listened to a Southern lecturer telling about the thinks we should do now. His climax was, that America must evangelize the world NOW. He said that if Christains were half so enthusiastic to have the world know and love the Christ, as are militarists (especially munition makers) enthusiastic in their business, in fifty years from now all the swords would be beaten into plow-shares and spears into pruning-hooks. Is this statement a bit startling? But after giving it sobered thought, don't you think it could be done if work to follow him NOW.

But this means really to proceed in the Jesus' way. In "What it means to follow Jesus", a college president writes, "By a demonstration of power, of sacrifice, of a real following of Jesus, there is a 'balm in Gilead' for the healing of the nations." And the call is to set to work to follow his NOW.

Is this Government following him now? How do you think it would work, that instead of planning to spend millions of dollars annually on a strengthened army, and navy, and air forces, we should prepare to feed and restore possible enemy nations? Jesus said, "If thine enemy hunger, feed him." Isn't Christianity practicable? Were we to cut our appropriations one half or even more and then use the funds to prepare an army of men to invade neighboring lands with bread for the half-starved men, women, and children, instead of with bullets, what do you think would happen? O, that is not practicable, you say. So said Israel, and her unsocial attitude and unGodly alliances with evil wrecked her house. But, methinks, the bread policy might act as a talisman in converting enemies into friends, in changing hatred and malice into love and gratitude, and in bringing erring nations under moral obligations to Jesus Christ. But we should do it NOW.

Again; the Jesus way means to "love your enemies." A Japanese tribute to Christ runs, "I think the only arm of religionists is their kindness (love). With this one arm they rush even into savage places and triumph everywhere." A Christian missionary to a heathen province said, "One missionary is worth a whole battalion of soldiers in bringing about order and peace." Let us love our enemies NOW. Did you say we do? Yes, but most of our love is held in solution. It is an intangible quality; something to be assumed only until it crystalizes into acts of self-sacrifice and service. Let us form the crystals NOW. Do you know the world is dying for a crystalized love right NOW?

But, again, to follow Jesus means self-amputation. We are to cut off selfish hands and feet. Mt. 18:7-9. But we are ever talking about selfish rights and national honor, forgetting that the ideal of a Christian nation is international. In Luke 4:16-30 Jesus announces his program. In this brief sermon he kindly lifts the veil of the Israelite mind and attempts to push out his social horizon into other lands where God pleases to bestow his favors. But this outlook is so dangerous to Jewish national policy that Jesus' hearers grow vehement and he only miraculously escapes with his life.

What meaneth this ultra-nationalism, this much boasted "America first" spirit? It means a patriotism of hatred. And that means war and hell. Let tell Henry W. Hobson, of Worcester, Mass., a college man and one with a distinguished war record. He says, "War has come to meân just one picture to me. In the St. Mihiel advance I came across a group of American soldiers ringed about a great sand pit where some German soldiers had been trapped in dugouts by the swiftness of the advance. Mind you, they were mainly farmer boys from Kansas and Missouri; boys who at home never had a cruel thought in all their lives. But now they had hit upon a most exciting sport. Part of the group were hurling hand bombs into the dugouts, and as the stunned and suffocated Germans rushed out with hands lifted, and scuttled to another door, the rest of our boys with leveled rifles shot them down like so many rats. It wás all I could do to stop this entertaining game, and that's what war does with character—bedevils it. And the only way to stop it is to begin now; not wait until we are all crushed into its hell again." How be it, our present policy is threatening just this repetition.

The United States, in her way, is giving the world a colossal exhibition of selfishness today. She is making herself rich at the expense of her bleeding and breaking down sisters, all the while barricading herself behind guns and the physical manhood of her realms. And the writer believes that back of much of our national policy is not so much a love of country as a greed for gold. If this be the way of the homeless Nazerene—but it is not. It is only the Christianity of men and may be labeled as such until it is purged of its narrowness and selfishness, and the millions of dollars that are not put into physical defenses and into surface tastes and pleasures, are put into human temples thru bread, education, and Christian missions.

But the Christianity of Christ is an international benediction. It stands for peace with justice for all. The two coordinate. It is a sweet-scented flower gradually but surely spreading its fragrance thruout all nations. We plead with America to provide fertile soil for the propagation of this Rose of Sharon. But whether she will or no, Christianity is destined to be the vital force of this world, and some day God will show what he can do with nations as he is today showing what he can do with individuals. We need not come together now so much to form plans for peace, but more to declare God's plan thru the revelation of our Lord and Savior, Jesus Christ. The Jesus' way must prevail, else a broad friendship and brotherhood will fail of realization. So, let us plead for this NOW.

BIBLE THOUGHTS

OF A TRUTH I perceive that God is no respecter of persons; but in every nation he that feareth him, and worketh righteousness, is accepted with him.—Acts 10:34, 35.

* * *

FOR GOD SO LOVED THE WORLD, that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life.—John 3:16.

* * *

BLESS THE LORD, O my soul, and forget not all his benefits; who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction. —Psalm 103:2-4.

* * *

BE SURE YOUR SIN WILL FIND YOU OUT.—Numbers 32:23.

* * *

O DEATH, where is thy sting? O grave, where is thy victory? But thanks be to God which giveth us the victory through our Lord Jesus Christ.—I Cor. 15:55, 57.

UNCLE RUBE SPINACH SAYS

SPRING AN' EVERYTHING

BEAUTIFUL spring! Wonderful time of the year. As a feller sez: "When a young man's fancy lightly turns to thoughts of love." I might say, when married men think of house cleanin' an' bein' all up-set for three or four weeks, when the gen'ral public 'spects to hear from our congressmen by way of garden seeds, an' sim'lar—Oh, beautiful spring! If it wasn't for you we might never know we had any congressmen, an' so we welcome spring. Maybe it's cold or hot, as the case may be—no matter what the weather is, we receive with joy or otherwise the little package of seeds sent by our congressman, with his regards. Seeds he ain't never seen nor thought of, to folks he cares no more about than the English sparrows they's a bounty on fer killin'. Friends there's a chance to put a stop to gover'ment expense. Seeds cost money, seed firms send mor'n a million dollars worth of old seeds down there an' they're sent out to us at gover'ment expense. Mebbe they grow, mebbe not. Our congressmen 'spects to get a vote next 'lection jest for that one little package of seeds. Now seeds, all kinds of garden seeds, are cheap—anybody 'at has a garden can afford to buy 'em. But are votes cheap? Can any man's vote be bought by a small package of garden seeds? Think it over friends; the seeds cost your congressman nothing, they are sent free, he knows nothing about where they're sent—why allow a thing like that? An' yet somebody has to pay, you, I, everybody helps pay for this foolish thing.

If you want to know about seeds, want something diff'rent than you can git in your store, there's always your own agricultural college. They will tell you everything, send anything you want, but folks, let no man buy your vote with a little package of seed that don't cost him a darn cent to begin with, an' ain't worth a dang when you get 'em.

An' yet in spite of it all, it's spring, an' a robin is buildin' her nest in a tree right in front of my south window—two of 'em in fact, an' I like to watch 'em. Love is there in the buildin' of that nest, it will last until the young are able to take care of themselves. There will be no divorce, no digression from the straight an' narrow path. Oh spring is beautiful to me. I get no garden seeds now you know. Couldn't hardly use 'em if I had 'em, so don't have to worry 'bout 'em, an' I tell you somethin' else—it brings nature back, squirrels an' everythin'. An' in watchin' the squirrels I forget some of the nuts we have. Well, I won't name any partic'lar place, but you know we got 'em, and jest one little thing 'at happens 's soon as spring comes. One great big fox squirrel walks the telephone cable past my room every morning jest 'bout 8 o'clock. Folks, I used to like to go out an shoot squirrels, now I'm lettin' the squirrels alone an' huntin' the nuts. Cordially yours.—UNCLE RUBE.

Wise To Men

A little crowd was gathered in the great man's studio to see his pictures before they were sent to the academy.

A girl strolling 'round turned to the artist and remarked:

"Strange that angels are always women, isn't it?"

"Yes," said the artist, with a twinkle. "Shows artists don't know much about women, doesn't it?"

"It may be so," retorted the girl quietly, "but it certainly shows that they know a lot about men."—Modern Art.

Referred to Mr. Bryan

"I believe in evolution to this extent."

"What?"

"That it was a jawbone and not a sparerib that woman came from."—Times-Union.

Worse and Worse

Thomas was not a prime favorite with his rich uncle. In vain did he try to impress him, but the old man was not easily impressed.

One evening the young man went to his uncle's home for a call, and in the course of conversation asked:

"Don't you think it would be rather foolish for me to marry a girl who was intellectually my inferior?"

"Worse than foolish, Thomas," was the reply. "Worse than foolish—impossible!"

92 New Threats Against Service

It may surprise you to know that the present Congress of the United States has already before it for consideration no less than ninety-two bills, each proposing to further restrict Railroad activities.

So wide is the scope of this proposed legislation, and so serious are many of its threats, that the Railroads have been forced to shape their affairs accordingly, as mariners take in sail when storm clouds the horizon.

Michigan's 24 steam railroads are today holding in suspense plans for the expenditure of large sums of money, pending legislative action on these ninety-two bills.

These expenditures, if released, would go into labor and materials—into Prosperity and Better Service.

Is it wise or just to thus threaten and impede the efforts of any honest business?

How would you welcome ninety-two additional threats against your independence of action in the pursuit in which you are yourself engaged?

We invite any thought on this matter which you care to express.

The WINDMILL with a RECORD

THE AERMOTOR

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

AERMOTOR CO. Chicago Kansas City Dallas Minneapolis Des Moines Oakland

The Children's Hour

SPRING

SUMMER is coming
And spring is here—
Bringing sunshine
And great cheer,
Bringing the flowers
And the bird-song—
With its warm breezes
All the day long.

Nature is opening
Her fairy books—
And birds are bathing
In the brooks.
We see the green buds
On the trees—
And feel the blessing
Of a warm breeze.

We see the little
Laughing sunbeams—
As we gayly walk
By meadow streams,
We breathe the warm
And summer air—
And hear the bird-
Song everywhere.

And as we receive
The benediction of the air—
We know that God
For us, does care,
And we raise on the
Air a happy song—
For summer is coming
With her flower throng.

Gladys Classman, Age 16 years,
R. 1, Sebewaing, Mich.

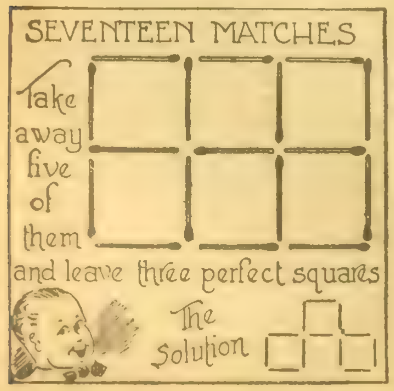
DEAR girls and boys:—The old saying is "April showers bring May flowers." If this is always true I think the crop of flowers this year is going to be about the largest every known, because we have certainly had a lot of rain, haven't we?

Today (I am writing this on May 1st) is a wonderful day. There is a little chill in the air left from winter, but the sun is shining brightly and it is warming up rapidly. Days like today make me want to play hooky from the office so I can work in my garden. I suppose by the time you receive this issue many of you will have all of your garden planted. I expect to have part of mine planted but not all. I am not going to plant as large a garden this year as last and devote more ground to flowers; I love flowers, don't you? All summer long I like to see vases of fresh flowers in each room of my house. The open windows and doors let in the fresh, cool air, and the flowers give forth a scent that is carried about the rooms by faint breezes. When you come in tired and out of sorts you are not in the house long before you begin to feel rested and your nerves quieted. Raise lots of flowers this summer and keep fresh ones about the house. You will be making life a little brighter for your parents, yourself and everyone who comes into your home. Just try it and see.—UNCLE NED.

OUR BOYS AND GIRLS

Dear Uncle Ned:—May I join your merry circle? I am fourteen years of age. I am five feet four and one-half inches tall. I am a blonde, have blue eyes. I have two sisters and one brother. We live on a eighty acre farm. We have acres of land besides what we live on. We have seven horses, seven cows, and nine young cattle. For pets we have a dog named Jiggs and two cats. My father is a mail carrier. We live four and a half miles from town. Last year we took a trip to the Soo. We had a dandy trip. We camped out. We went by the way of the shore of Lake Huron by way of Bay City, Oscoda, Alpena and Cheyboygan and came back by way of Petosky, Gaylord, Grayling and Bay City. I would write to anybody who will correspond with me. I corresponded with one girl over a year. From your niece.—Margaret Cameron, Deckerville, Mich.

Dear Uncle Ned:—May I join your merry circle? We take the M. B. F. and like it very well. I will describe myself. I am eleven years old, four and one-half feet tall, have brown hair and hazel eyes. I have two sisters and one brother. I am in the eighth grade at school. Do you like sleigh rides Uncle Ned? I do. There is fine sleighing up here in the winter. I have been in Mt. Clemens and think it is a nice place. Would some of the boys and girls write to me? I will answer their letters. I must close and hope the waste basket donesn't get this because I will write another if it does. Your nephew,—Ford H. Weyeneth, Deckerville, Michigan.



SEVENTEEN MATCHES
Take away five of them and leave three perfect squares
The solution

Dear Uncle Ned:—Will you let another girl join your circle? I have been a silent reader of the Children's Hour for a long time. I have written several times before but I guess Mr. Waste Basket must have been hungry and got my letters. I have light hair, bobbed, blue eyes, am light complexioned, am four feet, eleven and three-fourths inches in height and I weigh eighty-six and one-half pounds. I am eleven years old and my birthday is August the eleventh. Have I a twin? If I have I wish they would write to me. For pets I have a cat and four kittens, and a dog whose name is Sport. I have three brothers and three sisters. We play base ball at school. I am in the seventh grade at school. I like to play it, do you Uncle Ned? There are three, including myself, in my class. I like my teacher very much. We have a club at school and we have meetings every two weeks. At this meeting we have current events for roll call and then a program and then we elect officers. I would like to have some of the nieces and nephews write to me. I would try to answer them all. I will cloose with some riddles. What is the easiest way to get down off an elephant? What goes around around the house and at night it sits in the corner? From your want-to-be niece,—Lois Meyer, Stanwood, R. 2, Michigan.

Dear Uncle Ned:—Would you admit another cousin to your happy circle? I have wanted to write for quite a while but I have just found the courage. I am a girl 13 years old, have blue eyes, brown hair which is bobbed. I am 4 feet and 3 inches high. I go to the country school and am in the eighth grade. We have a piano which I can play and I also can drive our Ford car. I like to read the Children's Hour. I think the letters are very interesting. I am next to the youngest in our family. I have four older sisters and three older brothers. My youngest brother will be four this month. I wish the girls and boys would write to me. Your niece,—Lura Haines, Coleman, Michigan.

Dear Uncle Ned:—May I come in and join your circle? I have been a reader of the Children's Hour for about four years. I live on an eighty acre farm. I am twelve years old, have dark brown hair, it is bobbed, have a dark complexion. I have one sister, her name is Edna, and one brother, Elwin. We have three horses, three milking cows and six young cattle. For pets I have a pup named Teedy and a cat named Tom. I would like to hear from the girls and boys. I hope Mr. Wastepaper Basket does not get my letter. Our school is just across the road from us. Well as my letter is getting long I will close.—Bessie Steele, Fibre, Michigan.

Dear Uncle Ned:—I have read the Children's Hour with much interest and as it was so long ago that I wrote I thought I would write again. I will be fifteen years old the fourth of May. We are going to have one acre of cucumbers and one acre of string beans this summer to raise for the factory so you see we will be busy. I am also going to have a flower garden as I enjoy raising flowers. I have four sisters and one brother and also two grandmothers and two grandfathers which are still living and in good health. They have both had their golden wedding. We live about one-half mile between them both. We are writing a theme at school which is "Pioneer Life" in Montcalm county. I think it seems nice to have spring visit us again. I always read the womens page in the M. B. F. and find many interesting things there. I have tried some of the recipes and have had good luck. I like to cook and bake and crochet. I have been taking music lessons. I hope my letter will not be too long and I also hope he won't be in sight when you read this letter. Oh! that greedy old basket. Here I go! I just missed it! Maybe he'll have more strength next time. Your niece, Miss Alice Rasmussen, Greenville, Mich., R. 4, Box 67.

Dear Uncle Ned:—Well, here I am again! I certainly was glad to see my first letter in print, and I was also glad to get so many letters from the cousins. I enjoyed reading them all, and I would like to answer them all, but I just promised to answer all who guessed my right age, which is 15. Although I will soon be sixteen. I would write to all who write me, but it would keep me busy writing letters, and anyone who goes to high school will agree with me, when I say I have enough to do to get my lessons, especially when next week is examination week. When I was going to Canada last summer, I went through Mt. Clemens, and I think it is a very pretty city. When I was going through there, I wondered why it was called the "Bath City" but I have found out since then. Were any of the cousins ever in Battle Creek? Or were you Uncle Ned? If any of you have been, I think you will agree with me that it is a nice little city. We have a very nice high school here, a beautiful athletic field, a large sanitarium, and many other things of importance. I suppose most of you know that Battle Creek is the home of "Kellog's Corn Flakes", so now whenever you are eating corn flakes, or any breakfast foods, think of me. Our high school basket ball team is playing with Jackson tonight. I certainly hope we win, but if we do lose, it will be the first game we have lost this season. I like to watch a foot-ball game, although it is very rough. I don't care so much about watching a basket ball game though. Well I'm sure everyone is tired of reading this by now, so will leave space for some one who writes more interesting letters. As ever, your niece,—Sadie London, 66 Hanover St., Battle Creek, Michigan.

Dear Uncle Ned:—I have certainly neglected you awful but I have thought of you just the same. I will not make this long as I am submitting a poem again which I hope you see fit to print. You asked that the poets get busy so I thought I'd try anyhow. I think Muriel Frey's idea is splendid. Cordially youors,—Ruby N. Slack, Ellsworth, Michigan.

The Foolish Little Girl

"ONCE upon a time there was a little girl who was always wishing, wishing, wishing. In fact she wished for almost everything she saw. This Foolish Little Girl had a very unhappy disposition; for she let envy and dissatisfaction steal into her heart, gnawing at the beautiful things that lay hidden there, such as love and peace and contentment.

"One day she started down town with her lovely mother. And they had not gone far when she saw her neighbor Carroll riding along on his Shetland pony.

'Mother, I wish I owned that pony!' and a little farther on,

'Mumsy, I like Grace's house much better than ours. I wish we lived in it!'

On they chatted. The Foolish Little Girl holding to the Wise Mother's hand. Soon they came to a large window full of toys and dolls.

'Oh, Mumsy, see those beautiful playthings. I wish they were all mine!

Her mother looked down at the small bobbed head,

'Listen dear, forget your wishes and run down to the playroom of this store while I go up to the restroom for a few minutes. I feel a little ill!' She did not add that she was sick at heart.

The Foolish Little Girl ran down the steps till she came to the playroom. It was in the basement of a huge department store fitted out with swings and slides and everything that makes the hearts of children glad.

'Oh!' gleefully exclaimed the Foolish Little Girl. 'I wish all these wonderful things belonged to me.'

Upstairs sat the Mother, thinking, thinking, thinking.

'If only I could break the Foolish Little Girl of this bad wishing for everything she sees. It really makes me sick at heart.'

'I can break her of that habit,' said a tinkley, pleasing voice at Mother's elbow. The Mother eagerly looked up. Sure enough there stood a Fairy.

'Oh, can you, lovely Fairy? How grateful I shall be.'

But when she looked again the bad-habit-breaking-fairy had vanished.

Soon Mother heard a small voice, 'Come on, Mumsy, time to do your shopping.'

The Foolish Little Girl went with Mumsy to do her shopping. Mumsy talked to her telling her how she must be satisfied with what she had and not be always wishing, wishing, wishing. The Foolish Little Girl would remember only a short time and then,

'Oh, Mumsy, look at that lovely parrot in the cage. I wish I owned him!' or,

'Pretty dress, isn't it, Mumsy? I wish it were mine.'.

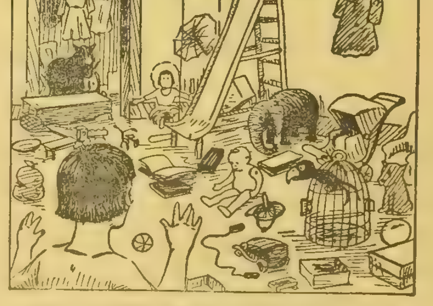
Shopping over Mumsy and the Foolish Little Girl started home. Still was the Foolish Little Girl wishing, wishing, wishing. When they arrived home there stood not their dear, inviting little white cottage, but a house exactly like the big white one the Foolish Little Girl had wished for that very morning.

'How strange!' exclaimed the Foolish Little Girl in amazement.

But Mumsy only smiled a mysterious smile and led her by the hand into the house.

'The Lovely Fairy has been here," she thought.

And what do you think? There in the front room stood the Shetland pony pawing at the blue rug, the very one the Foolish Little Girl had wished for. In another room were all the slides and swings and playground things piled high. And, oh goodness me! In the dining room were the hundreds of toys she had wished for and hanging in the hall any number of dresses and hats and coats and shoes and well, just everything. And, oh dear me, the sight almost made her ill. There was no place to sit down for all the chairs were full of things she had wished for, and hardly room to turn around.



"The Lovely Fairy has been here."

The Foolish Little Girl hated it all. Over in the corner sat the gay-colored parrot, squealing,

'And what do you wish for now, Foolish Little Girl?'

'Mercy, I shall never again wish for a single thing' and the Foolish Little Girl ran to the wise Mother's shoulder and cried very hard and long and—"

"Oh, Grandmother," chimed up Marjorie, "you made up that story about me!"

Grandmother smiled and looked over the top of her glasses at her grandchildren but said never a word. Grandmother was like that. She often kept you guessing and knew lots of secrets.

"Sure, Marjorie, The Foolish Little Girl was you. I knew it all along," Billie grumbled in his deep little voice.

"Dran'ma, you is a fine story teller. But, please make the next one about me," Small Sister squealed, delighted.

"Well, I guess I'll have to be a wise little girl now and break my bad wishing habit or I may have our parrot squealing at me, 'What do you wish for now, Marjorie?' "

And all the children ran to Grandmother and, between hugs, voted her the prize story teller.—By Helen Gregg Green.

CURING BLACK LEG IN POTATOES

Is there a cure for black leg in potatoes? If there is would it cure them that already has it or would it just prevent those from getting it that are not diseased?—L. S., Remus, Mich.

—The black leg disease lives both in the flesh and on the skin of the potato. Seed treatment with corrosive sublimate which is so generally used for the control of black scurf and scab is effective against the black leg organisms that may be on the skin of the potatoes. It is not effective against the organisms in the flesh of the potato. Since potatoes effected with the black leg disease are very apt to rot in storage and by this means spread the disease to adjoining tubers, the seed treatment with corrosive sublimate is quite effective in controlling black leg.

Before treating the seed the grower should sort out the potatoes very carefully removing any tubers that show indication of rot. After the potatoes have soaked thirty minutes or so in the solution of corrosive sublimate they should be removed and dried quickly. In cutting the seed, throw away any potatoes showing any discoloration in the flesh, since such potatoes may carry the black leg or wilt diseases.

To successfully control the black leg disease, it is also necessary for the grower to rogue out the diseased plants during the growing season. Black leg may show up quite early in the season causing the plant to be small and giving it a peculiar light green or orange coloration in the leaves. When such plants are pulled up, it will be noted that the stem is rotted and is usually black in color. This disease seems to be worse in wet soils and in wet seasons. Oftentimes it developes very late in the season, therefore, rogueing should be kept up until the plants are killed by frost.—H. C. Moore, Extension Specialist, M. A. C.

MUTUAL AUTOMOBILE INSURANCE

(Continued from Page 15)

portion by an assessment, to clean up all liabilities in full.

The only advice that we could give through this page as to which company to select would be that you make sure that the company you are going into is strongly financed and has a large membership. We would also advise against going into something which insures in Detroit, Grand Rapids, and other cities where the liability is much higher than it is in the rural districts, and we would further advise that you have the agent who sells the insurance explain to you carefully from the policy itself exactly what you can expect in case of accident or collision as most of these policies contain "deductable" clauses which make the insurance much cheaper to buy but naturally of less value to the purchaser.

It is our opinion that no farmer can afford to drive an automobile or truck on the roads of Michigan who is not insured at least against liability, whether or not he can afford to carry his own fire and collision insurance is a matter for he himself to decide, but the risk of a suit for damages which might run five thousand dollars or more is too much for any man to carry unprotected.

ANOTHER CLAIM ADJUSTED

DEAR SIR:—Am writing to tell you my claim No. 1457 has been settled owing to your kindness in taking up the matter and I thank you very much and I think your readers certainly should appreciate your kindness in cornering up the highliving rascals who use the mails to defraud people, especially sick ones who hope to receive help. —Mrs. C. L., Williamston, Mich.

REGARDING MUSKEGON ENGINE COMPANY

Our latest information upon this company indicates that the company is out of business and there has been no market for its stock in quite some time.

Dear Sirs: I received the money and wish to thank you for your kind services. I know without your help I should never have gotten it. Respectfully, R. R., Mancelona, Mich.

I think the Fisk Red-Top is the only tire on the market for country use

Are You Using Our Service and Protective Bureau?

Have you any perplexing farm or business problems? Then call on our Service Bureau.

Thousands of THE BUSINESS FARMER readers have learned that THE BUSINESS FARMER is more than a high class farm paper. It is a friend as well, one who serves—and never fails in time of need.

As a subscriber to THE BUSINESS FARMER, you are entitled to all the rights and benefits of our Service Bureau. We want you to use this service—call on us freely.

RESULTS

Dear Sir: We are writing you regarding ————. Claim No. 1257. We are very pleased to say it has been settled satisfactorily. We received the check in less than two weeks after writing to you. We are very thankful for the assistance you have given us and will endeavor to boost the M. B. F.—J. D., Jr., Ubly, Michigan.

Claim No. 1257.
Amount of claim, $40.00.

Gentlmen: We have today received the radiator we ordered from ———— & Co. I thank you for conducting a department in which we farmers can come to.—F. P. K., Belding, Michigan.

Claim No. 1234.
Amount of claim, $12.25.

Dear Sir: We received the knickers from ———— today. Thanking you very much for the same. They certainly got busy when they heard from you. Wishing you success in your good paper, I am,—V. A., Mt. Pleasant, Michigan.

Claim No. 1368.
Amount of claim, $3.77.

Dear Sirs: In todays mail I received my money from the ———— & Co. I asked for your help only ten days ago. I must say I am more than thankful to you.—Mrs. F. M., St. Clair, Michigan.

Claim No. 1355.
Amount of claim, $3.03.

JUST A FEW THINGS IT WILL DO FOR YOU

Will furnish you protection from swindlers, fake peddlers, and promoters.

Tell you about any investment or stock selling scheme. Invest no money in any scheme before you have asked THE BUSINESS FARMER Protective Service about it.

Aid you in collecting any claim you may have against any insurance, railroad, express or other company.

Aid in the collection of obligations.

Help you in the adjustment of claims.

Give you prompt information and advice about any crop, soil, live-stock, dairy, or poultry problem.

Furnish expert market information whenever you have something to sell.

Help you with any building construction or farm machinery problems you may have.

Tell you the law and custom on all questions of rents.

Answer any question with regard to home or community life, schools, canning, cooking, preserving, or housework in general.

Give you correct information on any farm subject and will help you in trying to settle and farm, health, or legal trouble of any sort.

Protective Sign and Certificate

We want every reader of The Business Farmer to have one of our beautiful certificates of membership and a Protective Service Sign. The certificate is suitable for framing and will be mailed free of charge.

The Protective Service Sign acts as a warning to swindlers and fakers and informs all that you are a member of an organization of power and influence that will stand with you in support of your rights. We are asking a small charge of 25 cents to cover cost of sign and mailing.

THE BUSINESS FARMER,
Mt. Clemens, Michigan.
Gentlemen:—

Check for either or both the certificate and sign.

☐ Please mail me a membership certificate free of charge.

☐ I would also like one of the Protective Service signs and am enclosing 25 cents to cover cost of sign and mailing.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—Have you a "happen-so" kitchen or is it well planned? Are your cupboards, table, stove, ice box, sink, arranged to save you steps, or are they just placed against the wall with no thought of convenience? The average woman on the farm does too much walking. There are a certain amount of steps she must take but by arranging the kitchen properly she will be surprised how much walking she can save herself. On this page I am publishing an article by E. A. Kirkpatrick. The Kirkpatricks had a kitchen that was not "handy" so they rearranged it. Mr. Kirkpatrick explains with type and illustration how they did it and I hope you all get some pointers from him. If you have a better arrangement tell me about it and send a rough sketch if possible, and I will publish the information for the benefit of my readers.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

THE BUGGY ON THE PORCH

By Anne Campbell

THERE he sleeps, the little king,
Where the winds of April fling
Scents of new buds blossoming—
On the porch!

In his fuzzy bonnet white,
With his rosy lips shut tight,
These two hours are a delight
On the porch!

Through his dreams, the children shout
As they gaily run about;
Then they see the baby out
On the porch!

And they scamper up the street,
Saying "Hush" to all they meet.
They won't wake the baby sweet,
On the porch!

Let him sleep, the little man,
Getting all the rest he can,
Where the sunbeams reach and span
On the porch!

Soon he'll run the same as you,
Happily the morning through.
You were once a baby, too,
On the porch!

(Copyright, 1924.)

HOW TO BE A HEALTHY CITIZEN

DR. ROYAL S. COPELAND, United States Senator, formerly Health Commissioner of the City of New York, and a former resident of Michigan, recommends the following rules:

I solemnly promise that on each and every day I will spend at least one hour in the open air in walking or in some other form of physical exercise.

I further promise that I will take at least twenty minutes for my midday meal, that is lunch, or thirty minutes if the meal is dinner.

I will give myself at least a half hour for removing the day's dirt and for rest before sitting down to my evening meal.

I will sleep two hours before midnight and at least six hours thereafter, in a room ventilated by an open window, both winter and summer.

I will refrain from harmful excesses in the use of candy, tobacco, medicines, rich food and from any practice that will lower my resistnce and leave me liable to disease.

I will do only such things that make for my health and by neighbor's health. I will refrain from doing anything that may damage me or do harm to my fellow-man.

I set for myself high standards of living, and by clean lines of mind and body will make this year better than any previous year in my life.

CLEANING BROOMS AND BRUSHES

THE ideal arrangement for one's cleaning implements is to keep a complete set of them in a well-ventilated closet having a shelf for soaps, powders and other cleaning agents. Well-made, durable utensils are an economy if they are kept in good condition.

Of brooms and brushes most housekeepers feel that they need at least the following: A corn broom, a soft-hair brush on a long handle, a soft-hair dust-brush to use with the dust-pan, a scrub-brush and a toilet-brush. Dust-pan, dust-brush and scrubbing-brush may have long handles if preferred. Special brushes for walls, radiators, upholstry, waxed floors and the refrigerator drain-pipe are often found desirable. Two mops are usually needed—a wet mop, which can be used more easily if a wringer-pail is provided, and a dry mop either oiled or untreated. In addition, a carpet-beater and a floor-pail are almost indispensible, while many housekeepers consider a vacuum cleaner essential.

All brooms, brushes and mops should be hung by strings or screw-eyes fastened to the handles so that the weight does not rest on the straws, bristles or strings. Carpet-sweepers should be set so that the weight does not come on the brushes.

As far as possible, cleaning equipment should be put away clean and ready for use. Corn brooms may be washed in hot soapsuds, but care must be taken not to let the water rust the wires which hold the straws to the handle. The hair and lint which accumulate in brushes, especially in carpet-sweepers, may be taken out with an old button-hook, a coarse comb or old scissors, The box of a carpet-sweeper should be opened over dampened newspaper, the dirt emptied out and the brush cleaned. The mechanism should be kept properly oiled. A vacuum carpet-sweeper is cleaned in the same way, but in addition the bag must be taken off and emptied. Bristle brushes may be washed with luke-warm water and a little alkali—either three teaspoons of dilute ammonia or one teaspoon of borax to a quart of water—and then rinsed in clear water. Care should be taken not to wet the back of the brush, or the cement holding the bristles in place may be loosened.

DON'T WORRY IT YOU CAN'T SLEEP NIGHTS

TO make a business of sleep is a bad habit. That is what persons do who worry because they can't sleep.

In answering a question about insomnia, Hygeia, the health magazine, declares that the chief harmful effects from not sleeping are caused not by sleeplessness, but by worry over not sleeping.

Sleep should and will come naturally, if one will only realize that it is rest and not sleep that is needed, says the health journal.

Of course it is important to pay attention to the ordinary rules of hygiene, with regard to exercise, fresh air and reasonable diet. But above all, it is important to fill one's life with satisfactory work and play.

The best incentive to sleep is still the feeling of "something attempted, something done," particularly something to help others.

As to the amount of sleep needed by different persons, that varies within wide limits and is much modified by habit. Many energetic, active individuals get along quite well with four or five hours of sleep. The proper amount for the average adult, however, is usually between seven and eight hours.

Our "Wife-Saver" Kitchen

OUR kitchen is a "wife-saver" (that is what my wife calls it) compared with what it was when we bought the house three years ago.

When we moved in, we put our kitchen in shape just about like it had been formerly, just to save time in getting settled. Then we began to figure out how we could better things by a few changes and additions here and there.

Fig. 1 shows the kitchen as it was in the first place. The work table was in front of the window, clear across the room from the sink and range.

Imagine yourself clearing the dining room table. If you did it as my wife did, you would take the dishes to the far side of the kitchen to the work table, stack them, then cross the kitchen to take them to the sink, and after washing and drying them, recross the kitchen to put them in the cupboard. (Our dining room is too small for a china closet, so we must use the kitchen cupboard.) And in preparing a meal it was necessary to cross the kitchen from the table to the range.

The ice box—well, when it was filled, there was always a trail of dirt and water clear across the kitchen, from the door.

The first change we made was to move the work table out in the middle of the floor, close enough to the sink that either the table or sink can be reached without taking more than a step. See Fig. 2.

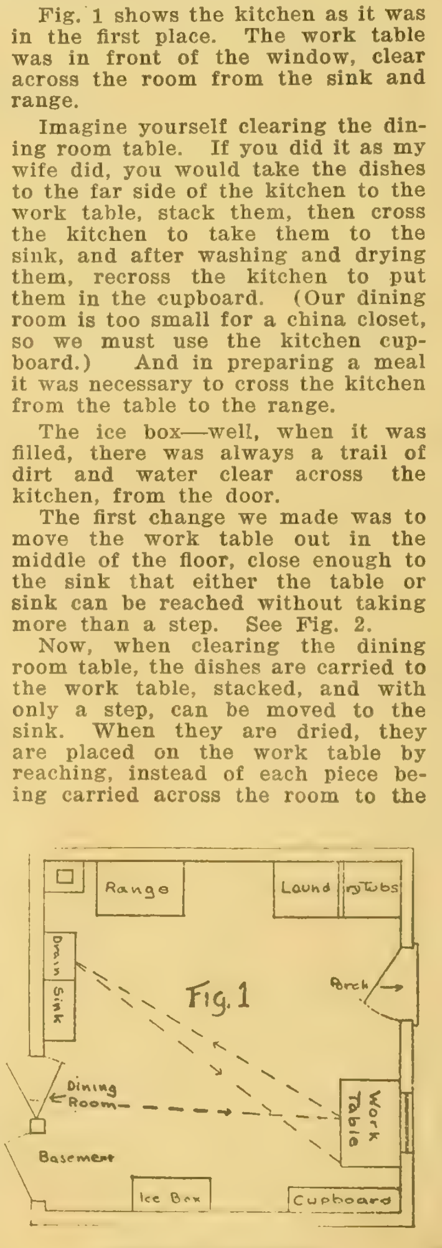
Now, when clearing the dining room table, the dishes are carried to the work table, stacked, and with only a step, can be moved to the sink. When they are dried, they are placed on the work table by reaching, instead of each piece being carried across the room to the table as before. Just think of the steps saved. And now, the table is close enough to the range that only a step is necessary to take a dish from the range to the table, or to empty a kettle into a dish on the table. There is a small cupboard under the drain board for dish pan, dish drawer, soap, etc.

Then, where we used to have the work table, we have a breakfast nook. This is the delight of our hearts—or of our kitchen, if you wish. It is in a place handy to the cupboard. This original cupboard now is used for cereals, coffee, bread, etc.—principally the things used for breakfast—and also pots and pans. There is an electric light outlet handy to the table, and we have out toaster right on the table next to the window. The only trip we have to make to the range for breakfast is for coffee and cooked cereal, when we serve it.

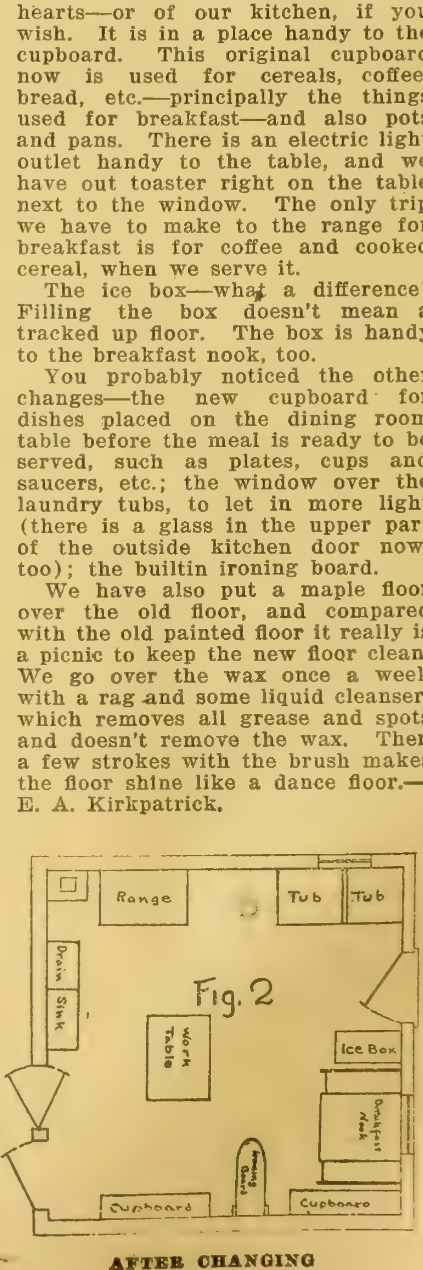
The ice box—what a difference! Filling the box doesn't mean a tracked up floor. The box is handy to the breakfast nook, too.

You probably noticed the other changes—the new cupboard for dishes placed on the dining room table before the meal is ready to be served, such as plates, cups and saucers, etc.; the window over the laundry tubs, to let in more light (there is a glass in the upper part of the outside kitchen door now, too); the builtin ironing board.

We have also put a maple floor over the old floor, and compared with the old painted floor it really is a picnic to keep the new floor clean. We go over the wax once a week with a rag and some liquid cleanser, which removes all grease and spots and doesn't remove the wax. Then a few strokes with the brush makes the floor shine like a dance floor.—E. A. Kirkpatrick.



BEFORE CHANGING



AFTER CHANGING

Personal Column

Keeping Horse-radish for Winter.—I saw where a subscriber's wife asked how to keep horse-radish for winter use. This is the way I keep it. I dig it in the fall and bury it in a box of dirt and put in the cellar. It will keep fresh all winter and can be fixed as you want to use it.—Mrs. B. F., Mancelona, Michigan.

Canton Flannel or Canvas for Gloves.—I am writing to find out where I can buy canton flannel or canton canvas for making men's work gloves, and also the knit wristing. I have tried at all the mail order houses but cannot find the wristing or the quality of canton canvas I would like. Any help will be appreciated. Your paper is the best ever, we enjoy it so much.—Mrs. Vern Horton, Glennie, Michigan.

Found Reproducer for Phonograph.—I have found a four minute reproducer for my phonograph. Several of the readers wrote me but I bought from the first one to write. I want to thank all who were so kind as to answer my request.—Mrs. Sarah Wright, Middleton, Mich.

Salad Dressing Recipe Wanted.—I heard from Mrs. Geo. Mattenson, also received some fancy work from her for what I sent her and I thank you very much for your trouble. I sure make use of the Farm Home department; it is the first thing I look for when the paper comes. I wonder if any of the readers know how to make salad dressing that can be put in fruit jars and used a little at a time. I would like to put some up now so that I could use it this summer.—Mrs. J. E. S., Manistee, Michigan.

Trouble With Bedbugs.—I wonder if any of the readers have had any experience with bedbugs. I moved into a little, old house last spring but did not discover the bedbugs until in August. from then until cold weather I worked hard with gasoline. I find gasoline very good but you have got to touch the bugs. I wonder if there is something one can burn that will kill them all at once. I do not feel strong enough to repeat again this summer. Thanking you in advance for any help, I am a constant reader.—Mrs. C. R., Adrian, Mich.

Who Weaves Rugs?—I would like to ask through the Farm Home department if any one can give me the address of one who weaves rugs from ingrain carpet. I know of the Olson Rug Co., but do not care for their rugs.—Mrs. N. H. Millikin, Ann Arbor, Michigan.

Wants Quilt Pieces.—I am a farmer's wife and love the great out-doors. I wonder if any of the sisters have quilt pieces that they do not want. I would like to get pieces. Our house burned to the ground the 29th of last February and we lost all we had. We need bedding and all my pieces burned so would be thankful for anything that would help.—Mrs. E. J. Hildebrandt, R. 2, Box 57, Grand Junction, Michigan.

Menu for May 10th

*Puree, a l'Indienne
Lamb Stew with Dumplings
Lettuce, French Dressing
Cheese Balls
Snow Pudding
Coffee

***Puree, a l'Indienne**—2 large apples, 4 tablespoons fat, 1 large onion, 1 large carrot, 1 turnip, white 2 leeks, 1 stalk celery, sprig parsley, 1 bay leaf, 1 tablespoon cocoanut; juice ½ lemon, 1 tomato, 1 teaspoon salt, ½ teaspoon red pepper, 1 tablespoon curry powder, 1 teaspoon curry paste, ½ cup cream, some boiled rice, and 2 quarts of water.

Melt fat, cut up all vegetables (prepared) into rough pieces, fry them a little in hot fat, add also curry powder, and fry it. Do not peel apples; simply wipe, cut up and add with vegetables. When fried for 7 minutes, add all ingredients except cream, simmer till soft, then rub all through fine sieve, return to pan to reheat, and gently add cream. Serve rice on paper mat, as croutons are served with most soups.

RECIPES

Favorite Cookies.—1 cup of butter, 1½ cups of sugar (granulated), ½ cup of sour milk, 1 level teaspoon of soda, 1 teaspoonful of grated nutmeg. Flour enough to roll, make quite soft. Put a little sugar over cookies before sliding into the oven to bake. Bake in a quick oven till a light brown.—Mrs. W. B.

Rolls—Take enough bread dough when baking bread, roll half inch thick spread butter on quite thick, sprinkle cup sugar on, then use nutmeg to season nice, then roll it in a long roll. Cut with knife across end. Fill tins, let raise and bake. Mrs. E. J. H.

Griddle Cakes, Sweet Milk—2 cups flour, 1½ cups milk, 3½ teaspoons baking powder, 1 egg, a tablespoon fat, ½ teaspoon salt. Put all ingredients but fat in bowl and mix well. Add melted fat. Bake on hot griddle.

Griddle Cakes, Sour Milk—2 cups flour, 2 cups sour milk, a teaspoon baking powder, 1 teaspoon soda, 3 tablespoons fat, ½ teaspoon salt. Sift dry ingredients into sour milk. Add melted fat. Bake on hot griddle.

Popovers.—2 cups flour, 2 cups liquid (milk or water), 2 eggs, 1 teaspoon fat, ½ teaspoon salt. Put all the ingredients into a bowl. beat with a dover egg beater. Put in hot iron pans. Bake in hot oven twenty-five to thirty minutes. Popovers may be used as a bread, as a desert if filled with whipped cream. Pieces of fruit may be dropped into each pan before baking.

Poor Man's Molasses Cake.—1 cup of molasses, 1 cup sugar, 1 cup shortening, 1 heaping tablespoon ginger, 1 cup boiling water. Use flour enough to handle nicely. Bake in hot oven. Very nice.—Mrs. E. J. H.

Cookies with Carbonate of Ammonia.—Carbonate of ammonia 1 oz, sugar 1 pt, sweet milk ½ pt, sweet cream ½ pt, flour enough to roll them out nicely. Bake quick. They are better to let stand 2 or 3 days.—Mrs. C. D. C.

—if you are well bred!

When conversing never interrupt another speaker. The unduly raised voice and the whisper represent two improper extremes of conversational tone. Do not use verbal exaggerations: "perfectly gorgeous," "perfectly magnificent," "enough to make me die laughing," etc. Do not listen with half a mind or half an ear. Speak of no one by their Christian name whom you do not yourself address by that name; to do so is vulgar. If you are compelled to cut short what someone else is saying, apologize for the necessity. Never correct another's mispronounciation before others, even though you may know the offender well. If you pay compliments, do so intelligently; do not offend common sense. Do not address people who you know slightly by their first names. To do so is very rude.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

I have blotted out as a thick cloud, thy transgressions, and, as a cloud, thy sins; return unto me; for I have redeemed thee. Isa. 44:22.

Sin has no more reality, substance, nor power than a cloud; but it does seem to obscure the real man. However, Love will make the clouds vanish and the real man will be revealed.

WOMEN'S EXCHANGE

If you have something to exchange, we will print it FREE under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR. Editor.

116—Gearhart Knitting Machine for anything of equal value.—Mrs. Ren Collins, Fenwick, Mich.

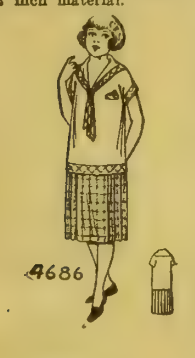
AIDS TO GOOD DRESSING

BE SURE AND SEND IN YOUR SIZE

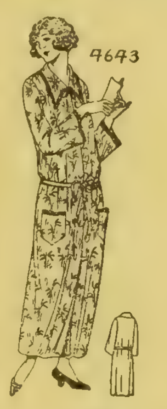
4674.—A Stylish Design.—Satin face crepe in a new shade of green is here portrayed, the drapery is of printed crepe de chine. The dress may be developed without the drapery and the "peasant" sleeve portions. This is a good style for linen, also for silk with net or allover lace. The Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 6½ yards of 40 inch material. For drapery and band cuffs of contrasting material 2¾ yards 22 inches wide is required. Without drapery 2 yards less of material is required. If made without "peasant sleeves" ⅝ yard less is required. The width of the skirt at the foot is 1⅞ yard.

4642. A Simple Night Dress with Cap.—The dainty simplicity of this style recommends it at once. It is suitable for cambric, nainsook, batiste, crepe, or crepe de chine. It may be decorated with embroidery or hemstitching or trimmed with narrow lace edging. The Cap may be of self material, or of lace and net. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 3⅝ yards of 36 inch material. The Cap requires ⅞ yard.

4640.—A Pretty Apron.—Figured cretonne with bindings of black sateen is here portrayed. One could use unbleached muslin with embroidery, or chambrey in a contrasting color for trimming. Lawn, cambric and percale are also desirable and serviceable materials for this apron. The Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large. A Medium size requires 2⅝ yards of 32 inch material.

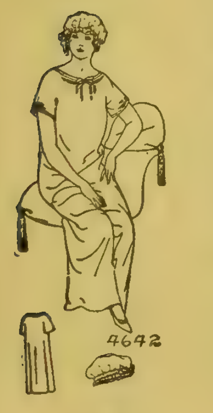


4643. A Comfortable Rest or Bath Robe.—Beacon Cloth, eiderdown, flannelette, corduroy, crepe or satin could be used for this style. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 4⅜ yards of 40 inch material.

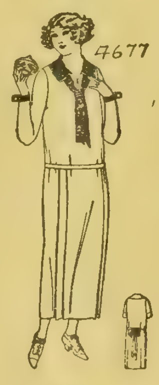


4665. A Dainty Frock for the Little Miss.—This style is attractive in the new prints, and also in silk jersey or wool rep. The closing is at the side under the plaits. The Pattern is cut in 4 Sizes: 4, 6, 8, and 10 years. A 6 year size requires 3 yards of 27 inch material.

4686. A Smart Middy Dress with Collar and Tie in One.—Plaided gingham is here combined with white Indian Head. This is a good model for linen and pongee. The Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. A 10 year size requires 3½ yards of 36 inch material. To make as illustrated requires 1¼ yards of plain material and 2¼ of plaid material 36 inches wide.



4664. A Simple Comfortable Frock.—Printed crepe was used for the "smock," and batiste for the guimpe. One could have jersey or plaid suiting in combination with wool crepe or silk. The Pattern is cut in 4 Sizes: 4, 6, 8, and 10 years. A 6 year size requires 1⅛ yard of 27 inch material for the guimpe and 1⅞ yard for the smock.



4677. A Smart "Little" Dress.—Serge, crepe or linen could be used for this design, with velvet satin or organdy for collar and cuffs. The Pattern is cut in 3 Sizes: 16, 18, and 20 years. An 18 year size requires 3½ yards of 40 inch material. For collar and cuffs of contrasting material as illustrated ½ yard is required. The width at the foot with plaits is 1¾ yard.

No Odor
No Wicks

No Noise
No Smoke

Beautiful Vapo Oil Range looks and acts like a gas range

32-36 hours of smokeless, odorless heat from a gallon of kerosene

Vapo is to the ordinary oil stove what the electric light is to the candle. It solves every cooking problem. You can bake, roast, boil, fry or stew with a Vapo. Everywhere, people proclaim it the cleanest, most convenient, most beautiful oil range ever seen. At state fairs thousands saw it pass tests out of the question for ordinary oil stoves. Any Vapo will duplicate these tests.

Burns gas made from kerosene

Each Vapo burner is a miniature gas plant. It generates hydro-carbon gas from kerosene and burns it with a hot, clean, blue flame ideal for cooking. Good baking and roasting are easy with the Vapo because the flame can be regulated from a low simmering heat to a heat intense enough for quickest cooking needs. Vapo has lever valves like a gas stove and these are provided with automatic safety locks preventing accidental shifting or moving by children.

Wickless, chimneyless and troubleless

Nothing on a Vapo to fuss with. No wicks to trim or adjust. No chimneys to burn out and fall into the burner. If kettle boils over, the liquid can't get into the burner and choke the flame. The Vapo burner is guaranteed for the life of the stove. Vapo heat does not smart the eyes nor soot up utensils.

Bake slow and fast at same time in Bolo oven

Adjustable Bolo plate makes oven big or little as you wish. It concentrates the heat and gives you two ovens in one. Odors from one oven do not permeate the other oven. Perfect ventilation insures light baking and pastry. Vapo is the *only* oil range with the built-in Bolo oven. You can have right or left hand oven. Ask dealer to show you Vapo. Write for booklet.

The Road to Home

Though written faithfully, his letters from home seemed to have had a way of arriving at his hotel in one city just after he had left for the next—and of never catching up.

Three weeks passed—business conferences, long night journeyings on sleepers, more conferences—with all too little news from home.

Then he turned eastward. In his hotel room in Chicago he still seemed a long way from that fireside in a New York suburb. He reached for the telephone —asked for his home number.

The bell tinkled cheerfully. His wife's voice greeted him. Its tone and inflection told him all was right with the world. She hardly needed to say, "Yes, they are well—dancing right here by the telephone. . . . Father and mother came yesterday. . . . Oh, we'll be glad to see you!"

* * * *

Across the breadth of a continent the telephone is ready to carry your greetings with all the conviction of the human voice. Used for social or business purposes, "long distance" does more than communicate. It projects you—thought, mood, personality—to the person to whom you talk.

Fair and Uniform Assessments Is the Way Out

(Continued from Page 3)

cent issue showed that the Ford Motor Company alone has assets of $840,000,000 and that if the Ford plant attains its scheduled production during the present season its fair valuation of assets will be $1,240,000,000. Ford's own official statement is more modest, yet he admits assets totaling considerably over a half billion dollars.

As the editor of the Hastings Banner puts it, "In view of what the annual statements of all the Detroit corporations will disclose, is it any wonder that the balance of Michigan is becoming restless when Wayne county escapes with an equalized valuation of but $2,666,500,000, or but 40 per cent of the equalized value of the state? Every well informed person in Michigan knows that above 50 per cent of the actual wealth of Michigan is centered in Detroit."

It is interesting to note in this connection that the equalized assessed valuation of Wayne county is only about twice as large as the assets which the Ford Company alone will have at the end of the present season if we can believe the Wall Street Journal estimates. It is probably in the hope of retaining this unjust distribution of the tax burden that a few Wayne county people are so intensely interested in having a legislative reappointment so that they may have a greater voice in outlining the tax laws and policies for Michigan.

Catching Mr. Nagel Off Guard

When Mr. McPherson was arguing before the State Board of Equalization for a reduction in rural equalized valuations, Mr. Nagel chairman of the Wayne County Board of Supervisors and acknowledged authority on Wayne county tax matters, tried to leave the impression that Detroit real estate was assessed above its real cash value, but, of course, this is ridiculous to anyone who is acquainted with the real facts.

Last October a special committee of the Detroit City Council was investigating the matter of procurring a cite for a $5,000,000 memorial which it was proposed to erect to the soldiers, sailors and marines of the recent World War. Some one suggested that Henry Ford be asked to donate to the city property lying north of the public library on Woodward Avenue and held in the name of the Lincoln Motor Car Company.

In commenting on this project the Detroit Free Press on page 1 of its issue of October 20, 1923, has this enlightening paragraph:

"Even with the donation of land by the Motor King it is doubtful if the city can buy the surrounding property for the $1,500,000 available. The property is assessed for $1,700,000 and councilman J. O. Nagel expressed the belief that it could not be bought **for three times that amount.** Mr. Nagel stated at the close of the meeting that in past condemnation suits the city has paid on an average of three times the assessed valuation."

In order to bring this recital of the admissions of Mr. Nagel down to date we might quote from the Detroit Evening Times of April 18, 1924, where appeared an article which informs us that the Wayne County Board of Supervisors presented a silver mounted gaval to Mr. Nagel, their chairman. We read that "Mr .Nagel, in responding, said he was proud of the record of the board in that Wayne county had the lowest per capita debt of any county in the United States.

How Is It In Other States?

Michigan farmers are not alone in experiencing this iniquitous unfairness in the matter of assessment. Illinois, with its great metropolis of Chicago, showed a similar situation, that is until recently. Then farmers in 56 counties of Illinois, working through their County Farm Bureaus, decided to find out whether or not the relative valuations of farm property and city real estate were fair. They wished to know whether they ought to ask for reductions in the valuation of farm land, and if so, how much reduction they could fairly request.

The Illinois farmers went about getting at the real facts in a systematic way, acting under the direction of Mr. John C. Watson, Director of Taxation and Statistics of the Illinois Agricultural Association. The plan they used may not have been original but it was at least effective. But let John Watson tell the story in his own words. He writes in part:

"The plan they adopted is an old one often used in other states and sometimes used in Illinois. They made from official records and without selection, a card catalog of sales values of from 100 to 500 pieces of property recently sold in each county, including both farm lands and town and city lots. They then inserted on the cards the valuations of the same properties for tax purposes, as given in the assessment books. They were able in this way to compute the average percentage of the sales values appearing in the assessments.

Rural Assessments High

"The results of the investigation in 56 counties were interesting. In about half of the counties it was found that, in spite of wide variations in individual properties, city and country real estate was assessed with fair uniformity between the two classes In about one-half of the remaining counties, or one-fourth of the total number, land was found to be assessed at a higher percentage of its actual value than lots, but the differences were not large. In the remaining one-fourth of the counties the differences were larger, farm land in a few counties running as much as forty or fifty per cent higher than lots.

"Other County Farm Bureaus in Illinois followed methods of their own in working out this problem. The result is a decrease of over $100,000,000 in assessed valuations in farm land in Illinois this year. if half of this decrease is reflected in decreased taxes, Illinois land owners will pay about $2,000,000 less taxes this winter than they would have paid had the high valuations of past years remained.

"What has been done by farmers of Illinois this year can be done by the farmers of any other state. It can be done by city people if their conditions require action. Organization, however, is necessary, for individuals cannot get very far with this kind of work.

Organization Is Essential

"Organizations can also accomplish other needed work, such as changes in the constitution or in the revenue laws to make them fairer. An income tax in Illinois to relieve real estate of the unfair burden of taxation it is carrying is the most notable example."

Several County Farm Bureaus in Michigan are studying this matter and many of them will in the very near future put on campaigns similar to those carried out in Illinois. As long as we continue to have the general property tax as the chief source of our revenue for local governmental purposes it would seem that the least we can do in the interests of justice would be to make every effort possible to see that the general property on which this levy is made is fairly and equally assessed.

And at the same time it might also be desirable to make an effort to get more property, both real and personal, but especially personal, on the tax rolls. By uncovering hidden wealth and equalizing assessment values we should go a long ways toward bringing down the tax rate and giving some measure of relief and justice to Michigan farmers and home owners.

MICHIGAN SECOND AS POTATO STATE

REPORTS show that Michigan takes second place when it comes to producing potatoes. The first six states rank as follows: New York, Michigan, Wisconsin, Minnesota, Pennsylvania and Maine. These six states harvest nearly half of the total crop for the country, which averages more than 374,000,000 bushels annually.

The national board of underwriters has estimated that the fire loss in the United States for 1922 totaled $506,541,001. Of this amount $25,776,951 was said to be due to the carelessness of smokers.

DAIRY and LIVESTOCK

BREEDS OF BEEF CATTLE

2. (a)—Polled Hereford

THE polled Hereford is a new breed which has been developed in America by mating Hereford cattle that are naturally polled. It was established by Warren Gammon in 1901 and has increased in numbers and popularity at a fairly rapid rate in the last few years. Because a large percentage of the calves from horned-Hereford cows mated with Polled-Hereford bulls are without horns or even scurs, the Polled-Hereford breed has developed more rapidly than would have been possible otherwise. The popularity of polled cattle is steadily increasing, especially where farming is done on a comparatively small scale.

The double-standard Polled Herefords are eligible to registry in both the American Hereford Herdbook and the American Polled-Hereford Record. They may be distinguished from the Hereford only by the polled characteristics.

GOING INTO PURE BRED CATTLE BUSINESS

I wish to start to raise pure bred cattle. I have been thinking of the beef and milk kind, though at present I am thing a little more on the beef kind. I would be glad to know what breed you think is best. I have been thinking of the Durham and I would like to know the difference between the Durham and the short-horn Durham, if any. How would you advise me to make a choice of either breed and where are they for sale? I have 640 acres of land and 140 of it is cleared. I also wish to know what you think is a fair value or price for a Durham cow, 3 to 9 years old weighing from 1100 to 1500 pounds, with calf by side.—R. K. C., Hubbard Lake,

—There are three breeds of beef cattle, namely the Shorthorn (Durham), Hereford, and Aberdeen-Angus. The Shorthorn has been somewhat of a favorite in the farming states, owing to a little more size and somewhat better milking properties than the other two breeds. The Hereford has been the favorite on the western range, owing to its ruggedness and grazing properties, while the Angus has a fair distribution in both the farming states and on the range.

There is absolutely no difference between the Shorthorn and the Durham, they being one and the same breed.

In the choice of one of the three breeds mentioned above, you should be guided almost solely by your personal preference, as good individuals of any one of the three breeds would be satisfactory.

With the amount of pasture land which you have, I believe you are in good shape to engage in the handling of one of the beef breeds. Just at present the prices being received for pure-bred breeding cattle are the lowest that they have been in a great many years. In fact, it would appear as though this is an especially opportune time to buy pure-bred breeding stock. The prices of pedigreed livestock, like the prices of any other commodities, move in cycles and authorities are generally agreed that the cycle is at its lowest ebb at present and that we will soon see an increase in the value of this stock.

Very good cows with calves by side should be obtained for from $150.00 to $200.00. Excellent individuals of superior quality may cost from $300.00 to $400.00. On the other hand, some parties would sell them much less than I have indicated above. The cheaper animals are very often inferior, however, and sometimes dear at any price. There are a considerable number of breeders advertising in the Michigan farm papers from whom you could obtain stock.—Geo. A. Brown, Professor of Animal Husbandry, Mich. Agricultural College.

VETERINARY DEPARTMENT

COW'S UDDER SWOLLEN

Would you tell me what to do for my cow? She has a swollen udder. After freshening, the cow had been in a week, and her udder became as hard as a stone. What would cause this?—D. W., Grand Rapids,

—Bathe the cow's udder three times daily with real warm water for thirty minutes at a time, dry the skin with a dry cloth, and massage the udder well with soap liniment (U. S. P.), seven parts; and fluid extract of phytolacco, one part. —John P. Hutton, Assoc. Prof. of Surgery & Medicine, M. A. C.

NO SPECIFIC TREATMENT FOR GREESE HEEL

"I would like a receipt for greese heel on a horse.—F. O., Fenton.

—There is no specific treatment for grease heel on the horse. A treatment that will cure one case often does not work well on another. The kind of treatment depends upon the degree of inflammation of the skin and the length of time the animal has been affected. Many cases respond much more readily to treatment after they have been polticed for several days in white rock, then thoroughly cleaned up before drugs are applied. I think it would be much better for you to let your veterinarian make an examination of your horse, then he can prescribe treatment much more intelligently than I can by mail. The history is really too brief for me to outline any definite treatment.

Should you desire to write me describing the case as best you can and giving all the symptoms, I would be very glad to outline treatment. —John P. Hutton, Assoc. Prof. of Animal Pathology, M. A. C.

At the door of the market

FARM shippers on the New York Central Lines have a great advantage over producers of agricultural products located in other sections of the country.

The great city markets in the thickly populated industrial section traversed by the New York Central Lines are within easy shipping range of the farms and orchards located on the Lines.

New York, Chicago, Detroit, Cleveland, St. Louis, Boston, Pittsburgh, Buffalo—eight of the eleven ranking cities in the country—are served by the New York Central Lines. Fifty million people are in this territory.

With the constant increase in the population of the cities, farm shippers on the New York Central Lines are assured of an ever growing market.

INTERNATIONAL
A Feed For Every Need

Dairymen everywhere know that every sack of International Special Dairy Feed is guaranteed to give 20 extra quarts of milk when compared with wheat feeds or ground grains. But not everyone knows that International has a feed for every need—a brand that matches Special Dairy for quality.

Int'l Special Dairy Feed makes more milk at less cost than any other feed.

Int'l Calf Meal will raise three calves at cost of raising one on new milk.

Int'l Pig Meal—One pound equals in feeding value one pound of fresh milk.

Int'l Egg Mash when fed with grain will often double egg production.

Int'l Buttermilk Chick Mash when used first ten weeks will insure quick and satisfactory growth and prevent usual heavy death loss during this period.

Int'l Growing Mash—Begin using at age 10 weeks. This will insure steady growth and sturdy body.

Dan Patch Horse Feed.

Int'l Chick Feed, Int'l Growing Feed and Int'l Poultry Feed will provide proper grain ration as indicated.

Int'l Climax Cattle Feed—This feed has caused cattle to double in weight and double in price inside five months.

Int'l Sugared Hog Feed with Mineral contains 3% mineral mixture made from following formula advocated by Iowa Agricultural Experiment Station: One part Salt, two parts Calcium Carbonate, two parts Bone Meal or Spent Bone Black. Follow our feeding directions and your hogs will be supplied with the necessary and vitally important mineral in required amount. Every sack International Sugared Hog Feed will save 6 to 7 bushels corn.

DAIRYMEN! HOG AND CATTLE RAISERS! POULTRY RAISERS!

Newaygo Testing Ass'n Holds Anuual Meet

THE Newaygo Cow Testing Association held its twentieth annual meeting at Fremont on April 18th.

The season has been backward in Newaygo County — delayed farm work needed attention—and yet 15 of the 26 regular members of the Cow Testing Association attended the meeting. This speaks well for the interest of the members. The Association is old but the spirit is fresh.

In fact the Association is so popular that Tester Johnson reports five herds being tested out monthly in addition to the regulation number. These extras will soon be in a separate Association, for County Agent Clair Taylor has the second Cow Testing Association ready to go, and a third is partially formed. We cannot say much longer "The Newaygo Cow Testing Association" but will have to designate one of three.

In the business meeting Raymond Kempf of Fremont was elected President for another year. Kempf is the only member whose herd, all purebred Holsteins now, has been in the Association since the start in 1905, although several other members have been in for three or four years.

Erwin Price—formerly herdsman for four years at M. A. C., but now running a Guernsey herd near Fremont — was re-elected Secretary-Treasurer. This mark of recognition came as a result of Price handling finances so skillfully last year that a surplus of eleven cents was left in the treasury.

Gerritt Meeuwenberg, now on the home farm after spending several years in Advanced Registry Testing for M. A. C., was elected Vice President.

The Association decided to hold a picnic during the summer at the river farm of Orville Atwood. President Kempf appointed a Holstein man, Meeuwenberg, a Jersey man, Nelson, and a Guernsey man, Rotier, to have charge of arrangements, saying that no breed favoritism should be permitted. A spirit of friendly rivalry exists between the lovers of the three leading dairy breeds represented in the Cow Testing Association.

Twenty boys from Mr. Holden's agricultural class in the Fremont High School attended part of the meeting to hear a dairy talk given by J. G. Hays of the Dairy Extension Department, M. A. C. Hays stressed "home" feeding of cows as well as new ideas on mineral requirements; pointed out the sales value of dairy cattle backed by Cow Testing Association records, and emphasized the value of real pure bred bulls.

Digging in King Tut's tomb revealed no more precious treasure than was recently discovered in the process of spring house cleaning in the vault of the Fremont State Bank. For behold the Prize Cup was found! This cup was procured by the Association in 1913 to be given out yearly to the cow producing the highest yield of butter fat during each Association year. The Newaygo County Farm won it during the year 1915-16, then H. W. Zerlaut captured it next season, then—it disappeared! To be found recently, years later!

This cup will be awarded for last year to A. C. Nelson of Holton, Michigan. His Jersey cow made 586.7 pounds fat and 8787 pounds milk. Mr. H. Zerlaut of Fremont would be winner for 1921. His grade Guernsey cow made 549.7 pounds fat and 10581 pounds milk In the future this cup will be awarded to the cow that produces most butterfat, age considered. Any breeder holding the cup three years in succession becomes permanent owner.

Truly the interest and enthusiasm shown by the members of this, the oldest Cow Testing Association in the United States, should serve as an inspiration to fellow dairymen in Michigan's 82 Cow Testing Associations.

MICHIGAN JERSEY COW EXCEEDS STATE RECORD

OXFORD DAISY'S GOLD CROWN 462703, a splendid young Jersey, has qualified as the Michigan Junior four-year-old champion, and on the same test won Gold and Silver Medals. She commenced her test at four years of age, and in one year produced 14501 pounds milk, 755.40 pounds butter-fat. This record, together with the calving requirements which she met, entitled her to both the Gold and Silver Medals. She displaces Majesty's Iris which held the previous record with 679 pounds butter-fat.

Her sire, Oxford Daisy's Flying Fox, has thirty-nine daughters and one son in the Register of Merit. Her dam is Foxhall's Crown Princess 260336, which has three official tests, one of which is within less than two pounds of the 600 pounds butter-fat mark and that record was made when she was a Senior three-year-old.

Her proud owner is Mr. H. F. Probert of Jackson, Michigan.

CURES DOG OF SHEEP KILLING

A Missouri farmer recently devised a new scheme which will prevent dogs from killing and chasing sheep and at the same time do away with the necessity of killing the dog to effect a cure. He ties the offending dog to a large sheep and then gets out of the way and watches the fireworks. The sheep will drag the dog until he is sick of the job and will then turn on him and butt all the taste for mutton out of him. It is declared to be a perfect cure and many living near this farmer have tried it with success.

The Question of Opposites

The teacher was giving a drill in the meaning of words and their opposites.

"Now tell me," she began, "what is the opposite of misery?"

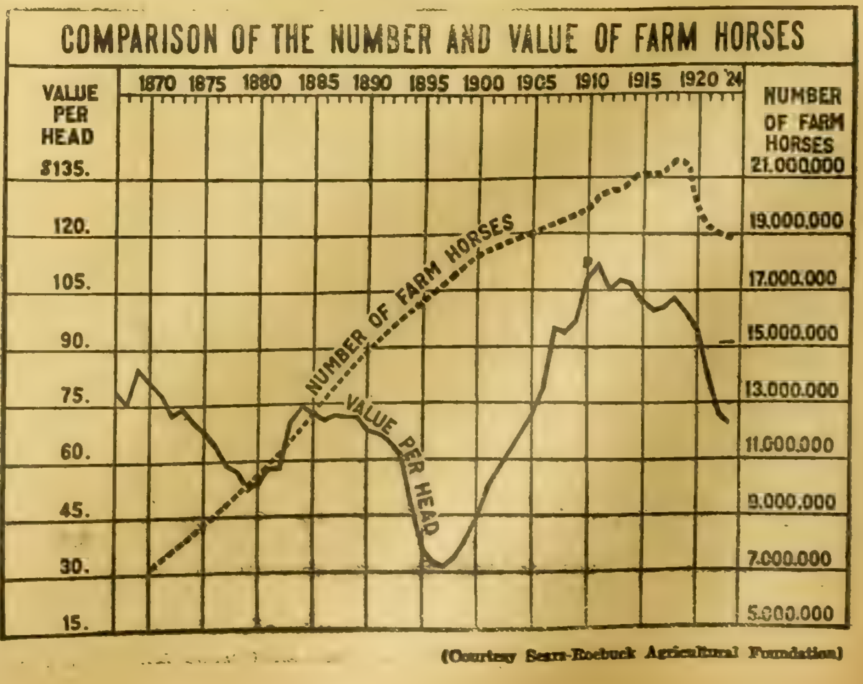
"Happiness!" said the class in unison.

"And sadness?" she asked.

"Gladness."

"And the opposite of woe?"

"Giddap!" shouted the enthusiastic class.



(Courtesy Sears-Roebuck Agricultural Foundation)

Rosen Rye Yields 45 Bushels Per Acre

(Continued from Page 4)

harder to replace them with true Rosen rye than it would have been had the crossing not occurred. This is because the old fashioned common rye would never have been kept by the farmer, once he came to know the Rosen rye.

An organization of farmers to take care of pedigreed grains was formed in 1911 and reorganized under the name of the Michigan Crop Improvement Association in 1917. A Jackson County member of this association was sent a bushel of Rosen rye in 1912. Te planted it away from other ryes on an acre of ground and obtained thirty-five bushels from one bushel of seed in 1913. His neighbors and friends, who were not in the habit of expecting more than fifteen bushels from an acre of rye, helped him thresh. Soon the whole country-side around Parma, in western Jackson county, and around Albion in eastern Calhoun county, grew rye as a winter crop and little or no wheat. Other countries took up Rosen rye with the aid of the organization, and the activity of county agricultural agents, who were now taking their places in the improvement of Michigan agriculture.

Finally, in 1917, the gradual spread of the new rye had caused it to occupy about 15,000 acres in Michigan. Up to this time the new Rosen rye was kept pure by only a few farmers, and most (about 95 per cent) of the so-called Rosen rye was in reality more or less crossed with the old fashioned common. This, the so-called Rosen rye, was quoted on the Detroit market in 1917, and car load lots began to be available to other states.

About 5 per cent of the 15,000 acres passed inspection in 1917 under the Michigan Crop Improvement Association, and certified grain began to be sold to the farmers of Michigan and other states. As a result of this activity in war times, when farmers were urged to sow the best seed, approximately 250,000 acres of Rosen rye were sown in Michigan in the fall of 1917. Of this acreage the inspectors of the Michigan Crop Improvement Association passed about 1,000 acres in June, 1918. Again under the stress of war conditions the acreage was almost doubled for the year of 1919 when there were about 500,000 acres of Rosen rye out of a total of 900,000 acres of rye in the state. In 1920, Michigan for the first time exceeded the other states of the Union in rye production.

The growing of Rosen rye in Michigan is now so general that even the old fashioned common rye is replaced with mongrel Rosen. The growing of Rosen rye in other states began commercially as early as there was a supply. It went from farm to farm across the state line into Indiana and Ohio until their upper rows of counties came to have as much Rosen rye as the southern row of counties in Michigan.

When carloads began to be available in 1917, the trade grew rapidly increasing steadily year by year, until now the Michigan supply from elevators is usually called Rosen rye. Much of this seed is purchased in sections where the rye is reasonably pure, but unfortunately, few people seem to realize the fact that rye cross-fertilizes, and that perhaps 75 per cent of it is really mongrel. The results obtained from this commercial seed can not be equal to those obtained by the use of seed inspected in field and bin by the Michigan Crop Improvement Association.

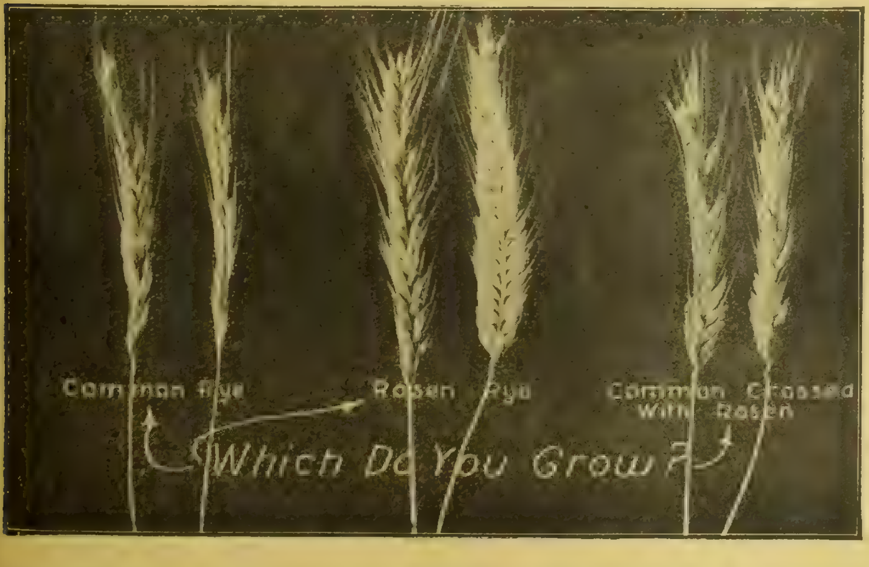
The extension of pedigreed Rosen rye into other states began in 1917, when the inspection work began, but the calls made by the members of the Association were imperfectly reported that year. The records for 1918 and 1919 show that pedigreed Rosen rye was sold into all except the southern states and even into Georgia, Texas, and New Mexico. In 1919, 1794 bushels of pedigreed Rosen rye was shipped as far as the state of Washington, and some was sold in Canada. Thus, the Rosen rye came to be International, and planted from the Atlantic to the Pacific. In 1918, Illinois and Indiana were the largest purchasers of pedigreed Rosen rye outside of Michigan, yet it is probable that Michigan bought more pedigreed Rosen rye seed than all the other states combined. In 1919, only two other states exceeded Michigan in the purchase of pedigreed Rosen rye. As more Michigan farmers grew their own pedigreed seed, more and more of it has been sold into other states. Still there is plenty of room for Michigan farmers to replace their mixed seed with the pedigreed.

A Minnesota man purchased pedigreed Rosen seed from Michigan in 1918 and sold 3,000 bushels of seed in 1919. Others have done likewise and Rosen rye is coming to be the standard rye for the corn belt. This is the statement of a recent Farmer's Bulletin (No. 1358), entitled "Growing Rye in the Western Half of the United States."

At the international Grain and Hay Show given in connection with the International Stock Show at Chicago in December, 1919, Rosen rye took ten prizes out of the sixteen that were offered; in 1920 it took the first 22 prizes, and has held this high place at that show since that time. At first the prizes given to Rosen rye went to Michigan farmers, but other states are now winning prizes with Rosen rye, leaving sixteen prizes for Michigan in December of 1923.

Because of the large amount of Mongrel Rosen rye in Michigan the Crop Improvement Association needed an isolated spot. They chose South Manitou Island, whose entire acreage planted to rye is now planted to certified Rosen. This island is ten miles off shore and directly west of the Leelanau peninsula.

The inspection of the fields planted to registered Rosen will occur in June and the grain inspection will occur shortly after harvest. Those who wish to obtain pedigreed Rosen rye seed for fall planting may do so by addressing the Secretary of the Michigan Crop Improvement Association at East Lansing during July and August.



This comparison is worth study. The old-fashioned black rye is here called common. It has almost entirely disappeared from Michigan agriculture. The trouble now is with the crosses between it and Rosen that still remain.

Larro
THE READY RATION
FOR DAIRY COWS
Larro
THE LARROWE MILLING CO.
DETROIT, MICH. U.S.A.

There's 4-Way Safety in Every Bag

Safe—because Larro has just the right amount of protein from the right sources. More is often dangerous. Less is often not enough.

Safe—because the quantity and high quality of each ingredient absolutely do not change. No variations to throw cows off feed. Larro-fed cows are always in the best of health.

Safe—because a powerful electro-magnet prevents tramp iron and steel from getting into finished Larro. Absolutely no nails, wire, needles or junk in Larro.

Safe—because it is free from adulteration and fillers. It contains nothing but clean, wholesome, milk-making, profit-making ingredients.

10,000 miles guaranteed and yet you save 1/3

Riverside OVERSIZE CORD Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schworm,
Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

Free to Asthma and Hay Fever Sufferers

Free Trial of Method That Anyone Can Use Without Discomfort or Loss of Time.

We have a method for the control of Asthma, and we want you to try it at our expense. No matter whether your case is of long standing or recent development, whether it is present as Chronic Asthma or Hay Fever, you should send for a free trial of our method. No matter in what climate you live, no matter what your age or occupation, if you are troubled with Asthma or Hay Fever, our method should relieve you promptly.

We especially want to send it to those apparently hopeless cases, where all forms of inhalers, douches, opium preparations, fumes, "patent smokes," etc., have failed. We want to show everyone at our expense, that our method is designed to end all difficult breathing, all wheezing, and all those terrible paroxysms.

This free offer is too important to neglect a single day. Write now and begin the method at once. Send no money. Simply mail coupon below. Do it Today—you even do not pay postage.

GET OUT THE DISHPANS, THE BEES ARE SWARMING!

IN the days of our grandfathers when the bees filled the air with their merry hum, which was the usual sign of leaving for a new home, the family band was called out to stop such proceedings. Unto this day, the modern beekeeper cannot convince the "old timer" that the noise does not stop the bees. By the way it is merely the natural instinct of the bees to alight before leaving for new quarters. The reason of this is for them to make sure that their beloved queen is safely with them.

Years ago the beemasters valued their colonies by the number of swarms, which they sent forth. While now the best colony is the one that does not swarm but remains together, united as one and gathers honey for their owner. Bees cannot swarm and gather surplus honey at the same time. So it is up to the beekeeper to keep his bees satisfied and remain in their hive. The following are the reasons why bees swarm: Lack of storage room for honey, poor vetilation, insufficient breeding room, direct contact with the hot sun, and a queen more than two years old. Bees generally start swarming preparations just at the beginning of the main honey flow.

By adding more supers, expanding the brood nest, raising the hive up on small blocks of wood and setting the hive under a small tree in the orchard one can keep down swarming to a great extent. About queens, now it is well known that a hen lays her greatest number of eggs in her first and second year, so it is with a queen bee. At the end of her second year a queen should be replaced with a young one of more vigorous blood.

Removing the queen cells will hinder the preparations for swarming but will not alone stop it. In doing this one would have to visit them once every nine days for that purpose and then sometimes they will swarm anyhow.—Kenneth E. Farmer.

BATHING WITHOUT BOTHER

(Continued from Page 4)

grease trap can be attached to the spud of the lavatory and the waste of the tub by a special slip nut which can be purchased for this purpose.

CAUTION: No faucet or any other means for closing the pipe should be attached at F, since provision must be made for expansion of the water in the tank when heated. Also do not light the heater until the range boiler is full of water.

Sewage Disposal

Since a closet is not provided for in this outfit, it is not necessary to have a very elaborate method for taking care of the waste water. A grease trap made from a barrel used as a form will be sufficient. Merely dig a hole in the ground adjacent to the house (if this hole is dug next to the house wall is will eliminate the danger of freezing of the inlet pipe) about eight inches larger than the barrel you are going to use as a form and about one foot deeper. Put about four inches of concrete in the bottom of the hole and set the barrel on the concrete. Fill in around the outside with concrete. At the top on opposite sides leave two notches in the side walls deep enough for the inlet and outlet pipes.

After the concrete has set remove the barrel and insert the inlet pipe into the notch nearest the house and a 4 inch tile elbow in the other notch. Connect up the outlet with your farm drainage system if possible or if you haven't drains, merely lay fifty to seventy-five feet of 4 inch drain tile with about six inches fall. The tile to be laid with open joints. If your soil is heavy clay it will be advisable to put about four to six inches of gravel under the tile. Provide a cover for the trap and cover with earth.

Materials Required

The following list of material covers the most of the items necessary in installing an outfit if arranged as shown on the drawing. Different arrangements of the fixtures will require slightly different amounts of piping and fittings.

One range boiler stand; 1 range boiler, 30 gallon; 1 five foot bath tub; 1 lavatory; 1 force cistern pump; 1 kerosene heater; 1 three-quarter inch gate valve; 10 feet one-half-inch black pipe, 35 feet three-quarter-inch black pipe; 26 feet one and one-quarter-inch black pipe; 6 three-quarter-inch unions, black; 5 three-quarter by one inch Mal. bushings, black; 10 three-quarter-inch Mal. ells, black; 1 three-quarter-inch Mal. T, black; 1 three-quarter by one-half by three-quarter inch Mal. T; 1 one and one-quarter by one and one-quarter by three-quarter inch T; 2 one and one quarter inch Mal. Ts; 1 one and one-quarter inch plug. Total cost, $70.00 to $90.00.

This outfit should find a place in a good many of our farm homes where a cheap system is desired. It is also especially well adapted for tenant houses and summer cottages. In the near future a satisfactory method for adding an indoor closet will be worked out.

OH, MONEY! MONEY!

(Continued from Page 8)

He walked with them, too, quite awhile, showing them the sights. He was very kind—he seemed so especially kind, after all those other coldhearted people, who didn't care! That was the day she and Mrs. Moore both lost their pocketbooks, and had such an awful time getting back to New York. It was right after they had said good-bye to the nice young gentleman that they discovered that they had lost them. They were so sorry that they hadn't found it out before, Miss Flora said, for he would have helped them, she was sure. But though they looked everywhere for him, they could not find him at all, and they had to appeal to strangers, who took them right up to a policeman the first thing, which was very embarrassing, Miss Flora said. Why, she and Mrs. Moore felt as if they had been arrested, almost!

Miss Maggie uprsed her lips a little, when she read this letter to Mr. Smith, but she made no comment.

From Jane, also, came several letters, and from Frank Blaisdell one short scrawl.

Frank said he was having a bully time, but that he'd seen some of the most shiftless-looking grocery stores that he'd ever set eyes on. He asked if Maggie knew how trade was at his old store, and if Donovan was keeping it up to the mark. He said that Jane was well, only she was getting pretty tired because she would try to see everything at once, for fear she'd lose something, and not get her money's worth, for all the world just as she used to eat things to save them.

Jane wrote that she was having a very nice time, of course,—she couldn't help it, with all those lovely things to see; but she never dreamed that just potatoes, meat, and vegetables could cost so much anywhere as they did in hotels, and as for the prices those dining-cars charged—it was robbery—sheer robbery! And why an able-bodied man should be given ten cents every time he handed you your own hat, she couldn't understand.

At Hillerton, Mr. Smith passed a very quiet summer, but a very contented one. He kept enough work ahead to amuse him, but never enough to drive him. He took frequent day-trips to the surrounding towns, and when possible he persuaded Miss Maggie to go with him. Miss Maggie was wonderfully good company. As the summer advanced, however, he did not see so much of her as he wanted to, for Father Duff's increasing infirmities made more and more demands on her time.

The Martin girls were still there. Annabelle was learning the milliner's trade, and Florence had taken a clerkship for afternoons during the summer. They still helped about the work, and relieved Miss Maggie whenever possible. They were sensible, jolly girls, and Mr. Smith liked them very much.

(Continued in May 24th issue.)

Very Simple

Little Girl (to Grandfather)—"Grandpa, why don't you grow hair on your head?"

Grandpa—"Well why doesn't grass grow on a busy street?"

Little Girl—"Oh, I see; it can't get up through the concrete."

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, of The Michigan Business Farmer, published biweekly at Mount Clemens, Mich., for April 1, 1924. 1. That the names and addresses of the publisher, editor, managing editor and the business managers are: Publisher, George M. Slocum, Mount Clemens, R. F. D. No. 4, Mich. Managing Editor, Milon Grinnell, Mt. Clemens, Mich. That the owners are: Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock. Pratt, Charlevoix; J. Ritzler, Rogers; F. R. Schalck, Chicago; F. A. Lord, Lapeer; W. Schriner, Marine City; A. Voss, Luther; B. Wolff, Riggsville; F. Yost, Bridgeport. 3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none so state.) Citizens Savings Bank, Mt. Clemens; R. R. Olds, Detroit, Mich. George M. Slocum, Publisher. Sworn to and subscribed before me this 26th day of April, 1924. Ralph E. Griffith. My commission expires November 13, 1927.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 680, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shennandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty,, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for a box of Walko or $1.00 for extra large box—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

GOBBLER LOST USE OF LEGS

Can you tell me what ails my gobbler, last fall he got stiff in the legs and has never gotten over it? He is not sick and eats good, just does not have the use of his legs. He is not too fat, as I only feed him wheat. Have raised turkeys 10 years and never had one act like this one does. If you can give me any remedy for the trouble will greatly appreciate it.—W. M., Davisburg, Michigan.

—It is difficult for one to accurately determine the cause of leg weakness, unless entirely familiar with the conditions prevailing in the flock. Poultry of all kinds may develop stiffness of the legs due to an insufficient supply of calcium or a lack of green food. Ordinarily, growing stock will respond to a ration containing a small percentage of cod liver oil. The D Vitamin in the cod liver oil seems to assist in calcium retention, as indicated by the higher calcium content in the blood following such a feeding practice.

Occasionally another condition known as Ergotism, develops. This may be induced by feeding ergot in rye, or smutty grains. A complete change of diet would in this latter case be recommended. I would suggest that you use the cod liver oil treatment on the gobbler affected. A moist mash containing rolled oats and bran with a small percentage of cod liver oil should correct this trouble if it is due to malnutrition. This condition may correct itself in the course of the next six weeks when the turkey stock is permitted free range, and green succulent food is available.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

TO TELL SEX OF GEESE

Will you kindly advise me how to tell the difference between a male and female in geese, while quite young, from six months to 1 year?—E. A. P., Atlanta, Mich.

—It is extremely difficult to determine which are males and which are females, especially among the immature stock. Ordinarily, the sex of the adult geese can be determined quickly by the pugnacious disposition of the gander which usually shows fight, especially during the breeding season. A female goose will seldom attack a person, whereas the male is always ready to offer protection and usually advances towards the intruder. The gander moreover, is coarser, especially about the head and neck, and usually the female shows more trimness about the head and neck and is a little lower in station.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

SOME THINGS ABOUT OUR POSTAL SYSTEM

EVERY year the United States Postal Service handles 23,000,000,000 articles. Ever year the increase in number of a[illegible]es in the mails is more than a bi[illegible] Of the total mail submitted, [illegible]000,000,000 pieces are letters.

Every year the Postal Service, on an average, delivers 112 letters to every man, woman, and child in the United States.

Atlas would have had a tough time indeed lifting the annual load of letters alone that the Postal Service moves. It is estimated to total 133,350 tons.

Every second of the twenty-four hours of every day there are 389 letters dropped into letter boxes; every minute, 23,334, and every hour 1,400,000.

The farmer is not neglected by the Postal Service. Today 44,552 rural routes supply mail to 6,504,592 families, or 29,921,123 individuals.

On February 25, 1924, the Post Office Department had more than 351,000 in its employ. Besides the 43,677 letter carriers, there are 62,400 clerks, 44,417 rural carriers, 51,393 postmasters, and 21,316 railway postal clerks.

The 51,393 postmasters run as many offices. There is one post office for every 58 square miles of territory.

The 351,000 full and part time postal employees are paid approximately $441,622,517 annually for their services.

RAISING GEESE

Will you please tell me how to care for a pair of common grey and white geese? How to house during winter? What to feed and how much. Would being related make any difference? Should we change ganders every year? Would a pair of young geese do alright as I cannot get older ones? Our land is heavy, but no water during summer, only from the well. Plenty of water during early spring. At what time should they start to lay, and how should eggs be cared for?—C. R., Onaway, Mich.

—The two great essentials in successful goose raising are, free range and an abundance of green food. Geese require very little housing. A rough shed or out building being sufficient for this purpose. They should, however, be provided with dry quarters and protected from draughts and deep snow. Breeding geese should be fed sparingly during the winter months, and should be given a large part of their ration in green food. A good winter ration for breeding stock consists of equal parts, oats, barley and wheat, and about 25 per cent green food. Clover, or alfalfa when well cured, is excellent, and cabbage or mangels can be used to supply this part of the ration.

Geese should be fed twice daily during the cold weather and as soon as spring opens up, should be given a mash to stimulate egg production. The mash may consist of equal parts of ground oats, corn meal, and bran, with a liberal amount of green food. This mash should be fed at noon in addition to the regular morning and evening feeding. Water, grit, and shell should be available at all times.

The breeding season will commence the latter part of March, depending somewhat on the locality and on the season. Geese usually lay every other day, and almost always in the morning. The number of eggs laid by each goose varies with different individuals, numbering from 12 to 50, altho 20 is considered satisfactory.

One male can be mated with from two to four females, depending upon the breed, and the individuality of the male bird. Geese are seldom good breeders until they are two years old, and continue their usefulness until they are ten or twelve years of age.

Geese are peculiar birds to mate, and should receive considerable attention. Young males should be confined with the females that are to be bred with them. This should take place not later than New Year, and the other geese removed from the pen. It is almost impossible to get a strange male to mate successfully with a female from another flock unless they are properly mated, they will divide out in the spring, each male mating with the females he accompanied the previous season.

A satisfactory feeding practice for the young goslings consists of bread crumbs, moistened with skim milk, in addition to green sod, and plenty of clean fresh water. When about two weeks old a mash composed of equal parts by weight of corn meal, barley meal, and bran, and shorts, should be moistened and fed four or five times daily for two weeks. After the goslings are three weeks old they will live and grow well on grass and water, tho shade should be provided during the warm summer days.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

BREEDS OF HENS THAT LAY WHITE SHELL EGGS

I know that Leghorn chickens lay white shell eggs. I would like to know what other breed of chickens and how many other breed also lays the white shell eggs.—O. R. McD., Lorain, Ohio.

—The production of white eggs is limited almost entirely to the Mediterranean breeds, which include the different varieties of Leghorn, Ancona, Hamburg, Minorca, Spanish, and Blue Andalusian. A new breed known as the "Lamona" bred at the Washington Station, altho not yet released to the public, has this characteristic developed along with other commercial possibilities.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

DEVELOPING PERMANENT FERTILITY IN NORTHERN MICHIGAN SOILS

IN 1888, the Michigan Experiment Station commenced an experiment on the light porous soils near Grayling, Michigan, having for its object methods of enriching them by green manuring with the aid of cheap fertilizers such as marl, gypsum and salt. Spurry, vetch, red white and alsike clover were used with good effect. Sugar beets and various grasses were also raised with good results. The soils were preceptibly improved as a consequence.

The use of salt in conjunction with gypsum probably originated in Switzerland. Sometimes wood ash was included with salt and gypsum. Marl was largely used in the early days in place of limestone and where available it is still used as a corrector of acid in soil. Furthermore, all of these substances are native to Michigan and comparatively cheap.

The Michigan Experiment Station recently analyzed some of the soil types found in northern Michigan for the purpose of learning something with regard to origin and geographic relationship. Based on analysis I computed that the sulphur content of the soil varies from nothing to 2924 pounds per 2,000,000 pounds of soil. The average is 571 pounds. Naturally much of the soil in northern Michigan which responded to gypsum treatment in the early days still needs it.

One change at least should be made in treating the soils which was not pursued in the early days. Much of the soil is low in phosphorus and applications of finely ground rock phosphate should prove to be a very good form of phosphorus to use, first, because it contains twice as much phosphorus as acid phosphate and second, because it is cheap compared with the latter. Rock Phosphate may be less effective at the outstart but after it is imbedded in the soil it becomes effective and is therefore the cheapest to use in the end. It serves in part as a neutralizer of soil acid and this process hastens the solution of the phosphorus. Less lime or marl would therefore be required. It is only on soils requiring large quantities of lime that applications should be made, and then only after the acid in the soil has had a chance to act on the rock phosphate.

Some form of sodium salt other than common salt may be applied with good results, and crude carbonate of soda may improve the soil. It would reduce the lime requirement and if necessary could be applied in ample quantities to take the place of lime. The old method of applying salt with wood ashes was for a similar purpose. Based on experiments conducted at the Rhode Island Experiment Station, the sodium conserved much of the potassium.

There are other reasons why sodium treatment might prove beneficial. The sodium content of much of the Michigan soil is low or the soil is devoid of this element and any good influence which sodium would have would be missing in the soils. In recent Wisconsin experiments sodium carbonate was employed because it was of recognized value in soil or culture solution.

The surface soil in northern Michigan contains ample nitrogen for plant needs but the sublayers as a rule are deficient in this element indicating that growth and accumulation are limited to the surface layer. Deep rooting plants would change conditions and various legumes such as vetch, alfalfa and clover would increase the organic matter and nitrogen in the subsoil.

There should be just as much soil improvement now as was secured in Grayling experiments, thirty-five years ago. In fact the treatment suggested should provide more substantial improvement because phosphorus is included in the treatment with gypsum, marl or limestone. Instead of common salt, sodium carbonate has been suggested.—Prof. George A. Olson.

Something Left

"The rapidly increasing divorce rate," remarked the newcomer, "proves that America is fast becoming the land of the free."

"Yes," said his friend, "but the continuance of the marriage rates shows that it is still the home of the brave."—West Virginia Wesleyan Pharos.

MARKET FLASHES

FOOTE'S MARKET LETTER

BY W. W. FOOTE

Good Farming Outlook

THE farmers throughout the country are busy in their spring work, and oat seeding has been pretty generally completed under favorable conditions. In a short time corn planting will begin, and it is the prevailing belief of those best informed that the acreage will exceed that of 1923. It is assumed that as much livestock as usual will be prepared for the market, but undoubtedly fewer swine will be marketed than the huge number shipped from farms in the corn belt during the past season, fewer sows having been bred for the crops of spring and fall pigs. Michigan farmers are deeply interested in the wheat crop, and late reliable advices indicate that the increase in the crop west of the Missouri River in the southwest is likely to more than offset the loss in the middle west, but it is too early to talk definitely about such matters. For many weeks it has been pointed out most emphatically that the right course for Michigan farmers was to materially reduce their wheat acreage and thereby do their full part in bringing about sufficiently high prices to make wheat growing profitable once more, as it was before the war started the mania for raising it. It is impossible to over emphasize the tremendous importance of diversifying the farm crops, and thereby defeating the loss resulting from raising only one crop. It is hardly necessary to discuss the question of sheep raising so far as most of our Michigan farmers are concerned, but here are some who have not established a flock, and if the dogs do not run things in your district, a small flock will become an important asset, helping to increase farm profits, and furnishing mutton for the home table, as well as for marketing, while the manure is a fine fertilizer for the land. Lambs soared a few weeks ago to $17.10 per 100 pounds in the Chicago market, making a wonderful record, and rallying after a natural reaction. The hired man question is still a great factor in farming, but in part it is met with the increased use of farm machinery, which vastly increases the work done and saves money in the end. The Department of Agriculture reports a material increase in dairying, poultry raising, flax growing, clover and soy beans, and emphasis is placed on the large profits from dairying.

The Wheat Outlook

Not very much attention is paid by traders in wheat to the statistical showing, and speculation lags, the volume of business being much less than in past years, before federal restrictions were placed on such transactions. Fluctuations are within rather narrow limits nearly all the time, with sales at far below prices of normal years, values being made mainly by the excessive crop of wheat raised last year by the fact that rival exporting countries continue to undersell our farmers. Until it becomes definitely known that our wheat crop for 1924 comes within reasonable limits there is little reason to look for any genuine improvement in prices, unless federal legislation intended to advance prices is enacted. Large amounts of wheat remain in the United States, as well as in Canada, and as effect of these stocks has been pretty well discounted, crop reports are beginning to be a basis for making prices. European wheat growing countries are gradually recovering from the effects of the war, and increasing crops of wheat, rye and other grains are looked for, rendering the prospect of a return to former liberal exports of breadstuffs from our shores extremely doubtful. Canada is underselling us in the markets of Europe, and as it looks now, the bulls in this country have little to hope for unless the wheat crop for this year is a short one. Crop reports are having a limited influence, it being too early to form and conclusion worth talking about. Farmers owning wheat from last year's crop ask in many instances what they shall do about marketing it wholly or in part; to which it may be replied that it seems a fair thing to do is to sell on any decent rallies in values. Late sales on the Chicago Board of Trade were made of July wheat at $1.06, comparing with $1.19½ a year ago, while a little more than two years ago wheat for May delivery was selling at $1.49. From present appearances, we must get used to depending upon the increase in our population to restore former prices for wheat.

July corn sells in the Chicago market around 78½ cents, comparing with 81½ cents a year ago; July oats at 44½ cents, or about the same as last year; and July rye at 66½ cents, comparing with 84 cents a year ago. In a short time the use of corn on farms will become much smaller, as stock will go on grass. In North Dakota wheat acreage is much reduced, and much more land is devoted to barley and flaxseed.

Wheat Competition

The Department of Agriculture has prepared an extremely interesting and valuable article showing the effect of competition in the production of wheat. "The American small grain producer," it is pointed out, "is being subjected to very severe competition from other countries, and in the long run this competition may be expected to increase. The western wheat farmer is now feeling the same kind of competition that 40 years ago he was able to bring to bear on the eastern wheat farmer and the European farmer as well. The older farmers of New York state, which at one time was considered an important wheat-producing state in the East, tell of the relatively 'good times' during the seventies of the last century and the very 'hard times' that the New York farmers experienced in the eighties and nineties. The English wheat-growing farmers can tell a similar story. These hard times were brought about in the Eastern states, as well as in some parts of Europe, by the enormous development of the Missouri and Mississippi Valleys, when the wheat boats began to deliver wheat from western lake points into Buffalo at a transportation cost of 3 or 4 cents a bushel. This completely demoralized the agricultural production of the East, but was followed by a period of readjustment.

"The western wheat-belt farmer is being subjected to a similar competition from Canada. Forty years ago the Kansas farmer was producing wheat on virgin soil, on land where his capital investment was not much above $5 to $10 an acre. The Canadian farmer is now producing wheat under the same conditions that obtained in the Missouri Valley years ago. In most cases the capital investment of the Canadian farmer is relatively small, his soil is still new, and while there are failures, yet the average crop is fairly certain, and the quality of the grain is exceptionally good. The potential production of small grain in Canada is much greater than its present production, which means that for many years to come the small grain farmer in the United States, who depends to a large degree on these crops for his income, must face the same competition that he forced upon the farmers in the eastern states 40 years ago."

Premium for Prime Steers

There are a number of stockmen who always make a specialty of preparing strictly prime steers for the market, and they make it pay usually, as overproduction of such beeves is extremely rare. J. W. Latimer, of De Kalb County, Illinois, who is in the habit of topping the Chicago market with prime heavy steers, says it has been his policy to hold on to cattle until they pay out. He has done this for twenty years and has never lost. He also feeds lots of hogs, and he handled 1,000 sheep during the last year. He fed one herd of cattle for about five months, giving them full feed, and they were given shelled corn, oil meal and clover hay, as well as molasses.

Frank Adrian, of Dallas County, Iowa, sold in the Chicago market recently two carloads of 1370-pound steers to an eastern shipper at $12.25. They were Wyoming bred Herefords, bought last September at $7.50. They were fed corn, clover hay and oil meal for 175 days. During the latter part of that period they received a molasses feed.

The Cattle Industry

Of late the most marked quotable changes in cattle offered on the Chicago market have been more in the in-between kinds than in those of choice quality, while the inferior kinds have not sold much lower. The bulk of the steers sell much below top prices paid for prime long fed heavy steers, there being hardly enough of these to go around and Nebraska and South Dakota contributing a large share of the best fed beeves. Very few prime yearling steers are offered for sale, and the top price for these has been $1 below the top for heavy cattle. Fat butchering heifers are sure of selling at high prices, and at last the demand for stockers and feeders has started up, while prices for all desirable offerings are headed upward. Probably the usual numbers of thin cattle will be purchased by country buyers for furnishing, and thus far prices have not ruled especially high for the general run of stockers and feeders, although extreme prices have been paid for fleshy feeders requiring a short finish. There is a much increased demand for dairy cows, and about 500 more dairy cattle were shipped out of Wisconsin during March than in any previous March. Such sales reached 3,937 head, Illinois and Iowa each taking over 1,000 head.

Monday is very apt to be a bad day for sellers because the receipts are usually much larger than on other days, and prices frequently advance later in the week. Recent much reduced receipts put prices 50 to 75 cents higher, the bulk of the beef steers selling at $8.50 to $10.85, and the best heavy steers at $11 to $12. Good fat cattle sold at $10 to $10.90, and medium grade steers brought $8.50 to $9.90, with sales down to $7.50 and over and inferior steers at $5.50 to $7.40. The best yearlings were quoted at $10.50 to $11.60, few being good enough to sell up to $11. Butcher cows and heifers sold at $4.25 to $10.25, few going as high as $9, while canner and cutter cows sold at $2 to $4, bulls at $3.50 to $7.50 and calves at $4 to $9.75. Stockers and feeders have a larger demand at $6 to 9.50, selling chiefly at $7 to $8.50. A year ago common to prime beef steers sold in Chicago at $6.75 to $10.25 and two year ago at $7 to $9.15. Combined receipts of cattle in twenty markets for the year to late date amount to 4,029,000 head, comparing with 4,097,000 a year ago and 3,859,000 two years ago.

Good Demand For Hogs

Decreasing marketing of hogs in Chicago and elsewhere and a good demand from local packers and eastern shippers put prices higher recently in the Chicago market. Irregularity in the offering explains the variations in prices, the Monday supply aggregating about 65,000 hogs, including 9,600 left over from the proceeding week. Receipts have averaged in weight 236 pounds, equaling the heaviest average since last October, and well finished swine have predominated, the greater part selling within a range of 20 cents, and the best heavy butchers selling at the top, bringing 10 cents above the best light bacon hogs. There is an unusually large domestic consumption of fresh pork, prices being remarkably low, but the exports of provisions are running much below those for a year ago. The spring pig crop is expected to run much below that of last year, fewer sows having been bred for spring and fall pigs than a year earlier. Combined receipts in twenty markets for the year to recent date foot up 16,058,000 hogs, comparing with 15,242,000 a year ago and 11,415,000 for the same period two years ago. A year ago hogs were selling at $6.35 to $8.25; two years ago at $9.20 to $10.70 and nine years ago at $7.15 to $7.80. Last week's hog receipts in Chicago were far smaller than a week earlier or a year ago, and prices had a moderate advance, closing sales being at $6.75 to $7.60. Further improvement in prices seems almost certain unless the receipts are increased.

Lambs Have Sold Higher

Much larger buying orders for lambs in the Chicago market have put prices up once more, the best handy-weights going the highest, although prime weighty lambs were less discriminated against than in former years. A good market for heavy lambs means much to the men who prepare lambs for the market, and a large Colorado flockmaster remarked recently: "We cannot help getting them heavy if we get them fat." Aged sheep have been scarce, but they were much slower to rally from their recent slump in prices than lambs, being much less in demand. Prime lambs have sold extremely high recently, the top being $17, comparing with $15.25 a year ago and $11.25 three years ago.

MARKET SUMMARY

Wheat and corn steady. Oats and rye unchanged. Beans steady. There is a large supply of potatoes and market is easy. Large receipts of butter and eggs but healthy demand will not allow prices to decline. All live stock higher.

(Note: The above summarized information was received AFTER the balance of the market page was set in type. It contains last minute information up to within one-half hour of going to press —Editor.)

WHEAT

Trading in the wheat market does not cover a very wide range. The market seems to be in a nervous condition, due to the political outlook according to reports, and dealers are marking time. Demand at Detroit is slow and the prices are slightly lower than they were one week ago.

CORN

The Detroit corn market shows no change, with demand poor and prices unchanged. The market was affected by the action of wheat. Wet weather in some states is holding up planting.

OATS

Oats followed the trend of other grains. The market is easy and unchanged.

RYE

Rye is steady at Detroit and the price is the same as quoted two weeks ago.

BEANS

Demand is fairly good on the New York market but dealers are not buying only enough to take care of the demand as many feel that prices are going to go lower before long. However, none are willing to shade the price in order to get the business away from the other fellow. The Detroit market is about steady with prices unchanged. It is being urged by dealers that the price be advanced before planting time to a level that will encourage a good acreage. One dealer has written to the trade urging cooperation of all to work the price up to where beans can be raised at a profit.

POTATOES

The Detroit market for old stock was steady last week with supply, demand and trading moderate. At Chicago the market was slightly stronger but price did not change. Demand is improving at that market. Eastern markets are weak with a large supply. Real good quality old potatoes find a fairly good market, however.

HAY

Timothy markets have been firm generally for the best grades except where increased receipts have weakened the market. Low grades are dull and move slow at irregular prices. Alfalfa markets are reported dull, buyers awaiting new hay.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 2 red, $1.11; No. 2 white, $1.12; No. 2 mixed, $1.10.

Chicago—Cash No. 2 hard, $1.07 ¼@1.13; No. 2 mixed, $1.06¾.

PRITCHARD'S
WEATHER
FORECAST
INTERPRETED BY THE STARS

Week of May 11

FOLLOWING Monday of this week the weather is expected to be generally fair in Michigan until about Thursday. On this day and the next, as well as very beginning of week will constitute the storm period dates of the week in this state. Aside from local thunder storms and showers, during latter part of week, however, we are not expecting any severe storminess.

Temperatures will show a steady climb upward during the week and through most of next week. A temporary climax in warmth will occur around Thursday of this week.

Week of May 18

Rains and thunder showers will occur in Michigan this week around Tuesday and Wednesday. The balance of the week with the exception of Saturday is expected to be generally fair with sunshiny days and moonlight nights.

During early part of week temperatures will be rising but after the middle part they will drop considerably lower. There is grave danger of local frosts in many counties of Michigan at the close of this or the opening of next week.

Between this and next week, we believe farmers will find this the best in which to advance their interests. Next week we are expecting heavier rainfall and considerably unsettled conditions. Farm operations will be greatly hindered.

Easter Weather Verified

Our forecast of the weather at Easter time proved correct in most parts of the state. Considering that the weather bureau was in doubt just what the outcome was going to be 24 hours in advance, we consider that our long range forecasts are of considerable value to the farmer who wants to made his plans weeks and months in advance by means of a reliable method.

RADIO PROGRAMS

Station KYW, Chicago. Central standard time 8:20. Wave length 536 meters.

May 13—"What Pig Club Work has Accomplished in One County," by C. D. Streeter, Lee County, Iowa. "What Lies Behind Successful Marketing," by Professor Fred E. Clark, School of Commerce, Northwestern University.

May 16—Address by Miss Louise Fitzgerald, National Dairy Council. "Among Our Neighbors," a regular weekly feature furnished by the Orange Judd Farmer.—Arthur C. Page, Editor, on "How Some Illinois Country Churches are Meeting Their Opportunities."

May 20—"Playing Margins," by A. R. Simpson, Assistant Director of Organization, American Farm Bureau Federation. Address by Senator Harold C. Kessinger, Aurora, Illinois.

WILL BROADCAST DEBATE AND THEN BARN DANCE

THE Sears-Roebuck Agricultural Foundation's radio station WLS will broadcast a debate next Saturday evening, May 10, at 7 o'clock, central standard time. The debate will be on the McNary-Haugen bill.

Charles J. Brand of the Department of Agriculture, Washington, who has had a great deal to do with framing the measure, will support the bill. Dr. Benjamin H. Hibbard of the University of Wisconsin, Madison, will oppose it. The listeners-in will decide as to the winner of the debate.

The debate program will begin promptly at 7 o'clock, an hour before the barn dance. Each speaker will have twenty minutes to present his main proposition, and afterwards will have ten minutes for rebuttal.

Station WLS thus offers the first national debate ever broadcasted. If it proves popular, this form of education may become a regular feature on the Sears-Roebuck station. WLS broadcasts on 345 meters, and is on the air three times every day. Edgar L. Bill is Director of the station.

Breckenridge Chicks Are Winners

Day old chicks from strong, vigorous flocks which have been carefully culled and extra selected standard male birds —Barred Rocks, R. I. Reds and White Leghorns. We guarantee 100% safe arrival. Write us for price list and circular.

Our Pride Mark Protects You!

The thought in our mind is this:

THAT there are many people in the State of Michigan who have been attracted to the Fox business by the many undoubted sucesses achieved in raising Silver Black Foxes as breeding animals; yet, who have refrained from entering the field owing to certain elements of instability and uncertainty that heretofore have been more or less exitent in the industry. —Such men of sober judgement have realized that the production of high grade breeding animals is a specialized business and requires both natural aptitude and practical experience, and that in order to carry on production of such breeding stock needs a well balanced organization, capable of producing a super grade of breeding stock allied to a strong and efficient sales organization.

To such as these—the Detroit Silver Fox Farms present a solution of the problem. Here is a strong company—well financed—with a wealth of practical experience in breeding foxes,—producing the highest quality stock—and having also the all important sales organization—built upon modern merchandising methods.

This company's campaign of dignified and intelligent advertising copy has already to some extent revolutionized the Fox breeding industry. Thus—financing—experience and sales organization—have built up a splendid service—that is constantly enlarging its scope.

To the man of judgement and foresight there is a tremendous attraction in an alliance with this company—in the shape of a producing unit which would be independently owned —yet operating as a strong unit in the larger organization have available every angle of the service this company has built up. It will crystallize his wish to participate in this very profitable enterprise by eliminating every element of doubt and uncertainty.

There is no doubt of the tremendous profit Fox breeding offers when the three elements necessary for success in any enterprise namely, finance—production—and sales—are present and linked with—knowledge—and efficient organization.

We would like to discuss our plans for increasing the supply of Pontiac Strain Foxes with men such as these—Men of acknowledged strength and standing in their community—who co-operating with this company may establish a production unit for Pontiac Strain Foxes—and receive the splendid financial returns that go with it.

When Demand Exceeds Supply, Production Must be Increased!

Plant Certified Seed Potatoes This Year

By H. C. MOORE

Extension Specialist, Michigan Agricultural College

LAST year Michigan farmers bought approximately 60,000 bushels of the 315,000 bushel Michigan certified seed potato crop of 1922. The results secured from this certified seed bought by more than 2,000 growers were so satisfactory that this spring a much larger quantity of certified potatoes will be planted by Michigan farmers.

Several of the Southern counties report that the acreage planted to certified seed this year will be twice that of last season. The reason for the more general use of certified seed in growing potatoes for market is because the certified seed gives an average yield of nearly 40 bushels more per acre than does the ordinary run of seed and furthermore the quality of the crop grown from ceritfied seed is far superior to that from common seed. The statements here made are based on the results secured in 1923 on approximately 500 tests or demonstrations in which certified seed was planted in comparison with uncertified stock. A study of the detailed reports received from over a hundred of the purchasers of the certified seed showed practically the same results as did the tests.

Floyd Algoe of Oakland county purchased last spring several bushels of certified seed from the Upper Peninsula. He grew it in comparison with some of his own stock which was uncertified. Last fall after the crop was harvested he submitted the following report:

Yield per acre of U. S. No. 1 from Mich. cert. seed, 275 bu.; Yield per acre of U. S. No. 1 from uncertified seed, 125 bu.; Quality of crop from Mich. certified seed, fine; Quality of crop from other seed stock, fair.

Mr. Fred E. Moeller at Kinde, Huron county, tested out certified seed last year to his own satisfaction. The certified seed yielded at the rate of 200 bushels per acre while the uncertified stock averaged 135 bushels per acre. 90 per cent of the crop grown from certified seed was marketable while only 60 per cent of the lot grown from uncertified seed was marketable.

In most all cases where tests were made or reports were secured it was found that the certified seed yielded a large percentage of medium uniform sized potatoes than did the uncertified seed. The market demands medium sized smooth potatoes that are of high quality. Planting certified seed is one of the big factors in producing the kind of potatoes the market wants.

Certified seed is seed that has been carefully selected over a period of several years and that has been grown under the most approved cultural methods. That is the reason why it has outyielded uncertified seed in most every test that has been conducted.

Those who are growing certified seed are required to hill select their seed stock in the fall; they are obliged to use a long rotation of crops and to treat the seed with corrosive sublimate before planting. Only high grade certified seed can be planted for the production of certified seed. Certified fields must be sprayed at least 5 times during the growing season with bordeaux mixture using a high pressure machine. This thorough spraying keeps the vines healthy and makes for vigorous high yielding seed. In the certified seed work all diseased and weak hills are removed from the fields before certification is granted. Careful field and bin inspection are made by competently trained men from the Michigan Agricultural College and all the fields and stocks that do not measure up to the high standards set for the inspection and certification service are disqualified. Certified seed is shipped in sacks containing 150 pounds. Each sack is sealed and bears a certification tag.

Careful observation has shown that many growers are getting inferior yields of poor quality potatoes because they are planting inferior seed. Much of the ordinary seed stock planted in the state is badly infested with such diseases as mosaic, leaf roll, fusarium wilt, black leg, and black scurf. These diseases are largely responsible for the so-called "running out" or degeneration of seed stocks. It is surprising how few growers recognize the diseases here named and fail to realize the importance of planting high yielding disease free seed. All growers whose seed potatoes are not of desirable qualities should procure certified seed this spring. Thus far this year approximately 250,000 bushels of Michigan certified seed have been sold; the bulk of this seed has gone to Pennsylvania, Ohio, Indiana and other states. There are still available for sale several hundred bushels of high quality certified seed that can be had at a very reasonable price. It is hoped that practically all of the seed left will be purchased by Michigan growers who are in need of good seed. Information concerning sources of certified seed can be procured from the Michigan Agricultural College, East Lansing, Michigan.

BUSINESS MEN ASSIST IN COW TESTING ASSOCIATION

AS a result of a series of meetings put on jointly by the farmers of northern Bay county and the Pinconning Booster's' Club, another group of farmers have organized to bring about greater efficiency in their dairy business thru the cow testing association. At a meeting held week before last, the following officers were chosen: J. L. Millard, president, Charles Sass, vice president, William Slusser, secretary-treasurer, John Gibson and Felix Pingot, Directors.

For a long while the business men in northern Bay county have seen their business decrease as the business of their farmer-patrons became less and last fall they decided to render first aid to the town's leading industry—agriculture. They fostered a series of meetings which culminated in the organization of the cow testing association. This means that 26 farmers are declaring war on the "slacker"-cow, and are going to feed more efficiently, thus insuring greater profits. Mr. A. C. Baltzer of the M. A. C. assisted materially in organizing the association. —E. J. Leenhouts.

Twenty-five billion telephone calls were made in the United States last year, according to the Michigan Public Utility Information Bureau. This is equivalent to 25 calls a minute for each unit of time during the entire Christian era.

Butterfield Becomes New Head of M. A. C

WHEN the Michigan Agricultural College opens its fall term it will have as its president Dr. Kenyon L. Butterfield, now at the head of the Massachusetts Agricultural Collge, Amhurst, Mass. He has filed his resignation from the Massachusetts Agricultural College and is expected to be at East Lansing in time for the commencement exercises in June. Dr. Butterfield takes the place of Acting-President Shaw.

Dr. Butterfield is well known in Michigan. He was born at Lapeer in 1868 and was educated in that town and Port Huron and the M. A. C. and University of Michigan. From the latter institution he received the degree of Master of Art and Doctor of Philosophy, after graduating from the Michigan Agricultural College.

After completing his college training he became interested in Grange work and was editor of the Grange Visitor for several years. In 1891 and 1892 he was assistant secretary of the M. A. C. and from 1896 to 1899 field agent. He became president of the Rhode Island Agricultural and Mechanical College in 1902, and held that position until 1906 when he accepted the presidency of the Massachusetts Agricultural College.

This is the second time that Mr. Butterfield has been suggested as head of the M. A. C. Back in 1915 when J. L. Snyder resigned from the presidency it was rumored that the position had been offered to him.

Powell's Tax Articles Open A Merry Debate

Governor's Secretary, Elton R. Eaton, Takes Issue With Stanley M. Powell Regarding Article in April 12th Business Farmer

TO the Editor:—I am sure I am following the right course in not taking up the Governor's time in placing before him the misleading article which appeared in your issue of April 12, entitled "What Funds Are Spent Must First Be Raised," by Stanley M. Powell, you courteously sent to this office and I know you will agree with me after reading my letter.

In Mr. Slocum's editorial he called particular attention to the figures regarding the cost of operating the three State prisons. He says that he does not believe them to be fairly stated in the article referred to. Mr. Slocum is correct in what he says about this. It is silly for any person to state that it did not cost the State of Michigan anything to operate Jackson prison in 1916.

The records of the Accounting Division are open to public inspection and if the writer of the article or anyone else desires accurate information as to the cost of maintaining State Institutions, it can be easily ascertained. But it is quite apparent that the writer did not care to place before your readers an honest statement of conditions. Of course, it must be admitted that previous to three years ago there was practically no system in keeping State accounts and sometimes it is difficult to secure information about the cost of operating State Institutions previous to that time. However, if Mr. Slocum had believed the facts published to be inaccurate relative to State expenses, it would seem to me as though he should have secured the correct information previous to the publication of the article. It is probable, however, he did not see the article before publication.

Many Inaccuracies

I have glanced over some of the statements made and the one thing that surprises me is the fact that so many inaccuracies could be made in such a brief article. Not a single appropriation made by the State Legislature for any of the new structures has been overdrawn. In the past three years Governor Groesbeck has reduced the State tax from 21 millions to 16 millions of dollars. The 30 million dollars voted for a soldiers' bonus and the 50 million dollars authorized by the voters for highway construction are charged up by this careless writer as debts incurred by the present State administration. It is also difficult to conceive how anyone can charge up as a State expenditure money transferred from the general fund where it draws two per cent interest to another State fund where it makes four per cent for the taxpayers. That is going a long way to deceive the reader who does not take time to analyze these matters and who depends upon publications for his information about public questions.

It is common knowledge that any money the State can spend must first be appropriated by the State Legislature. The question of State administration resolves itself down to but one issue and that is, how well and judiciously is the money spent that is appropriated by the Legislature; and I doubt if ever in the history of the State of Michigan has this commonwealth secured so much for every dollar spent as it has during the past three years. To date there is not a single overdrawn appropriation and every building now under construction by the State is going to be completed within the amount of the appropriation made by the Legislature. On April 30th there was a cash balance in all of the various State funds of $19,144,029.50.

It might be interesting to you also to know that the centralized purchasing and accounting system, established under the present administration and which is assailed in your article, is saving to the taxpayers many hundreds of thousands of dollars each year. For the fiscal year which ended July 1, 1920, the State of Michigan by taking advantage of cash discounts on purchases saved $10,050.57. The saving made by cash discounts during the last fiscal year ending July 1, 1923, amounted to the large sum of $177,546.77. No one in my mind with an honest intent would so deliberately misstate so many facts as appeared in the article in question and hold up to ridicule the Departments who are making such savings to the State.

Permit me again to say that the State records are open to public inspection and any information you or any other person desire pertaining to the expenses of any State Institution or Department can be easily and correctly secured. If the writer of the article mentioned desired to give your readers something accurate about Michigan prisons he could not only have secured correct information from State records in Lansing but he could have easily obtained additional and correct facts from the Department of Labor at Washington, D. C. This Department recently issued a report placing Michigan's prisons among the best in the Nation not only in prison work and the number of men employed in useful labor but in the value of goods produced and disposed of, and not one bit of this from contract-convict labor.

Why also did he not say something about the millions of dollars Governor Groesbeck has saved to property owners through his action in forcing down fire insurance rates? Why did he not say something about the vast sum he is saving to the taxpayers by giving his personal attention to road building and to the management of various State institutions? Of course, there is but one conclusion to draw after glancing through the article. It was the writer's purpose to mislead the readers of your paper about State affairs. Respectfully, Elton R. Eaton, Secretary to the Governor.

Mr. Powell's Answer

TO the Editor:—I wish to thank you for your courtesy in sending me copy of the letter which you received from Mr. E. R. Eaton, secretary to the Governor, and for advising me that you intend to publish this letter in your columns.

After reading the rather pointless and altogether discourteous comments voiced by Mr. Eaton, we rejoice to note that the Governor did not waste any of his precious time in personal preparation of this reply. Our conscience even pricks us a little for bothering Mr. Eaton with any trivial matters, such as state taxation. He is probably blissfully unaware of the fact that the property returned delinquent for taxes is increasing by leaps and bounds in Michigan and has already exceeded the staggering total of $455,000,000 per annum.

We take it that Mr. Eaton must be very busy, for practically a month elapsed between the publication of the article and the receipt of his reply. We suggest that this matter might well have been turned over to one of the 127 employees of the State Administrative Board. Any of them with a little imagination and a very superficial knowledge of state affairs, and a command of unkind attacks on my motives and personal character, might have made a reply about as constructive and helpful as the one which you received.

It is, however, gratifying to note that nowhere in this reply is there the slightest attempt to dispute my fundamental statement that what funds are spent must first be raised. The fact that during the year ending June 30, 1923, the State of Michigan disbursed about $71,500,00 remains unchallenged. My argument that "if Michigan spends a dollar she must have a dollar in revenue to meet that expenditure, and also if Michigan has that dollar in revenue, we the people of Michigan must contribute our share toward the raising of that revenue", stills stands unrefuted.

His Figures Agree With Mine

Mr. Eaton's statement that "in the past three years Governor Groesbeck has reducd the state tax from $21,000,000 to $16,000,000" is amusing, in view of the fact that I said in my article, "the first of these, the general property tax has been kept down surprisingly and this fact has been used by the administration in an effort to bolster up claims of economy and efficiency in state government. For the year ending June 30, 1924, this item amounted to an even $16,000,000 which was less than that for any of the preceding three years. This fact is widely advertised. Little is said about the growth of other forms of taxation".

Of course, Mr. Eaton would not care to dispute the fact that this general property tax was only kept down through devising new means of raising the greatly augmented total of revenue required to run the government of Michigan today. Auditor General O. B. Fuller or anyone else familiar with the financial affairs of the state would readily admit that had it not been for the corporation tax and certain other new fees and licenses recently put into effect, the state general property tax would have of necessity gone up by leaps and bounds, and again we call the attention of your readers to the fact that every dollar that is spent by the state must first be raised, and every dollar that is raised must be paid by us the people, either through direct or indirect taxation.

CONTINUE TO DRIVE TAX QUESTIONS HOME

I WANT to thank you and compliment you on your splendid article in The Business Farmer of April 12th. I hope you will continue to drive these tax questions home to the people for it is a serious question and selling bonds to create revenue is surely no way to keep out of the wilderness. Farmers are actually losing their farms through high taxes and the inequality in prices which they pay and which they receive.—David H. Brake, Fremont, Mich.

Mr. Eaton says that he has "glanced" over some of the statements in this article. I believe that glanced must be the right word. For instance, he accuses me, whom he terms a "careless writer", of charging up the $30,000,000 voted for soldier bonus as a debt incurred by the present state administration. He probably glanced over my article so rapidly that he failed to notice that I specificially excluded revenue derived from the sale of soldier bonus bonds when I computed the total receipts for the state, and that I also disregarded the item of soldier bonus bonds when I made a comparison of state expenditures for the past few years.

It is hard to tell what Mr. Eaton means when he says, "It is also difficult to conceive how anyone can charge up as a state expenditure money transferred from the general funds where it draws 2% interest, to another state fund where it makes 4% for the taxpayers." If he refers to the matter of transfers and revolving funds I believe he will find if he cares to visit the office of the Auditor General, that my figures have made due allowance for these various items.

Fuller Okehs My Figures

In disputing the evidence and figures which I have presented, Mr. Eaton shows surprising ignorance of state financial conditions. In not less that six portions of his comments, he indicates that I am misinformed and am attempting to misstate the facts and mislead the public. However, he does not see fit to correct any of my figures. I wish to assure him and the readers of THE BUSINESS FARMER that I have taken the article in question to Mr. C. B. Fuller, Auditor General of the State of Michigan, and he has been over these figures and finds them substantially correct, although some of them are slightly more moderate that the actual conditions. It is interesting to me to find out that the figures which I quoted from the Michigan Tradesman regarding the cost of running the three state prisons in Michigan, were practically identical with those found in the records of the Auditor General.

Mr. Eaton says, "It is silly for any person to state that it did not cost the State of Michigan anything to operate Jackson Prison in 1916." But if he will consult the records of the Auditor General he will find that nothing was paid out for the running expenses of the Jackson Prison during the year 1916, nor were there any requests for such financial aid from the State.

Gross Exaggeration of Facts

The charge he makes that, "It must be admitted that previous to three years ago there was practically no system in keeping state accounts and sometimes it is difficult to secure information about the cost of operating state institutions previous to that time," is a gross exaggeration of the facts, because the records on file in the office of the Auditor General and of the State Treasurer show authentically and accurately just what was paid for each institution each year, even before the advent of our present highly centralized state administration.

A man as close to the work of the State Administrative Board and the present government of Michigan as the secretary to the Governor should know better than to say "It is common knowledge that any money the state can spend must first be appropriated by the state legislature." If this were a fact, I should

Red Rock Wheat Is Good Flour Producer

Department of Agriculture Pronounces Product of M. A. C. Best Milling and Baking Soft Red Winter Wheat Grown in United States

By FRANK A. SPRAGG

Assistant Professor of Farm Crops, M. A. C.

This is a general view of two wheat plats that are being increased for distribution from the M. A. C. One of these was Berkeley Rock. This variety had shown itself to be more winter hardy and a better flour producer than Red Rock.

TIME was when the virgin soils of Michigan not only produced large yields of grain, but it was customary to plow under a crop of clover in preparation for a grain crop. In those prosperous times, Michigan was renowned on the market for its "Michigan Amber." It seems quite impossible to assign this so-called "Michigan Amber" to a definite variety. Several have tried to do so, and have isolated different types that they call by this name. If this market grade could not be assigned to any one variety, to what then was this distinction due? The quality must have been due to the fertility of the soil on which the wheat was produced.

Quality in wheat, as well as production, is due to the soil and conditions in which the crop is produced. The Red Rock is capable under the most favorable conditions of producing wheat that weighs 64 pounds to the bushel. Such wheat is clear vitreous, quite hard, and unusually good milling. This shows what Red Rock is capable of when properly fed. Under conditions where clover has failed, and the farmer has been growing corn continuously for the past few years, the Red Rock is yellow berry and little better in quality than a long line of the common varieties that farmers may raise.

What is yellow berry wheat? The wheat grain is made up of a mixture of starch and protein. The starch is produced by the plant out of water and what it gets from the air. To produce protein, the plant must also have nitrogen that is represented on the farm usually in the form of alfalfa and clover. If some such legumes have been plowed under, and lime has been supplied to keep the soil sweet that the nitrogen may be available, the plant also has a supply of protein. Yellow berry is a condition in wheat where the starchy framework of the grain has not been properly filed with protein. The yellow berry grains is lighter than the vitreous grains for the same reason that snow is lighter than ice. Yellow Berry indicates low proteins which means low milling and baking quality. It is evident that the market renown that Michigan once had was due to its soil fertility.

If the farmer is also interested in yield he needs to supply phosphorous, another plant food that has been sold off the farm in the years that have past. This is the most quickly supplied to the plant in the form of acid phosphate, which should be sown at the rate of 200 to 250 pounds to the acre, but not in contract with the wheat grains.

Yield and quality of a wheat crop depend first upon a variety that is capable of properly using the fertility supplied. Yield depends upon many other factors, however. Wheat cannot withstand the hardship that rye can, and must be planted about September 20th at Lansing and earlier as one goes north. It pays to give the land good tilth and prepare a good seed bed, that the wheat may get a quick start, and make a rapid growth.

When the writer undertook the breeding of better varieties of wheat, now eighteen years ago, the white wheats of the type of Dawson's Golden Chaff and Plymouth Rock were the highest producers under Michigan conditions. The soils that had been worn by thirty or forty years of culture during which little plant food had been supplied were no longer able to produce good yields from the red wheats. Another cause was that the varieties of red wheat had become so thoroughly mixed by thrashing machines in recent years, that farmers no longer grew definite varieties. Certain of the white wheats which had been more recently produced by selection and breeding, where the leading varieties in 1916.

The problem was to find a wheat that had quality as well as yield. The existing white wheats were poor millers because they made poor flour, suited to biscuits and pastry but not to bread making. Now the redness of wheat is only "skin-deep," as it is all taken off in the bran. There seemed no good reason why there may not be a white wheat with good milling quality. Such a white wheat has since been produced (ten years later) from an artificial cross between a white wheat and a red wheat with high milling quality. At that time investigation failed to find a good milling white. Nature it seems had not produced such a variety.

The most vitreous grains were selected out of hundreds of samples and each lot was planted in a separate plat, with the grains separately planted five inches from its neighbor. Thousands of individual plants were selected and the better of the progenies grown to compare their yielding power.

To make a long story short, a red grain picked out of a bushel of white wheat, known as Plymouth Rock, became the progenitor of Red Rock. This seed was planted in the fall of 1908 and produced a selected plant in 1909. Its progeny was increased enough so that in the fall of 1911, there was enough seed to plant a regular plat in the varietal series. This plat produced four times as much grain as the old standard which stood by its side in the season of 1912. This was due largely to ice sheets in the winter of 1911 and 1912.

The new variety which has since been called Red Rock, proved to be a good flour producer and has recently been pronounced the best milling and baking soft red winter wheat by the United States Department of Agriculture, Bulletin No. 1183. Red Rock has the stiffest straw that we have been able to find. It has been used as the standard variety with which all other varieties have been compared from the standpoint of yield since 1912. No variety has yet been found at M. A. C. that will consistently outyield the Red Rock as an average of a series of years. Some varieties have yielded more than Red Rock some years, but they have been much poorer producers in other years.

Peck lots of Red Rock were introduced to Michigan Farmers in the fall of 1913. These were sent to County Agents who located farmers that would take care of the production. To illustrate, the peck sent to Allegan county, was sown on the farm of Mr. John Odell about seven miles south of Allegan. He had a large fertile garden and sowed the Red Rock on a half of this piece. As a result, he had enough wheat in 1914 to sow seven acres, and had seed for sale in 1915. It was a bearded wheat, and it seemed that was all his neighbors wanted to know about it. He took a few bushels down to the local miller, who made some flour and ran a baking test. Then the miller became enthusiastic. He found that the Red Rock made unusually good bread, and told his farmer friends

Indications Are Growers of Navy Beans Should Not Cut 1924 Acreage

By E. A. LITTLE

"WHAT about beans, shall we plant less or more?" writes some of our subscribers. Wanting to get the best opinion possible on the future of the bean market we secured the services of Mr. E. A. Little, well known student of the bean market, to prepare this article. Please understand that Mr. Little has no way of making this market do as he wishes or predicts, but he does "know beans" and in his article he gives his honest opinion on what he thinks the market will do.

WITH the price of pea beans the lowest in many months, Michigan farmers are justified in wondering whether it is good policy to decrease their plantings or discontinue the growing of beans entirely. So many factors enter into the matter that one can hardly give definite advice without taking into consideration a number of influences which will be at work during the next few months, any one of which might change the looks of things.

With one of the largest crops in history last year, and with a steady pressure exerted the last few months in pushing the price down, it is refreshing to note the price has remained as high as it is. Any immediate changes will likely be upward; though following this year's plantings one should not be surprised at further small declines during the hot summer months.

For the reasons outlined below, we would recommend to Michigan farmers that a normal bean acreage be planted this year, with every effort put forth to insure a better-than-average yield. The average-yield grower is not the one who makes money on beans. It is the one who by using the best varieties of seed, the best preparation of the seed bed, the best care in harvesting, succeeds in producing 15, 20, 25 or more bushels per acre, while the average yield is 11 or 12 bushels.

Notwithstanding conflicting reports on the Robust bean, if your bean land is light, sandy and well drained, it would be well to plant this variety. But if the land is heavy and poorly drained, keep away from them. The Michigan Agricultural College is working steadily to perfect the Robust variety, and undoubtedly it is the coming bean. In western New York state the Robust has won wide popularity, and it will outyield the common varieties of beans.

A bulletin has just been issued by the Michigan Agricultural College on the growing of beans. It goes into detail concerning the varieties, bean diseases, marketing and grades. A copy may be had for the asking, and every progressive farmer will want one. It is the work of Professors Cox and Pettit.

Factor Influencing Price

Now for some of the factors which may influence to a greater or less extent the price of beans this coming fall. Because of the low price of pea beans, many New York state growers will switch to red kidneys, yellow eyes, narrows or some of the other New York state varieties. The California small white acreage will be decreased, due to small rainfall and to the curtailment of available land in some of the biggest producing sections. These developments would mean that Michigan more than ever must supply the pea beans of the nation.

We believe advertising of beans to be the one big thing necessary to keep the price at a fair figure and eliminate the fluctuations in price. Michigan jobbers failed to join with other state associations last year in a national advertising campaign. Spasmodic efforts have been and are being made to revive the idea, but the chances are it won't be done this year, at least in time to be of material good. The Michigan Bean Growers' association, under the leadership of A. B. Cook, is showing signs of life, and if it should again start functioning, in a closely-knit, well organized sort of way, there is hope of an advertising campaign getting somewhere. The Thumb Bean association is "talking" advertising, and there is hope in this direction.

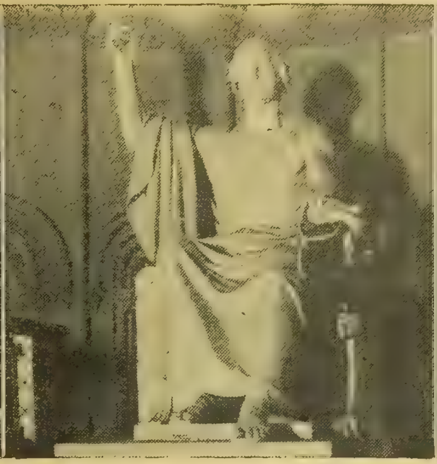
Another movement which might help the bean grower, as well as the jobber and the banker, is the extending of the federal warehouse act to cover beans. Hearings have been held in all the leading producing states, tentative regulations issued, and much preliminary work done, Once under way, the warehousing of beans would enable the grower to store his beans in a government licensed and inspected warehouse, taking a warehouse receipt therefore, and obtain a liberal advance from his bank on the security of the receipt. Thus the annual onslaught on the market of beans directly after harvesting would be unnecessary, and marketing could be conducted in more orderly manner.

If bean growers, particularly if organized, would insist that the bean jobbers of Michigan get behind the advertising of beans; if the growers would help in financing this advertising; if it could be started before the 1924 crop is ready for market, there would be no question as to a fair price for beans this fall.

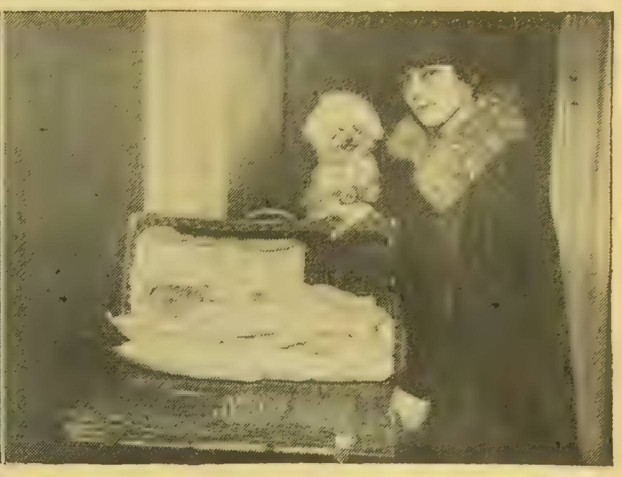
Considering all the influences noted, considering that beans are not the most troublesome crop to grow, that they bring in real money at an opportune time—Michigan farmers will make no mistake in planting a normal acreage, and we wouldn't be afraid to plant a little more than normally.

PICTURES FROM FAR AND NEAR

GREW, TAKING OFFICE, BECOMES CABINET HEAD.—Joseph C. Grew took the oath as Under Secretary of State and was at once the acting Secretary of State, due to the absence of Secretary Hughes. This is the first time in history that an Under Secretary became a Cabinet head in so short a time.

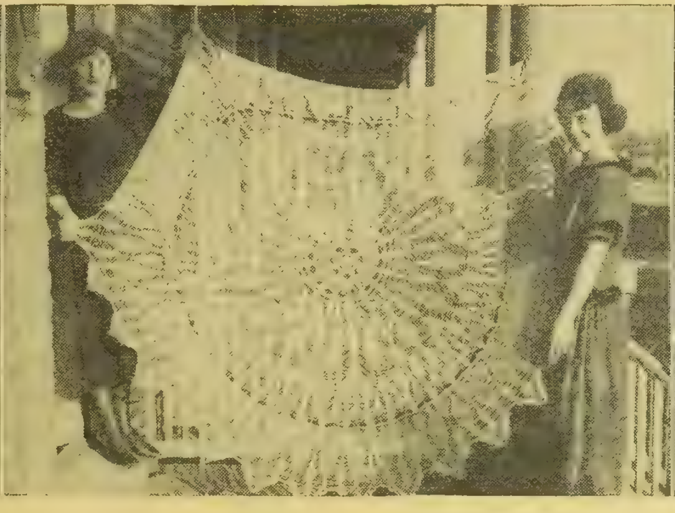


WASHINGTON IN NEW ROLE.—This statue is of George Washington, dressed as a Roman Gladiator, and possibly the only one of its kind in the world. It is at the Smithsonian Institute, Washington, D. C.



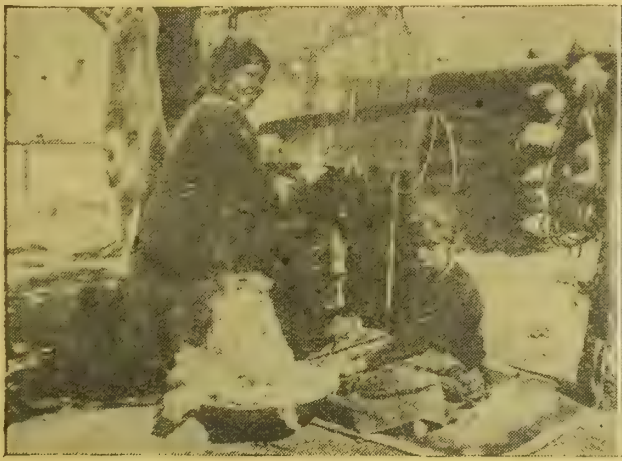
SOMETHING NEW IN BABY CARRIERS.—Mrs. Charles H. Lewis, who arrived in New York from an European tour with her husband, Dr. Lewis of Los Angeles, created a stir when she showed this ventilated suitcase, the doctor invention. Baby traveled quite comfortably in his suitcase home.

YOUNGSTERS CONDUCT CHURCH.—Donald Lake, of the Episcopal Church, Hillman, Mich., who on seeing that they were not going to get a rector, now gives services in the church twice a week to a congregation made up of children. He is only 12 years old.



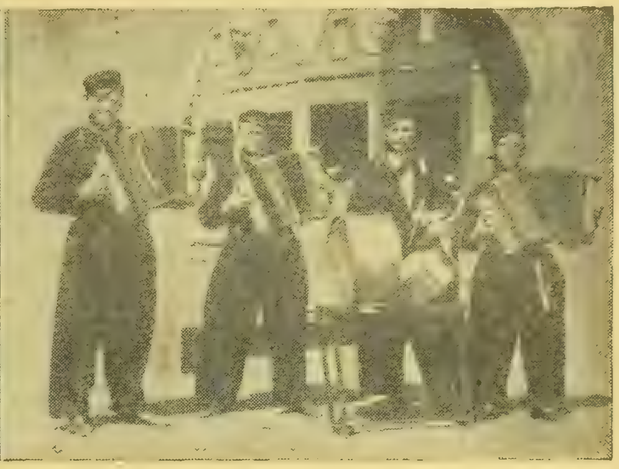
MARATHON KNITTER.—It took Miss Phipps, champion knitter of Washington, D. C. thirty days work of five hours a day to finish this tablecloth, valued at $1,000. It is six feet in diameter and took five miles of thread in the making. She is very clever at making up designs and her work has won wide admiration. Miss Phipps is on the right.

ENGLISH POLICEWOMAN HERE.—Commandant Mary S. Allen, who is head of the Womens Auxiliary Police Force of London, England, is now in New York City, starting an American tour to study the methods of the women police in this country.



NAVAJO BLANKETS BECOMING RARE.—There are very few real Navajo blankets in the United States due to the Indians now finding other means of making a living. Photo shows a Navajo Indian woman making a blanket.

MAY WED PRINCE OF WALES.—Princess Ileana, daughter of the King and Queen of Roumania, may soon wed the Prince of Wales.



NEW STYLE OF JAZZ BAND.—These four Hollanders have a new way of producing jazz, the only orthodox dance instrument being used is the drums. Their performances have been well received around the Hague.

HUNGARIAN "MARY PICKFORD".—Mme. Ille Toth, famous Hungarian screen star, bears a striking resemblance to our own "Mary". This is a "sad" study of her.

THE BASKET QUARTETTE.—A glance at this picture and you would expect these kiddies to burst forth into song, say "Barney Google." For you must admit the youngsters of today learn things very fast.

JUTLAND HERO JOINS ARMY.—Patrick O'Keefe, of Killarney, now of New York, hero of the battle of Jutland, recently joined the Salvation Army.

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

PETE DEXTER, who has been telling of his life of graft, was sure that there was a lot of truth in the statement that you can fool part of the people all the time and all the people part of the time. If it hadn't been for that, Pete probably would have had to work for a living, like the rest of us. But Pete knew folks, and depended on the human curiosity and carelessness to put over his deals. People who didn't investigate what they were buying were the ones Pete liked to meet.

Pete's last venture was an old one, making up a remedy to cure everything. As far as Pete was concerned, he didn't care about the cures, and felt bad when he found out that he didn't make as much out of his company as he could have. The master grafter also qualified in the stockselling game. His early training in fooling people who wanted a sure thing made it easy for him to dispose of stock. People were always ready to help Pete, particularly if they were to share in the boodle, and it was easy pickings for Pete. This week Pete strikes a snag, and as they say in prison circles, he does a little time. Before he was landed, however, he took a whirl in one of the so-called high finance deals, and here are some of the ways these fellows made an easy living off a lot of us.

(Continued from May 10th Issue)

ON the way to Kansas City, that was the direction the train I boarded was going, I met a fellow who was interested in oil. He was so much in love with the business, I finally says to him: "This must be a good business. What's the chance for a good salesman?" So it happened that I hooked up with the Lucky Strike Oil Company.

Of course, every one was crazy about oil. I knew that for some time and even had a few shares in my pocket. Got them one day from a fellow who visited Frisky Valley while I was in the hog powder business. They didn't cost much, and I got a rake-off from the agent when he left town for the use of my name as an investor.

The Lucky Strike Oil Company was a good thing. We were sure of it. Head offices were in Fort Worth and they furnished us with newspapers which told us each day how things were going. I found out on my first visit to Fort Worth that the company printed that paper and that it was made up for them purposely. Every time we stopped in a town, the company would send telegrams announcing strikes and other important stuff. Small town telegraph operators ate that stuff up, and while it was supposed to be confidential, the whole town soon knew the glad tidings.

I went to Missouri for a while. Business wasn't so good there, as the people were too slow. So I finally drifted into Iowa again. Here was easy money sure. Say, the way I took in cash was great. A few of our papers and a little talking and the checks came in in handfuls. Every day or two I would send in a few names of people who had taken only one or two shares, to Kansas City, and the office would wire these people that an opportunity to make their investment ten shares instead of two was open for a limit of three days. I got most of them, and when I would blow into Kansas City I got my rake-off for furnishing the names. Well, the boys worked hard for two years, and we sure rode in swell cars and ate at the best hotels. I'll bet that about two-thirds of the people in the middle-west own some shares in oil. They were pretty certificates we handed out.

Things quieted down for a while in oil, and I had hard picking and had to travel a lot to make expenses for several years. I landed in Fort Worth one day and found that a lot of people were trying to find out what had become of their companies. That gave me another idea. I liked Fort Worth, and so I decided to start a business of my own. I started what was called the Texas Oil Investigation Company.

Our business was to look up stocks for people and we charged them a small fee for the work. Here's how we made the money: We would get a list of addresses from an oil company and send out letters to the stockholders and ask them if they needed any confidential information on stocks. Naturally they wondered what had become of their company, and invariably we would get a nibble. Our prices for investigation were low, and every one was satisfied. However, here was the game. We would advise them that their company was about to be taken over by a new concern which was exceptionally strong, and if they wanted to save their original investment they had better take an interest in the trust company which was handling the affairs. When they bit, I got a rake-off on their cash. Oh course, it always required an additional cash payment to be installed as stockholders in the new company, and our thousands of customers kept us in good shape in Texas.

I sold that company to a couple of young fellows one day for a good price, as I found a deal that suited me better. A friend of mine whom I had known in Kansas City dropped in one day and told me about a new one he had. He had secured the list of stockholders in the old Lucky Strike Company, and as long as it was dead, he figured out the following:

We organized the Battle Creek Company. This was a company that had taken over all the holdings of a lot of companies that were supposed to have gone broke drilling wells and never got going again, due to the failure of the stockholders to come across.

I was delegated to go to Iowa, being careful not to cover the territory I had worked before, and talk the proposition over with some of our best customers of former days. Several fellows in that section had a few thousand sunk in the deals, and so I approached them with a scheme to trade them preferred stocks in the Battle Creek Company for their worthless stuff in the old Lucky Strike Company. All they had to do was send in their old stock, pay a small transfer fee of two dollars a share, and we showed them the chance they would have. Luck was with us this time.

On one of our small properties the boys accidentally did make a strike, and we got a producing well. The daily papers announced the strike just about that time, and we sure cleaned up big. The boys in Fort Worth started to send out small dividend checks to every one they could find an address for, and told them that they had struck it big. Of course, they managed to separate the paying property into another company at once, but those dividend checks sure did the business. We had hard work banking the money fast enough. Every one who had felt that the deal was off, when they got that check, generally sat down, took the dividend check and added to it and sent in for more stock—and the boys sure saw that they got it. Business was fine that year, and we lived high.

In fact we got lazy. That's what ruined us. I got an idea that a little literature be sent out to prospects and maybe they would bite some more. So we mailed a few hundred thousand letters telling about our successful year and how dividends were being gotten ready for the semi-annual payments and gave the suckers another chance to invest.

One day as I sat in my well-furnished office, thinking that the world was a rosy place, I had a visitor.

"Mr. Gladberry?" inquired the big fellow who entered.

"That's me," says I. "Have a chair. What can I do for you today?"

"You the fellow who is in charge of the Texas Trust Company?"

"Sure enough!" I answered, thinking that here was a prospect.

As I remember that visit, I sure think of how easy I stepped into that trap.

"Well," continues my visitor, in his easy manner, "I was interested in your letters," and he pulled out a folder from his coat pocket and laid a lot of my best literature on my desk.

"Let's see; is that your name on here?"

"Sure," I states. "That is one of the best deals a stockholder can invest in at present, stocks which have been idle for a long time can be made to pay by our new plan and all you have to do is to——"

"Not interested in your line any more, Mr. Gladberry. Guess I have enough stuff here. Sorry, but you will have to come with me." And he opens his coat and there's the badge of the United States secret service staring me in the eye.

Then he read me a summons which he had, which stated that I was indicted by the grand jury, and so it happened that I went to jail. When I got there, I sure was in good company, as those fellows had rounded up a gang of the boys.

Well, I had a good roll laid away, and it took a lot of it to fight, but it was no use. Finally, after a long battle, the judge lined us up one day and sent us all to Leavenworth for three years each. We had slipped when we started to mail our "Go-Getters."

I went to Leavenworth and it wasn't a bad place, but I didn't care for it in mine. I got a pardon after fourteen months and when I looked around I found that my friends were all gone and so was my money. I had a small bank account I had deposited in the little old town in New York where my aunt lives and to which I had added from time to time, and so I decided I had better beat it back there and rest up. I was broken in health and felt pretty blue to think that I had been caught. I was afraid to try any of my old games for fear of getting caught up again and it was tough sledding that year.

While I was wondering what I could do to get another start I chanced on an article telling about a wonderful wheat that was being sold. This article was in a small-paper and the writer said he had made a study of wheat and had some that was descended from some seed that an uncle of his had gotten out of an Egyptian tomb many years ago. I decided that ought to be worked over so I fixed up some letters to several of my Iowa friends. I did not use my regular name but had the inquiries come to the Society for the Advancement of Wheat Growing and put a post office box number in the literature.

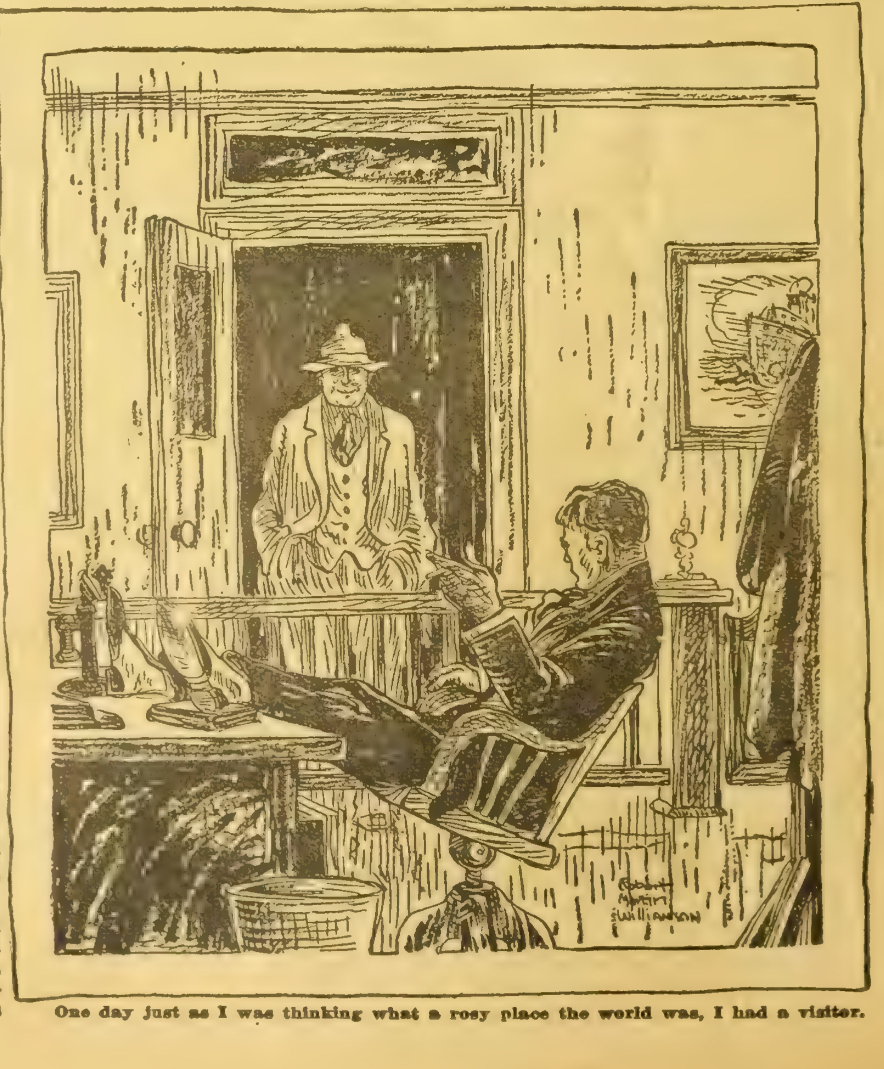
I wrote a fine piece of literature telling how my uncle had, in exploring an ancient tomb picked up several grains of this thousand year old wheat. He had brought it back to America and just out of curiosity planted it. Much to his surprise it had grown and instead of having merely one head per stalk it developed two. This new wheat had been carefully grown until now the Society for the Advancement of Wheat Growing had several bushels which would be sold at the rate of $5.00 per pound, to those interested. Of course all buyers would be expected to report the growth of the wheat and if they had any friends who were careful farmers, they would be allowed to try some of the wheat upon application to the Society.

This "Mummy" wheat, as we called it, would yield anywhere from 90 to 100 bushels per acre and it was a great discovery. Because of the limited offer, applications had to be filled out carefully and cash had to accompany the order.

I sure received a lot of money for this wheat and the local feed store supplied me with enough to fill the orders.

The suckers came thru and I had a start again. I left the little town where I had run my campaign, several hundred dollars richer and that literature sure paid well. At least I was on my feet again.

(Continued in June 7th Issue)



One day just as I was thinking what a rosy place the world was, I had a visitor.

BEEKEEPERS WILL MEET IN AUGUST

THE sixth annual summer meeting of the Michigan Beekeepers' Association will be held at Traverse City, August 6th and 7th. The secretary is negotiating with two nationally known beekeepers for the program. The meeting place this year is not far too north to prevent many southern beekeepers from attending the meeting. Please keep the dates in mind.

It required a force of 78 men to operate Thomas A. Edison's first electric generating plant 41 years ago in New York. When the plant opened it had only 59 customers, or one and one-third men's labor for each customer.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

MUST PAY TAX ON PAID ADMISSIONS

We are interested in forming a farmers' club but the following questions are bothering us: To conduct dances and other entertainments where admission is charged would we have to pay war tax? To purchase land or accept donations in a club name would we have to incorporate? The club is primarily for the purpose of providing entertainment for the young folks and the members favor financing the club by charging admission to all entertainments. The only requisite for membership and all its privileges is that one must live in the community where the club is located. Thanking you in advance I remain, E. P., Crystal Falls, Mich.

—Under the present Federal Income Tax Law, it would be necessary to pay a war tax on admissions to dances and entertainments such as you have mentioned. It would not be necessary, however, for the club to be incorporated in order to accept donations or to purchase land. —Clare Retan, Deputy Attorney General.

SUE FOR BREACH OF PROMISE

If a man over twenty one years of age promised to marry a girl and the girl's folks got her all things for a marriage, and the man backed out, what can you do? Under what proceedings would you have to go through? And what could be done to the man? Suppose the girl went and left the man after promising to marry him, what could he do?—Mrs. H. B., St. Johns, Mich.

—The girl could bring suit against the man for breach of promise. The first step would be to hire a lawyer to start the suit for you. The amount recoverable would depend upon all the circumstances surrounding the case. A man could bring the same kind of an action against a woman who broke her promise of marriage.—Asst. Legal Editor.

MAN WOULD GET ALL OF REAL ESTATE

Will you please tell me what the law is? A man and wife own property and have a joint deed, and the wife dies, and no will made. Does the property all belong to the man, or does he have to share it with the children?

What is the law? A bought a farm and B loaned some money to A, and A gave him a note. It was made out that A should pay back when he could. Now B went to Europe, and he wrote that he wants to sell the note, and the person that buys it can make A pay. Can he do that? A wants to pay but has not got the money now?—G. D., Unionville, Mich.

—The surviving father would be entitled to all the real property which he and his wife held jointly. The buyer of the note would not be able to collect it, since the date of maturity was indefinite.—Asst. Legal Edior.

DOES NOT PAY NOTE

A signs B's note. If B does not pay note when due how soon according to law must the holder of note let A know to make him holding for it.—P. T., Brown City, Michigan.

—Unless notice is waived, the indorser must have written notice within the following business day of the maker's failure to make payment in order to become liable for the payment of the note.

NEED NOT FURNISH BOOTH AT CAUCUSES

Is it necessary to furnish booths at caucuses and must the voters sign the ballots for candidates at such caucuses in secret? How should booths be constructed? If elections are not held according to law can a person break it up and call another election?—A. McC., Harrisville, Mich.

—The statute requiring booths and secret marking of ballots does not apply to caucuses. Political caucuses largely formulate their own rules of procedure. The design of booths at election is specified by Section 7 of Chapter 7 of Act 203 of the Public Acts of 1917. It provides that booths shall be built with walls not less than six feet high and in such a manner that the person preparing his ballot shall be concealed from other persons. No one would have authority to stop an election that he considered was being held unlawfully without taking proper court proceedings. That is, by an injunction or other appropriate remedy.—Clare Retan, Deputy Attorney General.

RAILINGS MUST BE PLACED ON CULVERTS

In the Compiled Laws of 1915, Chap. 86, page 1786 and section 4586 under the head, Line Bridges, I find the following quotation: "As to injury on bridges or culverts having no railings see Rohlfs. V. Township of Fairgrove 1741556." This part I do not understand. Could you tell me the law in regard to railing culverts? That is under what condition must they be railed in respect to their depth and length?—C. D., Newaygo, Michigan.

—In reference to the case of Rohlfs vs. Township of Fairgrove, it should have been written 174/556, which means that the case is reported in volume 174 of the Michigan Supreme Court reports on page 556. Railings must be placed on culverts when necessary to make them reasonably safe for public travel, taking into consideration all of the surrounding conditions.—H. Victor Spike, Assistant Attorney General.

SUE TO RECOVER AMOUNT OF NOTE

Through your department can you give us some information on the following conditions: A (a widow) owns a farm and gave a note with B as an endorser. A refused to pay the note so it was paid by B and note held by him. C buys the farm on contract from A. How can B collect for the note on the payment that is due on contract made by C? Can B put a garnistee on the payment to be made by C to recover the face of the note he endorsed for A?—H. N., Ludington, Mich.

—Generally the indorser of a note who has been forced to pay the amount may sue and recover from the maker the amount which he has been compelled to pay. B could garnishee the payments due A on the land contract.—Asst. Legal Editor.

COULD DEED TO WIFE

Years ago my father bought a farm, then a short time after he made out another deed to my mother telling her to have it recorded in case he should die. My father died in a few years and she had it recorded and sold the place afterwards. What I wish to know is; can a husband do the same now? We have no joint deed. Can a woman having a deed sell a place without the heirs consent?—B. B., Shepherd, Michigan.

—A husband may deed his property to his wife without the consent of his heirs and she would receive good title to it.—Asst. Legal Editor.

ENTITLED TO DAMAGES

I would like to ask a question through The Business Farmer about some goods that were left in a building and destroyed. I left some goods in a place where I rented and after a time this building was sold to a different party and they only notified me a week ahead before it was sold and it was impossible for me to get there at the time. I would like to know if I could draw damage for them?—G. D., Ludington, Michigan.

—I am of the opinion from the statements you make that you would be entitled to damages for the destruction of your goods.—Asst. Legal Editor.

Michigan and Her Railroads

Since 1920, when the Government returned Railroad operation to private enterprise, service in Michigan has become yearly more dependable—more nearly adequate.

That Service is today the best Michigan has ever enjoyed.

As a result there has come into being between the State's 24 steam Railroads and the public they serve, a spirit of pride and mutual good will.

Geographical isolation has made railroad service a local more than a national problem in both Peninsulas of Michigan. Within the enveloping barriers established by our Great Lakes, Michigan and her Railroads can prosper only by prospering together. State and carriers become thus members of a close community of interest.

Michigan Railroads realize this fact and make it fundamental in all details of management and operation.

The public can also recognize this situation by neighborly co-operation and by insisting that the roads be repaid by receiving, in national and state supervision, the same square deal.

We invite from you any suggestion of more ways in which we can consistently better our service.

Michigan Railroad Association
508 Railway Exchange Bldg., Detroit, Mich. (8-27)

Detroit, Michigan

Are You Using Our Service and Protective Bureau?

Have you any perplexing farm or business problems? Then call on our Service Bureau.

Thousand of THE BUSINESS FARMER readers have learned that THE BUSINESS FARMER is more than a high class farm paper. It is a friend as well, one who serves—and never fails in time of need.

As a subscriber to THE BUSINESS FARMER, you are entitled to all the rights and benefits of our Service Bureau. We want you to use this service—call on us freely.

JUST A FEW THINGS IT WILL DO FOR YOU

Will furnish you protection from swindlers, fake peddlers, and promoters.

Tell you about any investment or stock selling scheme. Invest no money in any scheme before you have asked THE BUSINESS FARMER Protective Service about it.

Aid you in collecting any claim you may have against any insurance, railroad, express or other company.

Aid in the collection of obligations.

Help you in the adjustment of claims.

Give you prompt information and advice about any crop, soil, livestock, dairy, or poultry problem.

Furnish expert market information whenever you have something to sell.

Help you with any building construction or farm machinery problems you may have.

Tell you the law and custom on all questions of [illegible]

Answer any question with regard to home or community life, schools, canning, cooking, preserving, or housework in general.

Give you correct information on any farm subject and will help you in trying to settle and farm, health, or legal trouble of any sort.

Protective Sign and Certificate

We want every reader of The Business Farmer to have one of our beautiful certificates of membership and a Protective Service Sign. The certificate is suitable for framing and will be mailed free of charge.

The Protective Service Sign acts as a warning to swindlers and fakers and informs all that you are a member of an organization of power and influence that will stand with you in support of your rights. We are asking a small charge of 25 cents to cover cost of sign and mailing.

THE BUSINESS FARMER,
Mt. Clemens, Michigan.
Gentlemen:—

Check for either or both the certificate and sign.

☐ Please mail me a membership certificate free of charge.

☐ I would also like one of the Protective Service signs and am enclosing 25 cents to cover cost of sign and mailing.

What the Neighbors Say

LIKES EDITORIAL ON WOOL POOL

DEAR Editor:—I have noted your editorial regarding the wool pool in a recent issue of THE BUSINESS FARMER and cannot let the matter pass without expressing my appreciation of your splendid assistance in helping along a project of so much concern to the farmers.

The matter of making the wool pool a success has been extremely difficult and the Farm Bureau administration has gone the extreme limit to establish a satisfactory wool marketing service for the farmers of the state. I thoroughly believe that at last we are developing a plan which will be ultimately successful.

Thanking you very kindly for the good words you have given the project, I am.—C. L. Brody, Secretary-Manager, Mich. State Farm Bureau.

CATCHING THOSE CHICKEN THIEVES

EDITOR, THE BUSINESS FARMER: I wish to give a reply to L. C. S., Breckenridge, Mich., as he is having the same trouble that I formerly had.

While I was still living in my home state of Illinois, we raised chickens, instead of three or four hundred it would be from one to five thousand 'each year. The chicken thieves sure made our work and life one of misery. The local officers could not do anything to help us as by the time they would get on the job the thieves were at a safe place. At last we farmers in Illinois had to protect ourselves in this way:

First get a good dog one that will make plenty of noise and is cross. Then a good shot gun. Then when we got the alarm from our dog instead of scowling him for waking us in the middle of the night we would hurry with the good old shot gun and follow the dog and at the first noise shoot towards the racket, not to frighten but to hit, and keep on going until we either had our man or men or made sure of giving him some number four shot. If the night was moonlight so we could see our man we called him to halt an keeping him covered ordered him to come over to us, then we turned him over to the sheriff. But if he run we stopped him with a load of shot in the legs or hips.

Our method may sound harsh to you but this method, used by almost every farmer in the state of Illinois, put a stop to chicken stealing there, as no man is going to take the chance of getting a few shot and having to fight a cross bull dog or airedale.

Brother L. C. S., are you sure your trouble is caused by the beet workers? When the ring at my home was finally broken up were surprised to find that the guilty ones were some well-to-do farmers living some eight to ten miles from our homes. I ask of you to not accuse any one because if you use the method of protection that I have given you, you may be surprised to find who you have the first time you declare open battle in your poultry lot. Go ahead and raise all the poultry you can take care of, then protect yourself, as I said. Your local officers are helpless to help you. You might band with your neighbors and work in helping the local officials run down these thieves.

Hoping that this will help you an also warning you that thieves always carry guns, I hope you success with chickens this year.—A. W. M., Turner, Mich.

TELEPHONE AND AUTO NECESSARY ON FARM

MY Dear Editor:—I also am a reader of the M. B. F. We take Farm & Fireside, M. B. F., Successful Farming, also Potato Growers' Exchange, and read them all, and enjoy my farm papers very much, as I am a real farmeress.

In the item answering Mr. Jorden in a recent issue—about telephones in farm homes—that is a farmer's need, not a comfort. We paid $25 for a share and pay $2.75 every three months, which does not amount to much. Also a farmer's car—now if the farmer does not have a car, where is he but in the ditch? A horse must be shod to stand on the country roads, and a man can't stand a horse in town because there is not a post to tie to. Where the water trough and hitching post used to stand, now there are oil stations, so he is forced to buy a car to haul his cream, eggs, butter and butchered meat to town. Nearly every man here has a car, but a good many are paying 7 per cent interest at the bank for the same.

Before the farmers organized here, we always got 50c a bushel for potatoes. We now get 25 cents, and have to wait for our money. A big price is promised but somehow it is always cut in half before the pay comes. Our farmers here have from 500 to 900 bushels of potatoes every fall, and by the time they are sorted at the warehouse, if you have 200 out of that amount to sell, you do well.

A young man starting in, where is he? A farmer always has more or less loss. We must go to our good banker and borrow and pay interest which counts very fast. The farmers in our neighborhood and a lot of Emmet County farmers had to go to Petoskey to work to pay debts, and they were not all farm shurkers. Our men around here all work hard, but were forced to work there nights also. So many of the papers lead city people to believe that if they buy a farm, they get rich quick, but they never print the other half. When you see a nice looking farm, it nearly always is an old man, who made it years ago.

If every farmer would print his experience that reads this M. B. F. paper, they would be a hard lot to read.

But I will say, if a man has money layed aside to buy a farm, and its needs, so as not to have to go in debt, do so, you can manage somehow, but don't forget you must work and save. The farm is free from noise, and we have fresh air, but hard times, and lots of work.—A Reader of M. B. F., Boyne City, Mich.

MICHIGAN BEET GROWERS RECEIVED $9.33 PER TON

MICHIGAN growers received $8,240,000 for their 1923 crop of sugar beets according to reports received by Verne H. Church, Agricultural Statistician and L. Whitney Watkins, Commissioner of Agriculture, from the best sugar manufacturers operating plants within the state. The guaranteed price plus the bonus resulted in an average price of $9.33 per ton for the 883,000 tons of beets delivered to the 16 factories operated. This crop was produced on 109,000 acres, a yield of approximately eight tons per acre, and an average gross return of $75.60 per acre. This exceeded the per acre income of any other major crop last year, its nearest competitor being $57 per acre from potatoes.

The actual amount of beets sliced was 815,000 tons, the beets losing 68,000 tons through shrinkage and removal of dirt. The beets had an average sugar content of 15.29 per cent of which it was possible to extract 84.4 per cent. As a result, 110,000 tons of sugar were produced, or approximately one-eighth of the beet sugar output for the entire United States last year, which totaled 881,000 tons.

There were 89 factories operated in the United states, slicing 6,565,000 tons of beets. The total production was 7,006,000 tons from an acreage of 657,000, or an average yield of 10.7 tons per acre. The high average yield, as compared to Michigan, is due to the fact that a large acreage is grown under irrigation in western states. The value of the sugar beet crop in the United States last year was $58,789,000. California was the only state paying a higher price per ton than Michigan.

Advance Information

She—How did you know I was going to wear my hair curled this evening?

He—I saw it in the papers this morning.—Stray Stories.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

A NEW TYPE OF DETECTOR

THERE has been placed upon the market, lately, a new type of detector tube that is much more sensitive to weak radio signals than any of the present type of tubes. This tube is the "Sodion" tube and is also spoken of as the "Golden Rule" tube.

This type of detector will bring in stations from great distances without using regeneration, and this means that the squealing that is so constantly heard in all regenerative sets can be done away with.

We are experimenting with this tube detector and in the early fall will tell you of our results. A cut of this tube is shown in these columns.

CRYSTAL RECEIVING SETS FOR SHORT DISTANCES

THERE are many farmers and residents of small rural communities that live within 10 to 30 miles of some broadcasting station; these same people are doing without the delights and advantages of radio because they can not afford the more expensive sets. It is for the benefit of these people that we will give some details on how to build and assemble a crystal receiving set that will give you satisfactory service.

Remember the crystal set will bring in the voice and music truer to life and clearer than any vacuum tube set will. It also works without any batteries and so does away with all this expense. It has given good results in the evening at distances of 50 to 400 and more miles; but bear in mind it is not recommended for distances greater than 30 miles from a broadcasting station.

Parts Necessary

Complete aerial equipment, wire, cleats, tubes, lightning arrester, ground clamp and strain insulators, $3.00; Tuning coil, (the cost to make, $2.00) with slides, etc., $3.00; 1 pair telephones, 2000 ohm, (some can be bought for less), $4.00; 1 phone condenser, $.50; 1 crystal detector, (from 50c up), $1.00; Total, $11.50.

This set can be bought for $11.50 which will include everything that you will need. Those of you who live near Detroit, Grand Rapids, Lansing, Ann Arbor, Saginaw and other broadcasting centers, will also be able to go to these cities to buy your parts and will find that the prices that I have given are higher than you will have to actually pay for some of the parts and you should be able to get in on the radio game for a ten-dollar bill carefully spent.

In an early issue we will give the details of assembling this set and how to tune it.

SEARS ROEBUCK STATION ON AIR

SEARS - ROEBUCK Agricultural Foundation of Chicago has opened a broadcasting station, call letters WLS; popular and instructive farm programs are broadcasted from this station which is primarily an agricultural broadcasting station. Their schedule is as follows:

Every noon 12.00 to 1:00 P. M. except Saturday and Sunday, Farm topic. Every afternoon, Home makers' hour, 3:45 to 4:45, except Sat. and Sun. Tuesday evening 6:30 to 12:00 P. M. Wednesday evening 6:30 to 11:00 P. M. Thursday evening 6:30 to 8:00 and 10:15 to 12:00 P. M. Friday evening, 6:30 to 11:00 P. M. Saturday evening, 6:30 to 12:00 P. M. Every evening the hours between 7 and 8 P. M. will be devoted to farm program or especially for farm people. The time given here is central standard time.

The United States government has placed in operation on both the Atlantic and Pacific coasts many radio compass stations which give to any inquiring ship it's exact location. This service is of great value in time of heavy fogs. There have been accidents and wrecks even since this new service has been used, such as the loss of several of our naval destroyers on the rocks off California coast not long ago, due in this case not to wrong radio information but a combination of circumstances which led to the loss of many lives and valuable ships.

Radio light ships and lighthouses are now being placed in operation. These ships and lighthouses send out certain signals at regular intervals and by checking these readings a ship at sea can avoid danger better than in the days of the real lightship and lighthouse.

FRUIT and ORCHARD

NO DIFFERENCE IN TREES

What would be the difference in a twenty acre commercial orchard in ten or twenty years grafted on whole roots or pieces of roots? From where and how do they import seedlings from Europe and what is the cost?—J. E., Pentwater, Mich.

—I feel confident in stating that there is no difference in the trees grown from whole or piece roots. Good trees can be produced in either way provided they receive proper care. I have seen mature trees grown, some of which were grown from piece roots and others from whole roots. These were planted alternately in an orchard. When I saw them they were 20 or 25 years of age and I could see no difference whatever in these trees, that could be attributed in any way to a difference in the nature of the original roots that were used.

Most of the apple seedlings imported from Europe come from dealers in France, although in the last few years Italy has become a large producer for the American trade. I am unable to state the present price quotations on these. Considerable quantities are raised in America immediately adjacent to Topeka, Kansas, and in the Yakima Valley in Washington. These seedlings, either American or European, can generally be secured from any of the larger nurseries.—F. C. Bradford, Research Assoc. in Horticulture, M. A. C.

PLUM TREES FOR MICHIGAN

Would like your advice on two good varieties of plums that are good on the market. Also what time of the year is best to prune plum trees?—L. W., Silverwood, Mich.

—There are a half dozen or more varieties of plums that are highly recommended for this state. Probably the Burbank is the most satisfactory of Japanese varieties. Amongst the European varieties Monarch and Grand Duke are probably two of the most satisfactory for commercial purposes.

Plum trees like most other fruit trees are pruned to best advantage during the dormant season; usually the pruning being delayed until rather late during the dormant season.—V. R. Gardner, Professor of Horticulture, M. A. C.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

Optimistic Medicine.—By Arthur G. Crandall. This book deals with a general study of the human mind and body and is well worth reading and should have a place in every library. Published by F. A. Davis Co., Philadelphia, Price $3.00.

The Pioneer West.—By Joseph Lewis French. This book is a collection of stories on the westward march of the Empire. The works of Francis Parkman, Mark Twain, Bret Harte, Hamlin Garland, Bayard Taylor, General George A. Custer, Owen Wister, Theodore Roosevelt, Emerson Hough and many other writers have been drawn on for material for this book. Published by Little, Brown and Co., Boston. Price $2.50.

CHAPTER XVI

The Fly in the Ointment

IN August Father Duff died. Miss Flora came home at once. James Blaisdell was already in town. Hattie was at the mountains. She wrote that she could not think of coming down for the funeral, but she ordered an expensive wreath. Frank and Jane were in the Far West, and could not possibly have arrived in time, anyway. None of the young people came.

Mr. Smith helped in every way that he could help, and Miss Maggie told him that he was a great comfort, and that she did not know what she would have done without him. Miss Flora and Mr. James Blaisdell helped, too, in every way possible, and at last the first hard sad days were over, and the household had settled back into something like normal conditions again.

Miss Maggie had more time now, and she went often to drive or for motor rides with Mr. Smith. Together they explored cemeteries for miles around; and although Miss Maggie worried sometimes because they found so little Blaisdell data, Mr. Smith did not seem to mind it at all.

In September Miss Flora moved into an attractive house on the West Side, bought some new furniture, and installed a maid in the kitchen—all under Miss Maggie's kindly supervision. In September, too, Frank and Jane Blaisdell came home, and the young people began to prepare for the coming school year.

Mr. Smith met Mrs. Hattie one day, coming out of Miss Maggie's gate. She smiled and greeted him cordially, but she looked so palpably upset over something that he exclaimed to Miss Maggie, as soon as he entered the house: "What was it? Is anything the matter with Mrs. James Blaisdell?"

Miss Maggie smiled—but she frowned, too.

"Oh, oh, no—except that Hattie has discovered that a hundred thousand dollars isn't a million."

"What do you mean by that?"

"Oh, where she's been this summer she's measured up, of course, with people a great deal richer than she. And she doesn't like it. Here in Hillerton her hundred- and two-hundred-dollar dresses looked very grand to her, but she's discovered that there are women who pay five hundred and a thousand, and even more. She feels very cheap and poverty-stricken now, therefore, in her two-hundred dollar gowns. Poor Hattie! If she only would stop trying to live like somebody else!"

"But I thought—I thought this money was making them happy," stammered Mr. Smith.

"It was—until she realized that somebody else had more," sighed Miss Maggie, with a shake of her head.

"Oh, well, she'll get over that."

"Perhaps."

"At any rate, it's brought her husband some comfort."

"Y-yes, it has; but—"

"What do you mean by that?" he demanded, when she did not finish her sentence.

"I was wondering—if it would bring him any more."

"They haven't lost it?"

"Oh, no, but they've spent a lot—and Hattie is beginning again her old talk that she must have more money in order to live 'even decent.' It sounds very familiar to me and to Jim, I suspect, poor fellow. I saw him the other night, and from what he said, and what she says, I can see pretty well how things are going. She's trying to get some of her rich friends to give Jim a better position, where he'll earn more. She doesn't understand, either, why Jim can't go into the stock market and make millions, as some men do. I'm afraid she isn't always—patient. She says there are Fred and Elizabeth and Benjamin to educate, and that she's just got to have more money to tide them over till the rest of the legacy comes."

"The rest of the legacy!" exploded Mr. Smith. "Good Heavens, does that woman think that—" Mr. Smith stopped with the air of one pulling himself from an adyss.

Miss Maggie laughed.

"I don't wonder you exclaim. It is funny—the way she takes that for granted, isn't it? Still, there are grounds for it, of course."

"Oh, are there? Do you think—she'll get more, then?" demanded Mr. Smith, almost savagely.

Miss Maggie laughed again.

"I don't know what to thing. To my mind the whole thing is rather extraordinary, anyway, that he should have given them anything—utter strangers as they were. Still, as Hattie says, as long as he has recognized their existence, why, he may again, of course. Still, on the other hand, he may have very reasonably urged that, having willed them a hundred thousand apiece, that was quite enough, and he'd give the rest somewhere else."

"Humph! Maybe," grunted Mr. Smith.

"And he may come back alive from South America."

"He may."

"But Hattie isn't counting on either of these contingencies, and she is counting on the money," sighed Miss Maggie, sobering again. "And Jim—poor Jim!—I'm afraid he's going to find it just as hard to keep caught up now—as he used to."

"Humph!" Mr. Smith frowned. He did not speak again. He stood looking out of the window, apparently in deep thought.

Miss Maggie, with another sigh, turned and went out into the kitchen.

The next day, on the street, Mr. Smith met Mellicent Blaisdell. She was with a tall, manly-looking, square-jawed young fellow whom Mr. Smith had never seen before. Mellicent smiled and blushed adorably. Then, to his surprise, she stopped him with a gesture.

"Mr. Smith, I know it's on the street, but I—I want Mr. Gray to meet you, and I want you to meet Mr. Gray. Mr. Smith is—is a very good friend of mine, Donald."

Mr. Smith greeted Donald Gray with a warm handshake and a keen glance into his face. The blush, the hesitation, the shy happiness in Mellicent's eyes had been unmistakable. Mr. Smith felt suddenly that Donald Gray was a man he very much wanted to know—a good deal about. He chatted affably for a minute. Then he went home and straight to Miss Maggie.

"Who's Donald Gray, please?" he demanded.

Miss Maggie laughed and threw up her hands.

"Oh, these children!"

"But who is he?"

"Well, to begin with, he's devoted to Mellicent."

"You don't have to tell me that. I've seen him—and Mellicent."

"Oh!" Miss Maggie smiled appreciatively.

"What I want to know is, who is he?"

"He's a young man whom Mellicent met this summer. He plays the violin, and Mellicent played his accompaniments in a church entertainment. That's where she met him first. He's the son of a minister near their camp, where the girls went to church. He's a fine fellow, I guess. He's hard hit—that's sure. He came to Hillerton at once, and has gone to work in Hammond's real estate office. So you can see he's in earnest."

"I should say he was! I liked his appearance very much."

"Yes, I did—but her mother doesn't."

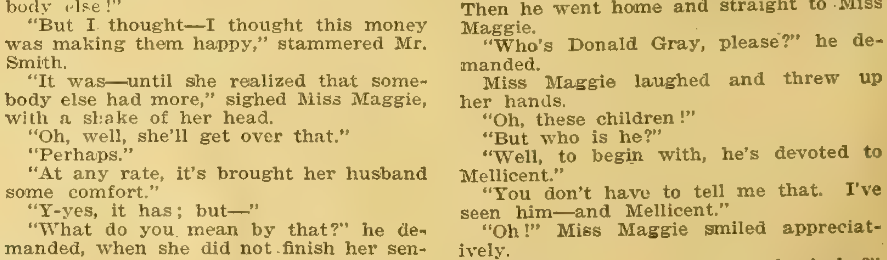
"What do you mean? She—objects?"

"Decidedly! She says he's worse than Carl Pennock—that he hasn't got any money, not any money."

(Continued on Page 21.)

OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.



UP-TO-DATE BUILDINGS ON FARM OF R. G. COLLINS, MT. PLEASANT, MICH.

I am sending you a picture of our barn which was built last year. You will notice the silo is built in which keeps the silo and silage in fine shape. The barn is 74 feet long by 38 feet wide and is built on a cement wall. Floor is cement. It cost $2200.00 to build.—R. G. Collins, Mt. Pleasant, Michigan.

FOUL DEEDS AGAINST FATHOMLESS LOVE

A SERMON BY REV. DAVID F. WARNER

> TEXT: "And forthwith, he came to Jesus and said, Hail, Master; and kissed him. And Jesus said unto him, Friend, wherefore art thou come? Then came they and laid hands on Jesus and took him."—Mt. 26: 49, 50.

JUDAS in history has been pointed out as an ingrate because of his foul betraying of friendship. To mention the kiss of Judas is to set surging in human breasts emotions of horror and loathing. In all the days of intercourse with his Lord, he had been contemplating this hideous crime within the closed doors of his heart. Therefore, to extenuate this deed by saying he desired to precipitate or hurry in the Messianic kingdom, does not seem in keeping with Revealed Truth. But, however, he succeeeded in keeping it within the drapery of religion; in hiding it under a show of prayer and devotion to the Christ. But, now, the fatal moment has come, and the kiss of poison and death is given. Can one conceive of a snakier deed?

But here also is Drummond's "Greatest Thing in the World," LOVE. "Faith, hope, love, these three; and the greatest of these is love," says Paul. This is one of the profoundest mysteries in the Book. But Jesus loved all of his disciples to the end; and in this scene, the Love that never faileth sees the traitor coming and hails him as "Friend." This is the love that passeth our understanding since the Christ saw corruption working in Judas' heart and the crime taking shape. At the table he said, "One of you shall betray me," but he pointed out no individual. Yet guilt in the person of the betrayer cried out, "Lord, is it I?" Well, what humans have done, humans may do again. Let us address our own hearts solemnly, "Lord, is it I?"

But let us keep to the foremost, THE PERMANENCE OF LOVE. And this is heightenend by noting the manner of the Judas sin. Our way of sinning is sometimes harder to hear than the sin itself. That kiss! How many libertines have entrapped the innocent thru a foul kiss! That Judas kiss loaded with poison! What shall we say about this church kiss, for so it was? What dread for the man or woman who secretly plan evil against you! How loathsome is he who is strangely genial and friendly to your face but who carries the dagger of destruction in his bosom! What pain to be betrayed by a familiar friend! Sack cloth and ashes! Some of the most detestable camouglage in the world has been enacted in the name of the church. Even many wicked hearts consider it beneath their sanction to commit a Judas betrayal. "Hail, Rabbi!" And he kissed and embraced. Now see his Lord, persistent in love. There is no recoil from the pollution of the traitor's lips. We see no white sheet of anger on his face. Looking the wretch over, in pity he says, "Friend, wherefore art thou comest?" How Jesus could wrap such a relentless foe in the mantle of charity, we cannot understand, but he did. And this constitutes a challenge to the charity and good-will of every humble follower of him.

But, friends, we do not know Jesus until we see in him more than perfect human goodness as such things go with us; until he becomes to us the revelation of God. "He that hath seen me hath seen the father." In this tragic scene we see the pity and tenderness of our Heavenly Father. If ever a man could expect Christ's heart to close up against him, it was the Judas man. But in the moment of treason, love did not fail. Now, sinning friend, the law of consequences makes sin terrible in its results. "He that pursueth sin pursueth it to his own death." And because you have not passed over into the realm of lost spirits, is because of Jesus' lingering, pleading love.

"God so loved the world" of sinning men, of outcasts and prostitutes, of Godless good-enuf men, and of church - hardened professors, "that whosoever believeth should not perish." Nothing more proves it than this Gethsemane tragedy. The waters of Fathomless Love lapped at the wayward feet of the traitor, but he would not be cleansed. Will you? Jesus Christ is the same yesterday, today, and forever.

The CHARACTER OF LOVE is abiding. So says the apostle in that great classic, the thirteenth chapter of first Corinthians. It believes, it hopes, it endures. Your attention will be called to this on Mothers Day. For, in the words of Coleridge, "A mother is a mother still, the holiest thing alive." The holiest in purity of love, in extremes of selfdenial, and in unwearied service. But if this be but sentiment, let me remind you that in this betrayal scene the Christ attitude strikes deeper than sentiment. "Friend, wherefore art thou comest" is a word that pierces even to the dividing asunder of soul and spirit, and is a discerner of the thoughts and intents of the heart. It strikes down to conscience. Judas friend, don't you remember our former companionship, and our walks and talks together? Don't you remember the official honors we gave you? Have you forgotten all this? Why do you come to betray me?

But conscience would no longer respond to the call of love. The Master would have Judas ask himself, What am I going to do? Why am I going to do it? Is this thing wrong that I am planning to do? Shall I do it anyway? The strength of Christ's moral appeal is always to drive the heart to examine its own conduct to bring about self-accusation.

The doctor says, What have you been eating? What are your habits? And then you are self-accused before him. The Great Physician asks, Why do you do wrong? What wages do you expect to reap from sinning? These questions when seriously put to our own hearts would save much misery and hell. "Happy is he that condemneth not himself in the thing which he approveth." The lie, the deception, the gay life, the selfish career, which I approve in my own life condemns me to separation from Christ. Church Member, if you could feel that that writhing thing crawling around the rots of your heart, is the snake of secret jealousy and revenge, you would pluck it out or forever take your stand with Judas. Careless Liver, if you would stop to consider that that subtle serpent which says, "Thou shalt not surely die," is the betrayer of your soul, you would yield to Infinite Love. To stop and consider, is to smite the conscience so that the grace of God might come to your rescue.

"My people doth not consider," cries out the prophet, Isaiah. O, yes, they were devoted to religious forms. But saith Jehovah thru the prophet, "When ye make many prayers I will not hear: your hands are full of blood." Judas was a formal religionist, but his hands were full of blood. Of course he did nothing but kiss his Lord and Master. No, you don't always have to set your teeth and raise defiant hands; just do nothing but keep religious forms and conventions and heaven and earth will know where you live. It is quite easy to miss the way to a saved personality. When Love pleads, just do nothing. He that believeth not (nothing) is condemned already. And the stroke of it is on the way. In a few hours after the Garden scene, it strikes into the heart of the traitor, and he cries, "I have sinned." This is the remorse of a soul that sold its Savior for gain and became its own hang-man.

Now, we need to turn the terror of such an end upon our own hearts. But, more than this, we need to let the love that never faileth flood our erring lives. Our bodies and spirits are not our own. And what shall we answer to the Owner, when we willfully wreck them in foul deeds and selfish living. "Lord, what wait I for? My hope is in thee."

The Seal of Quality and Service

PONTIAC STRAIN

Our Pride Mark Protetcs You

Announcement

In following out the Policy of a Service which protects the purchaser of Foxes and the beginner in the Industry—and to maintain—yes—increase the Standard of perfection—set up for Pontiac Strain Foxes—we wish to announce that

Mr. Justus E. Smith

Former Secretary of

National Fox Breeders' Association

is now affiliated with the Pontiac Strain organization—in the capacity of

Director of Purchaser's Service

Mr. Smith's four year's experience as National Secretary and Official Inspector qualifies him to give to beginners in this wonderful Industry the advice and Service necessary to assure their success.

Mr. Smith's—unimpeachable integrity—and wide knowledge of the Fox Industry—is a firm foundation upon which beginners—or others—may safely build. Write him your problems. He will serve you. Address—JUSTUS E. SMITH,

DETROIT SILVER FOX FARMS,
12-243 General Motors Bldg., Detroit, Mich.

"The Farm Paper of Service"

WELCOME BACK TO MICHIGAN

THIRD in a line of three generations of Butterfields, each of whom contributed largely to the agricultural progress of this state, returns Dr. Kenyon L. Butterfield, from Amherst, Massachusetts, to take up the presidency of the Michigan Agricultural College. The Good Book says "A prophet is not without honor save in the land of his birth," and yet Michigan is doubly proud to have a native son to head her college.

Dr. Butterfield's grandfather, I. H. Butterfield, Sr. was a pioneer farmer and stock breeder, who served twice as a member of the state senate and was chairman of the committee which reported the bill which later became the law under which the Michigan Agricultural College worked for half a century. His father, I. H. Butterfield, Jr., was also a farmer and was connected with the Michigan State Fair for thirty years, fifteen of which he was active in the capacity of secretary, during which time the foundations were laid for the exposition of which this state is now so proud. He was also the organizer of both the Michigan Shorthorn Breeders Association and the Michigan Livestock Breeders Association.

Dr. Kenyon L. Butterfield was born at Lapeer, Michigan, June 11, 1868, and his early education was received in the country school house and later in the city of Port Huron. He graduated from the college to which he now returns as president with a Bachelor of Science degree in 1891 and served in various agricutural activities until 1900, when he attended the University of Michigan and graduated from that institution in 1902, with a Master's degree. For a year he remained there as instructor in rural socialogy, and was then called as president of the Rhode Island College of Agricultural and Mechanical Arts, where he remained until accepting the presidency of the Massachusetts Agricultural College at Amherst, from which position he now returns to his home state.

Announcement that Kenyon L. Butterfield will return to Michigan to fill the chair as president left vacant by Dr. David Friday will, we feel sure, be welcome news to the progressive business farmers of this state and we share with Chairman L. Whitney Watkins and other members of the State Board of Agriculture their jubilation at being able to place a native son who has won such high honors at the head of the institution which means as much, if not more, than any other single factor to the progress of agriculture in this great state.

Welcome home, Kenyon! We hope you will never again see fit to get the Michigan mud off your heels or the pure ozone of Michigan out of your nostrils!

DIG OUT THE FACTS!

FEELING that farm property is being assessed relatively higher than city homes and business property, several county farm bureaus in Michigan are engaged in campaigns to find out the actual facts about these conditions. Committees representing the county farm bureaus are working in accordance with a plan devised by the Michigan State Farm Bureau to find out from the official records the actual assessment ratio for various classes of property.

Representatives from the State Farm Bureau are assisting the counties in putting on these campaigns. The general plan is to go to the Register of Deeds office and get a record of all the real estate transfers for several months back and then to find out the assessed valuation of each of these descriptions of property from the County Treasurer's records. A comparison of the sale price and the assessed valuation of each kind of property shows conclusively how fairly the different kinds of property in any given county are being assessed.

The results secured to date indicate that farm and village property is being assessed at almost its full sale valuation, while real estate, especially business property, is not being assessed at more than 65 per cent of its actual value. Results secured in these campaigns will be presented to the local supervisors and an effort made to secure an equalization. Where such efforts are not successful locally, an appeal will be taken to the State Tax Commission.

A similar campaign put on by the county farm bureaus in Illinois resulted in a reduction of taxes paid by Illinois farmers amounting to over $2,000,000 last year. If they ask you to help dig out the facts in your county, join hands and do your bit!

MORE ABOUT BEANS

THE article by E. A. Little, on page 4 of this issue, in which he advises not to cut the 1924 acreage of beans in Michigan, is only a starter in a serious study of the whole bean industry in this state.

There is no major crop that is more important to the farmers of Michigan than our bean crop. According to the last census, Michigan produced 72 per cent of all the navy beans grown in the United States and there are none of us who will not admit that the Michigan quality is far superior to anything else that can be grown in the United States.

To THE BUSINESS FARMER it has been obvious that Michigan needed more than any other thing a strong bean growers' organization. We had hoped that the man who could head such an organization, who had the ideas and the tenacity, would step forward and with the help of the many interests who are waiting him, organize the independent bean growers of Michigan into a solidified and stable business corporation.

No one who has made even a causuary examination of the facts can help but come to the conclusion that the bean market suffers annually and has from time immemorial, from the depradation, of a band of market-bandits who take advantage of the growers unorganized position to force the market up or down to their own particular advantage.

It was just this sort of thing that drove the citrus growers of California and the milk producers of New York state into the strong positions they occupy today, with a complete selling organization for their raw products.

We are going to continue to give all the space necessary to this subject because we know of none other which deserves more attention in Michigan at this time. If our readers have anything to offer or any suggestions or advice, we will be only too glad to welcome it into our columns.

FIGHTING FARM FIRES

WE mentioned recently on this page the motor-driven fire-fighting equipment which is being purchased in Michigan rural communities for the protection of farm property against the avages of fire. We pointed out that the advent of good roads and the rapid motor trucks have made it possible to have a community fire department in the farming districts giving the same advantages as enjoyed by city residents.

The latest to come to our attention is the modern fire equipment purchased by Montague township in Muskegon county. We understand this is largely sponsored by Mr. Charles Ohlenberger who, for twenty-three years, has been chief of the Montague fire department and who has had plenty of experience in fighting the fire monster.

We will welcome the news of more fire equipment in Michigan because we know it means the saving of a vast amount of property which has heretofore been lost because of inadequate protection.

We point out again that no farm home and no farm building should be without a small fire extinguisher of some kind to catch the small blaze at its inception, and if every insurance society in the state insisted upon this simple precaution the amount paid for insurance in Michigan could be reduced millions of dollars and yet the cost of this simple protection would only mean a few thousands, a fraction of the savings.

By actively fighting fire in Michigan the coming year the insurance rates can be materially lowered, and this is one of the propositions that we are going to harp-on until we see it an established fact.

INCOME TAX PETITION OUT

THE farmers of Michigan, working through their organizations are going over the top in their effort to initiate a state income tax constitutional amendment by petition. The Michigan State Farm Bureau and the State Grange and other cooperating farm bodies have already secured more than 50,000 signatures to the petition to put the proposed amendment on the ballot for the general November election this fall. Nearly 60,000 names are required, but the leaders are planning not only to secure the minimum, but to have several thousand names to spare.

The amendment now being proposed is radically different than the tax which was defeated a few years ago, in that it definitely provides that the first $4,000 of every man's net income shall be exempted from this tax and it fixes the rates on incomes in excess of this amount on a sliding or progressive scale which will vary from 5 per cent to 10 per cent according to the size of the individual's net income. Incomes of $100,000 or more per year will receive the maximum 10 per cent tax.

An analysis of receipts from the Federal income tax in Michigan indicates that the proposed state income tax would yield at least $12,000,000 revenue per year, which it is definitely provided would be deducted from the amount of general property tax for state purposes. Backers of the income tax state that this will not be an added burden to the Michigan tax-payers, but will give definite relief to the over-burdened real estate in that it will shift a considerable portion of the cost of maintaining the state government off from general property and distribute it upon men who are receiving relatively large incomes from salaries or investments.

It is also pointed out that a personal income tax is about the only form of taxation which cannot be readily passed on and the burden shifted from the big fellow down to the ultimate consumer. A personal income tax coming due after the year's business is all completed and the books balanced, must be paid by the individual who has received the net income.

ANOTHER CHEERFUL VIEW

ONE of the leading farm mortgage houses in the United States has the following to say in a recent bulletin issued to investors, which because of its conservative source has more than double meaning.

"As time goes on productive farms will appreciate more and more in value, just as they become scarcer and scarcer. A great change is certain in less than a generation. About all of the country's arable land has been taken up, but our population goes right on increasing just as if another West was waiting to be put under the plow. The result is inevitable, and the opportunity to buy fertile farms will never be greater than it is today. These farms are extensive in number and as low in price as they ever will be.

"The fact that land has a greater value today than it had only twelve years ago is due almost entirely to the fifteen million more mouths that must be fed. This has been the dominant factor that has caused food commodities and land values to increase steadily in this country for the last hundred years. It is true, not only in America but it has been true in every agricultural country in the world. Yet with approximately 25,000,000 more consumers to be fed in the next ten years from almost the same acres, many young farmers want to sell out, move to the crowded cities, engage in business, despite the fact that 95 per cent of all businesses fail."

FACE THE AUTOMOBILE

WHEN you start walking down the country road or highway, do you face the oncoming automobile or do you walk with your back to it?

If you follow the latter plan and do much walking on the highways the chances of your being alive five years from today are pretty slim, but if you will change your method of walking and face the traffic, stepping out to the side of the road as the oncoming vehicle approaches you, you will be removing at least one of the impediments to your reaching a ripe old age.

There is not a heavily travelled highway in Michigan that has not taken its toll of men, women and children who insist on walking up the road with their backs to the oncoming vehicle; probably the greater proportion of these accidents have occurred at night when the lights were dimmed or the driver befogged by liquor, but as simple as this rule would appear, it is only recently that they have been teaching it in the country schools or preaching it in public meetings.

Talk it over with every member of your family tonight and find out how they are walking, or if you do not your home is pretty apt to be turned into one of sadness. Help us spread the propaganda of "Drive to the right; walk to the left!"

PUBLISHER'S DESK

OUR SERVICE TO YOU IS FREE

WE are here to serve and help you, and you can help us help you by giving full information with your first letter. Hardly a day passes that we do not receive a letter from some paid-up subscriber asking for help and then the writer fails to give part of the information needed. Some will want us to handle claims for them and they fail to give the complete name of the company their claim is against, or they do not tell the amount due them, or what they purchased, or other information very necessary in handling a claim. Some even fail to sign their name.

We want to help you but you must give us a certain amount of information if we are to serve you. In writing the publisher kindly keep the following in mind:

Write on only one side of your paper.

Be careful to write plain.

Do not use wrapping paper for stationary.

Do not ask us to settle claims that are over six months old.

Do not expect us to handle claims between you and your neighbors. We will give you legal advice on the matter, however.

Be sure to give the complete name and address of the party about whom you are complaining.

Give full details regarding your case.

Do not fail to sign your full name and address plainly. We will not use your name if we publish the matter.

Be sure that you are a paid-up subscriber.

Read your letter over before mailing to make sure you have left nothing out. We always read our business letters carefully before mailing to make sure nothing has been omitted.

Will you kindly cooperate with us? It will enable us to handle more claims and answer more letters if you will. And you will get quicker service. Quick service is what you want and what we want to give you so help us by helping yourself.

GOOD NEWS!

I THINK we have some good news for all friends of THE BUSINESS FARMER! The certificates of membership in the Protective Service Bureau are now being mailed to all new subscribers, as their remittances are received and the metal signs, ready for hanging on the fence, attaching to the mail-box post or fastening to the barn or house, will be shipped in a few days.

This certificate is free and will be mailed on receipt of every subscription remittance. If you are paid-up, as shown by your address label on the front cover, to 1925 or longer, simply ask us on a postal-card and your certificate in three colors, suitable for framing will be mailed free. If your subscription has expired or will in 1924, send a dollar for a two year renewal and the certificate will come by the next mail.

When all our subscribers have certificates, we will give service from the Legal, Veterinary, Publisher's Desk and other departments absolutely free, only when the certificate number is mentioned.

Do You Want A Metal Sign?

If you want to be first in your neighborhood to get one of the weather-proof, two-color, metal signs which are now being made and will be ready for mailing within thirty days, send twenty-five cents (25c), with your subscription remittance or if you are paid-in-advance, send just a quarter for the certificate and the sign. For your convenience we will print a coupon at the bottom of this page.

Crooks, fakirs, quacks and grafters are going to keep away from the farm homes in Michigan where they see this sign displayed! They already have a healthy regard for "the little paper with the big stick!"

GUSTAVESON OIL COMPANY

Will you kindly investigate the Gustaveson Oil Company, Salt Lake City, Missouri, for me? They want to sell me some stock,—C. D., Sandusky, Mich.

WE had our representative at Salt Lake City call at the office of the Gustaveson Oil Company and he reports, "The first people who organized this company did it upon a promotion scheme. The people who now have charge of it are all local business men and of good standing. I believe that any money they receive will be expended in a right way, according to their judgement, but like any oil proposition, any one putting money into it is taking a long chance as to whether they get any money back or not, or oil for that matter. At the present time they do not have any oil wells and are only a prospecting company."

BLACK'S INTERNATIONAL SELLING SERVICE

I have noticed in your paper mention of fake real estate agents with remarks to find out who they are before giving money and your department would assist. Can you inform me if this Black's International Selling Service is reliable? I want to list my farm for sale but don't want to advance money and lose it. We are both in poor health and must sell. I will be grateful for any information you may be able to give me.—J. B., Missaukee County, Mich.

WE do not have much faith in the scheme where you list your farm with a dealer in another state paying him an advance fee. We wrote this agency twice, the last letter was over a month ago, and to date have heard nothing from them. We asked them for the names and addresses of several farmers in this state who had satisfactory dealings with them, and also their responsibility to make good on the sale of a farm that was listed with the company. As usual, these kind of folks seem more willing to write letters to unprotected farm folks than they do to us.

FUR SWINDLER GOES TO PRISON FOR TWO YEARS

MANY of our readers remember the I. R. Hough Fur Trading Company, of New Haven, Connecticut; in fact, some of them will remember that company the rest of their days because they shipped some furs to them last winter. Word has come from New Haven, Connecticut, that I. R. Hough of this company was recently convicted of swindling fur trappers in all parts of the country by failure to pay for the skins shipped to the concern, and was sent to the Federal penitentiary for two years.

Edited by **MRS. ANNIE TAYLOR**

DEAR FOLKS:—Memorial Day, May 30th, is the next public holiday. There is no holiday observed in this country that arouses the emotions of the people as does Memorial Day. First conceived as a day on which to decorate the graves of the soldiers and sailors of the Civil War, it is now a day on which we honor, with florial tributes, the final resting places of the heros of all our nation's wars. Let us all put aside our work for the day, hitch up the horse or jump into the flivver, and drive into town and observe this day along with our city cousins. , Yes, I know that we are behind with our work this spring, but we can spare at least one day in honor of those who died for us—some of them our own flesh and blood.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

MEMORIAL DAY

GATHER the garlands rare to-day,
Snow-white roses and roses red;
Gather the fairest flowers of May,
Heap them up on the graves of clay,
Gladden the graves of the noble dead.

Pile them high as the soldiers were
Piled on the field when they fought and fell;
They will rejoice in their new place there
To-day, as they walk where the fragrant air
Is sweet with the scent of asphodel.

Many a time, I've heard it said,
They fell so thick where the battles were,
Their hot blood rippled, and, running red,
Ran out like a rill from the drifted dead
Staining the heath and the daisies there.

This day the friends of the soldiers keep,
And they will keep it through all the years,
To the silent city where soldiers sleep,
Will come with flowers, to watch and weep
And water the garlands with their tears.
—Cy Warman.

THE FOREWORD TO JUNE FASHIONS

JUNE, month of brides and roses, brings us also many beautiful new fashions. Summer frocks, of course, have the advantage of sheer materials and brighter colorings to make them especially appealing, according to the Designer. Laces, too, and dainty embroideries add to their charm, and the present vogue of painted designs suggests a new and decorative way of embellishing this season's dresses.

Warm weather sponsors the sleeveless mode in dresses, coats and jumper styles, and a very original model features a cape-collar arrangement in one with the short sleeves. The apron front and side draperies are particularly attractive in soft summer fabrics.

The tailored vogue is evident in the simple, straight-line dresses, open at the neck to form a collar and with narrow belt and pocket. A novel coat dress presents a coat-suit effect in the front but the back is made in one piece. The sports influence is seen in all these styles for general wear. The effective use of striped materials is another interesting new note, and the crosswise treatment suggests many clever possibilities.

Among the prevailing accessories scarfs are most conspicuous and they accompany every type of costume. Striped and printed silks are used for daytime scarfs while hand-painted chiffon and silk lace are used with evening dresses. In the matter of footwear one may choose from a variety of strap pumps of satin, patent leather or kid, worn with stockings in the lighter shades of blond, peach and nude.

WHAT DO WE TALK ABOUT?

"AND when I wouldn't give him a date for the next night, he got sore———."

"There wasn't a bank in town that would lend us a nickel in those days. Now———."

With women it is men, and with men it is business! At least that is what three psychologists have found, after analyzing chance conversations of persons on Broadway and in Columbus, Ohio. The results of their survey are told in Hygeia.

As for health, it has little conversational interest to any one who is well.

Listening in on the conversation of others has always been an absorbing pastime, and many a dull journey has been enlivened by overheard conversation.

Two psychologists, M. H. Landis and H. E. Burtt of Ohio State University, recently analyzed 500 conversations which they overheard in that community, with a view to finding out what are mankind's chief interests. They compared their findings with those of the psychologist, Henry T. Moore, who several years ago made a similar analysis in New York of conversations heard on Broadway.

The two Ohio scientists included in their investigations the conversations of persons in restaurants, at baseball games, in theater lobbies, in front of store windows, on the campus, in barbar shops, in churches and on the street.

Conversations were classified under ten headings: business and money, men, women, clothes and decoration, sports and other amusements, college work, health, self and weather. The results at Columbus, Ohio, in general agreed with those on Broadway.

Men's most frequent topic is business—49 per cent. in Columbus and 48 per cent. in New York. If sports and other amusements are combined, these topics have a frequency of 15 per cent. at Columbus and 14 per cent. in New York. The third topic of men's conversation is men—12 per cent. in Columbus and 13 per cent. in New York.

Women's leading topics are men, 22 per cent., and clothes, 19 per cent. For New York, the figures were men, 44 per cent., and clothes, 23 per cent. The next topic is other women about 15 per cent.

In mixed company, men most frequently talk to women about amusement, and next of business and money. They further seem to talk to women considerably about themselves—17 per cent.—which is more than when talking to other men.

Women most frequently converse with men about amusement; secondly, about clothes; thirdly, to a considerable extent about themselves and about men.

The results were classified also as to social status of those concerned. Business people talked about business and money in 70 per cent. of cases, as compared with 43 per cent. for industrial workers and 9 per cent. for students.

Industrial workers talk chiefly about men and themselves, and students talk chiefly about other men, their opportunities and amusements. It is interesting to observe that only 8 per cent. of student conversation dealt with lessons.

Although health was one of the subjects catalogued, it is important to notice that it had little interest for those who were well.

HOW TO MAKE POCKETS FOR BLOUSES AND SKIRTS

POCKETS are used on blouses, skirts and dresses. They are the set-on or patch pocket, and the set-in. Both of these may be made with or without laps, which may be applied on the outside or set into the edge of the pocket.

The patch pocket is the simplest type of pocket. This may be cut according to a pattern, or a pattern may be easily made for such a pocket. The top edges are hemmed or faced, and the other edges turned in and basted flat to the desired position on the garment, then stitched by machine close to the edge. Two rows of stitching one quarter inch apart may be used.

The laps for patch pockets are generally made double, stitched on the lower edge and sides, then turned and stitched on the outside along the same edges. The upper edges are then turned in or under, and the lap is stitched flat to the garment so that its lower edge covers the top of the pocket.

Set-in pockets are made in a similar manner to bound buttonholes. To make a set-in pocket, cut a lengthwise strip of material three inches longer than twice the desired depth of the pocket, and two inches wider than the pocket opening. Mark the position and size of the pocket opening on the garment, then crease the strip of pocket material straight across, one and one-half inches from one end. Place this crease over the pocket marking and baste. Mark the position of the pocket through onto this section and stitch around this marking. Cut and turn pocket section through onto wrong side and baste around edges as for bound button-hole. Stitch on the lower edge of the opening then fold the long end of the pocket strip up, so that the two ends of the strip are together. Stitch around the upper edge of the opening, taking care that the ends of the stitching turn the corners and meet the stitching on the lower edge. Next stitch the sides of the pocket together and overcast. The set-in pocket used on middy blouses is finished with a very narrow binding and with pointed instead of square ends.—Blanche E. Hyde, Clothing Specialist, Colorado Agricultural College.

HANDLING MY BEDS

IRON bedsteads can be cleaned with a cloth dipped in gasoline.

Turning the mattress occasionally adds to the length of its life. Remove the dust from the mattress and from the springs with a whisk broom.

To take out spots and stains on a mattress moisten a little laundry starch and household amonia powder with water. Apply to the spot. Remove two days later with a stiff brush. If there are still traces of the stain, sponge with a cloth dampened with water to which a few drops of amonia have been added.

My double blankets were very heavy to wash so I cut them all apart and bound both ends of each blanket with binding ribbon. They are now much easier to handle and can be used singly when double blankets would be too warm.

It is often necessary to wash a large bed quilt or comforter when the upper end of it is the only soiled part. To avoid this, one side of each down comforter should have three or four buttons on it to which a sheet with buttonholes worked at the top may be buttoned over. This sheet can be changed with the other washable bedding and the comforter will keep clean and sanitary for a long time.—Mrs. B. D.

REMOVING STAINS

WHEN cleaning black satin shoes, always use a piece of black velvet. This prevents the satin from becoming rough and removes the dust and spots as readily as an ordinary cloth saturated with alcohol or chloroform.

If the percolator strainer becomes clogged, pour coarse salt into it and scrub the perforations inside and out. Pour boiling water through to wash away the salt and coffee deposit.

Coarse salt dampened with vinegar will clean enameled ware that has become burned or discolored.

Personal Column

Something on Styles and Colors.—I am a little brown-eyed girl of seventeen summers. There is a few things I would like to know and I am most sure you can enlighten me. Are old rose and bright red going to be worn much this summer? What are the leading colors for this summer? Also will colored shoes and stockings be worn much?—"Brown-Eyes", Shepherd, Michigan.

—Bright red and all of the gay colors are correct for sport clothes. Old rose is always pretty and proper if it is becoming to the wearer. Printed silks in various harmonizing color combinations are pretty and much in vogue at the present time. Tans, grays and blues in all shades are as popular as ever, while tan, gray, brown and black shoes with hose to match are mostly worn. Never under any circumstances follow the prevailing styles in colors unless they are becoming. One should not be tempted into wearing a new shade simply because it is the latest fad.

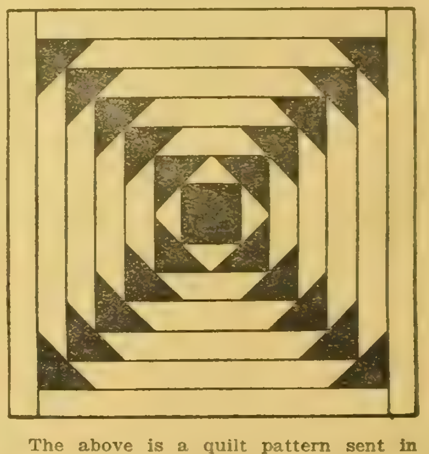
How to Keep Horse-radish.—I have noticed a request through The Business Farmer for a way to put up horse-radish for winter use and I am so well pleased with the way I have done it for the past fifteen years with perfect success that I am going to tell others. Leave the roots in the ground until the frost has killed the leaves, then take a box or old pail, or any article you wish, and put in a layer of dirt in the bottom, then a layer of horse-radish roots, and another layer of dirt, and so on until you have the amount you wish. Put plenty of dirt on top and place in your cellar and about once a week pour a little water on the dirt—not too much, just enough to keep moist. When you wish horse-radish just dig a few roots, scrape and put through the fine part of a vegetable chopper, or grate it, and then fix it as you like best. You will be delighted with it as it is just the same as when you take it from the ground in the spring. I also save all the crowns I cut off the roots and keep them in the box with the roots to set out in the spring to grow into more plants. You can also put down parsnips and carrots the same way and have them fresh and crisp for winter use.—Mrs. F. M. R., Orleans, Michigan.

Got Check for Prize Letter.—I am in receipt of your voucher for $1 for which (now that I've got my breath) I thank you very much. Wishing you great success, I am,—E. M. C., Oakley, Mich.

Household Hints.—I have a few household hints that may help some of our readers. The busy farmer's wife would like to make fuel for cook stove go as far as possible, so get your oil stove oven out on top of the cook stove and bake your bread in it while baking cookies or pie in the cook stove oven. Try it once, it works fine. Change the bread, in oil stove oven, from top to bottom after it has been in one-half hour. For washing milk separator after rinsing the first time put in a half teaspoonful of baking soda instead of soap.—Mrs. R. N.

Wants Some Red Pop Corn.—I wish I could find some red pop corn. I have looked in every catalog that I can get and cannot find any. I wonder if any of the readers have some seed that they could spare. I would be pleased to pay for some. I only need a little, just enough to get a start.—Mrs. N. Crum, Wheeler, Michigan.

OPEN STAIRS



The above is a quilt pattern sent in by one of our readers and I think it very attractive. The hand made quilts are very popular right now and command a big price in the city. I use a pink and white one in a rose room and a blue and white in my blue-bed-room. They are a very attractive addition on any bed.

Menu for May 24th

*Chickens Stewed with Olives
Chartresue of Spinach
Baked Squash
Asparagus Salad
Rhubarb Tarts
Coffee

***Chicken Stewed with Olives.**—Cut 2 young chickens into joints and put to cook in three pints of water with pepper, salt and an onion. Cook until the chickens are very tender, Take up, drain and wipe chickens and fry them in fat until they are brown. Strain water in which chickens were cooked and take a little more than ½ pint of it for sauce. Put this into the frying pan in which chickens were fried, thicken it a little, and into it put 2 dozen olives, chopped, and one tablespoon capers. When it is quite hot and smooth pour over chickens and serve.

RECIPES

Cream Puffs.—1½ cups flour, 5 eggs, 1 cup hot water, ½ cup butter. Boil the water and butter. Add flour carefully and mix thoroughly. Cook 5 minutes, cool slightly. Add the eggs, unbeaten, one at a time, when the mixture is cooked. Beat mixture until smooth. Bake in hot oven 25 to 30 minutes. If used as desert, fill with whipped cream or fruit whip. The latter is made by folding whipped cream into fruit pulp and sweetening to taste. Creamed meat or vegetable may be used for luncheon or supper.

Coffee Cake.—Use a baking powder biscuit dough. Spread a thin layer of cream over the top. Stick small pieces of apples into the dough. Sprinkle with sugar and cinnamon. Bake in hot oven 15 or 20 minutes. A layer of sliced apples may be used on top. This will make the Dutch apple cake.

Cinnamon Rolls.—Add two extra tablespoons of fat to the biscuit recipe. Roll out dough to one-fourth inch thickness. Spread over surface one tablespoon butter, two tablespoons sugar, and half teaspoon cinnamon. Make sheet into a tight roll. Cut in slices one inch thick. Bake in hot oven 15 to 30 minutes. Currants, raisins, nuts or pieces of apples may be used.

—if you are well bred!

The Spoon: Its Use and Abuse.—The spoon should always be noiseless. If the napkin is not a towel, neither is the spoon a musical instrument. Anything liquid should be taken into the mouth from the side of the spoon. In the case of bouillon served in the cup (save in the case of jellied bouillon), the accompanying spoon is a stirring accessory. After sipping to try the temperature, the spoon is laid aside and the bouillon drunk from the cup. It is not well-bred to pursue the last drop in the soup-plate or bouillon-cup with the spoon, or to tip the plate or cup to that end. What has been said with regard to the bouillon-spoon also applies to the tea and coffee-spoon. Beverages such as tea, coffee, chocolate, cocoa, milk lemonade, iced tea, etc., we drink; the spoon is used only for stirring and tasting. It is quite impermissible to drink from a cup in which the spoon remains; to leave the spoon standing in the cup; or to take up a spoonful of coffee or tea and "blow" upon it to cool it. Boiled eggs, fruits served with cream, custards and puddings are eaten with a spoon. Melons may be served either with fork and knife, or with fork and spoon; and either fork or spoon may be used to convey the portions to the mouth. Hominy, rice, etc., when served with cream and sugar, are eaten with a spoon; while frozen punches, ices, ice-cream, jellies and fruit salads are usually served with spoons and forks. Either utensil may be used alone or both in conjunction. When unpitted fruit is served, the fork is correct.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Ye shall know the truth, and the truth shall make you free. John 8:23.

Evil is not true. It is a belief that the untrue is true; and this belief fastens itself upon the consciousness of man and controls his thoughts and actions to his harm. Evil is one universal mistake, just as the belief that the earth was square was a universal mistake, that kept men stumbling in its darkness until one came holding aloft the light of his divine message. The darkness disappeared with the coming of this light, the evil vanished for it was only a belief—with the coming in of the truth.

WOMEN'S EXCHANGE

IF you have something to exchange, we will print it **FREE** under this heading providing: First—It appeals to women and is a bonifide exchanges, no cash involved. Second—It will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —**MRS. ANNIE TAYLOR. Editor.**

117—Pure Speckled Hamburg Cockerel for one of same breed.—Mrs. M. F. Cone, Roscommon, Michigan.

AIDS TO GOOD DRESSING

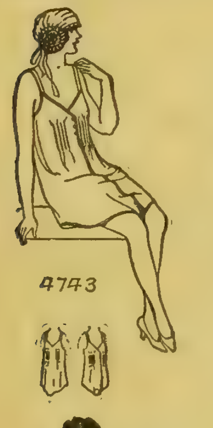
BE SURE AND SEND IN YOUR SIZE

4741. A Very Attractive Style.—This is a good style for combining two colors or two materials. One could use crepe satin, and have the tunic of the reversible side, and the dress of the satin or vis versa. Figured and plain voile together is also attractive. This Pattern is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38 inch size requires 3¼ yards of one material 54 inches wide. If made as illustrated, it will require 1⅝ yard of 40 inch material for the tunic, and 3¾ yards for the dress. The width at the foot is 1½ yard.

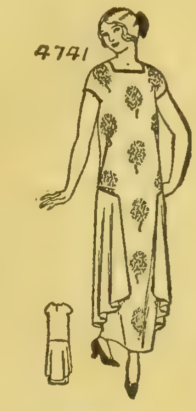
4743. A New and Practical Under Garment.—Cotton or silk crepe, crepe de chine, batiste, nainsook or silk broad cloth may be used for this model. The fronts may be closed with buttons from upper to lower edge or the design may be in "step in" style entirely. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 2¼ yards of 36 inch material.

4748. A Dainty Summer Frock.—This is nice for crepe de chine or batiste, with trimming of lace or embroiery. The new printed voiles, organdy and linen may also be used for this pretty frock. The Pattern is cut in 4 Sizes: 14, 16, 18 and 20 years. A 16 year size requires 4⅛ yards of 32 inch material. The width at the foot is about 1¾ yard.

4744. A Pretty Apron Frock.—Here is a style that will appeal to women of mature figure. It lends itself attractively to percale, crepe, sateen and gingham. The Pattern is cut in 8 Sizes: 36, 38, 40, 42, 44, 46, 48, and 50 inches bust measure. To make the frock for a 40 inch size will require 4¼ yards of 36 inch material. The width at the foot is 2⅛ yards.



4743



4741

4750. A Cool and Comfortable Undergarment for Boy's.—This simple Union Suit will afford no difficulty in the making and will be most serviceable to the "little man" who is to wear it. The style is suitable for madras, soisette, cambric or muslin as well as for flannel. The Pattern is cut in 5 Sizes: 4, 6, 8, 10 and 12 years. A 10 year size requires 1¾ yard of 36 inch material.

4758. Two Popular Styles in One.—For the Blouse one could use linen, soisette, Indian Head or batiste. For the Jacket, velvet serge, linen or pongee could be used. The Blouse may be finished with short sleeves. The Pattern is cut in 3 Sizes: 2, 4 and 6 years. A 4 year size requires 1½ yard of 32 inch material for the Blouse and 1 yard for the Jacket.

4757. A Set of New Sleeves.—Very often a dress of a previous season may be made up to date by the addition of new sleeves. The models here depicted, are all attractive. Both No. 1 and No. 3 are pretty in chiffon, crepe, kasha and other materials. No. 2 may also be used for soft fabrics, as well as for velvet, serge and heavier materials. This Pattern is cut in 4 Sizes: Small, Medium, Large and Extra Large armsize. To make one pair of sleeves for a Medium size will require ⅜ yard for No. 1. ¾ yard for No. 2, and ⅞ yard for No. 3.

4749. A Pretty Frock for Mother's Girl.—Wool crepe, gingham or voile could be used for this style. It is also a good model for linen. The closing is effected at the left side on shoulder and at armscye, but additional opening is also provided for. The Pattern is cut in 4 Sizes: 4, 6, 8 and 10 years. An 8 year size requires 2 yards of 36 inch material.

10,000 miles guaranteed and yet you save ⅓

Riverside OVERSIZE CORD Tires

Riverside Oversize Cord Tires are guaranteed for 10,000 miles and in actual performance give up to 18,000 miles. Can any other tire do more?

So why not save one-third and use Riverside Cords? What more will any other tire do? Then why pay more?

And this 10,000 miles service is backed by a guarantee that has stood for fifty-one years. Does any other tire carry a better guarantee?

Quality is built into Riverside Cords

This guaranteed mileage is built into Ward's Riverside Cords. High treads, thicker and stronger, of tough, live rubber.

This exceptional quality of Ward's tires alone has made us the *largest retailers of tires in the country*. The tires themselves have convinced thousands that Riverside Cords are best.

"I have used Riverside Tires for the past four years. I have never had to send a tire back for adjustment.
I have tried several different highly advertised makes alongside of Riversides and have not found a superior."
Walter M. Schworm,
Nessen City, Mich.

You Don't Risk One Cent

Before you buy any tires send for Riversides. Inspect them. Compare them with tires selling for $5.00 or $15.00 more.

Send them back if you do not find them the equal of any first-quality oversize cord made. We will refund your money.

These prices buy 10,000 miles of service—and more.

Beats Out the Grain
Beats Down the Cost

Beating out the grain—a method old as the pyramids and the best today.

Red River Special

is the only separator which employs the beating principle. All others depend on the grain falling out of the straw and chaff by its own weight.

The Big Cylinder, traveling a mile a minute, throws chaff, straw and grain against the famous "Man Behind the Gun." Right here 90% of the grain is separated. The Beating Shakers complete the saving and all your grain goes into your bins—clean, ready for market.

A Red River Special saves enough more of time and grain to pay your thresh bills. Therefore be sure to contract with the custom thresher who owns a Red River Outfit.

The Red River Special Catalog is sent only to those who ask for it. Write for your copy; learn about the smaller outfit for home threshing.

The Children's Hour

DEAR girls and boys:—Next week we will observe Memorial Day and honor the men and boys who have given their life blood for their country—our country—the United States. All of you know that Memorial Day comes on the 30th of May in Michigan but how many of you know if all of the states observe this day? No, they do not all observe it. May 30th is Memorial Day and a public holiday in all states and possessions except Alabama, Florida, Georgia, Louisiana, Mississippi, North and South Carolina, Tennessee, Arkansas, Texas and Virginia. Confederate Memorial Days that are public holidays are April 26th in Alabama, Florida, Georgia and Mississippi; May 10th in North and South Carolina, and June 3rd in Tennesssee. June 3rd is a legal holiday in Arkansas, Louisiana, Texas and Virginia. Now how many of you knew that?—UNCLE NED.

OUR GIRLS AND BOYS

Dear Uncle Ned:—May I join the Children's Hour? I never wrote a letter to you before so I thought I would write. I have brown hair and brown eyes. My birthday is the 6th of November. I am 11 years old and in the 4th grade. I have a mile and a little over to go to school. I wish some of the girls would write to me.—Ethel Clement, Dryden, R1, Michigan.

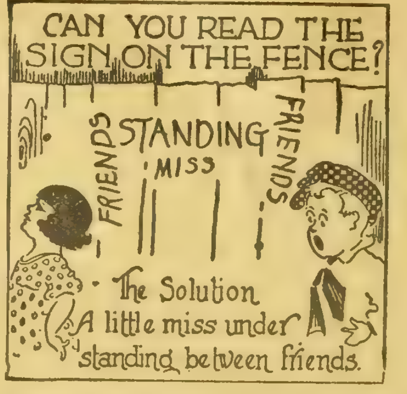
Dear Uncle Ned:—May I join your merry circle too? My father has been taking the M. B. F. for some time and he likes it very well. We live on a 40-acre farm. We have a large house. I guess I will describe myself. I am 10 years old and 4½ feet in height, have light brown hair and light blue eyes. My birthday is December 31st. Have I a twin? I have two sisters and no brothers. I am in the sixth grade at school. We have 30 rods to go to school. We have 65 chickens, 7 turkeys, 3 cows and one team of horses. We live seven miles west of Mt. Pleasant. My letter is getting sort of long so must close. All the boys and girls write to me, I will answer all letters. I hope Mr. Waste Basket does not get my letter. Your niece,—Luella Jewell, R2, Box 35, Mt. Pleasant, Michigan.

Dear Uncle Ned:—I have been a silent reader of the Children's Hour for a long time and it has gladdened some of my saddest hours. My father has been taking the paper for a long time and thinks it is a very good paper. I am 14 years old and am in the eighth grade at school. I am 5 feet 4 inches tall, rather slim, black bobbed hair, large blue eyes, pink cheeks and very pretty. I am writing this letter in school. I am very interested in riddles. There have been quite a few lately. I hope Mr. Waste Basket doesn't gobble down my letter. I remain as your niece,—Thresa Zamaites, R2, Auburn, Michigan.

Dear Uncle Ned:—Well here I am again. I come often, don't I? I guess you know me, don't you? Because the last time I wrote I told about my trip to Detroit. Well I went again last fall and had a much better time than I did the other times because we always went on the train before but this time we went in the automobile. I am not going to tell about it, on account of having taken up so much room the other time and I have more to tell about this time so I will not bother for if I do there wont be any room left for anybody else. Say I would like it if you would have a poetry contest.

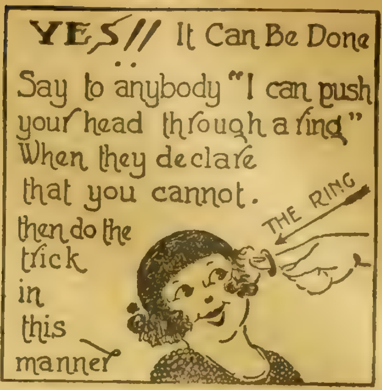
When we went to Detroit this last time we went just about straight south from Cass City and came to many detours. It was around the 15th of September. But Dad says the next time we go, he is going to Mt. Clemens and follow the shore line to Detroit. He said I could stop in and see you, Uncle Ned, when we do go. Won't that be nice? But whoa, just a minute here now! Say I know something. Do you know what it is? Some of the cousins might be jealous. Ha! Ha! I'll just bet there is more than one jealous cousin after they read this letter and find out what I said. But I don't care. I am going to stop in anyway. I don't suppose I can stay very long though. Just long enough to get acquainted.

Now if some of the cousins will write to me I will answer them unless there are so many in the mail that I can't answer them. The last time I wrote when I put that riddle in I got letters from all over Michigan and one from a girl named Hazel Thompson of Kentucky. I am 12 years old and I am in the seventh grade at present. I was 13 years old the 24th of March. The county nurse was to our school on November 8th and I was 60 inches tall and weighed 86¾ pounds at the time. My normal weight is 95 pounds. But I'll bet you know what I am called at school. Everybody calls me skinny most of the time. See, I am not ashamed to tell my name anyway. Say, Uncle Ned here is a good contest to have: Have each one that wants to join the contest compose a poem and send it to you. Each poem must have 4 lines in and the one who has the best poem for the grade they are in will be the one to get the prize. Have each one tell the grade they are in at the bottom of the poem and if they have graduated tell how many years ago, but if they have not attended school yet you can judge that yourself. Well I guess I had better stop for once and let the rest talk for a while. Please don't kick me out for talking so much. Please! Please!—Hazel Baker, Elkton, R1, Mich.



CAN YOU READ THE SIGN ON THE FENCE?
FRIENDS
STANDING
MISS
FRIENDS
The Solution
A little miss under standing between friends.

Dear Uncle Ned:—This is the first time I have ever written to the M. B. F. I live with my parents on a small farm. I am seventeen years of age. Am interested in music best of all, although am not afraid to try any kind of work. I have got three sisters and two brothers younger than myself. We live two and a half miles from Beulah on M. 11 Pike. I am interested in church and Sabbath school and I belong to a class of young folks, about twenty-five of us. Well as my letter is getting long and I don't care to go to the waste basket I will close hoping to get an answer from some of the cousins. Good-bye Uncle Ned. From your niece,—Miss Isabel Link, Box 11, R1, Beulah, Michigan.



YES!! It Can Be Done
Say to anybody "I can push your head through a ring" When they declare that you cannot.
then do the trick in this manner
THE RING

Dear Uncle Ned:—May I come in and join your merry circle? I have been reading the Children's Hour for quite a long time. My hair is dark brown and I have blue eyes and am 5 feet in height and 14 years old. My birthday is February the 6th. I am in the 8th grade at school. we had exams last week. I wish some of the boys and girls would write to me. Well I will have to close or my letter will be in the waste basket. Your friend, —Vera Crake, R6, Brown City, Mich.

Dear Uncle Ned:—May I please join your merry circle? I have been a silent reader of the Children's Hour for a long time. I always wanted to join but always put it off. I am a tomboy 16 years of age, weigh 110 pounds and am 5 feet 2 inches in height, have dark brown hair and dark brown eyes. My birthday is November 2nd. Have I a twin? I live on a farm with my mother and brothers. I have no sister. We have a Fordson tractor and like it real well, also a new Ford touring car, 1924 model. For pets I have 2 dogs, 3 cats, 1 chicken. I had a pet lamb but it died. We have 3 horses, 8 head of cattle, 4 calves, 2 pigs, 6 sheep, 7 lambs, chickens, ducks, geese, guinea hens and pigeons. My favorite sport is riding horseback. I can climb trees too. Say, Uncle Ned, once my brother went after some hickory nuts and I climbed the tree, and I was nearly up to the top when the limb I was stepping on broke and down I came but not all the way down. There were so many limbs that I got caught so I could not fall. Will some of the boys and girls please write to me. I will close with a few riddles. When is a door not a door? How many sticks goes to a crow's nest? What is the last hair on a dog's tail called? Whoever guesses any one of these or all, it makes no difference, will get a letter from me. With best wishes to the merry circlers. Your want-to-be-niece —Agnes Posey, R3, Box 94, Marine City, Michigan.

Little Brown Bats and Their Umbrellas

LITTLE Mother Brown Bat draped her soft little body over her three brown baby bats. The sky splashed millions of big tears over little Mother Brown Bat and her three brown baby bats.

"Oh, dear me! Oh, dear me!" wailed little Mother Brown Bat; adding her tears to the millions splashed from the sky. "I cannot keep my precious baby bats dry. If only I had a big umbrella!"

And with one motherly paw she smoother the downy heads of her baby bats. They were wet, oh, so very wet.

"If only our little Mother Brown Bat had an umbrella!" moaned Billy and Bumpy Bat, giving little Mother Brown Bat an affectionate squeeze. Billy and Bumpy were twins, you see. And always thought the same about everything.

"Poor Little Mother Brown Bat! She needs an umbrella to keep the sky's tears from drowning us!" whined Beezy Bat, through his wide-open, little bag of a mouth.

The erect, pointed ears of Grandmother Bat, who was huddling close by, listening to little Mother Brown Bat's squeaky voice, became a little more pointed as she called to little Mother Brown Bat,

"Well, my dear, if you so need a big umbrella why don't you go to the Golden Fairy, who has always been our friend, and beg that she give you a little umbrella, that you may keep your dear children always dry and warm?"

"Yes, Little Mother Brown Bat, go to the Golden Fairy and beg for an umbrella," the baby bats coaxed, raising deep-set, keen eyes toward Little Mother Brown Bat. And they shivered as they thought of their wet fur coats.

Now, my dears, of course you understand this all happened hundreds and hundreds of years ago, when not a single bat in the whole world owned a pair of wings.

It was an impish-looking little animal who was always kind to her babies, feeding her wee ones from her tiny breasts as a mouse does its young. She was also a very useful little Mother Brown Bat, gobbling up insects and helping to keep away malaria from the Really Truly Folksies.

But there, kiddums dear, I am straying far from my story.

Little Mother Brown Bat listened to her childrens' pleading and right then and there she made up her little bat mind as quick as "A B C" to do as they begged.

So she hung the twins over the twig of a tree and Beezy on another twig, and, bidding them and Grandmother Brown Bat a loving farewell, started for the Golden Fairy.

In a day's time little Mother Brown Bat, reached the Golden Fairy. Very humbly she told the Golden Fairy what she had come for.

And what do you think the Golden Fairy did? She warmly welcomed Little Mother Brown Bat, waved her golden wand and spoke,

"Little Mother Brown Bat, you have been a faithful mother, and a faithful friend to the Really Truly Folksies. You have always been very clean in your habits, and, as a reward I think that you and all the other little Brown Bats in the world deserve a beautiful pair of wings! Which shall be as agile as the swift's, and as fleet as the swallow's. They shall measure eight or nine inches from tip to tip and will fold like a pocket knife. With these wings you and all the other little Brown Bats can help rid the world of mosquitoes and other insect nuisances. Indeed, you will be very, very fast." The Golden Fairy paused.

"And, oh, lovely Golden Fairy, never again will the millions of tears from the skies almost drown my poor little Brown Bats." And at the thought of Billie, Bumpy and Beezy, little Mother Brown Bat took her wee pocket handkerchief and wiped the tiny tears that were spilling from her little brown eyes.

"No, never again, little Mother Brown Bat. You shall have an umbrella as well as a pair of swift, fleet wings."

Little Mother Brown Bat bowed

low, thanking the Golden Fairy. She turned her keen deep-set eyes around, and, behold! she had a pair of wings which were indeed as agile as the swift's and as fleet as the swallow's. In fact, quite the most wonderful wings in the world!

Little Mother Brown Bat raised her thin, gauzy wings and found herself darting hither and thither with great swiftness, making sharp turns without any effort. As she flew, she kept her little mouth open scooping all the insects in her way. And she kept thinking,

"How proud the twins and Beezy will be of their new wings. And Grandmother Brown Bat, too!" And with this thought Little Mother Brown Bat flew a little faster home.

Little Mother Brown Bat looked very fine indeed. Her wings fluttered like an aeroplane which you, my dear kiddums, have often seen. Her fur was soft as silk; and her dear, little mother heart beat very fast.

The next day Mother Brown Bat floated nearer, nearer home. When at last she arrived she found her tiny youngsters, still hanging on the twigs where she had left them. At sight of little Mother Brown Bat they squeaked joyfully,

"Oh, Grandmother! Do look at little Mother Brown Bat's beautiful new wings!"

And Grandmother Brown Bat gave them a cold, haughty look and,

"Sillies! Look at your own wings!" she snapped.

And, sure enough, the baby Brown Bats were sprouting tiny new wings! Exactly like those of little Mother Brown Bat. And even Grandmother Brown Bat had handsome new wings, which looked like a thin, rubbery membrane, and extended clear back to her ankles and thence back to the tips of the bony tail.

Any Breezy Brown Bat, who was hanging up-side-down, scratched the back of his little ear with one hind foot and squeaked.

"We all have tiny umbrellas now!"

And Billy and Bumpy Brown Bat, who were climbing the trees with the help of their teeth, stopped long enough to test their wings and gloated,

"Yes, Little Mother Brown Bat, we all have umbrellas now!"

And so it has been every since, kiddums dear. All the little Brown Bat's children and their childrens' children and their childrens' children have all owned tiny, silky "umbrellas" which enable them to gobble more insects and cover much more ground than did their great-grandfathers and their great, great-grandmothers.

And now when the sky spills millions of little tears the little Brown Bats do not care in the least, as did their great, great-grandfathers and their great, great-grandmothers, who had no protection at all from all those millions and millions of tears.—Helen Gregg Green.

Powell's Tax Articles Open A Merry Debate

(Continued from Page 3)

like to know how it is that through the State Administrative Board several new buildings have recently been erected at the Home and Training School at Lapeer, without the least vestige of legislative authorization.

Eaton Double-Crosses Himself

I am astounded by the inconsistency of the Governor's secretary in referring in one breath to Mr. Slocum's editorial calling attention to my article, and then in the next breath saying, "However, if Mr. Slocum had believed the facts to be inaccurate relative to state expenses, it would seem to me as though he should have secured the correct information previous to publication of the article. It is probable, however, he did not see the article before publication." If Mr. Slocum did not see the article before publication how could he have written an editorial calling attention to the article and had it published simultaneously with the article?

In connection with Mr. Slocum's editorial we might also point out another minor inconsistency on the part of Mr. Eaton. He quotes Mr. Slocum as saying with reference to my figures regarding the cost of operating the state prisons, as follows: "He says that he does not believe them to be fairly stated in the article referred to." Anyone by referring to Mr. Slocum's editorial will find he did not say any such thing but merely stated that he questioned a little whether or not to use my figures on this subject. We take it that they looked as though they might possibly be exaggerated or inaccurate. However, Mr. Slocum did not declare that he believed them to be untrue.

Why Dodge the Facts?

Does it not appear that Mr. Eaton is attempting to dodge the question in his attempt to answer my specific figures about state tax totals, by introducing a lot of irrelevant evidence regarding centralized purchasing and accounting, fire insurance rates, road building, etc? He seems to take it for granted that we have been attempting to throw the whole state administration into disrepute.

If the shoe fits we have no objection to his putting it on, although of course, that was not our intention in writing the article. We were merely seeking to give a satisfactory and comprehensive answer to a specific question asked us by one of the readers of The Business Farmer. We were not attempting to disparage all of the various activities of the present state administration but merely to cover this one matter of increase in state revenues and expenses. Mr. Eaton seems to feel that the work of the present state administration needs apologies and defense. It is, of course, fitting and proper that as the mouthpiece of the administration he should attempt to get his ideas in print.

Glad to Hear of Savings

We are, of course, greatly gratified to note all the benefits which have come to us through "the vast sum which he (the Governor) has saved to the tax payers by giving his personal attention to road building and to the management of various state institutions."

However, we have not noticed any material falling off in our highway taxes and still hear from time to time of additional millions of state highway bonds being issued. We are also informed that the state owes the counties $6,200,000 in back highway rewards. Concerning the prisons, the increase in expenditures has already been noted.

It almost seems as if the executive department is taking a little undue credit to itself when the statement is made about millions of dollars being saved by the Governor to the property owners through his action in forcing down fire insurance rates.

If I remember correctly the Enabling Act which made possible this admittedly desirable reform was passed by the legislature, and it is undoubtedly true that much more constructive legislation would have been passed had there been a proper harmony between the executive and legislative branches during the recent session. By vetoing the gas tax against the wishes of a large majority of Michigan citizens, the Governor placed the House in such a state of mind that a large amount of legislation was jeopardized. Many good bills were killed in the Senate Committees, being held up as clubs over the House in an attempt to force that body to pass the weight tax bill and other legislation desired by the Governor.

Not a Personal Argument

I trust that your readers will not get the idea—if you see fit to publish this letter—that there are any personal difficulties between myself and Mr. Eaton. He is merely an employee of the present state administration. But for me to remain silent in face of these attacks upon my integrity, purpose and character would be virtually to admit them, which I certainly do not care to do. It would be poor policy and almost suicidal folly for me to misquote figures or misstate facts.

This is just another example of where one who has come out and spoken boldly for the peoples' cause has not met with favor at the hands of those in control of a highly centralized government.—Stanley M. Powell.

MICHIGAN COWS THAT ARE REAL PRODUCERS

THERE have been and are yet a lot of mighty good dairy cows in the Wolverine State.

At Hillsdale, Glen Benedict has a nice herd and in it Fayne Patterson DeKol who made 536.3 pounds milk with 26.7 pounds butter; and Money Milk Segis, less than three years old, with 436.4 pounds milk and 18.65 pounds butter. Fayne Patterson DeKol was a hearty eater, consuming, besides hay, corn silage and molasses, 29 pounds of Larro a day as her grain ration.

Mr. Benedict's herd bull is Korndyke Butter Boy Fayne DeKol, of the line bred by that fine old man, the late Henry Stevens at the Brookside Herd in Lacona, New York, and the blood has carried its producing qualities to the fourth generation in this Michigan dairy.

Jerseys, too, are keeping money in circulation in Michigan, with Brown Swiss helping the good work along.

Near Ann Arbor, H. B. Waters & Son, have a herd of 40 Jerseys headed by a Golden Jolly bull of snap and style and good ancestry. Alfalfa from 35 acres, 30 acres of corn and 20 acres of oats help to feed the herd. Succulent summer feed is provided by green corn and sunflower stalks run thru a cutter and fed with Larro sprinkled over them. Sunflowers go into the silo with the corn, also.

An average yield of four gallons of milk a day from his milking herd shows the sort of cows W. H. Koppler of Ann Arbor keeps. He has a good Brown Swiss bull which he uses on Jersey cows, and the heifers are well grown and thrifty. Home grown corn and oats are used with Larro as the herd ration for the 50 head in the dairy.

Durand is the Michigan town which is in the limelight now, because Mr. John E. Post, Postdale Farm, has made a world's record for age with his Holstein-Friesian cow, Lilith Segis Inka DeKol Johan, in the seven day division. She is four years old and has to her credit, officially, 862.6 pounds of 2.71 per cent milk, 23.386 pounds fat or 29.23 pounds butter, having calved February 7, 1924. That is an average of 123.2 pounds a day, but one day she milked 126 pounds. Her thirty day record shows that she sticks right to her work as it is 3,435 pounds milk and 92.219 pounds fat or 115.27 pounds butter. These are world's records for milk in the four year old class.

Pedigree showing inherited ability plus good care and feeding, plus ambition and perseverance and hard work on the part of her owner—all these had their part in making this Michigan Holstein cow a world's record maker for her age and breed.

Mr. Post has been breeding registered Holsteins only two years, but he has "put his back into it" and has a herd of 47 head which would do credit to many a cattle man of twice his age. He is a fairly young man, but in dead earnest in his efforts to do real constructive work. Built on a foundation purchased fom J. F. Rieman, of Flint, the herd has been kept up to a high standard.

The emphasis laid on Lilith Inka's record does not mean that she is the only cow at Postdale which deserves mention. The whole herd is producing profitable, 35 pounds a day being the lowest amount given by any milking female, while the highest is at present 124.6 pounds. This is all the more remarkable as there are only six cows of mature age in the lot.

Careful feeding has a most important bearing on the work done at Postdale. The cows are started off with a warm mash and then are fed slowly and have their grain increased just as long as they respond to the increase. Lilith, for instance, ate as much as 35-pounds grain, 4-pounds cottonseed meal and 26-pounds Larro with 32-quarts of beet pulp and all the hay she would clean up. Mr. Post feeds alfalfa as long as he has any to feed.

Another detail that Mr. Post attends to very carefully is the amount of water his cows get. It is interesting to know that when Lilith was making 86.8 pounds milk a day she drank 100.6 pounds water.

The calves on Mr. Post's farm get 120 pounds milk a day and after their wants are provided for, he trucks over 1000 pounds each day into Flint.

The above mentioned Michigan dairymen are interested in their work, progressive and prosperous and we hope that the story of their success will be an inspiration not only to beginners in this line of work but to some who have not entirely without reason become rather pessimistic in the last few years.

There is an old saying, "What man has done, man can do," and there isn't a thing recited above that hundreds more in the State of Michigan cannot duplicate on their own farms. The good land is there, the good cows are there and the possibility of success is there—it remains only to use them intelligently with faith in the results.

CAN FEED CHAFF TO SOWS

Has clover chaff mixed with other ground feed any feed value for hogs?—C. R., Michigan.

—There is no question but what either clover or alfalfa hay is of considerable value for hog feeding and better results are obtained when one or the other of these two leguminous hays is kept in a rack where hogs can have continuous access to it.

There would also be some value in soaking the clover chaff along with the grain and feeding it in that way. I would not advise doing this, however, with either growing or fattening pigs, as the growing or fattening pig cannot handle a large amount of fiber and does better where he has access to it and takes only what he needs.

The mature sows, however, may be fed a ration containing a considerable amount, say one-fifth to one-fourth, of the total amount of her feed in the form of either clover chaff or alfalfa chaff.—Geo. A. Brown, Professor of Animal Husbandry, M .A. C.

VETERINARY DEPARTMENT

HOLE IN SIDE OF COW'S TEAT

I have a Jersey cow that freshened in November and a few days after cut one of her teats on a barb wire fence and left a little hole in the side. It healed all right but the milk leaks out of it. Could you tell me if there is anything I could do to make it grow closed again?—N. N., Grand Rapids, Mich.

—Holes in the side of the teat can be cured by performing an operation, scarifying the edges of the opening and closing it with sutures. The operation however, will need to be done by a veterinarian who understands this operation. It is best that the operation be performed when the cow is dry.—John P. Hutton, Assoc. Prof. of Surgery and Medicine, M. A. C.

REMEDY FOR LICE ON CATTLE AND HORSES

Please tell me if there is any preparation to rub on cattle and horses to rid them of lice?—A. H., Brown City, Michigan.

—I would suggest that you try the following: To one pound of Larkspur seed add one gallon of water, let simmer on the stove for about an hour. After cooling apply to the surface of the skin with a sponge and rub well in. This treatment can be repeated in two weeks if necessary.

Stables where the horses and cattle are kept should be thoroughly cleaned and disinfected by spraying them with some efficient disinfectant preparation.—John. P. Hutton, Assoc. Prof. of Surgery and Medicine, M. A. C.

Taking Him at His Word

He was telling her about the members of his football team.

"Now, there's Johnson," said he; "in a few weeks he will be our best man."

And then she lisped, "Oh! Jack, this is so sudden!"—Exchange.

Every Day You Need KRESO DIP No. 1

FARMERS BOOST TESTING WORK

R. E. HOPKINS of Allegan went into the West Allegan Association in June, 1923. He has a well bred herd of Holsteins and sells milk at wholesale.

In a conversation with an extension man recently Mr. Hopkins said: "The testing association work hasn't cost me a penny. It's made me money! My cows on the average produced me ten pounds more milk apiece every day this winter than last winter. I got this extra milk by knowing what my cows were doing and feeding them so they could give me the most milk at the lowest cost."

Mr. Dairyman! You can do this, too! Mike L. Noon, President of the Michigan State Farm Bureau, has been in a cow testing association for quite a few years. Ask him if it has paid him on his grade cows. Mr. Noon will rear up on his hind legs and orate thusly, "Any man who joins a cow testing association and uses the information he gets in weeding out his visitor cows and feeding his good cows so they milk to capacity and who fails to get enough extra profit to pay his testing cost can come to me and get his dues back plus a 50 per cent bonus."

How's that? Mr. Noon knows because he has tried it himself.—R. H. Addy, Dairy Extension Specialist, M. A. C.

NORTH KENT TESTING ASSOCIATION REPORTS

THE North Kent Cow Testing Association, Herbert Hansen, Tester, reports that 26 unprofitable cows were sold during the year and that there are at least an equal number remaining in the association that the members expect to sell soon. Twenty-three of the 25 members mix their own feed and 23 of the 25 members have one or more silos. Eleven herds have one or more purebred cows and all herds are tuberculin tested. There are 19 purebred sires owned by the association members, seven of them Holsteins, six Guernseys, four Jerseys and two Shorthorns. Harry William's cow carried all the honors in the association work. His purebred Holstein cow, Piney Grove Segis Elzevere, five years old, was high in both milk and butter fat production. Mr. William's herd of seven purebred and grade Holsteins was likewise high in both milk and butter fat production. Twenty-nine cows made better than 365 pounds of butter fat during the association year. This association has reorganized and Mr. Hansen is continuing on the work.—A. C. B.

LITTLE CHICKS SUFFER LEG WEAKNESS

I wish you would kindly tell me what is the matter with my little chicks. They are about 17 days old and have leg weakness. They eat good but keep getting weaker and finally die. I have them in a brooder house where it is warm all the time. Nice days I let them out door. I fed them oat meal the first week then mixed feed with it. They grew for two weeks nicely.—Mrs. L. M., Mt. Morris, Mich.

—The leg weakness which has occurred in this flock of chicks is in all probability a nutritional disturbance caused by an insufficient supply of green food. Leg weakness usually occurs after the eighth or ninth day if green food has been neglected in the ration. It is always advisable to feed the chicks green food in some form or other, preferably sprouted oats, after the fifth day.

Excellent results have been obtained by feeding a mash mixture containing bran and rolled oats with tomato juice used for moistening. Close confinement and an insufficient supply of mineral matter may also cause stiffening of the joints. We have found that the addition of granulated bone, bone meal, and calcium carbonate in the form of ground limestone rock is very beneficial providing a mash mixture containing bran and rolled oats and cod liver oil is given. Cod liver oil should be fed at the rate of one half pint to each five hundred chicks. It can be emulsified with boiling water if additional liquid is necessary. I am sure these chicks will respond to the above suggestions.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

Free to Asthma and Hay Fever Sufferers

Free Trial of Method That Anyone Can Use Without Discomfort or Loss of Time.

We have a method for the control of Asthma, and we want you to try it at our expense. No matter whether your case is of long standing or recent development, whether it is present as Chronic Asthma or Hay Fever, you should send for a free trial of our method. No matter in what climate you live, no matter what your age or occupation, if you are troubled with Asthma or Hay Fever, our method should relieve you promptly.

We especially want to send it to those apparently hopeless cases, where all forms of inhalers, douches, opium preparations, fumes, "patent smokes," etc., have failed. We want to show everyone at our expense, that our method is designed to end all difficult breathing, all wheezing, and all those terrible paroxysms.

This free offer is too important to neglect a single day. Write now and begin the method at once. Send no money. Simply mail coupon below. Do it Today —you even do not pay postage.

25 years the one dependable remedy and preventive. Millions use it for WHITE DIARRHOEA and other bowel troubles; colds, canker, roup, cholera, chicken pox, etc. Don't experiment. Get GERMOZONE, (65c & $1.25 sizes) and FREE book, "The Lee Way," worth a dollar to every poultry raiser. At drug or seed stores or sent postpaid by GEO. H. LEE CO. OMAHA, NEBR.

LEE'S LICE KILLER

The Old Reliable Has proven itself year after year the one sure way to rid poultry of lice, mites, bedbugs, body lice and such vermin. Paint or spray on roosts, etc. No dusting, dipping, greasing, handling. Get it of your drug or seed store, or write us for particulars and valuable free book. GEO. H. LEE CO. Omaha, Nebr.

GOOSE EGGS CAN BE HATCHED IN INCUBATOR

Can goose eggs be hatched successfully in an incubator?—Mrs. N. R., Deerfield, Mich.

—Goose eggs can be successfully hatched by artificial methods. It has been our experience that the hot water type of incubator is slightly superior for hatching goose eggs. It is advisable, however, to frequently sprinkle the eggs with warm water by means of a whisk broom several times throughout the hatching period. A common practice is to incubate the eggs by artificial methods the first two weeks, after which they can be transferred and the incubation period completed under the domestic hen. More satisfactory results usually attend natural incubation using either the goose or the domestic hen.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

SEND CHICKS TO M. A. C.

Would be grateful for advice about my baby chicks. They hatched out strong and healthy. Kept them in incubator 36 hours, then gave them water and fine sand, later began feeding them. Did fine at first but yesterday began to die. Some seem to have stiff necks and whirl around in circles and then die. Some show signs of bowel trouble and others just peep and get weak and die, no signs of looseness of bowels. I have chaff in house and fine sand on floor of brooder room, plenty of clean fresh water, also large chunk of sod. Too cold to put them on range as they are only one week old. Is buttermilk good for chicks of this age? Their mash contains dried buttermilk also charcoal. Would you advise using a White Diarrhea remedy? Would White Diarrhea cause my chicks to die without signs of bowel trouble? —Mrs. H. R., Gladwin, Mich.

—The symptoms described would indicate nutritional disturbances altho there is a possibility that many of these chicks may be infected with Bacillary White Diarrhea. The Bacteriology Department, under the direction of Doctor H. J. Stafseth, is conducting a poultry clinic and I would suggest sending him a number of affected chicks in a live condition if possible. These should be mailed or sent by prepaid parcel post.

We would recommend giving the entire flock a feed once per day consisting of bran, rolled oats, and tomato juice, also a fed of bran, rolled oats and cod liver at the rate of one half pint of cod liver to each five hundred chicks. The cod liver oil treatment should be given on three alternate days and the tomato juice mixture may be given daily until the chicks are permitted free range.

We would certainly recommend the use of either skim milk or buttermilk for young chicks. The high lactic acid content suppresses the development of many undesirable bacteria and more over, develops stronger resistance because of its high feeding value. To my knowledge, there is no satisfactory treatment for chicks affected with Bacillary White Diarrhea.—E. C. Foreman, Professor of Poultry Husbandry, M. A. C.

POWDERING BABY CHICKS FOR LICE

TAKE a paper flour sack, cut the top off, put in two spoonsful of powder. Then put in your chicks, 2 to 4 at a time accordingly to the size, grasp the sack tightly and shake it and roll upside down several times. The chicks flutter their wings, throwing the powder, among their feathers. Then open sack quickly and grab chicks out with both hands if they are very small. I sometimes blow in their little faces if necessary to get powder off but very seldom. By the time you grab another bunch for your sack they are gone. I have them all caught in a large tub with a gunny sack over them so they are handy. One can do this with success in a few moments. In about eight to ten days treat again, and you will agree with me it is easier than any other you ever tried.—Mrs. R. N.

Out of Sight

"I was so confused, I don't know how many times he kissed me!"

"What! with the thing going on right under your nose?"

RHEUMATISM

A Remarkable Home Treatment Given by One Who Had It.

In the year of 1893 I was attacked by Muscular and Sub-acute Rheumatism. I suffered as only those who are thus afflicted know, for over three years. I tried remedy after remedy, but such relief as I obtained was only temporary. Finally, I found a treatment that cured me completely, and such a pitiful condition has never returned. I have given it to a number who were terribly afflicted, even bedridden, some of them seventy to eighty years old, and the results were the same as in my own case.

I want every sufferer from any form of muscular and sub-acute (swelling at the joints) rheumatsim, to try the great value of my improved "Home Treatment" for its remarkable healing power. Do not send a cent; simply mail your name and address and I will send it free to try. After you have used it and it has proven itself to be that long-looked-for means of getting rid of such forms of rheumatism, you may send the price of it, one dollar, but understand, I do not want your money unless you are perfectly satisfied to send it. Isn't that fair? Why suffer any longer when relief is thus offered you free? Don't delay. Write today.

RED ROCK WHEAT IS GOOD FLOUR PRODUCER

(Continued from Page 4)

about it. The local banker, Mr. Frank Williams placed an exhibit in his window and told his friends. As a result, John Odell sold out. The County Agent instructed the farmers how to keep seed pure and saw to it that the pure seed was properly distributed to other farmers in 1916. In 1917, I personally inspected over 300 acres in Allegan county that had less than a half of one percent of other varieties.

Only a few counties took care of the first distribution of Red Rock and some of the lots were lost to pedigree through carelessness. It is likely that a thousand bushels of Red Rock were sown for seed in Michigan in the fall of 1915, and according to a United States Department of Agriculture investigation in 1919 there were 146,000 acres of Red Rock in Michigan. The variety is being extensively grown in southern Michigan, Illinois, Indiana, Ohio and other states.

On account of the extra stiff straw, Red Rock has been able to carry some unusually heavy yields to harvest. Mr. George Hurteau of Allegan lives on a piece of heavy land that only a few years ago was a cattle wallow. It has been well drained, and being unusually fertile has produced close to fifty bushels of Red Rock. A yield of 52 bushels of Red Rock was obtained on similar land at Three Oaks. In these cases the wheat did not lodge. Under conditions like this the quality of Red Rock is equalled by none that is grown in Michigan.

A large number of artificial crosses were made in wheat in 1912, 1916, 1919 and more recent years. One of the crosses made in 1912, was between Red Rock and Berkley, a hard red winter wheat that is also more winter hardy than Red Rock. Out of this cross a new wheat was distributed in 1921 under the name of Berkley Rock. This is a hard wheat, with a straw that is equal in stiffness to the average of Michigan varieties. It is an exceptionally good milling and baking wheat, and is more winter hardy than Red Rock. Although it does not yield more than Red Rock under ordinary conditions it outyields it when the winter is severe and Red Rock has been injured. These are the conditions in the Thumb district where Red Rock is grown only as one of many varieties.

The inspection of fields with pedigreed wheat will occur in June and pedigreed seed of either Red Rock or Berkley Rock can be obtained after harvest by addressing the Secretary of the Michigan Crop Improvement Association of East Lansing, Michigan.

OH MONEY! MONEY!

(Continued from Page 10.)

"Money!" ejaculated Mr. Smith, in genuine amazement. "You don't mean that she's really letting money stand in the way if Mellicent cares for him? Why, it was only a year ago that she herself was bitterly censuring Mrs. Pennock for doing exactly the same thing in the case of young Pennock and Mellicent."

"I know," nodded Miss Maggie. "But—she seems to have forgotten that."

"Shoe's on the other foot this time."

"It seems to be."

"Hm-m!" muttered Mr. Smith.

"I don't think Jane has done much yet, by way of opposition. You see they've only reached home, and she's just found out about it. But she told me she shouldn't let it go on, not for a moment. She has other plans for Mellicent."

"Shall I be—meddling in what isn't my business, if I ask what they are?" queried Mr. Smith diffidently. "You know I am very much interested in—Miss Mellicent."

"Not a bit. I'm glad to have you. Perhaps you can suggest—a way out for us," sighed Miss Maggie. "The case is just this: Jane wants Mellicent to marry Hibbard Gaylord."

"Shucks! I've seen young Gray only once, but I'd give more for his little finger than I would for a cartload of Gaylord's!" flung out Mr. Smith.

"So would I," approved Miss Maggie. "But Jane—well, Jane feels otherwise. To begin with, she's very much flattered at Gaylord's attentions to Mellicent—the more so because he's left Bessie—I beg her pardon, 'Elizabeth'—for her."

"Then Miss Elizabeth is in it, too?"

"Very much in it. That's one of the reasons why Hattie is so anxious for more money. She wants clothes and jewels for Bessie so she can keep pace with the Gaylords. You see there's a wheel within a wheel here."

"I should say there was!"

FOOTE'S MARKET LETTER

BY W. W. FOOTE

The Farmer's Outlook

ON all sides there is a determination among farmers to avoid mistakes made in recent years and to so diversify their crops as to prevent serious losses in the event of bad crops of certain grains. Intensive farming methods are becoming comparatively common in various states of the middle west, and the prevailing idea is to make smaller acreage produce more than in the past instead of increasing the acreage. This has proved a winner in recent years, and boys have taught their elders how to make a single acre produce much more corn than heretofore. Manure piles are being put to their only proper use, while limestone is used as a helper in production more and more every year. For instance there is Ohio. Farmers of that state used 170,052 tons of limestone last year, comparing with 149,054 tons in 1922 and 97,951 tons in 1921. Farm wages are very high, while many helpers are not much real help, and the farmer is forced to try new methods. Where the farms are large enough and the land lies right, tractors are being used with great success, and an Iowa farmer says he had a tractor in use recently for fourteen hours, in that time plowing nineteen acres, while a neighboring farmer used two teams of horses four days in plowing twenty acres. The farm on which this tractor work was done covers 200 acres, and the owner has sold his last two teams of horses, having four tractors for working the farm, about all of which is under cultivation. Farmers are busy with their field work, and the corn acreage is expected to be some larger than a year ago, live stock engaging a large share of the farmers' time in the corn belt states. Michigan farmers are expected to plant about the same number of acres with beans as last year, with some switching over by some farmers to the red kidney variety. Fortunately, sheep raising ranks high in Michigan, and the industry never looked more promising than it does now. The pig crop is coming along satisfactorily in most districts, but fewer cattle are feeding than a year ago.

Our Foreign Trade

Increasing exports and decreasing imports characterized the foreign trade of the United States for the ten months ending with April, as compiled by the commerce department.

For April merchandise exports were $348,000,000, against $325,492,175 for the corresponding month last year. This compared with imports of $324,000,000. In April, a year ago, imports were $364,252,544.

Exports for the ten months ending with April were valued at $3,670,938,080, against $3,320,416,950 for the corresponding period ending in April, 1923, an increase of $350,521,130. Imports for the ten months period were $2,977,077,487, against $3,088,186,074 for the corresponding period last year, a decrease of $111,108,587.

Gold imports exceeded gold exports during April by $44,027,578, and for the ten months ending April 1924, by $341,425,235.

Silver exports for April were valued at $7,804,689, against $4,336,338 for April, 1923. Imports of silver for April were $3,907,745, against $4,261,869 for April, 1923.

Agricultural Conditions Improved

Julius H. Barnes, president of the Chamber of Commerce of the United States, reports improving conditions in agriculture. In a summary of a report he made the other day to President Coolidge, he said: "The increased acreage of spring sown grains shows confidence and energy on the farm and show as well an intelligent shift to better paying crops. Corn, oats and flaxseed show increased sowings, and the prices of those grains are today on a full import basis with full duty protection. "The outlook is promising for better yields of wheat in those sections that suffered last year, and with prices of high-grade wheat in Kansas City and Minneapolis from 20 to 30 cents higher than in Canada the farm is securing a measure of benefit from the national policy of protection. Co-operative marketing methods are improving."

The Department of Agriculture has just issued a mimeograph release, entitled "An Analysis of the Retail Price of Potatoes Grown in Maine, Minnesota, Wisconsin and Michigan, and Sold in Boston, Chicago, and Pittsburgh." This publication presents the portion of the retail price which on the average accrues to each agency by which potatoes are ordinarily handled in getting them to the consumer. The Report is limited to potatoes grown in Maine, Minnesota, Wisconsin and Michigan and marketed at retail in principal large consuming centers tributary to these producing areas. The services which are rendered by these various agencies, and which must be performed by any organization which hopes to suppliant any of the existing agencies, whether such organization be a private agency or a growers' cooperative organization, are also discussed. This Report may be obtained by writing to the U. S. Department of Agriculture, Bureau of Economics, Washington, D. C.

Shipping Michigan Potatoes

Forty local cooperative marketing associations of the Michigan Potato Growers' exchange had on May 1 shipped 2,257 carloads of potatoes, Edmore leading with 185, McBain second with 157, Greenville, 153, Falmouth 135. Twenty-seven of the associations showed an increase over last year's total.

Moderate Trade in Grains

Speculation in wheat and other grains lags most of the time and is far smaller than before the war, particularly in wheat, the future of the market beiing extremely uncertain because of doubts as to federal legislation affecting values. Wheat prices do not change much, there being fractional advances, followed by small declines, and prices are far below those paid in recent years. May wheat has been selling on the Chicago Board of Trade below $1.05, comparing with $1.20 a year ago; while about two years ago it sold around $1.41. Corn has been selling around 76 cents for May delivery, comparing with 81½ cents a year ago and 61 cents two years ago. May oats sell around 47 cents, comparing with 43 cents last year and 37 cents two years ago. May rye is down to 65 cents, comparing with 78½ cents a year ago, and it is strange that its cheapness fails to stimulate exports to European countries. There have been good exports from North America of wheat in some late weeks, but most of the time exports of breadstuffs have ran far below those made a year ago. Corn and oats exports are moderate in volume, anl all the cereals are in ample supply. Barley is selling in Minneapolis at 69 cents, which compares with 60 cents a year ago. Country offerings of corn have dropped off because farmers are busy in the fields. The Chicago Tribune says: "An offer of new winter wheat for July shipment from the country was received yesterday by a cash house which refused to bid on the grain. The basis for the refusal is said to have been the fact that if they bought the grain and hedged it they stood to lose around 50c per bushel in case the McNary bill went into effect while the best they could make on the transactions was the commission charge.

Doings in Hog Market

Considering the huge marketing of hogs in western packing points, it is strange that prices have held up as well as they did during recent weeks. Of course, the explanation is found in the unusual cheapness of hog products, particularly fresh pork products, which increases their domestic consumption. Despite the enormous marketing of swine month after month, stocks of provisions have been decreasing, and they are much smaller in western markets than a year ago. It seems probable that after the middle of June marketing of hogs will show a fair falling off, and in that case it would be fair to look for better prices during the following two months. For the present year to late date the combined receipts in twenty markets have mounted up to 17,620,000 hogs, comparing with 16,793,000 for the like period last year and with 12,654,000 for the same time two years ago. Some enormous supplies have come on the Chicago market within a short time, but they sold much better than might have been expected, the bulk of the sales covering a range of 30 cents per 100 pounds, with heavy butcher weights going especially well at top quotations. Looking backward it is recalled that one year ago hogs were selling in the Chicago stock yards for $6.20 to $7.95, while the recent top stood at $7.65. The hogs offered on the Chicago market of late averaged 234 pounds. Rough heavy hogs sell as low as $6.75.

The Cattle Industry

Fewer cattle have been shipped to feeding districts in the corn belt states this year than a year ago, and there appears to be no danger of overproduction of beef the coming summer, although many farmers are sending back their herds to the markets after a short feed. Recent Chicago receipts of cattle were not particularly large, but too many came in on Monday, and prices broke on that day 25 to 40 cents under arrivals of 24,352 head, recovering most of the fall later in the week, with much smaller offerings, The bulk of the beef steers received for the week sold at a range of $8.50 to $11.25, with the best class of weighty, long-fed steers taken at $11 to $11.90 and the best yearlings offered taken at $11 to $11.50 while no good steers went below $10. Common to fair steers were salable at $7.40 to $9.90, and inferior little steers brought $4.50 to $7.35. Cows and heifers in the butcher class sold at $4.10 to $11.10, but very few sold up to $9.50. Canner and cutter cows sold at $2 to $4, bulls at $3.50 to $7.50 and calves at $5 to $11.50. Stockers and feeders were taken at $5 to $10, with a good demand for the better class and not enough good ones offered to go around. Nothing desirable sells below $7.25, and sales are largely at $7.25 to $8.50. Good stock cows and heifers are offered at $4.50 to $6. A year ago common to prime beef steers sold at $7 to $10.50 and nine years ago at $7 to $9.35.

Good Lamb Market

Well fattened lambs that are not too heavy to suit the popular taste meet with a strong demand at high prices, but heavy lots have to sell at quite a discount, as well as poorly finished shipments.

HOLD YOUR BEANS

MR. ART GOULET of the Orr Bean and Grain Company, Midland, believes that farmers can blame themselves for the condition of the bean market in Michigan. He writes us to the effect that if the farmers would hold their beans and store them on their own farms instead of at some elevator prices would be higher. Some dealers will sell themselves short and then they are interested in bearing the market so that the farmers who stored their beans with them will tell them to send a check for the beans before the price goes any lower. In other words, the dealer sells the beans the farmers stored with him for a price that suits him before he has purchased them from the farmer and then it is up to the dealer to keep the price down below what he received, because if it went above he would lose money; the result is, the lower price he pays the more money he makes. Mr. Goulet thinks that prices will go up again if the farmers will keep their beans off the market awhile and if they have any stored hold on to them. We will have an article in our June 7th issue that will be of great interest and value to the bean growers of Michigan and we hope you will all watch for it.

WHEAT

Last week the wheat market gained some strength and prices advanced slightly. The gain in prices was small but all that could be expected considering the dullness to trading, and dealers are in hopes that the low point in prices for this grain has been reached and a better tone will prevail from now on. The best demand is for export. Foreigners are consuming large quantities at present and the demand will undoubtedly continue for some time. The market is in a position, according to observers, to respond promptly to any reports of serious damage to the crop, and reports from the country have not been very favorable the past few days and it looks as though conditions were not going to improve in the near future. Receipts are small at the present time.

CORN

Corn shows little life as no one seems to want it. There is not much corn going to market at the present time as farmers are busy with spring planting but an increase in movement is expected in a short time.

OATS

The Detroit oat market follows the trend of corn and there is little doing in the way of trading at that point. At Chicago a steady tone prevails. Recepits are moderate and shipping demand quiet.

RYE

The rye market shows a fair demand at Detroit but buyers are not inclined to bid up prices. Chicago shows no change over a week ago.

BEANS

The Detroit market is dull and prices are slightly lower than they were two weeks ago. New York reports conditions unchanged and no increase in the general demand. Receipts were small last week and dealers were able to sell what they had at a very satisfactory price. The majority of the dealers sold only when they could get their own price, while there were a few that were willing to shade the price.

Are you undecided as to how many acres to plant this year? If you are maybe the article by E. A. Little on page 4 of this issue will help you decide.

POTATOES

Potatoes are active and steady on nearly all of the larger markets of the country. Old stock being purchased by some but only the best grades find purchasers. The dealer who has old potatoes on hand at present is ready to shade the price some to make a quick sale, according to reports.

HAY

Light receipts of hay caused a firmer tone in most markets last week. The general demand for hay is narrow but the very small supply of desirable grades has strengthened the general situation and the averages of values shows a gain over week before last. Two or three markets are still fully supplied and inclement weather restricted deliveries, but this is the exception, all other points showing firmer tendencies.

MARKET QUOTATIONS

Wheat

Detroit—Cash No. 2 red, $1.12; No. 2 white, $1.13; No. 2 mixed, $1.12.

Chicago—Cash No. 2 hard, $1.06;

Detroit—$1.43@1.50 per cwt.

Chicago—$1.20@1.50 per cwt.

Prices one year ago—Detroit, $1-33@1.50 per cwt.

HAY

Detroit—No. 1 timothy, $23.50@24; No. 2, $21@23; standard and light mixed, $22.50@23; No. 1 clover, $21@23 per ton.

Chicago—No. 1 timothy, $25@27; No. 2, $21@23; No. 1 clover, $20@22; light timothy and clover mixed, $22@24 per ton.

Prices one year ago—Detroit, No. 1 timothy, $17.50@18; standard and light mixed, $16.50@17; No. 2 timothy, $15.50@16.50; No. 1 clover, $13@14 per ton.

PRITCHARD'S WEATHER FORECAST
INTERPRETED BY THE STARS

Week of May 25

Memorial Day Stormy

MEMORIAL DAY in most parts of Michigan will appear threatening to stormy but with about seasonal temperatures. The wind will be high in force and scattered rains or showers with local electrical storms are probable.

Rain and Wind First Week

Moderate rains will be falling in many sections of Michigan at the beginning of this week and will be accompanied with high winds. Immediately following this storm period, however, Michigan residents may expect a couple of days nice weather. Temperatures will warm up just previous to Decoration day.

Week of June 1

With the exception of about Tuesday and Wednesday the week of June 1 will be fair. During the middle part of the week there will be a tendency to some showers and wind. The temperatures for the entire week will average below normal and frosts are liable to hit some sections.

June Cool; July Wet

June temperatures will range below the average; July will be better and August will record some very high readings. While the precipitation during June will probably average normal, July is expected to turn very wet. August will dish up a little of everything in weather for the Michigan farmer including electrical and wind storms, hail and fog.

Farm Outlook Poor

August and September will be poor months for the farmer and his crops either from a market or weather standpoint. It will not be a bad season for any farmer, however, who will be able to work with the market.

CONDITIONS ON MICHIGAN FARMS

LANSING, May 15.—The cool and wet weather in May has delayed seeding to some extent, although oats and barley is completed, and ground is being prepared for corn. Planting has commenced in southern half of the State. Reports received by L. Whitney Watkins, Commissioner of Agriculture, and Verne H. Church, Agricultural Statistician, U. S. Bureau of Agricultural Economics, indicate that the acreage of oats and barley sown is nearly normal although probably slightly less than last year in some localities due to the delay in seeding. Both crops have germinated slowly and need warm weather.

Wheat and rye are in excellent condition and making good growth. Meadows and pastures have been slow in starting but are improving now. New seedings were more or less injured throughout western Michigan by dry weather last year.

Potatoes are moving very slowly to market. Some sections are practically cleaned up but in others the farmers are holding in hopes to realize better prices. The bean market is stagnant, and while there are considerable quantities of beans on hand in some localities, there are but few moving. Hay is being marketed quite freely at fairly good prices, and the surplus in many sections has been disposed of.

Fruit prospects are generally good except peaches which will be a light crop in the heavy producing sections. The buds have advanced slowly due to the cool weather.

Live stock is mostly in good condition and has just been turned onto pastures, which is later than usual.

RADIO PROGRAMS

Station KYW, Chicago. Central standard time 8:20. Wave length 536 meters.

May 27—"The Horse in the Horse Market," by G. E. Wentworth, Supt., Union Stock Yards. "Science and the Soil," by O. F. Jensen, Soil Improvement Committee.

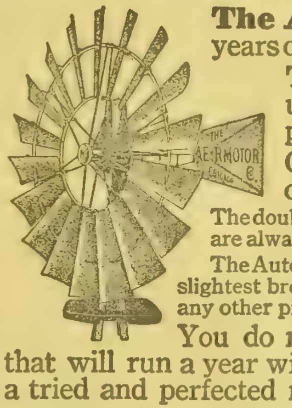
The WINDMILL with a RECORD



The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.
The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.
Oil an Aermotor once a year and it is always oiled. It never makes a squeak.
The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.
The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.
You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.
Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.
The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

From the Publisher's Desk of The Business Farmer, May 10th, 1924, issue.

* * * there has been considerable discussion regarding the safety of the mutual automobile insurance companies and this department has been asked many times for its opinion as to the safety of this or that company operating in the state.

In the first place, all state mutuals are under the direct control of the Department of Insurance, to which they must make regular reports and by which they are annually audited.

In a mutual company each member is equally responsible with every other member for the full liabilities of the company, so in the case of the one that failed at Grand Rapids when the insurance commissioner has finally settled up this company there will be no outstanding liabilities and each member who is collectable will have had to pay his proportion by an assessment, to clean up all liabilities in full.

The only advice that we could give through this page as to which company to select would be that you make sure that the company you are going into is strongly financed and has a large membership. We would advise against going into one which insures principally in Detroit, Grand Rapids, and other cities where the liability is much higher than it is in the rural districts, and we would further advise that you have the agent who sells the insurance explain to you carefully from the policy itself exactly what you can expect in case of accident or collision as most of these policies contain "deductable" clauses which make the insurance much cheaper to buy but naturally of less value to the purchaser.

It is our opinion that no farmer can afford to drive an automobile or truck on the roads of Michigan who is not insured at least against liability, whether or not he can afford to carry his own fire and collision insurance is a matter for he himself to decide, but the risk of a suit for damages which might run five thousand dollars or more is too much for any man to carry unprotected.

what the Editor of this paper thinks about mutual automobile insurance for his readers!

WHEN the editor of The Business Farmer wrote the attached article for his "Publisher's Desk" Department, he must have had this company in mind.

Citizens mutual insurance is now carried by the best class of business farmers in every county in Michigan and for the very reasons which the editor has pointed out to his readers, as the outstanding requirements of a safe mutual.

AGE.—This company now 10 years old, is the pioneer mutual automobile insurance company in Michigan and we have a record back of us for square and fair dealing that is the pride of the men behind this company and the envy of the other fellows who are trying to follow in our footsteps.

NUMBER OF MEMBERS.—This company made a record in 1923, by writing and renewing 46,050 policies. This amazing record of achievement was accomplished by a staff of representatives in every county in the state who not only write insurance, but look after the interests of our members when trouble comes.

AMOUNT OF CURRENT ASSETS.—This company had on hand at the start of the tenth year, $407,683.55, as against $226,499.45 at the beginning of 1923, an increase of $181,184.10! Think what that means in security to our members. That is what your editor meant when he said:

> "The only advise we could give through this page as to which company to select, would be that you make sure that the company you are going into is strongly financed * * * *"

Any agent of this company will be glad to go over with you every detail of the policy we write and explain to you every clause, just exactly what it means and what you are paying for. We are just as anxious to have you understand the policy you are buying, as we are to insure you.

We offer the business farmers of Michigan insurance in an old, strongly financed, powerfully organized mutual company, at rates which show a greater saving and a greater security than you can get anywhere else and this fact is endorsed by our ten years of successful experience and the $1,664,000.00 we had paid out to policy holders up to the first of this year.

Read again what your editor said in closing:

> "It is our opinion that no farmer can afford to drive an automobile or truck on the roads of Michigan who is not insured at least against liability, whether or not he can afford to carry his own fire and collision insurance is a matter for he himself to decide, but the risk of a suit for damages which might run five thousand dollars or more, is too much for many men to carry unprotected."

FORMER MICHIGAN MAN TO ASSIST M. A. C. PRESIDENT

DR KENYON L. BUTTERFIELD, new president of the Michigan Agricultural College, will have for his assistant a man, who, like himself, was born and raised in Michigan and resigned from the Massachusetts Agricultural College to accept a position at our own college at East Lansing. Dr. Butterfield's assistant will be Prof. John Phelan, who has directed the short courses at the Massachusetts college and is known as one of the foremost authorities in the country on rural sociology.

Prof. Phelan was born in Homer, Calhoun county, Mich. He graduated from the Western State Normal at Kalamazoo in 1908 and received his master degree from the University of Michigan in 1910. Previous to going to Massachusetts he taught mathematics at the Western State Normal school, served as assistant in the department of economics at the University of Michigan, was secretary to Dean John O. Reed of the College of Liberal Arts of the University of Michigan and to the late Prof. Henry C. Adams, then statistician of the Interstate Commerce Commission.

In 1910 he was appointed acting director of the department of rural education at the department of rural education at the Western State Normal school, Kalamazoo, and subsequently served at the State Normal school at Stevens Point, Wis., in charge of the rural education department.' In this position he did pioneer work in the development of the movement for training teachers for rural schools. There he built up a strong department of rural education and took an active part in all measures for the improvement of rural schools, was a prominent institute teacher, and a speaker on country life and rural and agricultural education in Wisconsin and the northwestern states.

Another one of Michigan's sons comes back home!

JUNE 18TH LIVESTOCK FEEDERS' DAY AT M. A. C.

WEDNESDAY, June 18th, has been designated as Livestock Feeders' Day at Michigan Agricultural College. At this time several experiments which have been under way for the past six months to a year will be concluded, the results given out, and the animals on exhibit. The forenoon will be devoted to a trip of inspection about the barns where the animals are on display and the experimental plots.

In experimental beef feeding work, three lots of Texas calves purchased last November, weighing 430 pounds and now weighing over 950 pounds, will be on display. One lot of these calves has had continuous access to a self-feeder in which at first corn and oats were offered and later corn alone. In addition, they have received silage and oil meal in the feed bunk, and alfalfa hay. Lot 2 have been fed the same feeds as Lot 1, except that all feeds were hand fed and the amount of grain limited somewhat during the early part of the feeding period. Lot 3 has been hand fed entirely upon farm raised feed, consisting of corn, oats, silage and alfalfa hay. The three lots have all done well. There is, however, considerable difference in the finish and a marked difference in the cost per hundredweight of grains in the three lots.

The cattle will be valued by expert market men the week proceeding June 18th and complete figures on cost of production and grains on each lot will be given out.

Eight lots of hogs have also been on experimental feed for several months, being fed as follows: Lot I, corn and tankage, free choice in separate compartments of a self-feeder; Lot II, corn and tankage, mixed and fed in the self-feeder; Lot III, two parts rye, one part corn, and tankage, mixed and fed in self-feeder; Lot IV, two parts rye, one part oats, and tankage, mixed and fed in a self-feeder. Lot V, two parts rye, one part middlings, mixed and fed in a self-feeder. During the past year rye has been one of the cheapest hog feeds available in Michigan and an effort has been made to determine how it could be fed to the best advantage.

Lot VI, VII, and VIII of the experimental hogs have been trough-fed, Lot VI receiving corn and tankage mixed and fermented with yeast for thirty-six hours before feeding. Lot VII has received corn and tankage, mixed, with yeast added just before feeding; Lot VIII, corn and tankage only, mixed and trough-fed.

The results with these different lots furnish much valuable information on the cost of pork production and methods which should be followed.

In experimental horse feeding, two lots of nine horses each doing ordinary farm work have been fed rations consisting of ear corn and alfalfa hay, against ear corn, oats and timothy. This work has been going on since November 1923. The results have been somewhat in favor of the alfalfa fed horses. This work has been particularly valuable because of the question so often raised by Michigan farmers with respect to alfalfa as a safe and satisfactory feed for work horses.

The horses may be seen at the College stables on June 18th with the results of the experiment posted and a man on hand to explain the details of the work. In addition to this feature, the horses to be exhibited by the College at the fairs for the coming season may be seen. A special effort will be made to have these animals accessable and in presentable condition.

It is hoped that horse breeders will make a special effort to be on hand and for the dinner hour assemble in a separate group for a basket picnic dinner. Two speakers of national reputation have already promised to attend.

MICHIGAN GENERAL PROPERTY TAX CUT

GOV. GROESBECK has had financial statements compiled which show that the state tax levy for the fiscal year beginning July 1 next will be $15,000,000 or $1,000,000 less than the tax for the present fiscal year.

Michigan will have the smallest general property tax since 1918, when the state levy was but $9,108,219.

With a $15,000,000 levy for the coming year, the rate for $1,000 of assessed valuation will be around $2, which is also the smallest rate in nearly 10 years. It will also mean a reduction of more than $5,000,000 in the last four years.

Gov. Groesbeck brought up the question of the state tax before the Administrative Board and the matter was referred to the budget committee. A report will be made within the next two or three weeks.

In announcing the reduction of $1,000,000 over the levy of the present year, Gov. Groesbeck said: "The financial condition of the state is the best it has been in many years and the property owner should be given the benefit of our healthy condition. This reduction will in no way hamper the maintenance of our various state institutions. They will have all the money they need."

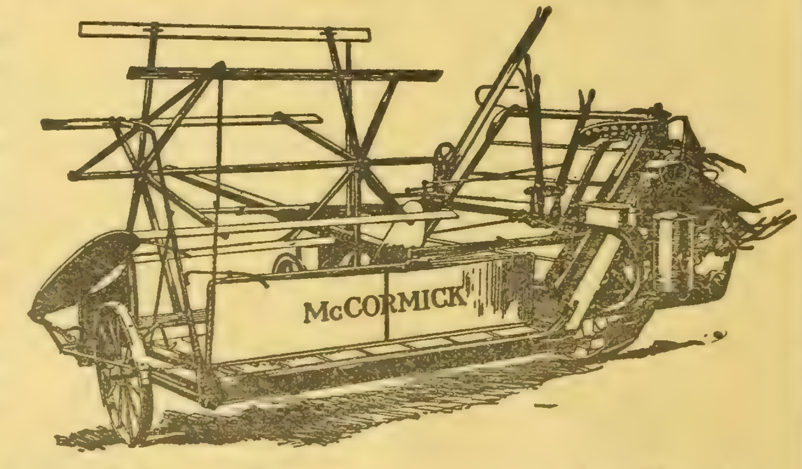
The highway building program will not suffer in any way through the reduction, the Governor declared. He expects the next Legislature to enact a sound financial program for the highway department. And if one does not materialize there will be a sizable amount available for highway construction.

The State will go into the new fiscal year, July 1, with upwards of $10,000,000 in the treasury, which is something new for the State at this time of the year.

The $15,000,000 tax will be equalized in June and will be collected next December. Under the present system the state must operate during the first six months of each fiscal year, before the tax money for the period is forthcoming, and often it is February and March before the bulk of the tax money is in. For this reason upwards of $10,000,000 of surplus is needed to tide over the period between the time the tax is levied and collected.

Is Your Old Binder Good for Another Season's Work?

Will it go into the harvest this season and tie all of the bundles and waste no grain or time? Will it cut the crop with the minimum of labor? Will it give you good service without excessive repair expense? If it will do these things, you don't need a new binder; but if its performance is doubtful, it is well to remember that a new, improved McCormick or Deering binder gives the best possible service and costs little considering the many years it will serve you.



Here are Some of the Many Improvements in Grain Binder Construction in the Last Twenty Years

1. *Outside reel support.* Strengthens reel and keeps reel bats parallel to cutter bar at all points.
2. *Floating elevator.* Makes it possible to cut a full swath of heavy or light grain without fear of clogging elevators. Results in increased cutting capacity and eliminates delays.
3. *Improved binder and knotter.* Insures every bundle being perfectly bound, eliminates losses and delays.
4. *Tongue truck.* Relieves horses of neck weight and conserves their strength. Keeps binder running straight, saving grain and delays.
5. *Improved bundle carrier.* Works as well going up and down hills as on the level. Saves grain and time of shockers.
6. *Improved bevel gears and chains.* Eliminates delays and expense on account of repairs. Fully as important as an improvement that increases capacity.

Both McCormick and Deering binders offer you the best possible construction, highest grade materials, and long-lived wearing parts. Any McCormick-Deering dealer will point out the above improvements on the binder he has on display.

BINDER TWINE—Now is the time to arrange for your harvest time requirements of twine. Ask the McCormick-Deering dealer to reserve your supply of McCormick, Deering, or International twine. It is wound in convenient "Big-Balls."

Allowing Forestry Through Suitable Taxation

Present High General Property Tax Discourages Reforestation in Michigan

By STANLEY M. POWELL
(Lansing Correspondent of The Business Farmer.)

TIME was when Michigan was a leading timber producing state. Now the annual freight bill on lumber shipped into Michigan exceeds $15,000,000. A large amount of our former timber wealth was removed ruthlessly, leaving vast areas of cut-over land regarding which no provision was made for reforestation. Of the state's 36,787,200 acres the best estimates are that to-day more than 12,000,000 acres are idle and unproductive. The proper utilization of this land constitutes one of the biggest problems confronting Michigan to-day.

The question presents itself as to whether we should attempt to farm all of this land or whether it should be redevoted to its original task of timber production and made attractive for recreation purposes. Certainly, we shall all agree that it should not longer remain idle. In the face of a surplus of most farm products and an alarming shortage of timber we may well conclude that an intelligent program of reforestation should very properly be an important part of any program for the proper development and efficient utilization of northern Michigan.

As Dr. Richard T. Ely, the great economist says, "We are slowly getting over the idea that farms must follow forests. Much of the cut-over land is not suited to agriculture and it is a question whether we need more farms at the present time. On the other hand, every consumer of forest products is feeling the consequences of the past ravages of our forests. The idle land must be put to work to grow trees".

This thought is carried a step farther by Col. Henry S. Graves who recently said, "We have reached a turning point in American forestry. Then next year or two will determine whether we will inaugurate a national policy of forestry commensurate with the vast economic and industrial interests involved, or will continue to lose ground in our efforts to check forest destruction and to produce new forests as the old timber is cut and used."

The President's Ideas

President Coolidge in his message to Congress last December declared that "Reforestation has an importance far above the attention it usually receives." In a recent statement to the American people, the President says, "American character and American customs are largely the result of the influence which our forest background has exerted upon the nation's history. Our civilization is largely dependent upon the unrestricted use of wood. But America's magnificent timber supply now needs replenishing. About 81,000,000 acres of idle forest land should be growing timber crops".

The influence of growing timber extends further than we ordinarily realize. It profoundly affects such factors as climate, rainfall and drainage and we must remember that the flow of streams and rivers, the preservation of birds and other wild life are of great importance—especially the abundance of birds to keep down insect pests. Perhaps of almost equal importance to us in Michigan is the significant part which our forests and their direct and indirect influences have to play in attracting thousands of tourists to Michigan every season. Mr. P. J. Hoffmaster, Superintendent of State Parks, is authority for the statement that the official count figures show that more than 550,000 individuals visited 22 of Michigan's State parks last season.

Land devoted to growing trees becomes more and more valuable from a fertility standpoint year by year. If our population ever becomes so dense that this land is required for intensive agriculture it will be found far better than had it been allowed to remain idle and unproductive in the meantime.

Michigan's Great Problem

Are the days of Michigan's leadership in lumber production a thing of the past? Must we relinquish our preeminence in tourist attraction? Are our burnt over and cut over lands to be left idle and unproductive while the general property tax becomes confiscatory and causes the owners to allow their land to revert to the state?

The problem is present. It is acute. Over 700,000 acres have reverted to the state for non-payment of taxes. The rate of such reversion is constantly increasing.

We have heard a lot of talk about the depletion of timber reserves and the scarcity of forest products. We cannot help but feel that land which once produced timber will do it again, provided, of course, that fire is kept out. All sorts of reforestation schemes have been advocated by various men who are giving a thought to the future. Among the big problems to be solved are the determination of the best methods of natural and artificial forestation and control of the fire menace.

But from a practical standpoint, there isn't much use of discussing ways and means of forestation for Michigan until the general property tax is no longer applied to farm and commercial woodlots. As P. S. Lovejoy says, writing in a recent issue of the Country Gentleman:

"The general property tax threatens the existence of the woodlot. In one way or another this has long been recognized and various states have passed laws intended to correct the difficulty. More woodlot and timberland tax legislation is coming up this winter.

Property Tax Not Adapted

"The trouble lies in that the general tax was built for short-time crops—and the woodlot has a long-time crop. As Col. William B. Greeley, Chief of the United States Forest Service puts it. 'The general property tax, applied to growing timber, is as unjust and as unreasonable as it would be to tax a field of wheat every few days during its whole growing season' ".

Michigan tax officials have agreed with the ideas expressed by Mr. Lovejoy and Col. Greeley. For instance, Mr. O. F. Barnes of the State Tax Commission, testifying at a forestry conference called by the State Conservation Commission June 27, 1922, declared:

"The economic effect of increased taxation upon forest property, such as necessarily results from ad valorem taxation, is far different from the effect of increased taxation upon other forms of real estate. It forces destruction, not development. All taxation must eventually be paid from income. If taxation is increased on non-income city property the owner can improve the same and thus obtain income to meet the increased tax, and in so doing he benefits both himself and the community. If taxation is increased upon non-income producing farm lands the owner can put the same under crop and obtain income to meet the increased taxation, again benefiting both himself and the community. The owner of forest property, however, when taxation increases can only obtain income from the property to meet such charges by destroying the property; and the destruction he is thus forced to make is of a character that requires years to replace.

Mr. Barnes' Four Points

"I suggest as basic principles of forest taxation:

"First: That forest property must not, through ignorance of its character and of the effect of ad valorem taxation upon it be overtaxed.

"Second: That taxation be so framed as to enable the investor in forest land to calculate with reasonable certainty his future tax burden until such time as he can realize income from his investment.

"Third: That the payment of taxes as far as possible be arranged for a time when income may be expected with which to pay the tax.

"Fourth: That the interests of the owners of other classes of property and the interests of the political units where forests are located be given proper consideration."

Sentiment to "make the tax fit the crop" was crystallized in the last session of the Michigan State Legislature. Several measures were considered. The Meggison-Sargent Bill which provided for a deferred tax on forest growth passed both branches of the Legislature by generous majorities and was regarded by many as one of the most constructive achievements of the past legislative session. However, this law was vetoed by Gov. Groesbeck who declared that it was poorly drafted and that the title of the act did not agree with the body of the measure.

Provisions of Vetoed Act

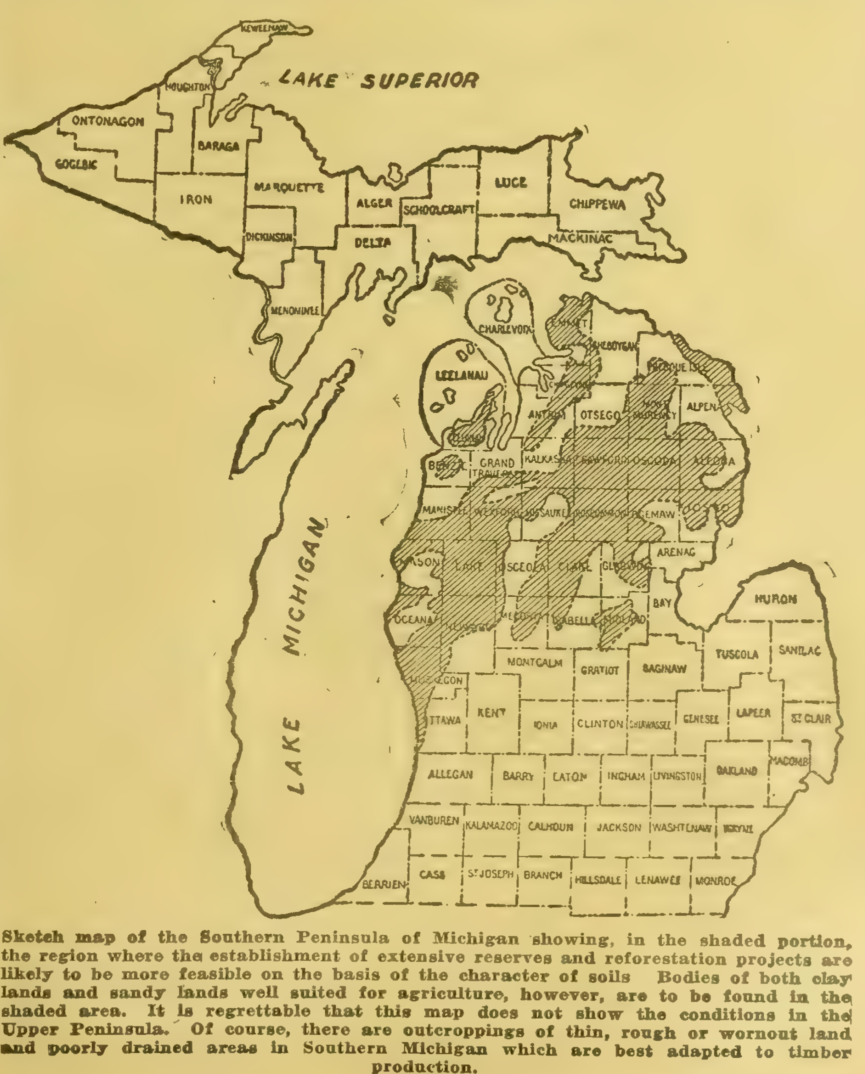
Under the terms of this enactment the owner of any timber lands, or lands chiefly valuable for the growth of timber within the state, might apply to the commissioner of agriculture to have such property set apart for the growth of timber. If, after investigation, the applications were approved by the commissioner of agriculture, the land would thereafter be taxed at the rate of five cents per acre annually.

After a twenty-five year period the timber would be subject to cutting, under general control of the commissioner of agriculture, who would guard against wasteful methods. At this time, the owner of the timber would be assessed a tax equal to twenty-five per cent of the stumpage value of the timber cut, to be paid into the state treasury.

There was a provision in the act which would prevent it from working a hardship on any local taxing unit. Section Six of the act provided that, "The state administrative board may, in its discretion, advance to the townships in which any forest reserve lands lie, such sums each year out of the general fund of the state as will compensate them for the amount of taxes which would be collected from such forest reserve lands had they not been registered".

It is certainly not the purpose of this article to go into the details of any specific measures, but merely to discuss the general principles which should underlie any constructive and equitable forest tax legislation. The importance of this matter to the northern portion of the state can hardly be estimated, although it is evident that its possibilities are very great. During the past few years,

(Continued on Page 23)



Sketch map of the Southern Peninsula of Michigan showing, in the shaded portion, the region where the establishment of extensive reserves and reforestation projects are likely to be more feasible on the basis of the character of soils Bodies of both clay lands and sandy lands well suited for agriculture, however, are to be found in the shaded area. It is regrettable that this map does not show the conditions in the Upper Peninsula. Of course, there are outcroppings of thin, rough or wornout land and poorly drained areas in Southern Michigan which are best adapted to timber production.

Importance Of Growing Alfalfa In Michigan

Hardigan Variety, Bred by M. A. C., Is Better Hay Producer for Michigan than Any Other Variety of Alfalfa Seed

By FRANK A. SPRAGG
Assistant Professor of Farm Crops, M. A. C.

THE farmers of Michigan are beginning to realize the value of the alfalfa crop. The seed they have raised has been largely by accident.

Farmers need to know that there are alfalfas that grow all winter in their native climates and always die if they must stop growing during the winter. These are valuable crops where they belong but are worthless in Michigan. Then there are alfalfas that may survive Kansas conditions perhaps and succeed in Michigan only in mild winters. We cannot depend upon such seed and therefore must avoid it.

Alfalfa is not a native American plant, but has been introduced from Europe, and usually from southern Europe, where the climate is not severe. These types of alfalfa were introduced into Mexico and have drifted into Southwestern United States. We want none of these alfalfas for Michigan conditions. These are the common alfalfas.

This is a piece of hardy variegated alfalfa that was sown at the rate of five pounds of seed to the acre in 1908 at M. A. C. This piece continued to produce hay from that time until it was plowed up in the fall of 1915, at an average of 5.5 tons of hay per acre per year.

However in northern Europe there are some alfalfas that originate from crosses, between common or southern types, and an extremely hardy yellow flowered but poor hay producing type from Siberia. Out of these crosses have originated by selection some good hay producers that have retained the hardiness of the Siberian parent to a greater or less degree, but need further selection. A man by the name of Grimm brought some of that alfalfa with him when he moved into Minnesota. No doubt there were several such men who settled in the Northwest. As they were pioneers, they were unable to find alfalfa seed on the market and must produce their own seed, from such plants as survived their conditions. Each time that a new crop was produced nature had therefore selected plants that were more and more hardy. Thus, for example, the Grimm alfalfa became selected year by year until it has become a success for Minnesota climate and conditions. The alfalfas of this class are known as variegated alfalfas, because the flowers contain some yellows, greens, and blues, showing that they come from crosses between the common purple flowered types and the yellow flowered Siberian alfalfa. These are the alfalfas to which we must look, and upon which the Michigan alfalfa industry must depend.

When America came to be better settled and our railroads connected us with the world trade, a new problem arose. Alfalfa seed came to be on a world market, and seedsmen could obtain larger quantities of seed from southern climates, than they could from northern climates. In fact our Northwest needed its seeds and sold but little to the general trade. As the experiment stations had not told them differently, it was only natural that seedsmen should throw alfalfa seed from all sources together in large bins before recleaning. Then when the seeds were largely removed, the alfalfa seed was well mixed.

This is the kind of alfalfa seed that has discouraged so many Michigan farmers. They have planted a mixture of alfalfa seed from various sources and although they had a good stand of alfalfa the first year, the first winter killed most of it and only a thin stand remained. This was because only a small portion of that seed came from northern climates, and this small portion produced plants that stood the winter in Michigan. If the seed had come entirely from warm climates the chances are that no alfalfa would have been left in the spring.

About twenty years ago, M. A. C. began to realize the existence of Grimm alfalfa and when, much more recently, reliable sources of Grimm seed came to be drawn upon, the alfalfa crop began to find a real place in Michigan agriculture. Previous to that time M. A. C. as well as farmers in general had tried the existing commercial sorts and reported that "alfalfa" was not to be depended upon in our climate. Let us note that the present success of alfalfa under our conditions depends upon somebody's selection of hardy sorts that will succeed under these conditions. We cannot continue to accept common commercial seed, and those who force it upon us, rob us of our chances for success. Alfalfa will become a Michigan crop when we plant seed that has been grown in Michigan from plants that have stood our climate and our conditions. Until then we must depend upon getting seed from northern sources.

The introduction of reliable sources of Grimm in quantities was started by the Michigan Crop Improvement Association, and has since been taken over by the Seed Department of the Michigan State Farm Bureau.

However, Michigan is producing seed. Some forty years ago, a Frenchman settled in Monroe county, Michigan. He like Grimm was a pioneer, and after he had sown the seed he brought with him, he had to produce seed if he continued planting alfalfa. He succeeded in planting seed and his friends and neighbors have succeeded until in 1922 seventeen car loads of alfalfa seed were known to have come from Monroe county. The past year (1923) was a poor seed year and they have produced little more than they needed at home. This may be the largest source of Michigan grown seed, but one does not need to look far to find stray alfalfa plants in farmers lawns, that we are told have been there for twenty or twenty-five years, and in the heaviest of June grass sods. Tell me that June grass cuts out alfalfa, and I will tell you, you are talking about alfalfas that are not suited to Michigan conditions. If an alfalfa plant has been frozen out, or has succumbed to disease and died, we need not to blame June grass if it takes the alfalfa's place.

One usually finds, that the stray alfalfas to be found in June grass sods produce seed. It is such alfalfas as these that need to be increased because these are the sorts that can be depended upon to produce desirable offspring. It appears that alfalfa, as well as corn, needs to have a thin stand if it is to be relied upon to produce seed. The sun and air must get through the branches, and the conditions should be somewhat dry, at least at blooming time. Some farmers have succeeded in producing a crop of

Farmers Hurt Market By Storing Beans At Elevators For Future Sale

By ART GOULET

THIS is the article we referred to on the first market page of our May 24th issue. In this article Mr. Goulet points out the evil of farmers storing their beans at the elevators for future sale, and places a good share of the blame for the present low price upon the shoulders of the farmers who stored their beans with the dealers. We would like to know the amount of beans stored at Michigan elevators at present by farmers for future sale and would appreciate it very much if you would clip, fill out and mail to us the coupon below. Your name will be kept confidential.

IT occurs to us that a survey by your paper to ascertain direct from growers the quantity of beans held by farmers in storage with elevators might disclose one of the reasons for the present condition of Michigan bean market prices.

One shipper in the state in a general letter to their brokers in early March stated, "That many single elevators are carrying from eight to as high as twenty cars for the account of the farmer and they would judge that easily 70 per cent of the beans left in Michigan are owned by the growers. In another paragraph they state, "They would make no attempt at that time to estimate the quantity of beans left in Michigan, no quesion but what there is ample stock to take care of the demand between now and new crop."

Would you consider that information broadcasted to the markets of the country favorable to the grower of beans if 70 per cent of the beans owned in Michigan then belonged to the grower.

The bean situation this spring is some what of a repetition of last year. Some Michigan dealers, who if we are correctly informed have been more interested in bearing the market than in real salesmenship to get a decent price for beans. We can see where short selling of large quantities of farmer-stored beans would be a strong temptation to the short seller to pound prices down.

We know that during the excellent sleighing in February prices at that time were not satisfactory to the majority of the farmers and a great many beans were hauled to elevators and placed in storage with the thought that the market would be better with the approaching planting time, when the farmer would be too busy planting his crop to haul beans to take advantage of a better market and by having beans on storage in the elevators all that it would be necessary for the farmer to do would be to phone the elevator to send him a check for the beans when the prices met with his approval.

We are sure that you can see that the elevator who sold short stored beans would not be interested in an advancing market, and a survey through the columns of your paper with a coupon attached asking the farmer to report to you the amount of beans stored at the elevator at the present time remaining unsold might be compared with the fall state crop report also the Michigan bean jobbers association report of inspected shipments and disclose quite accurately whether stored beans are still in elevators or shipped out.

We appreciate that you do not reach every bean grower in the state but the very large number that you do reach would give you valuable information for an article to be used later to show the farmers when they store beans with the dealer who sells short that the farmer is placing himself in a position to be double-crossed.

The short seller to protect his own interest must of necessity find all of the bear market factors that he can muster together and disseminate that information over as wide a territory as possible to become effective in best serving his own interests. In the dissemination of that bear information to buyers who are only ordinary human beings like the rest of us and like to receive information that we can buy at low prices and that prices will be lower if we wait, with the result that buyers hold off and their very act in holding off helps depress the market and the properly trained buyer reasons that if the large shippers feel weak on the market situation shopping around will find someone who will be willing to lower the price possibly 5c under the bear quotations that have been received. It is surprising how fast that information will travel in all of the larger markets. Let one buyer get a car of beans at a reduced price and immediately every broker in that market knows about it and wires his shipper to meet it or better it with the result that the short seller is accomplishing his purpose in lowering prices figuring the psychological effect will discourage the further holding attitude of the

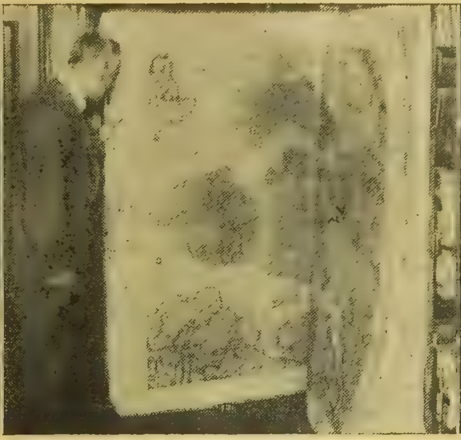
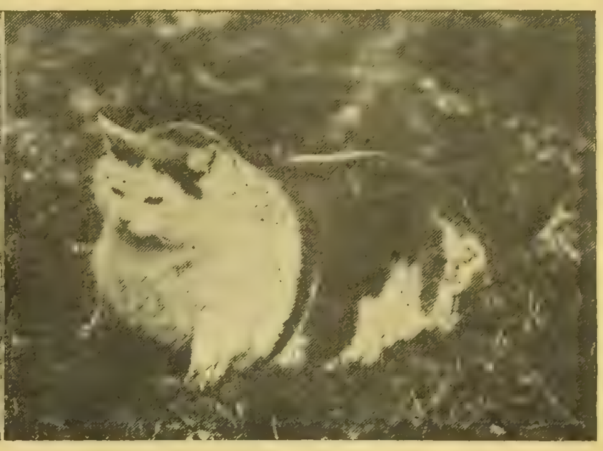
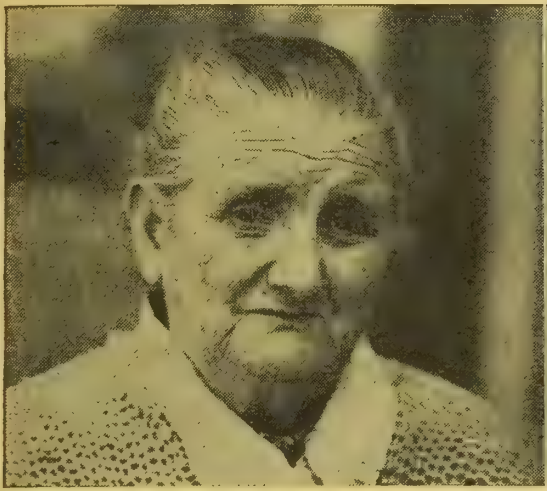
U. S. TAKES CHARGE OF CATTLE EPIDEMIC.—Dr. U. G. Houck (left) of the U. S. Dept. of Agriculture, is conferring with Geo. H. Hecke, director of Dept. of Agriculture of California, about the foot and mouth disease situation in that state. Dr. Houck has charge of the forces trying to wipe out the disease.



GERMANY HAS LARGEST BOOK.—The largest book in the world can be found at the University of Rostock, Germany. It is over 400 years old, being made in the 16th Century, and stands taller than the average height man.

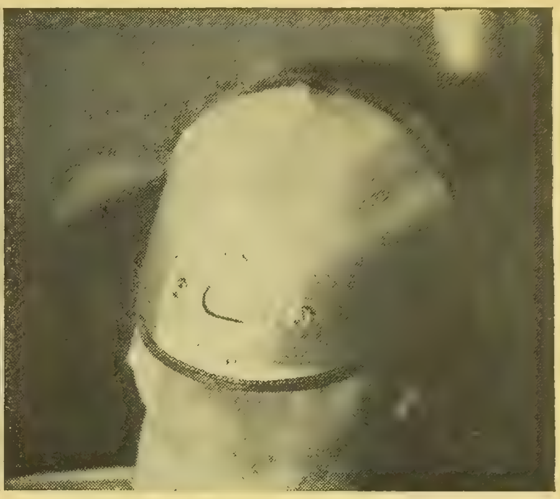


IS THIS THE LARGEST CAT IN THE WORLD?—Mrs. Nellie Harrington, of Goffstown, New Hampshire, declares her pet is the largest cat in the world, and we are willing to acknowledge that no doubt she is right. It is a maltese and white, weighs sixty pounds and is just three feet in circumference.

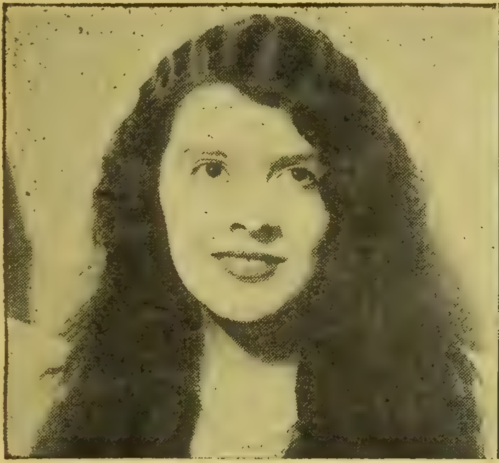


FROM POORHOUSE TO PLENTY.—Mrs. Peter Fenster, aged 72, living for the past year at Cambridge, Mass. Almshouse, has been notified that she is one of the heirs to an $8,000,000 fortune left by distant relatives. Mrs. Fenster will return to England, the land of her birth, to live the rest of her life in ease.

TO OPEN "JAZZLESS" UNIVERSITY.—John E. Brown, known throughout the U. S. as an evangelist, with over 200,000 converts to his credit, has practically purchased the entire town of Sulphur Springs, Ark. where he will build his own university which is to be "jazzless". He will interest students in the great out of doors.



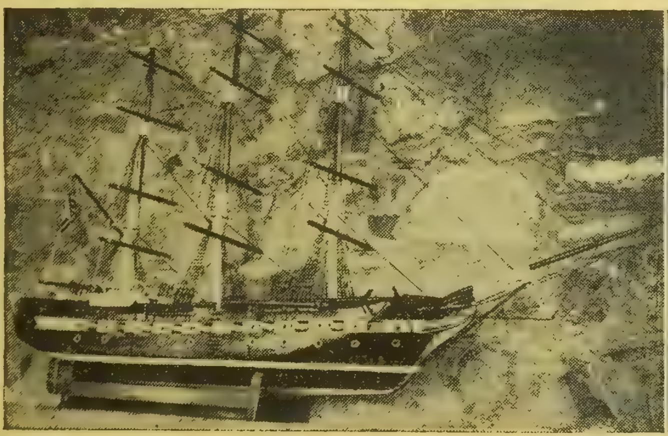
NEW INVENTION OF INSOMNIA MASK.—This is the latest in inventions, an insomnia mask, the work of Niels Aason, known as the "Edison of Norway" who is now in this country. The warm breath of the mouth goes to the eyes and in a very short time the wearer is asleep. Now what we want to know is how you ever wake up.



LOOKING FOR A HUSBAND.—Miss Alyce McCormick, of Nebraska, is in New York with her father, a battalion head in the Volunteers of America, looking for a husband. She says he must be a Mason, pass a test of psychologists, and finally, get her consent.

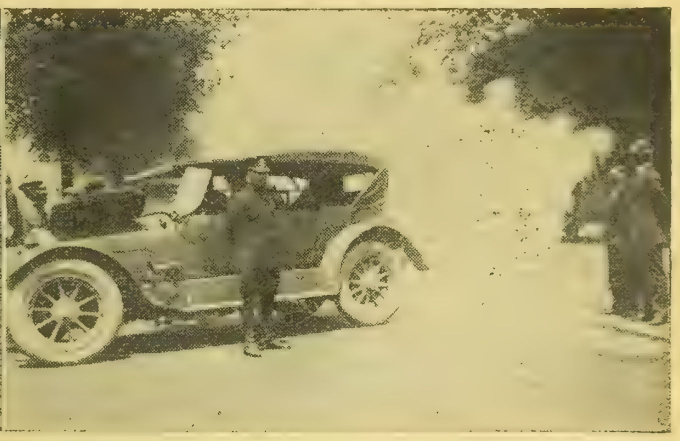
A RATHER COSTLY COSTUME.—In the stage play "Flame of Love" it is necessary to have a robe of gold. A robe was made of 22 Kt. gold, overlaid with silk. In between performances the robe is taken by armed guards in an armored truck to a New York bank where it is placed in a deposit vault until needed for the next show.

FINDS CURE FOR PYORRHEA.—Dr. Harold Leith Box, DDS, young Canadian dental scientist of the Royal College of Dental Surgeons, Toronto University, declares he has found a method for curing that dreaded disease of the teeth, Pyorrhea.



MODEL OF AMERICA'S OLDEST FIGHTING SHIP.—When the USS Constellation was built in Baltimore, Md., 127 years ago, she was considered a wonder with her 20 guns which went through the wars of 1812 with distinction. This model belongs to former British Admiral William Owen.

CHINESE BALL PLAYER.—Kai Kee plays second base for the Yale Varsity nine and holds down his position in big league style.



HERE'S A NEW IDEA FOR BOOTLEGGERS.—This bootlegger's automobile was captured in Washington, D. C., and when examined was found to have apparatus which would throw out a heavy smoke screen if a pursuing car of the prohibition department got too close.

FORTY YEARS OF FAKING

The Memoirs of a Grafter—By Himself

PETE DEXTER, who has been recounting his life of faking, has reached the place where he finds that even roses have thorns. His games in which he took money from people who trusted him have begun to cause him trouble, and in the last chapter, in spite of his ill-gotten wealth, Pete had to go to a federal prison to think over some of his crimes. Pete wasn't as ready to talk of that part of his career as he was to brag of escapades in raiding people's pocketbooks.

Like lots of other folks, Pete just couldn't stay out of the oil business. When he had a chance to get in on the big money he grabbed it. Because he didn't look up the ultimate end of his scheme, he came to one day and found that his dream of wealth was just an ordinary dream, and, like a bubble, when it broke nothing was left.

Altho he admitted he had made a lot of money, Pete had to resort to petty graft to get on his feet again. But he got another start. Even tho he is getting what he calls a case of "nerves," he has to eat, and in this chapter he tells of some of the little schemes he used to keep out of honest work.

CHAPTER VII

ONE day I picked up a paper in which it told about culling chickens. The idea struck me at once that here was a good one. I packed up and pulled out for Iowa, my old stamping ground.

I had been in such good health that there wasn't very much danger of anyone recognizing me, so I went into a section I had worked many years before. Most of the people were new anyway, as all of the old-timers had gone west. I bargained for an old Ford and bought a chicken coop, started out and announced that I was a culling expert. I would look over the flock for half a cent a bird and take out those hens that were non-producers.

Every one had the "bug," I found, so I had no trouble in working my scheme. Instead of picking out the poor chickens as the non-layers, I managed to select some of the best birds in the flock, and after my work was done I would bargain for the poultry. Business went good for several weeks till a county agent got wise to my deal and it was all off. I drove over to Illinois and the scheme worked a while, but I wasn't what I used to be.

One day, a fellow who saw me with a flat tire on my auto asked me if I would be interested in a tire selling deal. I was pretty blue that day, but he did me more good than medicine. After I had dinner with him, we got down to business and soon we were all set. Here was our latest game, and a good one, too: My new partner, Mr. Henry Young, had been working in a tire factory in Ohio. He had found out that the big tire companies put out a lot of "seconds" that could be got pretty cheap. He had a small amount of capital and I had an equal amount, so we went into business. Our game was to sell these tires as bargains. So we picked a small city in Illinois and opened up the Damon City Tire Company.

We managed to sell a few good cord tires to the leading business men of the city at prices which cost us money to put them out. We put extra good tires on about ten of the best cars in town, and frequently Young, who worked the city, would walk up to a doctor or lawyer who was using our tires, examine a tire on the car and remark that the tire seemed to be wearing out pretty fast. Of course the man thought the tire was all right, but Young would send the fellow down to the shop and replace the tire free of charge. As a result, it wasn't long before we had the reputation in that town of being the best tire dealers in existence, and that saved us when we finally did get in bad, thanks to Young.

We started a big mail campaign offering tires at unusual prices. We got a lot of suckers who bit pretty hard. We offered a free tire with every three the money was sent in advance for, and the way those checks came in was a fright. We sent out the cheap tires made by the same companies that made the best tires, and of course some of the gang kicked. We did refund some money, but we were not called on many times, and we got by, by keeping as many people quiet as we had to.

That year we sure coined the money. I felt like my old self again, and made plans to salt down some of my earnings so I could retire. After the second year was nearly over, one of our customers started a big row. He claimed that we had been defrauding the public, and got a farm paper behind him. Then two other farm papers started the trouble all over again, and we just couldn't quiet that fellow down. Young took him down some good tires, but the old fellow was on his ear and wouldn't shut up. We had just started a big advertising campaign for the summer's business, and his holler sure hurt. He got the farm papers to looking over our stuff and they soon found out that we were passing off the cheap second grade tires for which we were supposedly taking money for good ones.

One of the papers over in Iowa got us investigated by the postoffice officials, and I sure was scared. Young, he was clever, tho. When our trial came up, he hauls into court as witnessess all the doctors and lawyers in our town, and they cinched our case. Young admitted that he made a few mistakes, but he claimed that it was the fault of our big business, and when our attorney brought all these men of importance on the witness stand to tell the jury how square we had treated them with our "cheap" tires, that other gang didn't have a chance. The judge was so sure we were honest, he took the case away from the jury and ordered an acquittal.

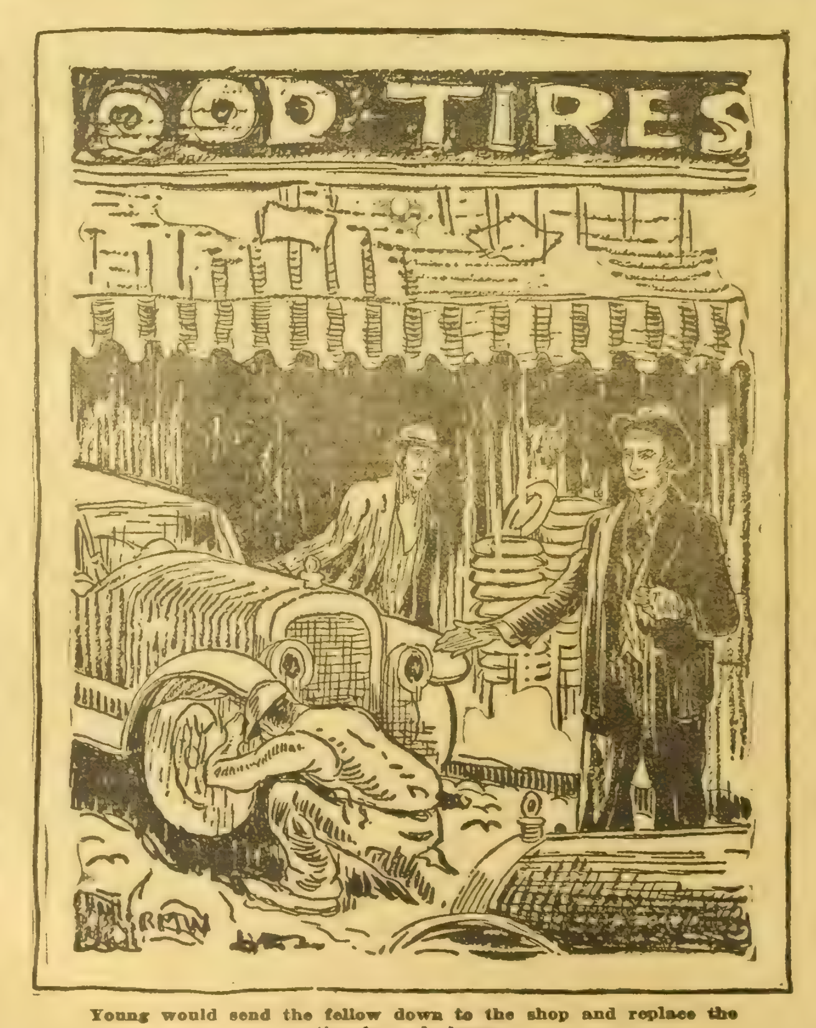
We eventually closed out, but before we did, we ran a big sale. We announced that with every ten-dollar order received by the first of the month, we would put in a set of chains free and with every twenty-dollar order we would give a set of tools and the chains. Well, that free stuff brought them. We sent out tires and sent a note saying the order for the tools and chains was being sent to a factory for delivery, and the old game worked and we disposed of our tires, got our money, pulled out and let the gang worry about the chains and tools.

> I am an enthusiastic reader of the M. B. F. with its different departments and "Forty Years of Faking" included which gives a good example of what is transpiring every day of which I have been a victim a couple of times, but will watch my steps closer in the future.—B. W., Daggett, Mich.

I was felling fine, and felt as if I was getting back into form. I came to the conclusion that it was easier to sting the public on small deals than it was to swing the promotion stuff, and there wasn't half the risk. With a big deal, every one plays safe and looks before he leaps, but with the small stuff, they bite and look later.

A little later I was up in Canada and a fellow pulled a good joke on me. He handed me a jug one day and says: "Friend, here's a gallon of Old Rye for you." I opened the jug, and sure enough he was right. Some of the nicest seed rye poured out. That set me thinking. A lot of fellows down in the states were thirsty as long as prohibition was in effect. I sat down that night and wrote a letter. It stated that four quarts of real rye could be had from Canada for $10 if the coupon was used. I explained as it was Canadian mail it yas not subject to inspection. I then wrote to Kansas City for a mailing list and soon had a long list of prospects.

The addressing of the letters took some time, but I enjoyed the work and soon the money and checks and orders came back. That's once I actually delivered what I claimed I would, and I sent each one his rye nicely packed. The papers spoiled my game a few weeks later, telling how some smart guy cleaned out a lot of thirsty ones to the tune of $10 each. I made a good winter's living out of that deal and moved back to the states the next spring.



Young would send the fellow down to the shop and replace the tire free of charge.

I decided I would try an old game with groceries. I had a lot of cards offering $20 worth of groceries, and agreed to send ten pounds of sugar free with every order. I arranged with a grocery company to fill the orders, but didn't tell them about the sugar. Out of 5,000 cards mailed I got replies from nearly 3,000. I filled about half those orders but didn't send the sugar. It took about $1,000 to get the orders filled and I had the foresight to send another $1,000 to my bank account back in New York for safe keeping.

One day a fellow with a policeman in tow steps into my office. He immediately asks for his sugar, and I tried to tell him it would be coming in a short time. "Say!" he shouts, "I'm wise to the game, you ain't got no sugar."

Then he tells the cop to take me to the station. He had a John Doe warrant for me on a fraud deal, and I was scared. But a roll of bills fixed things. Took most of it to get my release on a cash bond, but when I got out it didn't take me long to jump town and head for Chicago.

I was all in and finally landed in a hospital and stayed there for a long time. I couldn't stand shocks like that any more, and I was getting so afraid I hated to walk down the street for fear someone would grab me. Nerves are bad things when they start to perform. I needed a rest, and had about enough money left to get back to New York state where my aunt was still living. That town had the idea that I was a capitalist "out west" some place. Aunt was glad to see me, and as she needed someone to look after things, I decided to stick around and rest up for a while. (Another complete chapter in June 21st issue.)

MICHIGAN CROPS

GET INOCULATION FROM M. A. C.

I would like to know if I can get inoculation from the M. A. C. and if so how much does it cost and is there a different inoculation for each variety of clover? Is it advisable to inoculate field beans and if so do they have inoculation for beans at the college?—A. S. V., Pigeon, Mich.

THE Bacteriological Laboratory at M. A. C. furnishes at cost inoculation for the various legumes. There are various kinds of legume bacteria, and, consequently, we have to know the crop being planted in order to furnish the right kind of inoculation. There is one strain of organism that inoculates alfalfa and sweet clover, and another strain inoculates the common clovers such as red, alsike, mammoth, and white. There are also special strains for beans, peas, cowpeas, and soy beans.

We feel it is desirable to inoculate field beans and all legumes in fact unless the farmer is confident that the field to be planted already contains the proper organism. If the field has produced a crop of the same legume within the past four years with a good nodule production, he may be fairly sure that the field still contains the bacteria in question. But if there is any doubt, it is desirable to inoculate.

One culture costs twenty-five cents and treats a bushel of seed. Orders and inquiries should be addressed to the Bacteriological Laboratory, Michigan Agricultural College, East Lansing, Michigan.—R. M. Snyder, Res. Assoc. in Bacteriology, M. A. C.

APPLY ACID PHOSPHATE

I have a piece of ground which I wish to seed to alfalfa or clover. The soil is a good gravel sand loam but has been croped several times. It is good clover land as I have an eight acre lot in alfalfa, same kind of soil.—W. B., Biteley, Mich.

IF you have grown good crops of clover and alfalfa on this land it is my judgement you could not increase your yield by use of lime. The use of acid phosphate at the rate of approximately 250 pounds per acre would probably be the most economical fertilizer you could use. —G. M. Grantham, Research Assoc. in Soils, M. A. C.

Farmers Service Bureau

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you. All inquiries must be accompanied by full name and address. Name not used if so requested.)

NEED NOT GET STATE LICENSE

Do I need a license to take orders and sell binder twine and fire extinguishers? If so where do I get it and what does it cost?—C. W., Sand Lake, Michigan.

IN reply will adivse you that a person does not need a state license to take orders and sell binder twine and fire extinguishers. If a person intends to sell villages and cities he may be required to secure a local license. That would depend on the ordinances in the various cities and villages in which he might work.—Clare Retan, Deputy Attorney General.

PROCEED AGAINST ENDORSERS

I am a reader of the M. B. F. and find it one of my best papers. I am pleased with the questions and answers to same. It is a great help to its readers. I have a question which I do not understand. A had an auction three years ago, B purchased team and tools to the amount of $400. B has paid no interest. B has 40 acres which is in his wife's name but B signed his name to note and how can this note be collected?—C. M., Grand Ledge, Mich.

YOU could proceed against the indorsers to B's note and try to collect from them, or you could bring suit against B on the note and levy on any property which he has in his own name, or garnishee his wages if he is working.—Asst. Legal Editor.

MAKING CIDER VINEGAR

Is there any law against a farmer making sweet cider for home use? Can he make vinegar for home use? Would he have to have a permit if he operated a cider press and did custom work? Thanking you for your help, I am, An Interested Reader, Mason, Mich.

FEDERAL Regulations No. 60, revised March, 1924, Section 610, provide that any person may manufacture non-intoxicating cider exclusively for home use, either at home or at a custom mill, without permit. The same section provides that vinegar for exclusive home use may be manufactured from cider and other fruit juices, without permit. Also the juice made for home use which has fermented and is not required for home vinegar may be sold to a vinegar manufacturer, who has a permit.

Section 618 provides that neither permit nor bond is required for operating a custom cider mill if cider is removed immediately after pressing; that cider taken as toll may be sold for immediate removal or may be removed to the home of the proprietor of the mill.

Sections 630 and 631 provide that pasteurized sweet cider in closed sterile containers, and preserved cider and cider vinegar may be manufactured in a commercial way and placed on the market for sale, by obtaining a permit.

CANNOT RAFFLE OFF AUTOMOBILE

Is a person allowed to raffle off a car or any other implements; also is a person allowed to sell ice cream and lemonade along a country road without a license; if not, how much are the licenses and where can you get them?—E. G., Hale, Mich.

IT is undoubtedly a technical violation of the statute prohibiting games of chance to raffle off an automobile or other property. Any game whereby a person has an opportunity of securing more than the value of his money or where there is an opportunity to get no return for the money paid falls within the definition of a game of chance and is prohibited by statute.

We are not sure from your second question whether or not you have in mind the person peddling ice cream and lemonade along the country road or whether you mean the person is selling ice-cream and lemonade from a stand permanently located along the highway. If the party you have in mind is peddling ice-cream, he would undoubtedly fall within the provisions of the Hawkers and Peddlers Act and would be required to secure a license from the state treasurer. The license fee provided for hawkers and peddlers is five dollars if person intends to travel on foot; if he travels with one horse, twenty dollars; if traveling with more than one horse, forty dollars. This is an old Act and no provision is made in it for traveling by motor vehicle. No license is required for maintaining a stand to sell lemonade and ice-cream along a public highway. A person would be prohibited, however, from maintaining one on a trunk line highway, except on private land.—Clare Retan, Deputy Attorney General.

IS BANK ACCOUNT HELD JOINTLY?

Would you please answer these questions in your paper? If a man dies, leaving no will, what share will his wife get, if she has two small children? We have a farm and a little money also, would all the personal property go to the wife? If you have money in the bank in the name of Mr. or Mrs. would the money all go to the wife at death of husband? If the wife only gets one-third of property, what is she allowed to care for the children? Or does she have to care for them until of age out of her share? I want my husband to make some kind of a will but he says if he died all of the personal property and the money what we have in the bank and one-third of the farm would go to me, and I could keep the farm until the children were of age to support them. Is this true? Our farm was willed to my husband by his father, he having to pay out his brothers' and sisters share at his mother's death, and he still has the old deed what his father had.. Is this deed good or should he have a new one made in his name? Would his brothers have any claim on farm if he didn't have a new one made? He has paid them their share. These are quite a few questions but I sure will be very thankful if you will answer them. Don't use my name when you put this in paper.—Reader, Romeo, Michigan.

IF the money is properly deposited in the bank as a joint account of the husband and wife, the surviver would be entitled to the entire amount upon the death of the other.

After certain allowances to the widow, of furniture, wearing apparel, etc., and for her support during the settlement of the estate, she would be entitled to one-third of the real personal estate and the children would be entitled to the other two-thirds.

Your husband would have good title to the land willed to him by his father, provided the will has been properly probated. You should consult your probate judge about this matter.—Asst. Legal Editor.

NO WRITTEN CONTRACT NEEDED

Has the clerk of a township any right to pay any money out of road funds on road jobs where no contract has been drawn and signed and what is the penalty for so doing?—C. T., Lake, Michigan.

IT is not necessary to enter into written contracts for road improvements, unless the amount involved is more than $500.00. See Section 4473 of the Compiled Laws of 1915.—H. Victor Spike, Assistant Attorney General.

HOME NOT EXEMPT FROM TAXATION

Is the home of a widow of a civil war veteran exempt from taxes? My first husband was a civil war veteran and after his death I married again and my second husband died. I have been told my home is exempt from taxation. Please tell me if that is so.—Mrs. L. D., Mt. Pleasant.

IN reply thereto, will say that in accordance with the former rulings of this Department, your question should be answered in the negative.—Clare Retan, Deputy Attorney General.

ALWAYS HAVE ABSTRACTS EXAMINED

Enclosed please find check for my renewal of your valuable paper, also self addressed envelope and would like to know what the laws governing abstract offices are if any. Wonder why they are not kept in court house with other records and not by individuals to take advantage of.—P. K., Hastings, Michigan.

COMPANIES are authorized to make abstracts of title, and keep them up to date. Abstracts should always be examined by a lawyer or other competent person before relying on them.—Asst. Legal Editor.

OPERATE GROCERY STORE WITHOUT LICENSE

Could you tell me what it costs to secure a grocer's license for a small store?—Mrs. R., Leslie, Mich.

THERE is no state license required to operate a grocery store unless the owner should be what is known as a transient merchant under the provisions of Section 7001 of the Compiled Laws of 1915. That Section defines a transient merchant as a person who is engaged in a temporary business at wholesale or retail in any township, city or village and who is using or occupying any building or room temporarily for the exhibition and sale of such merchandise. The fee for license under this act is stated in Section 7002.—Clare Retan, Deputy Attorney General.

"MY success depends entirely upon the tires I sell and I recommend Fisk Cords with the confidence that comes from experience."

Fisk Cords are the best tires that one of the oldest and largest manufacturers can produce. Their finer quality gives them the strength and toughness that makes possible this extra long, reliable service. It really costs less to use Fisk Cords.

Robbed of It's Last Kernel

Your grain crop is never subjected to heavy waste when threshed with a

Red River Special

"No grain in the strawpile—all in the bins" is the invariable result of Red River Special threshing, as attested by thousands of signed reports from all sections where grain is grown.

Save the grain and time wasted by other methods—it will pay your thresh bill. "Wait for the Red River Special" should be your policy—it will certainly save you money.

The Big Cylinder and the famous "Man Behind the Gun" first tackle the work and go right along under conditions that would stop other machines. 90% of the grain is separated right at the cylinder. Then the Beating Shakers secure the rest.

You cannot make a mistake in buying or hiring a Red River Special. Write for circulars of the full line—there's a Small Red River Special for small jobs.

What the Neighbors Say

FAILS TO AGREE WITH MR. LITTLE

TO the Editor:—I read with considerable interest the bean article in last week's issue of your paper, by E. A. Little. My interpretation of that article is that it comes from a dealer who sold short beans rather than a survey of a magazine publisher who has carfully analyzed conditions.

If you will permit the suggestion, I would inquire of Mr. Little, by whom a part of that article was written, from what sources he obtains his information.

The encouragement given in that article for the planting of a large acreage again this year, and if the farmer accepted those recommendations and a large acreage was planted, it would furnish just the right kind of ammunition for present short sellers to tell the buyer that there will be plenty of old beans all summer at cheap prices, or until the new crop is harvested. They could also point to the acreage planted this year as being enormous, in support of their low price contentions, with the result that short sellers would repeat this year's operations.

A continuation of present low prices will discourage the farmer holder of beans and he will sell out shortly after planting time at prices probably lower than the present, playing directly into the hands of the short sellers of storage beans.

If there is a large acreage of beans planted again this year, and the farmer stores any beans with elevators who sell short, he is going to get stung again. The stored beans were responsible for heavy losses to many farmers the last two years. Why should he take another chance?

Here is another angle to the storage situation and a plausible reason for an elevator owner to encourage and even solicit storage beans, free of storage, free of insurance, and free of shrinkage—particularly the elevator owner who was financially weak and he had borrowed his limit from the bank. By getting farmers to store beans and selling them short, he is supplying his business with additional capital, without interest, that he could not otherwise obtain.

Everything goes well provided the market stays down or goes lower, and in the meantime he figures he has it all over his competitors—he can pay more and sell cheaper. But, suppose that some elevator (always keeping in mind he is financially weak) finds that for some reason beyond his control, the market advances, suppose a dollar a hundredweight, and he had ten cars sold short, and a $4,000.00 loss looking him square in the eyes!

How would the stored bean farmer come out? Who would eventually swallow the loss?—Art Goulet, Midland, Mich.

RETROSPECTION

SAVE $16,000.00 and lose $3,200,000.00. Any school boy who has the first lesson of arithmetic mastered can prove it for you if you will give him the example—briefly the proposition is this.

Had Michigan come through on the Advertising Campaign our market would have been sustained at levels prevailing at the November basis, namely, $5.50 to $5.75, which is 1c a pound over the present level, or $400.00 car lower price than prevailed when the Advertising Campaign was kicked over. No one disputes that Michigan will ship 8000 cars beans on this crop—so 400 times 8000 gives the sum of 3,200,000.

Viewing the problem from another angle—Michigan's share at $16,000 would have been $2.00 a car, making a total of $32,000.00. Had it been decided to go no further than the minimum of $16,000.00—there would remain in the Michigan Treasury a balance of $16,000.00 to be used later—because under the St. Louis conference the assessment was to be about $4.00 car based on 400 bags to a car, or a total of $32,000.

In analyzing the remarks of the spokesman for the opponents, when the plan after having been adopted was again up for consideration, we find these significant and hopeful word "Willing to pay five cents a bag for the beans we buy to be used in advertising Michigan beans." The rest of the country said "well fellows if you want to play a lone hand, go to it."

Now at 5c a bag a fund of $160,000 would have been raised to advertise Michigan's Beans alone—and, of course, every section in the country would have benefited even though Michigan paid the entire bill alone. However, the opponents did nothing to go through with what they termed a sound policy—as against the St. Louis committee's plan, which they called unsound.

Today we all know what a lifeless, stagnant, unprofitable season the bean men endured with a steady declining market—and nothing has been done by the opponents to remedy this condition, which is clearly their responsibility.

I recommend that those interested should read from pages 35 to 51 of the report of the Michigan Bean Jobber's Association meeting at Detroit in September 1923. A careful study of this report will help you recognize quickly in the future the stalled automobiles in the road, which look perfectly good from the rear but are experiencing engine trouble. Don't wait in line in the future for them to start but pull out and around them with the progressive, constructive crowd and let the obstructors stay where they are—they will soon follow.

I believe that the opponents should be classified as all those who failed to sign their pledge card and send it in to headquarters when the subscriptions were being solicited for the Advertising Campaign Fund. Cordially yours,—Benjamin Gerks, Secretary of the St. Louis Committee.

NOT MUCH CHANCE ON THE FARM

DEAR Editor:—Being an interested reader of your paper, also having done quite a little farming I can't help but notice the interesting articles that appear in this widely circulated paper. I am not farming, at present, because there is so little in it, except for the farmer who is well-heeled.

You state you have not sold out to big or little business, and confidentially, with the continued support of the better class of business farmers in Michigan, will never have to. Now, why not include all farmers, instead of the so-called better class? It appears to me, that you could support all likewise!

As for the weak-kneed, jelly-spined, and yellow-backed farmer, leaving the farm, I quite disagree with you, as I am from a Michigan farm, and while I am not flattering myself, understand, I say that it is the class-conscious, ambitious, broad-minded thinker, with wide-awake ideas of life, and what it should hold for him, who is determined not to slave 14 to 16 hours per day for 3 to 4 hours pay.

It is true we have a sturdy lot of business men, who are sticking to their plows and harrows, not because they have millions of dollars invested, but because they, at their age, have no other trade but farming, and dare not venture from it, for fear they cannot turn the sod. There is no form of labor, skilled or otherwise, that is not shamefully underpaid. Why? Because the labor market is controlled by big-moneyed interests, the same as the farmer is, has been, and always will be, so long as we, as a nation of supposed-to-be sturdy, educated people allow the present and past administrations to rule and control the land.

In regard to your answer to Mr. Jordan's letter, I must agree with him, as there are hundreds of people in cities and towns, who are unemployed, thousands who are working part time, and they are honest, hard-working men of clean mind and character. The present prosperity of the so-called "hunkies" was attained thru living like cattle; would we, of this advanced age do thus to attain some apparent prosperity? Needless to say, red barns and tall silos are not always tangible evidence of the farmer's prosperity, as many farm homes are heavily mortgaged to erect such display of prosperity.

For less physical exertion, less time, we may receive our food, clothes, shelter, recreation, educational advantages, etc., in the cities. I should term it an insult to the farmer to call the necessities of life, luxuries. Most city workers have bath-rooms, pianos, "lizzies", etc., and apparently demand a higher living standard than the farmer. I repeat, these are more easily and quickly obtained in city than thru the drudgery of the farm.

The farmer has caused most of the present condition, by not recognizing his kinship with labor. Optimism is fine, but truth is truth, and there isn't much chance for an ambitious, broad-minded young person on the farm today. I would like to see other readers opinions on this subject, which is one of the most vital topics of the day.—Thomas T. Ames, Toledo, Ohio.

BACK TO THE FARM

TO the Editor:—I've been to the city, I've been to work in the shop. But on account of my farm work I was compelled to stop. I'll go back to the farm now and drive old Jack and Kate. I'll be compelled to get up early and work until it's late. It will seem a little queer at first but will appeal to me. The shops are alright boys but on the farm you are free. You say there is no money in farming, that farming does not pay. But I put the farm up against the shop any day.

I'll get up the wood for summer. I'll plow and harrow and sow. Then we can sit in the evening and watch our crops as they grow. The cows need milking, the pigs will have to be fed. I'll turn the horses out to pasture before I go to bed. I'll be up in the morning before the break of day. You remember the saying of our grandfathers about the making of hay.

I'll have a fine garden, I'll keep it very clean. I've always been fond of a garden with everything fresh and green. I'll keep a flock of poultry of some good standard breed, and sit out the best plants that I can get and sow the best of seed. After the corn is planted and potatoes are in the ground, I'll have time to go fishing and do a little running around. Before I begin my haying and putting the wheat in the stack. No doubt I will often think of the factory but be glad I am not back. I buy me a binder and mower to cut my wheat and hay. I'll use them with care in harvesting then store them carefully away.

I have finished my story will send it to the M. B. Farmer. They may put it in print or possibly sent it where it is warmer.—J. I.

OUR BOOK REVIEW

(Books reviewed under this heading may be secured through The Michigan Business Farmer, and will be promptly shipped by parcel post on receipt of publisher's price stated.)

The Cooperative Marketing of Farm Products.—By O. B. Jesness, B. S. A., Chief, Section of Markets, and Professor of Markets, College of Agriculture, University of Kentucky. Former Specialist in Charge of Organization Work, Bureau of Markets, U. S. Department of Agriculture. This book is the latest one of the series "Lippincott's Farm Manuals." Published by J. B. Lippincott Co. Price $2.50.

Good Health, How To Get It and How To Keep It.—By Alvah H. Doty, M. D., author of "The Preventation of Infectious Diseases," "The Mosquito," etc. This is a very good medical book dealing with a great many ailments before the doctor is necessary. Published by D. Appleton and Co.

The Story of the Bible.—By Hendrik Van Loon, author of "The Story of Mankind." The title of this book expresses very nicely what it is all about and it is very interesting for children. Most children cannot become interested in the Bible and it was with this in view that Mr. Van Loon wrote this book. There are over one hundred and fifty black and white line illustrations and sixteen full page plates in color and in etching effect, done by the author. Published by Boni and Liveright, New York City. Price $5.

Ex-actly

Sam—What am you doin' now?
Bo—I'se an exporter.
"An exporter?"
"Yep, the sleeping car company just fired me."—John Hopkins Black and Blue Jay.

RADIO DEPARTMENT

EDITED BY J. HERBERT FERRIS, R. E.

WILL NOT WORK WITH LOUD SPEAKER

I have built a single circuit regenerative set with two stages of audio frequency amplification. It works fine when useing the phones but as soon as I use the loud speaker I must put my fingers over the holes in the detecter jack and the first stage jack in order to get any sound and as soon as removed all sound stops. This set runs on WD-11 tubes. On the plate of the detecter 22½ volts and 90 on the amplifier. Would you please write me how I could get this set to work with loud speaker.—R. W., Grand Rapids, Mich.

I THINK that the trouble that you are having is due to the fact that possibly you are not using a condenser across your phone terminals which in some sets is necessary. Place a small capacity condenser of about .0005 mfd. across the primary terminals of the first amplifying transformer or if you have a variable condenser try this in place of a fixed condenser as it will enable you to use just the right capacity.

Try connecting your loud speaker and tune with it connected sometimes the difference in the capacity of the phone and speaker cords will make a great difference in a set.

If the above does not help you, let use know and we will try to help you, but be sure to send diagram of your hookup with your letter.

CRACKLING AND SHORT WAVE RECEPTION

Will you please advise me as to what is the matter with my radio set? I use a Freshmen Variable grid leak and Rico Variable .0005 mfg. condenser in aerial circuit and wonder if trouble would be in these. I use two moulded variometers. At first I used fixed condensers and then changed to variable condensers. For a while I used a variable grid leak and fixed .0005 condenser in aerial and I fixed condenser over putting some parafine on it and found it would not work only when working with a midget .005 condenser and an .00025 condenser in aerial outside of set. It also cut waves in half. I received a variable .0005 condenser Rico condenser a couple of days ago and connected it up and I could not get any higher waves than formerly. The variometers are supposed to receive waves from 200-600 but I only receive up to 400. I also have some crackling in reception occasionally and can not clear it up with grid leak.—C. B., Wayland, Mich.

FROM your letter I am not sure exactly as to what your trouble is, but suppose that the crackling and short wave reception is what you wish to clear up.

The crackling, if not atmospheric or static, is caused by either dirt between the plates of your condenser, a very poor joint, but most likely a loose connection in the variometer or other part of circuit. This last look for carefully as it is hard to find at times. There may be another cause of the noise and that is old or defective B batteries.

To increase your wave length try some of the following—place your variable condenser in mutiple with your aerial and ground instead of in series. This will increase the wave length of the aerial and first variometer and enables you to tune by varying the condenser capacity. Or place a small condenser across either one or both of the variometers, in multiple and not series, using a condenser of about the capacity of .00025. This will increase the wave length of one or both variometers. In some case you may have to use condensers of greater value. Try different ones.

SET PROPERLY GROUNDED

In the BUSINESS FARMER we saw where you said to ground a radio wire to attach it to a water pipe or well. My grandson has made a radio and he fastened the ground wire to the pipe of the pump in cellar. Now we have a flowing well in cellar, it flows into two tiles. This pipe goes into the water but not into the ground. It is not driven nito the ground nor does not touch the ground. The wire is fastened to pipe with a clip, not soldered. Will you please tell me if this is safe and all right? If not please tell how to ground it. I thank you in advance. He has his aerial wire attached to peak of barn, but not very far from the lightning rod.—Mrs. F. A. C., Mason, Mich.

YOU do not need to worry about the ground connection, the main thing is to get the wire "grounded" to the earth water layer, and a pipe that reaches into this water is much better than a piece of pipe driven into the ground that does not touch water. He has a very good ground, especially if the pipe reaches into the water for a foot or two.

The connection at the barn should be made by a piece of rope and not covered wire.

It is advisable at all times to use a lightning arrester connected to the aerial and ground wires at all times. This will save damage to the set from lightning and also prevent lightning damage to the house. We have shown in our previous issues how this should be connected.

NEW YORK CENTRAL LINES

Ship now—*and insure against a car shortage*

IDLE freight cars in the spring are no guarantee against a car shortage at crop moving time. But the use of available equipment now to make shipments in anticipation of fall and winter needs will insure against the costly delays that are the inevitable result of the periodical harvest time traffic congestion.

The railroads were never better equipped. They have made heavy outlays for new cars, engines and facilities. Operating morale is at a high level. Performance records reflect high credit on men and managements.

But railroad men are not supermen—and there is a limit to the amount of traffic that can be promptly handled in yards and terminals. Car shortages are the result of the slow movement of cars rather than the lack of cars.

Shippers who take advantage of the present ease of transportation to move fuel, raw materials and finished products that will be needed later in the year will not only protect themselves against business losses due to traffic congestion, but will help to insure the prompt movement of the crops to market.

Highway Danger!

HAROLD CRANDALL, who lives on a farm a few miles from Howell, while driving toward Howell on May 17, saw a runaway team coming toward him. He drove to the right side of the highway and stopped. One of the horses attempted to pass on the right side and the other on the left side, the wagon tongue going through the radiator and front of the car, just missing Mr. Crandall, who was riding alone. The horses broke loose, leaving the car badly wrecked.

Mr. Automobile Owner, can you take the risk on the highway today without proper insurance? The above automobile was insured with the Citizens' Mutual Automobile Insurance Company of Howell. The company is now starting its tenth season and with one annual premium, which is very reasonable, it has accumulated total assets of $500,000 and paid over 19,000 claims since organization. It has an agency force in every county seat in Lower Michigan.

No automobile owner can take the chances on the highways today without keeping well insured.

(Continued from May 24th Issue.)

"AS near as I can judge, young Gaylord is Bessie's devoted slave—until Mellicent arrives; then he has eyes only for her, which piques Bessie and her mother not a little. They were together more or less all summer, and I think Hattie thought the match was as good as made. Now, once in Hillerton, back he flies to Mellicent."

"And—Mellicent?"

Miss Maggie's eyes became gravely troubled.

"I don't understand Mellicent. I think—no, I know she cares for young Gray; but—well, I might as well admit it, she is ready any time to flirt outrageously with Hibbard Gaylord, or—or with anybody else for that matter. I saw her flirting with you at the party last Christmas!" Miss Maggie's face showed a sudden pink blush.

Mr. Smith gave a hearty laugh.

"Don't you worry, Miss Maggie. If she'll flirt with young Gaylord and others, it's all right. There's safety in numbers, you know."

"But I don't like to have her flirt at all Mr. Smith."

"It isn't the flirting. It's just her bottled-up childhood and youth bubbling over. She can't help bubbling she's been repressed so long. She'll come out all right, and she won't come out hand in hand with Hibbard Gaylord. You see if she does."

Miss Maggie shook her head and sighed.

"You don't know Jane. Jane will never give up. She'll be quiet, but she'll be firm. With one hand she'll keep Gray away, and with the other she'll push Gaylord forward. Even Mellicent herself won't know how it's done. But it'll be don,e and I tremble for the consequences."

"Hm-m!" Mr. Smith's eyes had lost their twinkle now. To himself he muttered: "I wonder if maybe—I hadn't better take a hand in this thing myself."

"You said—I didn't understand what you said," murmured Miss Maggie doubtfully.

"Nothing—nothing, Miss Maggie," replied the man. Then, with business-like alertness, he lifted his chin. "How long do you say this has been going on?"

"Why, especially since they all came home two weeks ago. Jane knew nothing of Donald Gray till that time."

"Where does Carl Pennock come in?"

Miss Maggie gave a gesture of despair.

"Oh, he comes in anywhere that he can find a chance; though, to do her justice, Mellicent doesn't give him—many chances."

"What does her father say to all this? How does he like young Gray?"

Miss Maggie gave another gesture of despair.

"He says nothing—or, rather, he laughs, and says; 'Oh, well, it will come out all right in time. Young folks will be young folks!' "

"But does he like Gray? He knows him, of course."

"Oh, yes, he likes him. He's taken him to ride in his car once, to my knowledge."

"His car! Then Mr. Frank Blaisdell has—a car?"

"Oh, yes, he's just been learning to run it. Jane says he's crazy over it, and that he's teasing her to go all the time. She says he wants to be on the move somewhere every minute. He's taken up golf, too. Did you know that?"

"Well, no, I—didn't."

"Oh, yes, he's joined the Hillerton Country Club, and he goes up to the links every morning for practice."

"I can't imagine it—Frank Blaisdell spending his mornings playing golf!"

"You forget," smiled Miss Maggie. "Frank Blaisdell is a retired business man. He has begun to take some pleasure in life now."

"Humph!" muttered Mr. Smith, as he turned to go into his own room.

Mr. Smith called on the Frank Blaisdells that evening. Mr. Blaisdell took him out to the garage (very lately a barn), and showed him the shining new car. He also showed him his lavish supply of golf clubs, and told him what a "bully time" he was having these days. He told him, too, all about his Western trip, and said there was nothing like travel to broaden a man's outlook. He said a great deal about how glad he was to get out of the old grind behind the counter—but in the next breath he asked Mr. Smith if he had ever seen a store run down as his had done since he left it. Donovan didn't know any more than a cat how such a store should be run, he said.

When they came back from the garage they found callers in the living-room. Carl Pennock and Hibbard Gaylord were chatting with Mellicent. Almost at once the doorbell rang, too, and Donald Gray came in with his violin and a roll of music. Mellicent's mother came in also. She greeted all the young men pleasantly, and asked Carl Pennock to tell Mr. Smith all about his fishing trip. Then she sat down by young Gray and asked him many questions about his music. She was so interested in violins, she said.

Gray waxed eloquent, and seemed wonderfully pleased—for about five minutes; then Mr. Smith saw that his glance was shifting more and more frequently and more and more unhappily to Mellicent and Hibbard Gaylord, talking tennis across the room.

Mr. Smith apparently lost interest in young Pennock's fish story then. At all events, another minute found him eagerly echoing Mrs. Blaisdell's interest in violins—but with this difference: violins in the abstract with her became a violin in the concrete with him; and he must hear it at once.

Mrs. Jane herself could not have told how it was done, but she knew that two minutes later young Gray and Mellicent were at the piano, he, shining-eyed and happy, drawing a tentative bow across the strings: she, no less shining-eyed and happy, giving him "a" on the piano.

Mr. Smith enjoyed the music very much—so much that he begged for another selection and yet another. Mr. Smith did not appear to realize that Messrs. Pennock and Gaylord were passing through sham interest and frank boredom to disgusted silence. Equally oblivious was he of Mrs. Jane's efforts to substitute some other form of entertainment for the violin-playing. He shook hands very heartily, however, with Pennock and Gaylord when they took their somewhat haughty departure, a little later, and, strange to say, his interest in the music seemed to go with their going; for at once then he turned to Mr. and Mrs. Frank Blaisdell with a very animated account of some Blaisdell data he had found only the week before.

He did not appear to notice that the music of the piano had become nothing but soft fitful snatches with a great deal of low talk and laughter between. He

(Continued on Page 17.)

OUR READERS' NEW BUILDINGS

Have you built any up-to-date farm buildings lately? If you have send us a picture of the new building and we will print it in this new department. It will show the M. B. F. readers what their distant neighbors are doing to change the scenery. And, incidently, you may be able to help some farmer decide the type of house, or barn, or other buildings he desires to put up. He may like the appearance of your building and will want the plan of it. Kodak pictures are all right if the details show up well. Do not send the negative, just a good print.

BARN ON FARM OF SIMON REISS, R. 1, FREELAND, MICHIGAN.

This barn has been built longer than the average that has appeared in this department; it was built in 1922. It is located on the farm of Mr. Simon Reiss, R. 1, Freeland, Michigan, is 80 feet by 32 feet and cost $2400. Send us a picture of your new house or barn for this department, won't you?

THE HIDDEN FOE OF YOUR COMMUNITY

A SERMON BY REV. DAVID F. WARNER

Text: "But I fear lest by any means, as the serpent beguiled Eve in his craftiness, your pure minds shculd be corrupted from the simplicity and the purity that is toward Christ." 2 Cor. 11:3.

SERPENT-LIKE, our crafty enemy steals upon us or lies concealed along our pathway. With his sinuous folds he presses in upon us from every side. He climbs lifty trees, swims widest rivers, and leaps from rocks over our head. And this subtle, writhing thing sometimes crawls into the hearts of meek-garbed Christians or hides itself on the lips of some feigned friend to fang us. How always present and vital is temptation! And how only can the habit of obedience to the simplicity and purity that is toward Christ save us!

But, for the purposes of this sermon, impurity is this hidden foe. So much for the growing purity of the nation's soul! But since the days of the first recorded sin, an under-current of impurity has been flowing in human life. Often, it has broken out into violent eruptions. Yes, I know, you are concerned little about it until some cesspool of vice breaks out in your community, or the snaky thing gets some unfortunate victim of your family. The doctors use to tell us it was the impure blood stream that caused the eruptions on the skin.

I wonder if spiritual society has a greater foe today? But it has gone on so long vitiating the bodies, minds, and morals of our young people; demoralizing society; and menacing the church; that some regard it as an impregnable foe, as baffling resistance, as being here to stay, as a necessary evil.

"Vice is a monster of so frightful a mien,
That to be hated needs but to be seen.
But seen too oft, familiar with her face,
We first endure, then pity, then embrace."

But, on a "So-help-me-God" basis, there is no evil that is necessary. There is a remedy for this condition. And not to consider this remedy, with its unique power, is to cry out, "Woe is me. Who shall deliver me?"

But, first, what are some of the contributing causes to this subterraneaon current of filth and indecency? Subjectively, of course, it is due to a heart lusting. "Everyone that looketh to lust," says Jesus, "committeth adultery already in his heart." How many a boy who helped to hold the Germans at the Marne, afterward invited the tempter into his heart. He could stand up against the Kaiser's steel, but he falls at the feet of the red-dragon of lust. But the objective causes? Well, the Methodists, now in general conference at Springfield, Massachusetts, give out the word that immodest dressing in women is doing much to increase the divorce and social evil. But that is no indictment. The church has ever taught that the indecently clad woman is blighting to the tender flower of modesty and a contributing factor to the loss of purity of character in the lives of many men. A man is not a man until he is personally pure, but he has a tremendous fight in some quarters because of gross improprieties in the dress of women. Dress, primevally speaking, is the consequence of sin and the antecedent of respectability. Adam caught up a few fig leaves to cover his nakedness. Afterward God provided him a more adequate covering in the skins of animals. The sin-atoning element in dress is its covering-up or concealing feature. In this way it helps to obliterate sex distinctions in spiritual society. You will remember the Pauline teaching, that in Christ there is no sex, no male or female. Therefore any dress in man or woman which suggests sensuality must be avoided.

But all causes have been accentuated since the war. War tendencies for men to lose the sense of moral responsibility for chastity of character. We astonished the world by our strict army regulations against venereal disease. But, notwithstanding, reports tell us that the results of illicit relations with women were, and are yet, terrible. These results were carried into every American community by the home-coming of the soldier boy. So, how widely extended and greatly increased is our sex problem!

But, again, walk into the popular book-store and ask the names of the best sellers. In pre-war days such books were read in stolen corners. Now, they are read openly, and are considered quite proper to talk about in social groups. And this vile fiction is doing its blighting work. But the stage and picture show are not one bit behind in their salacious tendencies. And then, the producers of this vicious fiction and art say they must pander to vice for profit's sake. What a reflection on sexual looseness in modern times! Well, when the social purity lecturer said that one girl falls every eight minutes and one boy every two minutes, and that ninety per cent of our children were human culls, physically, mentally, or morally; I felt he was over-reaching. But when I walked out and saw that group of cigarette-smoking, tobacco-soaked, booze-poisoned, and lewd-faced men standing in front of pool-rooms and on the street corners looking for leg-shows; and then, when I stepped into the theater and matinee and saw the dads of our Sunday school boys and girls feasting vulgar eyes on stage beauties, I felt, after all, if many such men were fathering our children, the lecturer might be right.

But what are we to do about it? Naturally and sensibly, apply the remedy for the sake of future generations. And that lies in throwing around our young life proper educational and environmental forces. The masses are ignorant. We must let in the light. We are fundamentally wrong in applying restrainsts unless we accompany with right education. We shall begin in the home. "The hand that rocks the cradle rules the world." (But, methinks it will be rather poor ruling unless our girls learn more of mothercraft). It is the home responsibility to teach children simply and constructively about sex-life. Did you say you couldn't because of not knowing how? Well, there is helpful literature for you, but, anyway, use common sense and go at it. Better make a few mistakes than to keep criminally silent. The growing mind of the child leads naturally to such questions as "Where did I come from?" And, "How did I get here?" And one day in a little group by the road-side one says, "I'll tell you if you don't tell dad or mother." You see, because parents keep silent, the children think the secret is evil. Then, in the language of street or play-ground incorrect information is given. Be frank, parents. Life closes up in the teens.

Some of our public schools are undertaking sex instructions in courses in physiolgy. This scientific instruction is helpful, or should be. But the sunday school with its millions of young people and a teaching force larger than the public schools, and with a message that always uplifts and purifies, can render distinctive service by giving needed religious sanction to this important work. A purity department in the sunday school could be of measureless force. It must not be a venereal clinic where young minds are dragged thru a moral sewer, but a place of constructive purity teaching where light is let in and sex ideals raised. Along with this let us have a community play-ground near the community church, in its atmosphere, and under its sanction. (We are now building one at the writer's church.) In directed play, we learn of the impulses and aspirations of our children, and these are the raw materials out of which we are to build the finished produce in Christian character. It seems that body and soul develop together. An unclean body means a polluted soul. We must cleanse the body thru the refining processes of the spirit.

This is to say, Christianity alone is the remedial power. Purity is one of her many graces. "Blessed

Kodak on the Farm

With spring plowing done and the team in pasture for a well-earned, Sunday's rest, there's a chance for a Kodak picture.

Story-telling pictures like this are plenty on the farm—you'll always be glad you have them. And for practical use in advertising and selling your cattle, horses, hogs, pictures are of obvious worth.

It's all easy, and fun, the Kodak way.

Get a copy of the new Kodak catalog at your dealer's.

Autographic Kodaks $6.50 up

In every case when writing say: "I saw your advertisement in The Michigan Business Farmer!" It will guarantee honest dealing.

"The Farm Paper of Service"

HISTORY REPEATS ITSELF

> "For four years they had lamented over bad seasons. But their lamentations then were nothing to what they were now with a fine harvest. At the same time as a great portion of the abundant crop of the past year was unsold the foreign importation was in full flow; if it should continue, they saw no limit to the fall till the regulative price was reached. From every correspondent of the Farmers' Magazine came a passionate appeal to the legislature to avert the coming ruin, generally coupled with the assertion that theirs was the cause of the community, while nobody wanted low prices but 'a few commercial men' whose interests were opposed to those of all the others.*********"
>
> "The pressure on agriculture was not temporary, but 'arose from the operation of positive laws'—the system of taxation which 'operated almost exclusively upon the husbandman'; there were several taxes bearing excessively on the agriculturalist, such as the Malt Tax, which amounted almost to a prohibition—'a tax which operated most cruelly on the industrious peasant who could not obtain a drop of that invigorating beverage necessary to the discharge of his laborious functions.' In agriculture 'there was such a competition that the smaller farmers could not wait for a rise of price but must bring their goods to market immediately.' "
>
> "The distressed state of agriculture was formally called to the attention of the House on March 7th., by Western. He cited the number of writs and executions and farms untenanted. He said the primary cause—and the obvious cause—was the "redundant supply in the markets, a supply considerably beyond the demand, and that created chiefly by the produce of our own agriculture." He recommends two remedies, an increased price of grain and diminished taxation.*****"

WHAT you have just read above is not prophetic of an article which may be written some years from now, but is, in fact, statements made in the House of Commons in England following the close of the Napoleonic wars in 1814,—just one hundred and ten years ago!

There is an old adage which has been handed down through the generations which says "History repeats itself," and the older we grow, the more firmly we see the foundations on which these old axioms are laid.

It is rather encouraging, therefore, or should be, to find that the writer's account of this experience of five generations ago closed with these very succulent remarks:

> "So ended for this year the discussions on agricultural distress, and indeed the debates lost their interest before they were over. For now wheat began to rise, and by December the price was exactly double what it had been in January. Undeterred by their previous experience, one reads that by April 'the rapid rise in grain has already occasioned many applications in the home counties to take farm abandoner by occupiers.' "

After you have read the above, unless you have fully digested its meaning to you, read it again; it is a fact borne out by history that may make you a more contented man and which will at least endorse your good judgement in holding on and staying on your farm.

We sometimes wonder if, after all, man is the moulder of his own destiny. Time, tide, gravitation, the ceaseless procession of the seasons, the sweep of the scythe of time and the repetition of history make us question it!

THE BEAN GROWERS' OPPORTUNITY

ON page four of this issue Mr. Goulet, a man who knows beans and who ought to know beans if any man in Michigan does, points out that there is still a good gamble for the bean grower in the present market situation.

It is the opinion of the writer that most of the beans still being held in Michigan are stored in elevators, but owned by the grower's and he also points out, that there are many bean buyers in Michigan who have sold short and that in their desire to cover they will have to purchase a great many thousands of bushels of beans from present growers. If the bean grower will "sit tight" his chances of making an extra profit on his present bean crop according to Mr. Goulet seems fairly good.

In the first place, let us point out that in printing opinions of this kind THE BUSINESS FARMER does not accept any responsibility, because when it comes to guessing on a future market if our market editor were infallible we would take his opinion on the future of the wheat, corn, or bean market and by knowing in advance what was going to happen it would not be hard to soon rival John D. or Henry Ford in wealth.

It is a fact, however that a man in the position of Mr. Goulet ought to know more about the bean market than the average bean grower who is not in touch daily with the market in all parts of the country and his advice reprinted in columns of a publication which reaches growers ought to be at least food for thought.

One thing is certain and that is, that everyone connected with the bean industry in Michigan knows that things are not right; beans are not being sold at the price at which they should be sold, although we must admit they show a profit to the grower this past year which is not measured up to by some of the old-line staple crops that come in more direct competition with the products of the rest of the world.

There is a coupon on page four that we would thank every bean grower who is a reader to return to this office. The information he sends us will be guarded and used only to the advantage of the growers themselves. If we can get the price of beans yet to be sold from the 1923 crop up one, two or three cents per pound we would make a good many million dollars for the bean growers in this state and nothing, we can assure you, would give us more pleasure.

It should not take very long to clip out this coupon, put it in an envelope, spend two cents and get it into your market editor's hands. Of course, you don't have to do it, but if you don't help us in these business moves you only cheat yourselves—not us! Don't count on the other fellow! Don't say "Oh, they'll get enough information anyway," but do your share by sitting down right now and sending in that coupon if you have a bushel or more of beans stored anywhere. At the same time we would appreciate the acreage information whether or not you have any beans stored.

TAXES AND REFORESTATION

IN the present week's installment on taxation in Michigan by Mr. Stanley M. Powell, an interesting phase in its regard to agriculture is brought out in the discussion of reforestation.

It is obvious that the present high rate of the general property tax leaves no possibility for the land owner to reforest his property at a profit to himself.

A measure was vetoed by the governor last season, because he did not believe it adequate, which would have made land under reforestation free from general taxation, a movement which had the support of every thinking man in Michigan, including, fortunately, both sides of the legislature.

Michigan is not unlike other states in that we have a great many thousands of acres which could best be devoted to the production of lumber. When it is considered, as Mr. Powell points out, that over fifteen million dollars was spent in freight alone, for lumber coming into Michigan, principally from the Northwestern states; it would seem perfectly clear that this is a subject which deserves attention and must be given it.

Some credit ought to be given to Senator James Couzens for the interest he has taken in this subject, being a member of the national committee and spending considerable of his time and energy on this important subject, not only in regard to Michigan but to the national situation at large.

Over seven hundred thousand acres, mostly of cut-over land, have already reverted to the state because of their owners' refusal to pay taxes, the land not being worth what it is taxed.

How can a state expect to exist when such a condition is continued?

Michigan once held a high place in the production of lumber in this country. We can grow the finest quality and on land which is not valuable at this time for any other purpose. Why then should we not be looking fifty or one hundred years ahead and providing for future generations a supply of lumber which will probably come at a time when the West faces a cut-over problem such as we in Michigan face today? The lumber supply out there cannot last always and we might as well be looking into the future, and if the state can help to this end it certainly should be willing to do it.

This is a subject which local farm organizations and granges should be taking up for active discussion during the present season. We will have more to say of it from time to time in these columns.

BABY CHICKS

OWING to the lateness of the present season there is still ample time to order baby chicks and be assured of a strong, healthy brood, which will mature in time for a profitable market.

This has been an exceptional year in Michigan and we are from two weeks to a month behind in climatic conditions in practically all sections of the state. The month of June, therefore, becomes an ideal time in which to purchase, at the low prices which are offered by the many hatcheries, a quantity of these profit makers.

The importance of poultry and eggs as profit producers on the farms in this state have never been more emphasized than during the past year, when it is literally a fact that a great many families have found their chief cash return from the products of their poultry yards that were once considered "pin money" for the women and children of the house.

Poultry supplies have sold on the city markets in Michigan at a fair price and there is every indication to believe that this market will be strengthened during the present season.

Next to the dairy cow, the hen has become the most prolific gold mine on the farms of Michigan!

It is possible to buy from the hatcheries strong, healthy chicks which are delivered in good condition by parcel post within twenty-four hours to the door of practically any farm home in Michigan. If you have never bought baby chicks by mail try it once and in our opinion you will be through with the "old-mother-hen" method for the rest of your days. The baby chick method has become so popular with so many thousands of farmers, particularly in Michigan, that no state can rival us in number of successful commercial hatcheries, which are shipping to all parts of the United States.

THOUGHTS FER THE DISCURAGED FARMER

(Written in 1889)

By James Whitcomb Riley

THE summer winds is sniffin' round the bloomin' locus' trees;
And the clover in the pastur' is a big day fer the bees,
And they been a-swiggin honey, above board and on the sly,
Tel they stutter in theyr buzzin' and stagger as they fly.
The flicker on the fence rail 'pears to jest spit on his wings
And roll up his feathers, by the sassy way he sings;
And the hoss-fly is a-whettin'-up his forelegs fer biz,
And the off-mare is a switchin' all of her tail they is.

You can hear the blackburds jawin' as they foller up the plow—
Oh, theyr bound to git theyr brekfast, and theyr not a carin' how;
So they quarrel in the furries, and they quarrel on the wing—
But theyr peaceabler in pot-pies than any other thing;
And its when I git my shotgun drawed up in siddy rest,
She's as full of tribbelation as a yeller-jacket's nest;
And a few shots before dinner, when the sun's a-shinnin' right,
Seems to kindo-sorto sharpen up a feller's appetite!

They's been a heap o'rain, but the sun's out today
And the clouds of the wet spell is all cleared away,
And the woods is all the greener, and the grass is greener still;
It may rain again to-morry, but I don't think it will.
Some says the crops is ruined, and the corn's drowned out,
And propha-sy the wheat will be a failure, without doubt;
But the kind Providence that has never failed us yet,
Will be on hands onc't more at the 'leventh hour, I bet!

Does the medder-lark complane, as he swims high and dry
Through the waves of the wind and the blue of the sky?
Does the quail set up and whissel in a disappinted way,
Er hang his head in silence, and sorrow all the day?
Is the chipmuck's health a-failin'? Does he walk, er does he run?
Don't the buzzards ooze around up thare jest like they've allus done?
Is they anything the matter with the rooster's lungs er voice?
Ort a mortal be complainin' when dumb animals rejoice?

Then let us, one and all, be contented with our lot;
The June is here this morning, and the sun is shining hot.
Oh! let us fill our harts up with the glory of the day,
And banish ev'ry doubt and care and sorrow fur away!
Whatever be our station, with Providence fer guide,
Sich fine circumstances ort to make us satisfied;
Fer the world is full of roses, and the roses full of dew,
And the dew is full of heavenly love that drips fer me and you.

PUBLISHER'S DESK

SIGN YOUR NAME

I WAS just talking with the circulation manager and he told me that hardly a day goes by that his department does not receive a letter from a subscriber containing money to renew his subscription and he FAILS TO GIVE HIS COMPLETE NAME AND ADDRESS. There is no way of telling who the subscriber is so we must wait until he writes. In the meantime the man who sent his money to us begins to think that we have his money and do not intend to send him his paper. Maybe after a few weeks he writes us a very threatening letter, or maybe he decides to "let 'em keep the money, if they can be bought that cheap. I'll have nothing to do with them in the future and try to keep them from roping any of my friends." We want you to get your paper and will do anything within reason we can to get it to you but we must have YOUR NAME AND ADDRESS. And be sure to sign it plainly.

NEW BAIT

I am asking you if you could inform me as to what kind of company, what its business is, by the name of "Empire Service Company", 106 East 18th St., New York, N. Y. I have two letters from them inquiring for persons saying they have a lost package to deliver to them. I don't know how they got my name and don't know the persons. Could you please tell me anything about them? It seems so funny that they would have a lost package for any one in Jackson who was never in New York. I did not know them and I wanted to know their business. Thank you.

WE wrote the above company two months ago, but nary an answer! That leads us to believe, that we have discovered a new bunch of sucker-bait which is being dangled here in Michigan. Sounds a little like the "lost-heirs" or "you-have -won -first -prize-in-our-contest" schemes, set to new music!

MANICOPY TYPEWRITER COMPANY

I am writing to ask if you can tell me whether or not the American Manicopy Typewriter Company of Chicago is a reliable firm. They are sending out literature asking people to buy shares in it, offering 8% dividends immediatly upon the issuance of stock. All checks are to be made payable to S. W. Cochran & Co., 29 South La Salle Street, Chicago, Illinois.

I am a reader of THE BUSINESS FARMER and having read your advice to others, I thought perhaps you could advise me regarding this firm.

THIS is not the first inquiry we have had in regard to the American Manicopy Typewriter Company stock, which is being sponsored by the brokers named in this readers inquiry. Evidently they have showered the rural mail boxes of the state with their stock-selling literature.

One reader wrote that if he could only sell his farm he was going to put his all into this company and if they would pay 8% per annum on his investment as they promised, he could live very nicely in the nearby village.

Frankly, we know little about this company, its brokers or its stock. We are under the impression however, that it is for the marketing of a new invention which it is hoped will become as common and profitable as the cash register or the adding machine. Maybe it will and if they have sold stock to farmers in Michigan, we certainly hope it will!

The Collection Box

The purpose of this department is to protect our subscribers from fraudulent dealings or unfair treatment by persons or concerns at a distance.

In every case we will do our best to make a satisfactory settlement or force action, for which no charge for our services will ever be made, providing:

1.—The claim is made by a paid-up subscriber to The Business Farmer.
2.—The claim is not more than 6 mos. old.
3.—The claim is not local or between people within easy distance of one another. These should be settled at first hand and not attempted by mail.

Address all letters, giving full particulars, amounts, dates, etc., enclosing also your address label from the front cover of any issue to prove that you are a paid-up subscriber.

THE BUSINESS FARMER, Collection Box
Mt. Clemens, Mich.

Report Ending June 2, 1924

Total number claims filed	2489
Amount involved	$24,1[illegible]2
Total number claims settled	1987
Amount secured	$22,689.18

But the trouble with any new invention of this kind is that it may not prove a commercialy profitable success. For every Burroughs Adding Machine Company or National Cash Register Company success there are a thousand dismal failures, many of which started with even more promise.

Why should the farmers of Michigan be called upon to finance a new office improvement? Why should they go up and down the highways and byways of Michigan looking for the small investor with from a hundred to a few thousands, when in the city of Chicago alone there are two or three hundred thousand men and women who work in offices, have small savings to invest and who are familiar with the demand for such a machine as this company claims it has?

We do not know whether or not the American Manicopy Company stock has been passed on the Michigan securities commission. We will find out immediately, but our readers must remember what Mr. Duff pointed out in his letter to this department only a few weeks ago, THAT A COMPANY MAY SELL STOCK BY MAIL IN MICHIGAN WITHOUT HAVING PASSED THE SCRUTINY OF THE SECURITIES COMMISSION!

There are many safe investments offered the farmers of Michigan who have spare funds to invest. Investments that are recognized by banks, trust companies and insurance societies as suitable investments where the maxium of security is present. There is no excuse for any farmer investing his funds in a new and unproven company, unless he is investing only a sum which he can well afford to gamble on. In that case, we suggest he go somewhere, where the lights are bright and the table green, where the wheel spins, the little ball rolls and he makes or loses on whether it lands in the black or red. There is at least excitement in that and you have practically a fifty per cent chance of winning, which is more than many an investor has had in a new company, a new gold mine or an old oil well!

D. F. BUSH, MINNEAPOLIS

"WANTED to hear from an owner of a farm for sale. No agents," same old story! You'll find this and similar advertisments in the columns of country papers, city dailies, and even some farm papers that ought to know better.

We have told you about the scheme so often, but of course every week sees many new readers added to THE BUSINESS FARMER family, so here goes.

These advertisers are after a listing fee. They ask you to pay them from $2 to $20 to list your farm, promising you to send you buyers, advertise your farm in a new catalog they are printing, etc., etc. Some even get so excited about getting ahold of your money that they use the telegraph wires to tell you that they already have a buyer to send you and are only awaiting your listing fee.

Steer clear of all of them!

We have a standing offer that we will run an advertisement free at the head of this column to any so-called real-estate agent who can prove that he has satisfied one out of every hundred persons from whom he has taken a listing fee in Michigan. So far we have never had to run that ad at the head of this column!

Dear Sirs:— Relative to the information on the enclosed card I am pleased to state that this day I have received a check from the ——— for the original amount paid for the chicks. Feeling myself very greatly indebted to you for the service you rendered me in this matter, I remain, Respectfully yours. E. L. B., Howell, Mich.

Are You Using Our Service and Protective Bureau?

Have you any perplexing farm or business problems? Then call on our Service Bureau.

Thousand of THE BUSINESS FARMER readers have learned that THE BUSINESS FARMER is more than a high class farm paper. It is a friend as well, one who serves—and never fails in time of need.

As a subscriber to THE BUSINESS FARMER, you are entitled to all the rights and benefits of our Service Bureau. We want you to use this service—call on us freely.

JUST A FEW THINGS IT WILL DO FOR YOU

Will furnish you protection from swindlers, fake peddlers, and promoters.

Tell you about any investment or stock selling scheme. Invest no money in any scheme before you nave asked THE BUSINESS FARMER Protective Service about it.

Aid you in collecting any claim you may have against any insurance, railroad, express or other company.

Aid in the collection of obligations.

Help you in the adjustment of claims.

Give you prompt information and advice about any crop, soil, livestock, dairy, or poultry problem.

Furnish expert market information whenever you have something to sell.

Help you with any building construction or farm machinery problems you may have.

Tell you the law and custom on all questions of rents.

Answer any question with regard to home or community life, schools, canning, cooking, preserving, or housework in general.

Give you correct information on any farm subject and will help you in trying to settle and farm, health, or legal trouble of any sort.

Protective Sign and Certificate

We want every reader of The Business Farmer to have one of our beautiful certificates of membership and a Protective Service Sign. The certificate is suitable for framing and will be mailed free of charge.

The Protective Service Sign acts as a warning to swindlers and fakers and informs all that you are a member of an organization of power and influence that will stand with you in support of your rights. We are asking a small charge of 25 cents to cover cost of sign and mailing.

THE BUSINESS FARMER,
Mt. Clemens, Michigan.
Gentlemen:—

Check for either or both the certificate and sign.

☐ Please mail me a membership certificate free of charge.
☐ I would also like one of the Protective Service signs and am enclosing 25 cents to cover cost of sign and mailing.

BEFORE AND AFTER MARRIAGE

By Anne Campbell

WE used to talk of so many things,
Roses and summer and golden rings,
Music and dancing and books and plays,
Venice and moonlight and future days.

Now our chief subjects are food and bills,
Genevieve's measles, and Johnny's ills,
New shoes for Betty, a hat for Jane,
Taxes, insurance, the mail, and rain!

We used to say that Romance would stay,
We'd walk together a magic way!
Though we don't talk as in days of yore,
Strange, is it not, that I love you more!

(Copyright 1924, by Detroit News.)

HOW LONG DOES DISHWASHING TAKE?

HAVE you ever timed yourself washing dishes, to see whether there was any way of shortening the work? Or noticed what motions you make with your hands during this and other daily jobs? Or how many steps you take in connection with a meal, particularly when you are clearing the table and washing the china and other utensils used during the meal and its preparation? Every motion requires energy and unnecessary motions use up unnecessary energy, leaving one fatigued with no real gain. When acutal minutes are saved, they can be put to more interesting uses than the routine of daily dishwashing.

Try the way you are now doing the work suggests the United States Department of Agriculture, observing as you go whether there are any motions made which could be eliminated, or if any part of the process could be shortened. Those who possess dishwashing machines expect to leave the dishes to dry themselves after being washed and rinsed with very hot water. This principle can be applied perfectly well to dishes draining in a basket if a kettleful of clean hot rinsing water is poured over them. The process of wiping can then be entirely eliminated, except possibly for the glass and silver. Fewer towels are thus used, so that the amount of washing of tea-towels is reduced.

Right-handed persons ordinarily hold what they are washing in the left hand, and apply the mop or dish cloth with the right, so that when the dish is set on a drain board at the left they do not have to cross their hands. In spite of this simple and obvious way of doing the work, it is common to find in houses offered for sale or for rent a right-hand drain board, installed probably by some masculine architect who did not think out the process of doing the work or consult any woman about it. Having two drain boards, or a drain board at the left and a level shelf at the right hand side of the sink for stacking the soiled dishes is even more convenient than having only one drain board.

When the housekeeper has to heat all the water she needs, steps may be saved by placing the sink fairly near the stove, and by bringing all the dishes from the dining-table into the kitchen on a tea-cart. Utensils that hang up should be put on hooks on the wall right over the sink; and if all the pots and pans were washed before the meal is served, the time for the entire job of dishwashing is greatly shortened.

When the clean dishes are set in a drain basket and scalded the task will be done, as nearly all of them will probably be wanted on the table for the next meal. If the china is to be put away, a set of shelves within reach of the sink will save many steps.

MAKE THE MEAL INTERESTING

BECAUSE of the varied food needs there is a demand for contrasts between foods of the different courses or dishes of a meal. It is not wise to serve the same food twice in a meal, even though it is prepared in different ways, e. g. apple salad and apple bettie, or bean soup and baked beans. This leads to monotony rather than variation or contrasts. Neither is it desirable to serve the same preparation, e. g. scrambled eggs for breakfast and luncheon, or hash for breakfast and luncheon on the same day.

In case of breakfast for example, if fresh fruits cannot always be served it is better to alternate the fresh fruit with the canned or stewed rather than to have fresh fruit several days in succession followed by canned or stewed for a number of days. The same can be said in regard to cereals when both cooked and uncooked are used.

There should also be variety in the flavor of the food selected as well as in the materials used. For example, potato, rice, and maraconi, are all high in starch and also resemble each other too closely in consistency and texture as well as being all bland in flavor. Bland dishes should be supplemented with more highly flavored dishes to relieve monotony.

When two or more vegetables are used in the same meals they should be different. Sweet potatoes and white potatoes do not belong in the same meal though they are often served together. It would be much better to serve contrasting vegetables such as spinach or cabbage.

In addition to the contrasts the foods should have flavors that go well together. This is where the provider's "imagination" comes into play for the best results.

Contrast and harmony in color in general appearance makes the meals more interesting.

A combination of moist and dry foods, e. g. creamed potatoes is not as good a combination with a meat stew as it is with a broiled steak.

Contrast in temperature of dishes also adds interest.

The Farm Home
A Department for the Women

Edited by MRS. ANNIE TAYLOR

DEAR FOLKS:—I want to thank the many good readers of our department for responding so promptly to the various requests for help we have had recently. So far there has not been a request published in this department that has not been answered, and as a rule there has been several answers to each question. And each and every answer has been appreciated I can assure you. I want you to all feel free to use this department whenever it can be of value to you. Send in your questions and I will promise you an answer. I feel confident in making this statement because somewhere among my readers some one has the answer to your question and if your question appears in this department the answer will be sent in. The other day I received by parcel post a lovely bouquet from Mrs. Henry Cochran, of Alpena county, and I take this opportunity to thank her. She must know that flowers are one of my weak spots.

Your Friend,
Mrs Annie Taylor

Address letters: Mrs. Annie Taylor, care The Business Farmer, Mt. Clemens, Michigan.

CULTIVATING HEALTH ON THE FARM

A SHORT time ago two sons of a leading farmer were taken sick with infantile paralysis. One died within a few days; the other still lives, but is completely paralyzed below the waist. A survey of that farm showed that the barnyard contained all kinds of farm animals, including some hogs that spent most of their time in the shade by the house. Flies were found in great numbers. Judging from the best knowledge we have, flies may have carried the disease. Conditions on many farms, even if not dangerous to health, are unsightly, and should not be tolerated by self-respecting families.

The laws of health are simple, but they must be well learned. A little knowledge is often dangerous.

In some respects the work of public health has lagged behind in the rural communities. In large measure this is due to the apparent difficulty in securing sufficient results to make it pay; in part it is due to more or less blind faith in the efficacy of pure fresh air. In Hygia Dr. C. M. Siever gives some really practical suggestions for developing rural health districts, and good reasons why public health work is so important. He says: "The human body is in one way similar to any piece of machinery. It must be given proper fuel in proper amounts and protected from all harmful outside influences. It is well known that a machine will not last long if it is not properly looked after. For this reason the owners of fine machinery find it cheaper to employ the most skilled engineers at high prices than to trust it to unskilled hands at cheaper rates. Just so the human body needs looking after, and it should be done by men who are qualified and who are watching and studying the movements of the machinery all the time.

"This does not mean that all the work need be done by the health officer, but it does mean that the health officer must be on full time, that he may direct the work and see that it is all done. It means further that in the near future all physicians will be devoting more time to the prevention of disease instead of to the attempt to cure it."

Personal Column

Getting Rid of Bed Bugs.—Many of our readers sympathize with Mrs. C. R. of Adrian if the number of answers I have received to her question published in this department is an indicator. Every answer is greatly appreciated and I am publishing several of them below for the benefit of Mrs. C. R. and others who might be interested:

As I am interested in your paper and a regular sister helper I write for the benefit of Mrs. C. R. of Adrian, Mich., how to get rid of bed bugs. Take about 1 quart of kerosene oil and add 1 tablespoon of carbolic acid and mix well. Put in an oil can with a long spout and pour in all cracks or places where the bugs can get. This will kill all bugs or eggs. Take a brush and brush some of the mixture around the baseboard and on the floor out to about six inches from the base board as they inhabit the floor as well as the beds. This leaves no stain and does no harm.—Mrs. L.

As I was looking over The Business Farmer I noticed the request for a bed bug recipe. I will send you the recipe of what I used to get rid of the ones we had in our house. It was an old house that wasn't plastered and we tried about everything without success. My nephew brought me a quart of Peterman's Bed Bug Discovery from Saginaw. It can be purchased from either Montgomery Ward and Co., or Sears, Roebuck and Co. Apply it with a small oil can with a long spout on it. It not only kills the bugs but the nits. If you have the catalogues of the two mail order houses you will find it advertised on page 263 in the Montgomery Ward and Co. catalog and on page 482 in Sears, Roebuck and Co. catalog. It works wonders. It will not leave a spot on the wall paper very long.—Mrs. G. F., Coleman, Mich.

Oil of Cedar is a sure exterminator of bed bugs and you will not have to use it very often. They will never appear again.—Mrs. E. G., Montrose, Mich.

I see one of your readers would like to know how to get rid of bed bugs. I find that elm dissolved in water and put on with a feather or little brush will soon kill them.—Mrs. J. W., Weidman, Mich.

Just buy the insect powder that is put up to kill flies and squirt it on the beds and in the crevices. It is a sure remedy. —Mrs. T. T., Merritt, Mich.

If Mrs. C. R. will apply denatured alcohol with a machine oil can on bed, springs, mattress and on the floor where beds stands, as well as any place where she thinks the bug might be, I am sure they will disappear at once.—Mrs. B. M., Charlotte.

I got the following from a furniture dealer; and used with success: 14 ozs. formaldehyde and 2 ozs. permagnate potash. Place in a gallon jar and set on bricks and leave in the house or room for 6 or 7 hours, then open doors and windows.—Mrs. F., Clayton, Mich.

Wants Part For Phonograph.—I have an Edison phonograph that plays 2 minute records and I would like to know if you could help me find a 4 minute reproducer.—Rudolph Hansen, R. 1, McBride, Mich.

Salad Dressing.—I noticed a request from Mrs. J. E. S., Manistee, for a salad dressing that would keep. Am sending recipe for one that I never knew to spoil. 2 eggs well beaten, 1 cup vinegar, 1 teaspoon mustard (powder), one-half teaspoon salt. Set in hot water and cook. Cool before using. Thin with cream or milk as desired.—A Friend of Business Farmer, Elsie, Mich.

Another Salad Dressing.—3 eggs, 1 cup granulated sugar, 1 cup vinegar, small piece butter, scant tablespoon prepared mustard, 1 tablespoon of flour. Stir sugar flour and mustard until smooth, add vinegar, butter and beaten eggs and cook in double boiler stirring until thick and smooth. Thin just what you use at one time with rich milk. Will keep a long time in a cool place.—Mrs. O. A. K., Gobles, Mich.

Gloves and Mittens.—I see Mrs. Horton's request for canvas, etc. If she is just making them for her own men's use any woolen or overall goods would do. I always save the wrists from old canvas gloves and turn inside out and sew to upper part. I rip an old glove for pattern and if I have no wrists on hand I use upper ribbed part of men's hose doubled and sew on. I also make all my men's mittens of new or partly worn wool goods, and for real cold weather line them with odds and ends of warm goods. This saves many a dollar during the season for my men husk corn. Hoping this will help her and others.—Mrs. G. M., Vicksburg, Mich.

To Take Hair Off Upper Lip.—Please let me know if there is anything that will take hair off on upper lip? Can any of the readers give me this information?—Miss F.

Page Getting Better.—Our page is getting better and better. I can hardly wait until my next number comes.—Mrs. M., Vicksburg, Mich.

—if you are well bred!

The Fork: It's Proper Employ.—The fork is, first of all, the vegetable table implement. Accepted custom practically everywhere regards the following fork facts as socially warranted: The best American usage shows the increasing tendency to follow the English custom and take the fork in the left hand to raise food to the mouth (on the outer edge of the prongs) the knife assisting, avoiding the necessity of shifting the fork to the right to lift food which has been cut.

Food should be raised to the mouth on the upper, not the lower side of the prongs.

The fork prongs when eating should give no more audible indication of their presence than the spoon of the soup bowl.

Meat is always impaled on the down-turned prongs of the fork to be carried to the mouth; the implement must not be employed spade fashion.

To raise vegetables to the mouth, the fork is used with prongs up-turned.

The fork is never used to mash food on a plate.

When not used the fork (or knife) always lies on the plate, never with its prongs on the plate-edge and its handle on the cloth.

When butter is taken for baked potatoes, it should be "scooped" by the tip of the fork: the knife is not used for this purpose.

In case of soft meat dishes, i.e., where meat appears in the shape of meat-loaf, patties, croquettes, hash, etc., the fork is used both as a fork and as a knife. It cuts or parts the crust or form with its edge, knife-wise, and is then turned in the hand and used as a fork proper.

When eating lettuce the fork is used to fold over the leaves and carry them to the mouth. When a leaf is too large to fold, the blunt edge of the fork may be used to cut it. Lettuce is never cut with a knife.

Fork and knife, when the eater has finished using them, should be put close together on the plate. The handles should be turned toward the side of plate; the fork should be turned up and the knife-blade in, toward fork. The handles of knife and fork should extend an inch or so beyond the rim of the plate. It is in this position that they also appear when the plate is sent back for a second helping at a meal.

Menu for June 7th

Boiled Salmon, Egg Sauce
Creamed Potatoes New Peas
Dressed Lettuce
Cheese Crackers
*Chocolate Bread Pudding
Coffee

***Chocolate Bread Pudding.**—¾ cup bread crumbs, 2 cups scalded milk, 2 squares melted chocolate, 2 eggs, 1 tablespoon fat, salt to taste, ½ teaspoon vanilla, ¼ cup cold milk, ¾ cup sugar and ½ cup Sultana raisins. Mix all ingredients in order given. Pour into a greased baking dish, set into pan of hot water, and bake 1 hour in moderate oven; stir twice during baking to keep chocolate from rising to the top.

RECIPES

Bean Salad.—One quart cooked beans (the red kidney), three eggs hard boiled, six cucumber pickles (use ones ready for the table), two onions chopped fine. Grind pickle, onion and egg through food chopper. For dressing use two eggs, one cup sugar, ½ cup vinegar, one tablespoon butter, salt and pepper. Cook dressing in double boiler until smooth.—Mrs. O. A. K., Gobles, Mich.

Apple Dumplings.—The baking powder biscuit dough (2 cups flour, 2/3 cup milk or water, 4 teaspoons baking powder, 2 tablespoons fat, ½ teaspoon salt) may be rolled into a thin sheet, and cut into pieces for apple dumplings. One half a large apple, peeled and quartered is enough fruit for one dumpling. Fold the dough over the fruit. Bake 30 minutes in not too hot an oven. Peaches or cherries are excellent when used the same way. Serve with whipped cream and sugar or fruit sauce.

Griddle Cakes, Corn Meal—1½ cups flour, 1 cup cornmeal, 2 cups water, 4 teaspoons baking powder, 2 eggs, 3 tablespoons fat, 1 teaspoon salt, ⅛ cup sugar. Cook the corn meal and water five minutes. Add milk, dry ingredients and eggs well beaten. Stir well. Bake on hot griddle.

Hot Cross Buns.—One cup scalded milk, one-fourth cup sugar, two tablespoons butter, one-half teaspoon salt, one-half yeast cake dissolved in one-fourth cup of lukewarm water, three-fourths teaspoon cinnamon, three cups flour, one egg, one-fourth cup raisins stoned and quartered or one-fourth cup currants. Add butter, sugar, and salt to milk; when lukewarm, add dissolved yeast cake, flour, cinnamon, and egg, well beaten: When thoroughly mixed, add raisins, cover, and let rise over night. In morning shape in forms of large biscuits, place in pan one inch apart, let rise, brush over with beaten egg, and bake twenty minutes: Cool and with ornamental frosting make a cross on top of each bun.

The Runner's Bible

(Copyright by Houghton Mifflin Co.)

Behold, I make all things new. Rev. 21:5.

Physiologists tell us that every cell in the human body is replaced by a new one every few months, that we are actually, wholly remade. We are further informed by scientists of another sort that whether or not the new cell is perfect, rests entirely with us—with the "mind of the flesh"—its character is determined by that which we hold in our thoughts. Thus if health and perfection are in our consciousness, health and perfection will be manisfested. If, however, we picture disease and imperfection—then these things are likely to appear.

WOMEN'S EXCHANGE

IF you nave something to exchange, we will print it FREE under this heading providing: First—it appeals to women and is a bonifide exchanges, no cash involved. Second—it will go in three lines. Third—You are a paid-up subscriber to The Business Farmer and attach your address label from a recent issue to prove it. Exchange offers will be numbered and inserted in the order received as we have room. —MRS. ANNIE TAYLOR, Editor.

118—Pattern quilt block, "Sage Bud" for 2 spools black thread, No. 40, or offers.—Mrs. Geo. Morgan, R3, Vicksburg, Mich.

AIDS TO GOOD DRESSING

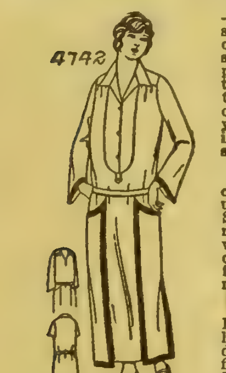
BE SURE AND SEND IN YOUR SIZE

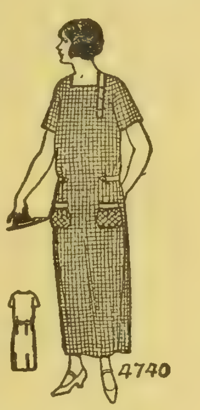
4731-4651-4658. A Jaunty Suit and Blouse.—This suit is comprised of Ladies Blouse 4731, Ladies Skirt 4658 and Ladies Jacket 4651. One could use alpaca or tweed for Jacket and Skirt and silk broadcloth or crepe de chine for the Blouse. The width of the Skirt at the foot with plaits extended is 2⅛ yards. The Skirt is cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure with accompanying hip measure, 35, 37, 39, 41, 43, 45 and 47 inches. The Blouse is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The Jacket is cut in 6 Sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make the Suit (Skirt and Jacket) material 40 inches wide, for a medium size, will require 5¾ yards. To make the Blouse of 32 inch material will require 2¾ yards.

4742. A Stylish Dress for Mature Figures.—Here is a model with new features, comfortable lines and good style. It may be finished with or without panels, and may have the sleeves in wrist length, or very short. The vest and collar may also be omitted. This is a good model for crepe weaves, for linen, ratine and alpaca. The Pattern is cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 5¼ yards of 36 inch material. Without vest and collar 4⅝ yards are required. With short sleeve 4⅝ yards are required. The width of the dress at the foot is 2⅛ yards.

4740. A Neat and Pretty "Apron Frock".—Gingham, the season's popular material, was chosen for this garment. In green and white or brown and white gingham, this would be very pleasing with trimming of linene and rick rack braid in self color or white. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A Medium size requires 4⅛ yards of 32 inch material. The width at the foot is 2 yards. For band on pocket, and at the opening, and for belt ⅛ yard of contrasting material 36 inches wide is required.

4745. A Practical Apron Model.—This style is good for percale, gingham, unbleached muslin, lawn or sateen. It may be trimmed with bias banding or with rick rack braid. The Pattern is cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44; Extra Large, 46-48 inches bust measure. A medium size requires 3 yards of 36 inch material.

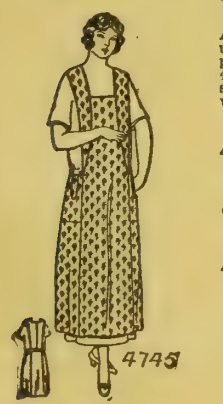


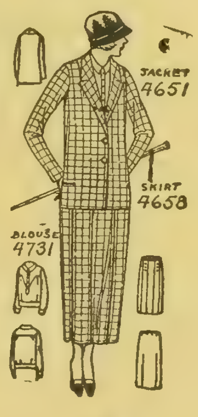


4754. A Smart Frock for the Growing Girl.—To the girl who likes something different, this style will appeal. It has the hip band extensions on the waist, and the popular side closing. The sleeve is very attractive in wrist length and equally pleasing in its brevity. This model is nice for the new prints and crepe weaves. It is also attractive in gingham and linen. The Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 10 year size requires 3½ yards of 32 inch material, if made with long sleeves. If made with short sleeves 3¼ yards is required.

4736. A Cool, Comfortable Play Suit.—Linen, chintz, printed voile, pongee or percale could be used for this model. The Pattern is cut in 3 Sizes: 2, 4 and 6 years. An attractive development would be henna and white checked gingham with white bands finished with lines of henna cross-stitching for trimming. To make this model for a 6 year size requires 2⅛ yards of 32 inch material.

746. A Pretty Frock for Many Occasions.—For afternoon or evening wear this model is delightful. It is pretty in changeable taffeta, crepe de chine, chiffon or in the new printed voile or figured silks. The puff sleeves may be omitted. The Pattern is cut in 3 Sizes: 16, 18 and 20 years. An 18 year size requires 5⅛ yards of material 32 inches wide. The width at the foot of the dress is 2¾ yards.





4756.—A New and Charming Bathing Suit.—Alpaca, pongee, jersey crepe or flannel may be used for this comfortable bathing suit. The panels may be omitted. This Pattern is cut in 4 Sizes: 8, 10, 12 and 14 years. A 12 year size requires 3⅛ yards of one material 40 inches wide. For the breeches of contrasting material ¾ yard 54 inches wide is required.

The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

MOTHER

[illegible] cherish ye your mother!
  You may not have her long
To add to your joy and comfort,
  And aid your feet along
Life's long and troubled pathway.
  Then love her while you may.
Her smile your heart may not gladden,
  All along the thorny way.

If you leave her, write a letter,
  That will fill her heart with light.
Let her know that you still love her,
  Though far away from her anxious sight.
You will find there is no other,
  That can help you more than she.
Do not weigh her down with sorrows,
  Which perhaps need never be.

Keep no secret from your mother.
  Make her everything to you.
Save her all the toil and trouble
  It is in your power to do.
God gives many things twice over,
  But only a loving mother once.
Don't be angry or cruel with her,
  Comfort and aid her, Love her much!

After her life's great work is ended
  And she is laid to her last long rest,
You'll not be sorry you helped to aid her,
  Remember, you're the one that she loved best.
'Twas a mother's loving, willing fingers,
  That rocked your cradle, soother your woe.
A mother's heart not one can fathom
  Except the God who loves us so.

—Iola E. Hardy.

DEAR girls and boys:—Vacation time is here for most of you, especially those going to the country schools; and those who are going to high school will soon be out. I know about how all of you feel. You are glad that school is over for another year and you can get out of doors for a while away from your books. But is school over for you forever? Do you intend to go back to school this fall or are you through with school? Think well before you answer because your future depends on your decision. And after you have thought it all over say "Yes, I intend to go back to school, not only this fall but every fall, until I graduate from college."

To become a success in this world you do not need a college education but it is much harder and takes many years longer to become successful without the college training. You may think, "Oh, I am going to be only a farmer and a farmer has no use for a college education." You are wrong. The farmer needs a college education just as much as anyone else, and more than many business people. The farmer has a business that he owns and operates requiring considerable capital and the business is conducted at a great risk. He must know how to produce at the lowest cost and sell at a profit.

You girls and boys who are growing up on the farms will some day take the places of your mothers and fathers but you cannot expect to farm the same way. No, the world is going forward and you must go forward with it or lose out—become a failure, and none of you want to be a failure. Resolve that you are going to high school and then to our M. A. C. Be prepared to fill your place in this world of ours. But have a good time and rest this vacation that you will be ready to go back this fall.—UNCLE NED.

OUR BOYS AND GIRLS
